Germany's War Zone and Neutral Flags

The German Decree and Interchange of Notes Answering American
Protests to Germany and Britain

BERLIN, Feb. 4, (by wireless to Sayville, L. I.)—*The German Admiralty today issued the following communication:*

The waters around Great Britain and Ireland, including the whole English Channel, are declared a war zone on and after Feb. 18, 1915.

Every enemy merchant ship found in this war zone will be destroyed, even if it is impossible to avert dangers which threaten the crew and passengers.

Also neutral ships in the war zone are in danger, as in consequence of the misuse of neutral flags ordered by the British Government on Jan. 31, and in view of the hazards of naval warfare, it cannot always be avoided that attacks meant for enemy ships endanger neutral ships.

Shipping northward, around the Shetland Islands, in the eastern basin of the North Sea, and a strip of at least thirty nautical miles in breadth along the Dutch coast, is endangered in the same way.

AMERICAN NOTE TO GERMANY.

Feb. 10, 1915.

The Secretary of State has instructed Ambassador Gerard at Berlin to present to the German Government a note to the following effect:

The Government of the United States, having had its attention directed to the proclamation of the German Admiralty, issued on the 4th of February, that the waters surrounding Great Britain and Ireland, including the whole of the English Channel, are to be considered as comprised within the seat of war; that all enemy merchant vessels found in those waters after the 18th inst. will be destroyed, although it may not always be possible to save crews and passengers; and that neutral vessels expose themselves to danger within this zone of war because, in view of the misuse of neutral flags said to have been ordered by the British Government on the 31st of January and of the contingencies of maritime warfare, it may not be possible always to exempt neutral vessels from

attacks intended to strike enemy ships, feels it to be its duty to call the attention of the Imperial German Government, with sincere respect and the most friendly sentiments, but very candidly and earnestly, to the very serious possibilities of the course of action apparently contemplated under that proclamation.

The Government of the United States views those possibilities with such grave concern that it feels it to be its privilege, and, indeed, its duty, in the circumstances to request the Imperial German Government to consider before action is taken the critical situation in respect of the relation between this country and Germany which might arise were the German naval forces, in carrying out the policy foreshadowed in the Admiralty's proclamation, to destroy any merchant vessel of the United States or cause the death of American citizens.

It is, of course, not necessary to remind the German Government that the sole right of a belligerent in dealing with neutral vessels on the high seas is limited to visit and search, unless a blockade is proclaimed and effectively maintained, which this Government does not understand to be proposed in this case. To declare or exercise a right to attack and destroy any vessel entering a prescribed area of the high seas without first certainly determining its belligerent nationality and the contraband character of its cargo would be an act so unprecedented in naval warfare that this Government is reluctant to believe that the Imperial Government of Germany in this case contemplates it as possible.

The suspicion that enemy ships are using neutral flags improperly can create no just presumption that all ships traversing a prescribed area are subject to the same suspicion. It is to determine exactly such questions that this Government understands the right of visit and search to have been recognized.

This Government has carefully noted the explanatory statement issued by the Imperial German Government at the same time with the proclamation of the German Admiralty, and takes this occasion to remind the Imperial German

Government very respectfully that the Government of the United States is open to none of the criticisms for unneutral action to which the German Government believes the Governments of certain other neutral nations have laid themselves open; that the Government of the United States has not consented to or acquiesced in any measures which may have been taken by the other belligerent nations in the present war which operate to restrain neutral trade, but has, on the contrary, taken in all such matters a position which warrants it in holding those Governments responsible in the proper way for any untoward effects on American shipping which the accepted principles of international law do not justify; and that it, therefore, regards itself as free in the present instance to take with a clear conscience and upon accepted principles the position indicated in this note.

If the commanders of German vessels of war should act upon the presumption that the flag of the United States was not being used in good faith and should destroy on the high seas an American vessel or the lives of American citizens, it would be difficult for the Government of the United States to view the act in any other light than as an indefensible violation of neutral rights, which it would be very hard, indeed, to reconcile with the friendly relations now happily subsisting between the two Governments.

If such a deplorable situation should arise, the Imperial German Government can readily appreciate that the Government of the United States would be constrained to hold the Imperial Government of Germany to a strict accountability for such acts of their naval authorities, and to take any steps it might be necessary to take to safeguard American lives and property and to secure to American citizens the full enjoyment of their acknowledged rights on the high seas.

The Government of the United States, in view of these considerations, which it urges with the greatest respect and with the sincere purpose of making sure that no misunderstandings may arise, and no circumstances occur, that might even

cloud the intercourse of the two Governments, expresses the confident hope and expectation that the Imperial German Government can and will give assurance that American citizens and their vessels will not be molested by the naval forces of Germany otherwise than by visit and search, though their vessels may be traversing the sea area delimited in the proclamation of the German Admiralty.

It is stated for the information of the Imperial Government that representations have been made to his Britannic Majesty's Government in respect to the unwarranted use of the American flag for the protection of British ships.

AMERICAN NOTE TO ENGLAND.

Feb. 10, 1915.

The Secretary of State has instructed Ambassador Page at London to present to the British Government a note to the following effect:

The department has been advised of the declaration of the German Admiralty on Feb. 4, indicating that the British Government had on Jan. 31 explicitly authorized the use of neutral flags on British merchant vessels, presumably for the purpose of avoiding recognition by German naval forces. The department's attention has also been directed to reports in the press that the Captain of the *Lusitania*, acting upon orders or information received from the British authorities, raised the American flag as his vessel approached the British coasts, in order to escape anticipated attacks by German submarines. Today's press reports also contain an alleged official statement of the Foreign Office defending the use of the flag of a neutral country by a belligerent vessel in order to escape capture or attack by an enemy.

Assuming that the foregoing reports are true, the Government of the United States, reserving for future consideration the legality and propriety of the deceptive use of the flag of a neutral power in any case for the purpose of avoiding capture, desires very respectfully to point out to his Britannic Majesty's Government the serious consequences which may result to American vessels and

American citizens if this practice is continued.

The occasional use of the flag of a neutral or an enemy under the stress of immediate pursuit and to deceive an approaching enemy, which appears by the press reports to be represented as the precedent and justification used to support this action, seems to this Government a very different thing from an explicit sanction by a belligerent Government for its merchant ships generally to fly the flag of a neutral power within certain portions of the high seas which are presumed to be frequented with hostile warships. The formal declaration of such a policy of general misuse of a neutral's flag jeopardizes the vessels of the neutral visiting those waters in a peculiar degree by raising the presumption that they are of belligerent nationality regardless of the flag which they may carry.

In view of the announced purpose of the German Admiralty to engage in active naval operations in certain delimited sea areas adjacent to the coasts of Great Britain and Ireland, the Government of the United States would view with anxious solicitude any general use of the flag of the United States by British vessels traversing those waters. A policy such as the one which his Majesty's Government is said to intend to adopt would, if the declaration of the German Admiralty be put in force, it seems clear, afford no protection to British vessels, while it would be a serious and constant menace to the lives and vessels of American citizens.

The Government of the United States, therefore, trusts that his Majesty's Government will do all in their power to restrain vessels of British nationality in the deceptive use of the United States flag in the sea area defined by the German declaration, since such practice would greatly endanger the vessels of a friendly power navigating those waters and would even seem to impose upon the Government of Great Britain a measure of responsibility for the loss of American lives and vessels in case of an attack by a German naval force.

You will impress upon his Majesty's Government the grave concern which this Government feels in the circumstances in regard to the safety of American vessels and lives in the war zone declared by the German Admiralty.

You may add that this Government is making earnest representations to the German Government in regard to the danger to American vessels and citizens if the declaration of the German Admiralty is put into effect.

GERMANY'S ANSWER.

BERLIN, (via London,) Feb. 18.—The German Government's reply to the American note follows:

The Imperial Government has examined the communication from the United States Government in the same spirit of good-will and friendship by which the communication appears to have been dictated. The Imperial Government is in accord with the United States Government that for both parties it is in a high degree desirable to avoid misunderstandings which might arise from measures announced by the German Admiralty and to provide against the occurrence of incidents which might trouble the friendly relations which so far happily exist between the two Governments.

With regard to the assuring of these friendly relations, the German Government believes that it may all the more reckon on a full understanding with the United States, as the procedure announced by the German Admiralty, which was fully explained in the note of the 4th inst., is in no way directed against legitimate commerce and legitimate shipping of neutrals, but represents solely a measure of self-defense, imposed on Germany by her vital interests, against England's method of warfare, which is contrary to international law, and which so far no protest by neutrals has succeeded in bringing back to the generally recognized principles of law as existing before the outbreak of war.

In order to exclude all doubt regarding these cardinal points, the German

Government once more begs leave to state how things stand. Until now Germany has scrupulously observed valid international rules regarding naval warfare. At the very beginning of the war Germany immediately agreed to the proposal of the American Government to ratify the new Declaration of London, and took over its contents unaltered, and without formal obligation, into her prize law.

The German Government has obeyed these rules, even when they were diametrically opposed to her military interests. For instance, Germany allowed the transportation of provisions to England from Denmark until today, though she was well able, by her sea forces, to prevent it. In contradistinction to this attitude, England has not even hesitated at a second infringement of international law, if by such means she could paralyze the peaceful commerce of Germany with neutrals. The German Government will be the less obliged to enter into details, as these are put down sufficiently, though not exhaustively, in the American note to the British Government dated Dec. 29, as a result of five months' experience.

All these encroachments have been made, as has been admitted, in order to cut off all supplies from Germany and thereby starve her peaceful civil population—a procedure contrary to all humanitarian principles. Neutrals have been unable to prevent the interruption of their commerce with Germany, which is contrary to international laws.

The American Government, as Germany readily acknowledges, has protested against the British procedure. In spite of these protests and protests from other neutral States, Great Britain could not be induced to depart from the course of action she had decided upon. Thus, for instance, the American ship *Wilhelmina* recently was stopped by the British, although her cargo was destined solely for the German civil population, and, according to the express declaration of the German Government, was to be employed only for this purpose.

Germany is as good as cut off from

her overseas supply by the silent or protesting toleration of neutrals, not only in regard to such goods as are absolute contraband, but also in regard to such as, according to acknowledged law before the war, are only conditional contraband or not contraband at all. Great Britain, on the other hand, is, with the toleration of neutral Governments, not only supplied with such goods as are not contraband or only conditional contraband, but with goods which are regarded by Great Britain, if sent to Germany, as absolute contraband, namely, provisions, industrial raw materials, &c., and even with goods which have always indubitably been regarded as absolute contraband.

The German Government feels itself obliged to point out with the greatest emphasis that a traffic in arms, estimated at many hundreds of millions, is being carried on between American firms and Germany's enemies. Germany fully comprehends that the practice of right and the toleration of wrong on the part of neutrals are matters absolutely at the discretion of neutrals, and involve no formal violation of neutrality. Germany, therefore, did not complain of any formal violation of neutrality, but the German Government, in view of complete evidence before it, cannot help pointing out that it, together with the entire public opinion of Germany, feels itself to be severely prejudiced by the fact that neutrals, in safeguarding their rights in legitimate commerce with Germany according to international law, have up to the present achieved no, or only insignificant, results, while they are making unlimited use of their right by carrying on contraband traffic with Great Britain and our other enemies.

If it is a formal right of neutrals to take no steps to protect their legitimate trade with Germany, and even to allow themselves to be influenced in the direction of the conscious and willful restriction of their trade, on the other hand, they have the perfect right, which they unfortunately do not exercise, to cease contraband trade, especially in arms, with Germany's enemies.

In view of this situation, Germany,

after six months of patient waiting, sees herself obliged to answer Great Britain's murderous method of naval warfare with sharp counter-measures. If Great Britain in her fight against Germany summons hunger as an ally, for the purpose of imposing upon a civilized people of 70,000,000 the choice between destitution and starvation or submission to Great Britain's commercial will, then Germany today is determined to take up the gauntlet and appeal to similar allies.

Germany trusts that the neutrals, who so far have submitted to the disadvantageous consequences of Great Britain's hunger war in silence, or merely in registering a protest, will display toward Germany no smaller measure of toleration, even if German measures, like those of Great Britain, present new terrors of naval warfare.

Moreover, the German Government is resolved to suppress with all the means at its disposal the importation of war material to Great Britain and her allies, and she takes it for granted that neutral Governments, which so far have taken no steps against the traffic in arms with Germany's enemies, will not oppose forcible suppression by Germany of this trade.

Acting from this point of view, the German Admiralty proclaimed a naval war zone, whose limits it exactly defined. Germany, so far as possible, will seek to close this war zone with mines, and will also endeavor to destroy hostile merchant vessels in every other way. While the German Government, in taking action based upon this overpowering point of view, keeps itself far removed from all intentional destruction of neutral lives and property, on the other hand, it does not fail to recognize that from the action to be taken against Great Britain dangers arise which threaten all trade within the war zone, without distinction. This a natural result of mine warfare, which, even under the strictest observance of the limits of international law, endangers every ship approaching the mine area. The German Government considers itself entitled to hope that all neutrals will acquiesce in these measures,

as they have done in the case of the grievous damages inflicted upon them by British measures, all the more so as Germany is resolved, for the protection of neutral shipping even in the naval war zone, to do everything which is at all compatible with the attainment of this object.

In view of the fact that Germany gave the first proof of her good-will in fixing a time limit of not less than fourteen days before the execution of said measures, so that neutral shipping might have an opportunity of making arrangements to avoid threatening danger, this can most surely be achieved by remaining away from the naval war zone. Neutral vessels which, despite this ample notice, which greatly affects the achievement of our aims in our war against Great Britain, enter these closed waters will themselves bear the responsibility for any unfortunate accidents that may occur. Germany disclaims all responsibility for such accidents and their consequences.

Germany has further expressly announced the destruction of all enemy merchant vessels found within the war zone, but not the destruction of all merchant vessels, as the United States seems erroneously to have understood. This restriction which Germany imposes upon itself is prejudicial to the aim of our warfare, especially as in the application of the conception of contraband practiced by Great Britain toward Germany—which conception will now also be similarly interpreted by Germany—the presumption will be that neutral ships have contraband aboard. Germany naturally is unwilling to renounce its rights to ascertain the presence of contraband in neutral vessels, and in certain cases to draw conclusions therefrom.

Germany is ready, finally, to deliberate with the United States concerning any measures which might secure the safety of legitimate shipping of neutrals in the war zone. Germany cannot, however, forbear to point out that all its efforts in this direction may be rendered very difficult by two circumstances: First, the misuse of neutral flags by British merchant vessels, which is indubitably

known to the United States; second, the contraband trade already mentioned, especially in war materials, on neutral vessels.

Regarding the latter point, Germany would fain hope that the United States, after further consideration, will come to a conclusion corresponding to the spirit of real neutrality. Regarding the first point, the secret order of the British Admiralty, recommending to British merchant ships the use of neutral flags, has been communicated by Germany to the United States and confirmed by communication with the British Foreign Office, which designates this procedure as entirely unobjectionable and in accordance with British law. British merchant shipping immediately followed this advice, as doubtless is known to the American Government from the incidents of the *Lusitania* and the *Laertes*.

Moreover, the British Government has supplied arms to British merchant ships and instructed them forcibly to resist German submarines. In these circumstances, it would be very difficult for submarines to recognize neutral merchant ships, for search in most cases cannot be undertaken, seeing that in the case of a disguised British ship from which an attack may be expected the searching party and the submarine would be exposed to destruction.

Great Britain, then, was in a position to make the German measures illusory if the British merchant fleet persisted in the misuse of neutral flags and neutral ships could not otherwise be recognized beyond doubt. Germany, however, being in a state of necessity, wherein she was placed by violation of law, must render effective her measures in all circumstances, in order thereby to compel her adversary to adopt methods of warfare corresponding with international law, and so to restore the freedom of the seas, of which Germany at all times is the defender and for which she today is fighting.

Germany therefore rejoices that the United States has made representations to Great Britain concerning the illegal use of their flag, and expresses the ex-

pectation that this procedure will force Great Britain to respect the American flag in the future. In this expectation, commanders of German submarines have been instructed, as already mentioned in the note of Feb. 4, to refrain from violent action against American merchant vessels, so far as these can be recognized.

In order to prevent in the surest manner the consequences of confusion—though naturally not so far as mines are concerned—Germany recommends that the United States make its ships which are conveying peaceful cargoes through the British war zone discernible by means of convoys.

Germany believes it may act on the supposition that only such ships would be convoyed as carried goods not regarded as contraband according to the British interpretation made in the case of Germany.

How this method of convoy can be carried out is a question concerning which Germany is ready to open negotiations with the United States as soon as possible. Germany would be particularly grateful, however, if the United States would urgently recommend to its merchant vessels to avoid the British naval war zone, in any case until the settlement of the flag question. Germany is inclined to the confident hope that the United States will be able to appreciate in its entire significance the heavy battle which Germany is waging for existence, and that from the foregoing explanations and promises it will acquire full understanding of the motives and the aims of the measures announced by Germany.

Germany repeats that it has now resolved upon the projected measures only under the strongest necessity of national self-defense, such measures having been deferred out of consideration for neutrals.

If the United States, in view of the weight which it is justified in throwing and able to throw into the scales of the fate of peoples, should succeed at the last moment in removing the grounds which make that procedure an obligatory duty for Germany, and if the American Government, in particular, should find a way

to make the Declaration of London respected—on behalf, also, of those powers which are fighting on Germany's side—and there by make possible for Germany legitimate importation of the necessities of life and industrial raw material, then the German Government could not too highly appreciate such a service, rendered in the interests of humane methods of warfare, and would gladly draw conclusions from the new situation.

BRITAIN'S ANSWER.

LONDON, Feb. 19.—The full text of Great Britain's note regarding the flag, as handed to the American Ambassador, follows:

The memorandum communicated on the 11th of February calls attention in courteous and friendly terms to the action of the Captain of the British steamer *Lusitania* in raising the flag of the United States of America when approaching British waters, and says that the Government of the United States feels certain anxiety in considering the possibility of any general use of the flag of the United States by British vessels traversing those waters, since the effect of such a policy might be to bring about a menace to the lives and vessels of United States citizens.

It was understood that the German Government announced their intention of sinking British merchant vessels at sight by torpedoes, without giving any opportunity of making any provision for the saving of the lives of non-combatant crews and passengers. It was in consequence of this threat that the *Lusitania* raised the United States flag on her inward voyage.

On her subsequent outward voyage a request was made by United States passengers, who were embarking on board of her, that the United States flag should be hoisted presumably to insure their safety. Meanwhile, the memorandum from your Excellency had been received. His Majesty's Government did not give any advice to the company as to how to meet this request, and it understood that the *Lusitania* left Liverpool under the British flag.

It seems unnecessary to say more as regards the *Lusitania* in particular.

In regard to the use of foreign flags by merchant vessels, the British Merchant Shipping act makes it clear that the use of the British flag by foreign merchant vessels is permitted in time of war for the purpose of escaping capture. It is believed that in the case of some other nations there is similar recognition of the same practice with regard to their flag, and that none of them has forbidden it.

It would, therefore, be unreasonable to expect his Majesty's Government to pass legislation forbidding the use of foreign flags by British merchant vessels to avoid capture by the enemy, now that the German Government have announced their intention to sink merchant vessels at sight with their non-combatant crews, cargoes, and papers, a proceeding hitherto regarded by the opinion of the world not as war, but piracy.

It is felt that the United States Government could not fairly ask the British Government to order British merchant vessels to forego a means, always hitherto permitted, of escaping not only capture but the much worse fate of sinking and destruction.

Great Britain always has, when a neutral, accorded to vessels of other States at war the liberty to use the British flag as a means of protection against capture, and instances are on record when United States vessels availed themselves of this facility during the American civil war. It would be contrary to fair expectation if now, when conditions are reversed, the United States and neutral nations were to grudge to British ships the liberty to take similar action.

The British Government have no intention of advising their merchant shipping to use foreign flags as a general practice or to resort to them otherwise than for escaping capture or destruction. The obligation upon a belligerent warship to ascertain definitely for itself the nationality and character of a merchant vessel before capturing it,

and a fortiori before sinking and destroying it, has been universally recognized.

If that obligation is fulfilled, the hoisting of a neutral flag on board a British vessel cannot possibly endanger neutral shipping, and the British Government holds that if loss to neutrals is caused by disregard of this obligation it is upon the enemy vessel disregarding it and upon the Government giving the orders that it should be disregarded that the sole responsibility for injury to neutrals ought to rest.

ALLIES' DECLARATION OF REPRISALS.

LONDON, March 1.—Following is the text of the statement read by Premier Asquith in the House of Commons today and communicated at the same time to the neutral powers in their capitals as an outline of the Allies' policy of retaliation against Germany for her "war zone" decree:

Germany has declared the English Channel, the north and west coasts of France, and the waters around the British Isles a war area, and has officially given notice that all enemy ships found in that area will be destroyed, and that neutral vessels may be exposed to danger.

This is, in effect, a claim to torpedo at sight, without regard to the safety of the crew or passengers, any merchant vessel under any flag. As it is not in the power of the German Admiralty to maintain any surface craft in these waters, the attack can only be delivered by submarine agency.

The law and customs of nations in regard to attacks on commerce have always presumed that the first duty of the captor of a merchant vessel is bringing it before a prize court, where it may be tried and where regularities of the capture may be challenged, and where neutrals may recover their cargo.

The sinking of prizes is, in itself, a questionable act, to be resorted to only in extraordinary circumstances, and after provision has been made for the safety of all crews and passengers.

The responsibility of discriminating

between neutral and enemy vessels and between neutral and enemy cargoes obviously rests with the attacking ship, whose duty it is to verify the status and character of the vessel and cargo, and to preserve all papers before sinking or capturing the ship. So, also, the humane duty to provide for the safety of crews of merchant vessels, whether neutral or enemy, is an obligation on every belligerent.

It is upon this basis that all previous discussions of law for regulating warfare have proceeded. The German submarine fulfills none of these obligations. She enjoys no local command of the waters wherein she operates. She does not take her captures within the jurisdiction of a prize court. She carries no prize crew which can be put aboard prizes which she seizes. She uses no effective means of discriminating between neutral and enemy vessels. She does not receive on board for safety the crew of the vessel she sinks. Her methods of warfare, therefore, are entirely outside the scope of any international instruments regulating operations against commerce in time of war.

The German declaration substitutes indiscriminate destruction for regulated captures. Germany has adopted this method against the peaceful trader and the non-combatant, with the avowed object of preventing commodities of all kinds, including food for the civilian population, from reaching or leaving the British Isles or Northern France.

Her opponents are, therefore, driven to frame retaliatory measures in order in their turn to prevent commodities of any kind from reaching or leaving Germany.

These measures will, however, be enforced by the British and French Governments without risk to neutral ships or neutral or non-combatant lives, and in strict observation of the dictates of humanity. The British and French Governments will, therefore, hold themselves free to detain and take into port ships carrying goods of presumed enemy destination, ownership, or origin.

It is not intended to confiscate such vessels or cargoes unless they would otherwise be liable to confiscation. Vessels with cargoes which sailed before this date will not be affected.

Britain's New and Original Blockade

American Protests Following the "War Zone" Decrees Defined

The first definite statement of the real character of the measures adopted by Great Britain and her allies for restricting the trade of Germany was obtained at Washington on March 17, 1915, when Secretary Bryan made public the text of all the recent notes exchanged between the United States Government and Germany and the Allies regarding the freedom of legitimate American commerce in the war zones. These notes, six in all, show that Great Britain and France stand firm in their announced intention to cut off all trade with Germany. The communications revealed that the United States Government, realizing the difficulties of maintaining an effective blockade by a close guard of an enemy coast on account of the newly developed activity of submarines, asked that "a radius of activity" be defined. Great Britain and France replied with the announcement that the operations of blockade would not be conducted "outside of European waters, including the Mediterranean."

The definition of a "radius of activity" for the allied fleet in European waters, including the Mediterranean, is the first intimation of the geographical limits of the reprisal order. Its limits were not given more exactly, the Allies contend, because Germany was equally indefinite in proclaiming all the waters surrounding Great Britain and Ireland a "war zone." The measures adopted are those of a blockade against all trade to and from Germany—not the historical kind of blockade recognized in international law, but a new and original form.

The several notes between the United States and the belligerent Governments follow. The stars in the German note mean that as it came to the State Department in cipher certain words were omitted, probably through telegraphic error. In the official text of the note the

State Department calls attention to the stars by an asterisk and a footnote saying "apparent omission." In the French note the same thing occurs, and is indicated by the footnote "undecipherable group," meaning that the cipher symbols into which the French note was put by our Embassy in Paris could not be translated back into plain language by the State Department cipher experts. From the context it is apparent that the omitted words in the German note are "insist upon," or words to that effect.

I.

AMERICAN NOTE TO THE BELLIGERENTS.

The following identic note was sent by the Secretary of State to the American Ambassadors at London and Berlin:

WASHINGTON, Feb. 20, 1915.

YOU will please deliver to Sir Edward Grey the following identic note, which we are sending England and Germany:

In view of the correspondence which has passed between this Government and Great Britain and Germany, respectively, relative to the declaration of a war zone by the German Admiralty, and the use of neutral flags by the British merchant vessels, this Government ventures to express the hope that the two belligerent Governments may, through reciprocal concessions, find a basis for agreement which will relieve neutral ships engaged in peaceful commerce from the great dangers which they will incur in the high seas adjacent to the coasts of the belligerents.

The Government of the United States respectfully suggests that an agreement in terms like the following might be entered into. This suggestion is not to be regarded as in any sense a proposal made by this Government, for it of course fully recognizes that it is not its privilege to propose terms of agreement between Great Britain and Germany, even though the matter be one in which it and the people of the United States are directly and deeply interested. It is merely venturing to take the liberty, which it hopes may be accorded a sincere friend desirous of embarrassing neither nation involved, and of serving, if it may, the common interests of humanity. The course outlined is offered in the hope that it may draw forth the views and elicit the suggestions of the British and German Gov-

ernments on a matter of capital interest to the whole world.

Germany and Great Britain to agree:

First—That neither will sow any floating mines, whether upon the high seas or in territorial waters; that neither will plant on the high seas anchored mines, except within cannon range of harbors for defensive purposes only; and that all mines shall bear the stamp of the Government planting them, and be so constructed as to become harmless if separated from their moorings.

Second—That neither will use submarines to attack merchant vessels of any nationality, except to enforce the right of visit and search.

Third—That each will require their respective merchant vessels not to use neutral flags for the purpose of disguise or ruse de guerre.

Germany to agree: That all importations of food or foodstuffs from the United States (and from such other neutral countries as may ask it) into Germany shall be consigned to agencies to be designated by the United States Government; that these American agencies shall have entire charge and control without interference on the part of German Government of the receipt and distribution of such importations, and shall distribute them solely to retail dealers bearing licenses from the German Government entitling them to receive and furnish such food and foodstuffs to non-combatants only; that any violation of the terms of the retailers' licenses shall work a forfeiture of their rights to receive such food and foodstuffs for this purpose, and that such food and foodstuffs will not be requisitioned by the German Government for any purpose whatsoever, or be diverted to the use of the armed forces of Germany.

Great Britain to agree: That food

and foodstuffs will not be placed upon the absolute contraband list, and that shipments of such commodities will not be interfered with or detained by British authorities, if consigned to agencies designated by the United States Government in Germany for the receipt and distribution of such cargoes to licensed German retailers for distribution solely to the non-combatant population.

In submitting this proposed basis of agreement this Government does not wish to be understood as admitting or denying any belligerent or neutral right established by the principles of international law, but would consider the agreement, if acceptable to the interested powers, a *modus vivendi* based upon expediency rather than legal right, and as not binding upon the United States either in its present form or in a modified form until accepted by this Government.

BRYAN.

II.

GERMANY'S REPLY.

The German reply, handed to the American Ambassador at Berlin, follows:

BERLIN, March 1, 1915.

The undersigned has the honor to inform his Excellency, Mr. James W. Gerard, Ambassador of the United States of America, in reply to the note of the 22d inst., that the Imperial German Government have taken note with great interest of the suggestion of the American Government that certain principles for the conduct of maritime war on the part of Germany and England be agreed upon for the protection of neutral shipping. They see therein new evidence of the friendly feelings of the American Government toward the German Government, which are fully reciprocated by Germany.

It is in accordance with Germany's wishes also to have maritime war conducted according to rules, which, without discriminatingly restricting one or the other of the belligerent powers in the use of their means of warfare, are equally considerate of the interests of neutrals and the dictates of humanity. Consequently it was intimated in the German note of the 16th inst. that obser-

vation of the Declaration of London on the part of Germany's adversaries would create a new situation from which the German Government would gladly draw the proper conclusions.

Proceeding from this view, the German Government have carefully examined the suggestion of the American Government and believe that they can actually see in it a suitable basis for the practical solution of the questions which have arisen.

With regard to the various points of the American note, they beg to make the following remarks:

First—With regard to the sowing of mines, the German Government would be willing to agree, as suggested, not to use floating mines and to have anchored mines constructed as indicated. Moreover, they agree to put the stamp of the Government on all mines to be planted. On the other hand, it does not appear to them to be feasible for the belligerents wholly to forego the use of anchored mines for offensive purposes.

Second—The German Government would undertake not to use their submarines to attack mercantile of any flag except when necessary to enforce the right of visit and search. Should the enemy nationality of the vessel or the presence of contraband be ascertained, submarines would proceed in accordance with the general rules of international law.

Third—As provided in the American note, this restriction of the use of the submarines is contingent on the fact that enemy mercantile abstain from the use of the neutral flag and other neutral distinctive marks. It would appear to be a matter of course that such mercantile vessels also abstain from arming themselves and from all resistance by force, since such procedure contrary to international law would render impossible any action of the submarines in accordance with international law.

Fourth—The regulation of legitimate importations of food into Germany suggested by the American Government appears to be in general acceptable. Such regulation would, of course, be confined to importations by sea, but that would,

on the other hand, include indirect importations by way of neutral ports. The German Government would, therefore, be willing to make the declarations of the nature provided in the American note so that the use of the imported food and foodstuffs solely by the non-combatant population would be guaranteed. The Imperial Government must, however, in addition (*****) having the importation of other raw material used by the economic system of non-combatants, including forage, permitted. To that end the enemy Governments would have to permit the free entry into Germany of the raw material mentioned in the free list of the Declaration of London, and to treat materials included in the list of conditional contraband according to the same principles as food and foodstuffs.

The German Government venture to hope that the agreement for which the American Government have paved the way may be reached after due consideration of the remarks made above, and that in this way peaceable neutral shipping and trade will not have to suffer any more than is absolutely necessary from the unavoidable effects of maritime war. These effects could be still further reduced if, as was pointed out in the German note of the 16th inst., some way could be found to exclude the shipping of munitions of war from neutral countries to belligerents on ships of any nationality.

The German Government must, of course, reserve a definite statement of their position until such time as they may receive further information from the American Government enabling them to see what obligations the British Government are, on their part, willing to assume.

The undersigned avails himself of this occasion, &c. VON JAGOW.

Dated, Foreign Office, Berlin, Feb. 28, 1915. GERARD.

*Apparent omission.

III.

GREAT BRITAIN'S REPLY.

The reply of Great Britain to the American note of Feb. 20, handed to the

American Ambassador at London, was as follows:

LONDON, March 15, 1915.

Following is the full text of a memorandum dated March 13, which Grey handed me today:

"On the 22d of February last I received a communication from your Excellency of the identic note addressed to his Majesty's Government and to Germany respecting an agreement on certain points as to the conduct of the war at sea. The reply of the German Government to this note has been published and it is not understood from the reply that the German Government are prepared to abandon the practice of sinking British merchant vessels by submarines, and it is evident from their reply that they will not abandon the use of mines for offensive purposes on the high seas as contrasted with the use of mines for defensive purposes only within cannon range of their own harbors, as suggested by the Government of the United States. This being so, it might appear unnecessary for the British Government to make any further reply than to take note of the German answer.

"We desire, however, to take the opportunity of making a fuller statement of the whole position and of our feeling with regard to it. We recognize with sympathy the desire of the Government of the United States to see the European war conducted in accordance with the previously recognized rules of international law and the dictates of humanity. It is thus that the British forces have conducted the war, and we are not aware that these forces, either naval or military, can have laid to their charge any improper proceedings, either in the conduct of hostilities or in the treatment of prisoners or wounded. On the German side it has been very different.

"1. The treatment of civilian inhabitants in Belgium and the North of France has been made public by the Belgian and French Governments and by those who have had experience of it at first hand. Modern history affords no precedent for the sufferings that have been inflicted on the defenseless and non-

combatant population in the territory that has been in German military occupation. Even the food of the population was confiscated until in Belgium an international commission, largely influenced by American generosity and conducted under American auspices, came to the relief of the population and secured from the German Government a promise to spare what food was still left in the country, though the Germans still continue to make levies in money upon the defenseless population for the support of the German Army.

"2. We have from time to time received most terrible accounts of the barbarous treatment to which British officers and soldiers have been exposed after they have been taken prisoner, while being conveyed to German prison camps. One or two instances have already been given to the United States Government founded upon authentic and first-hand evidence which is beyond doubt. Some evidence has been received of the hardships to which British prisoners of war are subjected in the prison camps, contrasting, we believe, most unfavorably with the treatment of German prisoners in this country. We have proposed, with the consent of the United States Government, that a commission of United States officers should be permitted in each country to inspect the treatment of prisoners of war. The United States Government have been unable to obtain any reply from the German Government to this proposal, and we remain in continuing anxiety and apprehension as to the treatment of British prisoners of war in Germany.

"3. At the very outset of the war a German mine layer was discovered laying a mine field on the high seas. Further mine fields have been laid from time to time without warning, and, so far as we know, are still being laid on the high seas, and many neutral as well as British vessels have been sunk by them.

"4. At various times during the war German submarines have stopped and sunk British merchant vessels, thus making the sinking of merchant vessels a

general practice, though it was admitted previously, if at all, only as an exception, the general rule to which the British Government have adhered being that merchant vessels, if captured, must be taken before a prize court. In one case already quoted in a note to the United States Government a neutral vessel carrying foodstuffs to an unfortified town in Great Britain has been sunk. Another case is now reported in which a German armed cruiser has sunk an American vessel, the William P. Frye, carrying a cargo of wheat from Seattle to Queens-town. In both cases the cargoes were presumably destined for the civil population. Even the cargoes in such circumstances should not have been condemned without the decision of a prize court, much less should the vessels have been sunk. It is to be noted that both these cases occurred before the detention by the British authorities of the *Wilhelmina* and her cargo of foodstuffs, which the German Government allege is the justification for their own action.

"The Germans have announced their intention of sinking British merchant vessels by torpedo without notice and without any provision for the safety of the crews. They have already carried out this intention in the case of neutral as well as of British vessels, and a number of non-combatant and innocent lives on British vessels, unarmed and defenseless, have been destroyed in this way.

"5. Unfortified, open, and defenseless towns, such as Scarborough, Yarmouth, and Whitby, have been deliberately and wantonly bombarded by German ships of war, causing in some cases considerable loss of civilian life, including women and children.

"6. German aircraft have dropped bombs on the east coast of England, where there were no military or strategic points to be attacked. On the other hand, I am aware of but two criticisms that have been made on British action in all these respects:

"1. It is said that the British naval authorities also have laid some anchored mines on the high seas. They have done

so, but the mines were anchored and so constructed that they would be harmless if they went adrift, and no mines whatever were laid by the British naval authorities till many weeks after the Germans had made a regular practice of laying mines on the high seas.

"2. It is said that the British Government have departed from the view of international law which they had previously maintained, that foodstuffs destined for the civil population should never be interfered with, this charge being founded on the submission to a prize court of the cargo of the *Wilhelmina*. The special considerations affecting this cargo have already been presented in a memorandum to the United States Government, and I need not repeat them here.

"Inasmuch as the blockade of all foodstuffs is an admitted consequence of blockade, it is obvious that there can be no universal rule based on considerations of morality and humanity which is contrary to this practice. The right to stop foodstuffs destined for the civil population must therefore in any case be admitted if an effective 'cordon' controlling intercourse with the enemy is drawn, announced, and maintained. Moreover, independently of rights arising from belligerent action in the nature of blockade, some other nations, differing from the opinion of the Governments of the United States and Great Britain, have held that to stop the food of the civil population is a natural and legitimate method of bringing pressure to bear on an enemy country as it is upon the defense of a besieged town. It is also upheld on the authority of both Prince Bismarck and Count Caprivi, and therefore presumably is not repugnant to German morality.

"The following are the quotations from Prince Bismarck and Count Caprivi on this point. Prince Bismarck in answering, in 1885, an application from the Kiel Chamber of Commerce for a statement of the view of the German Government on the question of the right to declare as contraband foodstuffs that were not intended for military forces said: 'I reply to the Chamber of Commerce that any disadvantage our com-

mercial and carrying interests may suffer by the treatment of rice as contraband of war does not justify our opposing a measure which it has been thought fit to take in carrying on a foreign war. Every war is a calamity which entails evil consequences not only on the combatants but also on neutrals. These evils may easily be increased by the interference of a neutral power with the way in which a third carries on the war to the disadvantage of the subjects of the interfering power, and by this means German commerce might be weighted with far heavier losses than a transitory prohibition of the rice trade in Chinese waters. The measure in question has for its object the shortening of the war by increasing the difficulties of the enemy and is a justifiable step in war if impartially enforced against all neutral ships.'

"Count Caprivi, during a discussion in the German Reichstag on the 4th of March, 1892, on the subject of the importance of international protection for private property at sea, made the following statements: 'A country may be dependent for her food or for her raw products upon her trade. In fact, it may be absolutely necessary to destroy the enemy's trade.' 'The private introduction of provisions into Paris was prohibited during the siege, and in the same way a nation would be justified in preventing the import of food and raw produce.'

"The Government of Great Britain have frankly declared, in concert with the Government of France, their intention to meet the German attempt to stop all supplies of every kind from leaving or entering British or French ports by themselves stopping supplies going to or from Germany. For this end, the British fleet has instituted a blockade effectively controlling by cruiser 'cordon' all passage to and from Germany by sea. The difference between the two policies is, however, that, while our object is the same as that of Germany, we propose to attain it without sacrificing neutral ships or non-combatant lives, or inflicting upon neutrals the damage that must be entailed when a vessel and its cargo are

sunk without notice, examination, or trial.

"I must emphasize again that this measure is a natural and necessary consequence of the unprecedented methods repugnant to all law and morality which have been described above which Germany began to adopt at the very outset of the war and the effects of which have been constantly accumulating."

American Ambassador, London.

IV.

AMERICAN INQUIRY ON REPRISAL METHOD.

The American Government on March 5 transmitted identic messages of inquiry to the Ambassadors at London and Paris inquiring from both England and France how the declarations in the Anglo-French note proclaiming an embargo on all commerce between Germany and neutral countries were to be carried into effect. The message to London was as follows:

WASHINGTON, March 5, 1915.

In regard to the recent communications received from the British and French Governments concerning restraints upon commerce with Germany, please communicate with the British Foreign Office in the sense following:

The difficulty of determining action upon the British and French declarations of intended retaliation upon commerce with Germany lies in the nature of the proposed measures in their relation to commerce by neutrals.

While it appears that the intention is to interfere with and take into custody all ships, both outgoing and incoming, trading with Germany, which is in effect a blockade of German ports, the rule of blockade that a ship attempting to enter or leave a German port, regardless of the character of its cargo, may be condemned is not asserted.

The language of the declaration is "the British and French Governments will, therefore, hold themselves free to detain and take into port ships carrying goods of presumed enemy destination, ownership, or origin. It is not intended to confiscate such vessels or cargoes unless

they would otherwise be liable to condemnation."

The first sentence claims a right pertaining only to a state of blockade. The last sentence proposes a treatment of ships and cargoes as if no blockade existed. The two together present a proposed course of action previously unknown to international law.

As a consequence neutrals have no standard by which to measure their rights or to avoid danger to their ships and cargoes. The paradoxical situation thus created should be changed and the declaring powers ought to assert whether they rely upon the rules governing a blockade or the rules applicable when no blockade exists.

The declaration presents other perplexities. The last sentence quoted indicates that the rules of contraband are to be applied to cargoes detained. The rules covering non-contraband articles carried in neutral bottoms is that the cargoes shall be released and the ships allowed to proceed.

This rule cannot, under the first sentence quoted, be applied as to destination. What, then, is to be done with a cargo of non-contraband goods detained under the declaration? The same question may be asked as to conditional contraband cargoes.

The foregoing comments apply to cargoes destined for Germany. Cargoes coming out of German ports present another problem under the terms of the declaration. Under the rules governing enemy exports only goods owned by enemy subjects in enemy bottoms are subject to seizure and condemnation. Yet by the declaration it is purposed to seize and take into port all goods of enemy "ownership and origin." The word "origin" is particularly significant. The origin of goods destined to neutral territory on neutral ships is not, and never has been, a ground for forfeiture, except in case a blockade is declared and maintained. What, then, would the seizure amount to in the present case except to delay the delivery of the goods? The declaration does not indicate what disposition would be made of such cargoes

if owned by a neutral or if owned by an enemy subject. Would a different rule be applied according to ownership? If so, upon what principles of international law would it rest? And upon what rule, if no blockade is declared and maintained, could the cargo of a neutral ship sailing out of a German port be condemned? If it is not condemned, what other legal course is there but to release it?

While this Government is fully alive to the possibility that the methods of modern naval warfare, particularly in the use of submarines for both defensive and offensive operations, may make the former means of maintaining a blockade a physical impossibility, it feels that it can be urged with great force that there should be also some limit to "the radius of activity," and especially so if this action by the belligerents can be construed to be a blockade. It would certainly create a serious state of affairs if, for example, an American vessel laden with a cargo of German origin should escape the British patrol in European waters only to be held up by a cruiser off New York and taken into Halifax.

Similar cablegrams sent to Paris.

BRYAN.

V.

BRITISH REPLY TO THE AMERICAN INQUIRY.

The reply from the British Government transmitted by the American Ambassador at London to the Secretary of State concerning the method of enforcing the reprisal order follows:

LONDON, March 15, 1915.

Following is the full text of a note dated today and an Order in Council I have just received from Grey:

"1. His Majesty's Government have had under careful consideration the inquiries which, under instructions from your Government, your Excellency addressed to me on the 8th inst., regarding the scope and mode of application of the measures foreshadowed in the British and French declarations of the 1st of March, for restricting the trade of Germany. Your Excellency explained and illustrated by reference to certain con-

tingencies the difficulty of the United States Government in adopting a definite attitude toward these measures by reason of uncertainty regarding their bearing upon the commerce of neutral countries.

"2. I can at once assure your Excellency that subject to the paramount necessity of restricting German trade his Majesty's Government have made it their first aim to minimize inconvenience to neutral commerce. From the accompanying copy of the Order in Council, which is to be published today, you will observe that a wide discretion is afforded to the prize court in dealing with the trade of neutrals in such manner as may, in the circumstances, be deemed just, and that full provision is made to facilitate claims by persons interested in any goods placed in the custody of the Marshal of the prize court under the order. I apprehend that the perplexities to which your Excellency refers will for the most part be dissipated by the perusal of this document, and that it is only necessary for me to add certain explanatory observations.

"3. The effect of the Order in Council is to confer certain powers upon the executive officers of his Majesty's Government. The extent to which those powers will be actually exercised and the degree of severity with which the measures of blockade authorized will be put into operation are matters which will depend on the administrative orders issued by the Government and the decisions of the authorities specially charged with the duty of dealing with individual ships and cargoes, according to the merits of each case. The United States Government may rest assured that the instructions to be issued by his Majesty's Government to the fleet and customs officials and Executive Committees concerned will impress upon them the duty of acting with the utmost dispatch consistent with the object in view, and of showing in every case such consideration for neutrals as may be compatible with that object, which is, succinctly stated, to establish a blockade to prevent vessels from carrying goods for or coming from Germany.

German Secretary for Foreign Affairs
(Photo from Rogers)

MAXIMILIAN HARDEN
Editor of *Die Zukunft*, Germany's Most Brilliant Journalist,
Who Has Been Severe in His Strictures Upon the United States
(Photo from Brown Bros)

"4. His Majesty's Government has felt most reluctant, at the moment of initiating a policy of blockade, to exact from neutral ships all the penalties attaching to a breach of blockade. In their desire to alleviate the burden which the existence of a state of war at sea must inevitably impose on neutral sea-borne commerce, they declare their intention to refrain altogether from the exercise of the right to confiscate ships or cargoes which belligerents have always claimed in respect of breaches of blockade. They restrict their claim to the stopping of cargoes destined for or coming from the enemy's territory.

"5. As regards cotton, full particulars of the arrangements contemplated have already been explained. It will be admitted that every possible regard has been had to the legitimate interests of the American cotton trade.

"6. Finally, in reply to the penultimate paragraph of your Excellency's note, I have the honor to state that it is not intended to interfere with neutral vessels carrying enemy cargo of non-contraband nature outside European waters, including the Mediterranean."

(Here follows the text of the Order in Council, which already has been printed.)

American Ambassador, London.

VI.

FRENCH GOVERNMENT'S ANSWER.

The French Government transmitted the following message:

PARIS, March 14, 1915.

French Government replies as follows:

"In a letter dated March 7 your Excellency was good enough to draw my attention to the views of the Government of the United States regarding the recent communications from the French and British Governments concerning a restriction to be laid upon commerce with Germany. According to your Excellency's letter, the declaration made by the allied Governments presents some uncertainty as regards its application, concerning which the Government of the United States desires to be enlightened

in order to determine what attitude it should take.

"At the same time your Excellency notified me that, while granting the possibility of using new methods of retaliation against the new use to which submarines have been put, the Government of the United States was somewhat apprehensive that the allied belligerents might (if their action is to be construed as constituting a blockade) capture in waters near America any ships which might have escaped the cruisers patrolling European waters. In acknowledging receipt of your Excellency's communication I have the honor to inform you that the Government of the republic has not failed to consider this point as presented by the Government of the United States, and I beg to specify clearly the conditions of application, as far as my Government is concerned of the declaration of the allied Governments. As well set forth by the Federal Government, the old methods of blockade cannot be entirely adhered to in view of the use Germany has made of her submarines, and also by reason of the geographical situation of that country. In answer to the challenge to the neutrals as well as to its own adversaries contained in the declaration, by which the German Imperial Government stated that it considered the seas surrounding Great Britain and the French coast on the Channel as a military zone, and warned neutral vessels not to enter the same on account of the danger they would run, the allied Governments have been obliged to examine what measures they could adopt to interrupt all maritime communication with the German Empire and thus keep it blockaded by the naval power of the two allies, at the same time, however, safeguarding as much as possible the legitimate interests of neutral powers and respecting the laws of humanity which no crime of their enemy will induce them to violate.

"The Government of the republic, therefore, reserves to itself the right of bringing into a French or allied port any ship carrying a cargo presumed to be of German origin, destination, or own-

ership, but it will not go to the length of seizing any neutral ship except in case of contraband. The discharged cargo shall not be confiscated. In the event of a neutral proving his lawful ownership of merchandise destined to Germany, he shall be entirely free to dispose of same, subject to certain conditions. In case the owner of the goods is a German, they shall simply be sequestered during the war.

"Merchandise of enemy origin shall only be sequestered when it is at the same time the property of an enemy. Merchandise belonging to neutrals shall be held at the disposal of its owner to be returned to the port of departure.

"As your Excellency will observe, these measures, while depriving the enemy of important resources, respect the rights of neutrals and will not in any way jeopardize private property, as even the enemy owner will only suffer from the suspension of the enjoyment of his rights during the term of hostilities.

"The Government of the republic, being desirous of allowing neutrals every facility to enforce their claims, (here occurred an undecipherable group of words,) give the prize court, an inde-

pendent tribunal, cognizance of these questions, and in order to give the neutrals as little trouble as possible it has specified that the prize court shall give sentence within eight days, counting from the date on which the case shall have been brought before it.

"I do not doubt, Mr. Ambassador, that the Federal Government, comparing on the one hand the unspeakable violence with which the German Military Government threatens neutrals, the criminal actions unknown in maritime annals already perpetrated against neutral property and ships, and even against the lives of neutral subjects or citizens, and on the other hand the measures adopted by the allied Governments of France and Great Britain, respecting the laws of humanity and the rights of individuals, will readily perceive that the latter have not overstepped their strict rights as belligerents.

"Finally, I am anxious to assure you that it is not and it has never been the intention of the Government of the republic to extend the action of its cruisers against enemy merchandise beyond the European seas, the Mediterranean included."

SHARP.

British Order in Council

Declaring a Blockade of German Ports

LONDON, March 15.—The British Order in Council decreeing retaliatory measures on the part of the Government to meet the declaration of the Germans that the waters surrounding the United Kingdom are a military area, was made public today. The text of the order follows:

Whereas, the German Government has issued certain orders which, in violation of the usages of war, purport to declare that the waters surrounding the United Kingdom are a military area in which all British and allied merchant vessels will be destroyed irrespective of the safety and the lives of the passengers and the crews, and in which neutral shipping will

be exposed to similar danger in view of the uncertainties of naval warfare, and

Whereas, in the memorandum accompanying the said orders, neutrals are warned against intrusting crews, passengers, or goods to British or allied ships, and

Whereas, such attempts on the part of the enemy give to his Majesty an unquestionable right of retaliation; and

Whereas, his Majesty has therefore decided to adopt further measures in order to prevent commodities of any kind from reaching or leaving Germany, although such measures will be enforced without risk to neutral ships or to neutral or non-

combatant life and in strict observance of the dictates of humanity; and

Whereas, the allies of his Majesty are associated with him in the steps now to be announced for restricting further the commerce of Germany, his Majesty is therefore pleased by and with the advice of his Privy Council to order, and it is hereby ordered, as follows:

First—No merchant vessel which sailed from her port of departure after March 1, 1915, shall be allowed to proceed on her voyage to any German port. Unless this vessel receives a pass enabling her to proceed to some neutral or allied port to be named in the pass, the goods on board any such vessel must be discharged in a British port and placed in custody of the Marshal of the prize court. Goods so discharged, if not contraband of war, shall, if not requisitioned for the use of his Majesty, be restored by order of the court and upon such terms as the court may in the circumstances deem to be just to the person entitled thereto.

Second—No merchant vessel which sailed from any German port after March 1, 1915, shall be allowed to proceed on her voyage with any goods on board laden at such port. All goods laden at such port must be discharged in a British or allied port. Goods so discharged in a British port shall be placed in the custody of the Marshal of the prize court, and if not requisitioned for the use of his Majesty shall be detained or sold under the direction of the prize court.

The proceeds of the goods so sold shall be paid into the court and dealt with in such a manner as the court may in the circumstances deem to be just, provided that no proceeds of the sale of such goods shall be paid out of the court until the conclusion of peace, except on the application of a proper officer of the Crown, unless it be shown that the goods had become neutral property before the issue of this order, and provided also that nothing herein shall prevent the release of neutral property, laden at such enemy port, on the application of the proper officer of the Crown.

Third—Every merchant vessel which

sailed from her port of departure after March 1, 1915, on her way to a port other than a German port and carrying goods with an enemy destination, or which are enemy property, may be required to discharge such goods in a British or allied port. Any goods so discharged in a British port shall be placed in the custody of the Marshal of the prize court, and unless they are contraband of war shall, if not requisitioned for the use of his Majesty, be restored by an order of the court upon such terms as the court may in the circumstances deem to be just to the person entitled thereto, and provided that this article shall not apply in any case falling within Article 2 or 4 of this order.

Fourth—Every merchant vessel which sailed from a port other than a German port after March 1, 1915, and having on board goods which are of enemy origin, or are enemy property, may be required to discharge such goods in a British or allied port. Goods so discharged in a British port shall be placed in the custody of the Marshal of the prize court, and, if not requisitioned for the use of his Majesty, shall be detained or sold under the direction of the prize court. The proceeds of the goods so sold shall be paid into the court and be dealt with in such a manner as the court may in the circumstances deem to be just, provided that no proceeds of the sale of such goods shall be paid out of the court until the conclusion of peace except on the application of a proper officer of the Crown, unless it be shown that the goods had become neutral property before the issue of this order, and provided also that nothing herein shall prevent the release of neutral property of enemy origin on application of the proper officer of the Crown.

Fifth—Any person claiming to be interested in or to have any claim in respect of any goods not being contraband of war placed in the custody of the Marshal of the prize court under this order, or in the proceeds of such goods, may forthwith issue a writ in the prize court against the proper officer of the Crown and apply for an order that the

goods should be restored to him, or that their proceeds should be paid to him, or for such other order as the circumstances of the case may require.

The practice and procedure of the prize court shall, so far as applicable, be followed *mutatis mutandis* in any proceedings consequential upon this order.

Sixth—A merchant vessel which has cleared for a neutral port from a British or allied port, or which has been allowed to pass as having an ostensible destination to a neutral port and proceeds to an enemy port, shall, if captured on

any subsequent voyage be liable to condemnation.

Seventh—Nothing in this order shall be deemed to affect the liability of any vessel or goods to capture or condemnation independently of this order.

Eighth—Nothing in this order shall prevent the relaxation of the provisions of this order in respect of the merchant vessels of any country which declares that no commerce intended for or originating in Germany, or belonging to German subjects, shall enjoy the protection of its flag.

Germany's Submarine War

LONDON, March 13.—The Admiralty announced tonight that the British collier *Invergyle* was torpedoed today off Cresswell, England, and sunk. All aboard were saved.

This brings the total British losses of merchantmen and fishing vessels, either sunk or captured during the war, up to 137. Of these ninety were merchant ships and forty-seven were fishing craft.

A further submarine casualty today was the torpedoing of the Swedish steamer *Halma* off Scarborough, and the loss of the lives of six of her crew.

The Admiralty announces that since March 10 seven British merchant steamers have been torpedoed by submarines. Two of them, it is stated, were sunk, and of two others it is said that "the sinking is not confirmed." Three were not sunk.

The two steamers officially reported sunk were the *Ivergyle* and the *Indian City*, which was torpedoed off the Scilly Islands on March 12. The crew of the *Indian City* was reported rescued.

The two steamers whose reported sinking is not yet officially confirmed are the *Florazan*, which was torpedoed at the mouth of the Bristol Channel on

March 11, all of her crew being landed at Milford Haven, with the exception of one fireman, and the *Andalusian*, which was attacked off the Scilly Islands on March 12. The crew of the *Andalusian* is reported to have been rescued.

The *Adenwen* was torpedoed in the English Channel on March 11, and has since been towed into Cherbourg. Her crew was landed at Brisham.

The steamer *Headlands* was torpedoed on March 12 off the Scilly Islands. It is reported that her crew was saved. The steamer *Hartdale* was torpedoed on March 13 off South Rock, in the Irish Channel. Twenty-one of her crew were picked up and two were lost.

Supplementary to the foregoing the Admiralty tonight issued a report giving the total number of British merchant and fishing vessels lost through hostile action from the outbreak of the war to March 10. The statement says that during that period eighty-eight merchant vessels were sunk or captured. Of these fifty-four were victims of hostile cruisers, twelve were destroyed by mines, and twenty-two by submarines. Their gross tonnage totaled 309,945.

In the same period the total arrivals

and sailings of overseas steamers of all nationalities of more than 300 tons net were 4,745.

Forty-seven fishing vessels were sunk or captured during this time. Nineteen

of these were blown up by mines and twenty-eight were captured by hostile craft. Twenty-four of those captured were caught on Aug. 26, when the Germans raided a fishing fleet.

Dotted portion indicates the limits of "War Zone" defined in the German order which became effective Feb. 18, 1915.

German People Not Blinded

By Karl Lamprecht

[Published in New York by the German Information Service, Feb. 3, 1915.]

Denying flatly that the German people were swept blindly and ignorantly into the war by the headlong ambitions of their rulers—the view advanced by Dr. Charles W. Eliot, President Emeritus of Harvard University, and Dr. Nicholas Murray Butler, President of Columbia—Dr. Karl Lamprecht, Professor of History in the University of Leipsic and world-famous German historian, has addressed the open letter which appears below to the two distinguished American scholars. Dr. Lamprecht asserts that under the laws which govern the German Empire the people as citizens have a deciding will in affairs of state and that Germany is engaged in the present conflict because the sober judgment of the German people led them to resort to arms.

Dr. C. W. Eliot, President Emeritus of Harvard University; Dr. N. M. Butler, President of Columbia University.

Gentlemen: I feel confident that you are not in ignorance of my regard and esteem for the great American Republic and its citizens. They have been freely expressed on many occasions and have taken definite form in the journal of my travels through the United States, published in the booklet "Americana," 1905.

My sentiments and my judgment have not changed since 1905. I now refer, gentlemen, to the articles and speeches which you have published about my country and which have aroused widespread interest. I will not criticise your utterances one by one. If I did that I might have to speak on occasion with a frankness that would be ungracious, considering the fine appreciation which both of you still feel for old Germany. It would be specially ungracious toward you, President Eliot, for in quite recent times you honored me by your ready help in my scientific labors. All I want to do is to remove a few fundamental errors—in fact, only one. I feel in duty bound to do so, since many well-disposed Americans share that error.

The gravest and perhaps most widely spread misconception about us Germans is that we are the serfs of our Princes, (Fuerstenknechte,) servile and dependent in political thought. That false notion has probably been dispelled during the initial weeks of the present war.

With absolute certainty the German

Nation, with one voice and correctly, diagnosed the political situation without respect to party or creed and unanimously and of its own free will acted.

But this misconception is so deep rooted that more extended discussion is needed. I pass on to other matters.

The essential point is that public opinion have free scope of development. Every American will admit that. Now, public opinion finds its expression in the principles that govern the use of the suffrage. The German voting system is the freest in the world, much freer than the French, English, or American system, because not only does it operate in accordance with the principle that every one shall have a direct and secret vote, but the powers of the State are exercised faithfully and conscientiously to carry out that principle in practice. The constitutional life of the German Nation is of a thoroughly democratic character.

Those who know that were not surprised that our Social Democrats marched to war with such enthusiasm. Already among their ranks many have fallen as heroes, never to be forgotten by any German when his thoughts turn to the noble blood which has saturated foreign soil—thank God, foreign soil! Many of the Socialist leaders and adherents are wearing the Iron Cross, that simple token that seems to tell you when you speak of its bearer, "Now, this is a fearless and faithful soul."

Let it be said once and for all: He who

wants to understand us must accept our conception that constitutionally we enjoy so great a political freedom that we would not change with any country in the world. Everybody in America knows that our manners and customs have been democratic for centuries, while in France and England they have been ever aristocratic. Americans, we know, always feel at home on German soil.

But the Kaiser, you will say, speaks of "his monarchy," therefore must the Germans be *Fuerstenknechte*, (servants of Princes.)

First of all, as to the phrase "*Fuerstenknechte*." Does not the King of England speak of his "subjects"? That word irritates a German, because he is conscious that he is not a subject, but a citizen of the empire. Yet he will not infer from the English King's use of the term in formal utterances that an Englishman is a churl, a "servant of his King." That would be a superficial political conception.

As to our Princes, most of us, including the Social Democrats, are glad in our heart of hearts that we have them. As far back as our history runs, and that is more than 2,000 years, we have had Princes. They have never been more than their name, "*Fuerst*," implies, the first and foremost of German freemen, "*primi inter pares*." Therefore they have never acted independently, never without taking the people into counsel. That would have been contrary to the most important fundamental principles of German law; hence our people have never been "*de jure*" without their representatives. Even in the times of absolute monarchy the old "estates of the realm" had their being as a representative body, and wherever and whenever these privileges were suppressed it was regarded as a violation of our fundamental rights and is so still regarded.

Our princely houses are as old as our monasteries, our cities, and our cathedrals. A thousand years ago the Guelphs were a celebrated family, and the Wettins have ruled over their lands for eight centuries. In the twelfth century the Wittelsbachs and Thuringians were

Princes under the great Kaisers of the Hohenstaufen dynasty. Among these great families the Hapsburgs (thirteenth century) and the Hohenzollerns (fifteenth century) are quite young. All have their roots in Germany and belong to the country.

We glory in our Princes. They link our existence with the earliest centuries of our history. They preserve for us the priceless independence of our small home States.

We are accused of militarism. What is this new and terrible crime? Since the years of the wars of liberation against France and Napoleon we have had what amounts practically to universal conscription. Only two generations later universal suffrage was introduced. The nation has been sternly trained by its history in the ways of discipline and self-restraint. Germans are very far from mistaking freedom for license and independence for licentiousness.

Germany has a long past. She enjoys the inheritance of an original and priceless civilization. She holds clearly formulated ideals. To the future she has all this to bequeath and, in addition, the intellectual wealth of her present stage of development. Consider Germany's contributions to the arts, the poetical achievements of the period of Schiller and Goethe, the music of Handel, Bach, Haydn, Mozart, and Beethoven; the thought systems of Kant, Fichte, Schelling, and Hegel!

The last decade has reawakened these great men in the consciousness of the German Nation. Enriched by the consciousness and message of an intellectual past, our people were moving forward to new horizons.

At that moment the war hit us. If you could only have lived these weeks in Germany I do not doubt that what you would have seen would have led your ripe experience to a fervent faith in a Divinely guided future of mankind. The great spiritual movement of 1870, when I was a boy growing up, was but a phantom compared to July and August of 1914. Germany was a nation stirred by the most sacred emotions, humble and

strong, filled with just wrath and a firm determination to conquer—a nation disciplined, faithful, and loving.

In that disposition we have gone to war and still fight. As for the slanders of which we have been the victims, ask the thousands of Frenchmen who housed German soldiers in 1870 and 1871, or ask the Belgians of Ghent and Bruges! They

will give you a different picture of the "Furor Teutonicus." They will tell you that the "raging German" generally is a good-natured fellow, ever ready for service and sympathy, who, like Parsifal, gazes forth eagerly into a strange world which the war has opened to his loyal and patriotic vision.

KARL LAMPRECHT.

REVEILLE

By JOHN GALSWORTHY.

[From King Albert's Book.]

IN my dream I saw a fertile plain, rich with the hues of Autumn. Tranquil it was and warm. Men and women, children, and the beasts worked and played and wandered there in peace. Under the blue sky and the white clouds low-hanging, great trees shaded the fields; and from all the land there arose a murmur as from bees clustering on the rose-colored blossoms of tall clover. And, in my dream, I roamed, looking into every face, the faces of prosperity, broad and well favored—of people living in a land of plenty, of people drinking of the joy of life, caring nothing for the morrow. But I could not see their eyes, that seemed ever cast down, gazing at the ground, watching the progress of their feet over the rich grass and the golden leaves already fallen from the trees. The longer I walked among them the more I wondered that never was I suffered to see the eyes of any, not even of the little children, not even of the beasts. It was as if ordinance had gone forth that their eyes should be banded with invisibility.

While I mused on this, the sky began to darken. A muttering of distant winds and waters came traveling. The children stopped their play, the beasts raised their heads; men and women halted and cried to each other: "The River—the River is rising! If it floods, we are lost! Our beasts will drown; we, even we, shall drown! The River!" And women stood like things of stone, listening; and men shook their fists at the black sky and at that traveling mutter of the winds and waters; and the beasts sniffed at the darkening air.

Then, clear, I heard a Voice call: "Brothers! The dike is breaking! The River comes! Link arms, brothers; with the dike of our bodies we will save our home! Sisters, behind us, link arms! Close in the crevices, children! The River!" And all that multitude, whom I had seen treading quietly the grass and fallen leaves with prosperous feet, came hurrying, their eyes no longer fixed on the rich plain, but lifted in trouble and defiance, staring at that rushing blackness. And the Voice called: "Hasten, brothers! The dike is broken. The River floods!"

And they answered: "Brother, we come!"

Thousands and thousands they pressed, shoulder to shoulder—men, women, and children, and the beasts lying down behind, till the living dike was formed. And that blackness came on, nearer, nearer, till, like the whites of glaring eyes, the wave crests glinted in the dark rushing flood. And the sound of the raging waters was as a roar from a million harsh mouths.

But the Voice called: "Hold, brothers! Hold!"

And from the living dike came answer: "Brother! We hold!"

Then the sky blackened to night. And the terrible dark water broke on that dike of life; and from all the thin living wall rose such cry of struggle as never was heard.

But above it ever the Voice called: "Hold! My brave ones, hold!"

And ever the answer came from those drowning mouths, of men and women, of little children and the very beasts: "Brother! We hold!" But the black flood rolled over and on. There, down in its dark tumult, beneath its cruel tumult, I saw men still with arms linked; women on their knees, clinging to earth; little children drifting—dead, all dead; and the beasts dead. And their eyes were still open facing that death. And above them the savage water roared. But clear and high I heard the Voice call: "Brothers! Hold! Death is not! We live!"

Can Germany Be Starved Out?

An Answer by Sixteen German Specialists*

[From The Annalist of New York, March 1, 1915.]

BERLIN, Feb. 1, 1915.

PROBABLY the most interesting economic problem in the world at this moment is whether England can succeed in starving out Germany. While the world at large is chiefly interested in the vast political issues involved, the question interests the Germans not only from that standpoint, but also—and how keenly!—from the mere bread-and-butter standpoint. For if Germany cannot feed its own population during the long war that its foes are predicting with so much assurance, her defeat is only a question of time.

That the German Government is keenly aware of the dangers of the situation is evident from the rigorous measures that it has taken to conserve and economize the food supply. After having fixed maximum prices for cereals soon after the war began, the Government last week decided to requisition and monopolize all the wheat and rye in the country, and allow the bakers to sell only a limited quantity of bread (2.2 pounds per capita a week) to each family. It had previously taken measures to restrict the consumption of cereals for other purposes than breadmaking; the feeding of rye was prohibited and its use in producing alcohol was restricted by 40 per cent.; a percentage of potato flour was ordered added to rye flour, and of the latter to wheat flour in making bread. These are but a few of the economic measures

adopted by the Government since the outbreak of the war.

The general opinion of the people in Germany is that the country cannot be starved out, and this opinion is asserted with a great deal of patriotic fervor, particularly by newspaper editors. The leading scientists of the country, moreover, have taken up the question in a thoroughgoing way and investigated it in all its bearings. A little book ("Die Deutsche Volksernährung und der Englische Aushungerungsplan") has just been issued, giving the conclusions of sixteen specialists in various fields, which will be briefly summarized here. Economists, statisticians, physiologists, agricultural chemists, food specialists, and geologists have all taken part in producing a composite view of the whole subject; it is not a book of special contributions by individual specialists, but is written in one cast and represents the compared and boiled-down conclusions of the sixteen scholars.

The authors by no means regard the problem of feeding Germany without foreign assistance as an easy and simple one; on the contrary, they say it is a serious one, and calls for the supreme effort of the authorities and of every individual German; and only by energetic, systematic, and continued efforts of Government and people can they prevent a shortage of food from negating the success of German arms. Yet they feel bound to grapple the problem as one calling for solution by the German people alone, for very small imports of food products can be expected from the neutral countries of Europe, and none at all from the United States and other overseas countries, and the small quantities that do come in will hardly be more than enough to make good the drain upon Germany's own available stocks in help-

*Die Deutsche Volksernährung und der Englische Aushungerungsplan. Eine Denkschrift von Friedrich Aereboe, Karl Ballod, Franz Beyschlag, Wilhelm Caspari, Paul Eltzbacher, Hedwig Heyl, Paul Krusch, Robert Kuczynski, Kurt Lehmann, Otto Lemmermann, Karl Oppenheimer, Max Rubner, Kurt von Rümker, Bruno Tacke, Hermann Warmbold, und Nathan Zuntz. Herausgegeben von Paul Eltzbacher. (Friedr. Vieweg and Sohn. Braunschweig. 1914.)

ing to feed the people of Belgium and Poland.

The simplest statistical elements of the problem are the following: Germany, with a population of 68,000,000, was consuming food products, when the war broke out, equivalent to an aggregate of 90,420 billion calories, including 2,307,000 tons of albumen; whereas the amount now available, under unchanged methods of living and feeding, is equal to only 67,870 billion calories, with 1,543,000 tons of albumen. Thus, there will be an apparent deficit of 22,590 billion calories and 764,000 tons of albumen. On the other hand, the authors hold that the minimum physiological requirements are only 56,750 billion calories, containing 1,605,000 tons of albumen, which would give a large surplus of calories and a small deficit of albumen, but they make certain recommendations which, if carried into effect, would bring the available supply up to 81,250 billion calories and 2,023,000 tons of albumen.

Germany raises (average for 1912-13) about 4,500,000 tons of wheat and imports nearly 2,000,000 tons, (about 73,000,000 bushels.) On the other hand, it exports about 530,000 tons net of the 11,900,000 tons of rye produced. It imports nearly 3,000,000 tons of low-grade barley and about 1,000,000 of maize, both chiefly for feeding stock. Its net imports of grain and legumes are 6,270,000 tons. Of its fruit consumption, about 30 per cent. has been imported. While Germany has been producing nearly its entire meat supply at home, this has been accomplished only by the very extensive use of foreign feedstuffs. The authors of this work estimate that the imports of meats and animals, together with the product from domestic animals fed with foreign feedstuffs, amount to not less than 33 per cent. of the total consumption. They also hold that about 58 per cent. of the milk consumed in Germany represents imports and the product of cows fed with foreign feedstuffs. Nearly 40 per cent. of the egg consumption was hitherto imported. The consumption of fish has averaged 576,000 tons, of which not less than 62 per cent. was imported;

and the home fisheries are now confined, besides the internal waters, almost wholly to the Baltic Sea—which means the loss of the catch of 142,000 tons hitherto taken from the North Sea. Even the German's favorite beverage, beer, contains 13 per cent. of imported ingredients.

The authors assume, as already intimated, that nearly all of these imports will be lost to Germany during the full duration of the war, and they take up, under this big limitation, the problem of showing how Germany can live upon its own resources and go on fighting till it wins. They undertake to show how savings can be made in the use of the supplies on hand, and also how production can be increased or changed so as to keep the country supplied with food products.

In the first place, they insist that the prohibition of the export of grain be made absolute; in other words, the small exception made in favor of Switzerland, which has usually obtained most of its grain from Germany, must be canceled. Savings in the present supplies of grain and feedstuffs must be made by a considerable reduction in the live stock, inasmuch as the grain, potatoes, turnips, and other stuffs fed to animals will support a great many more men if consumed directly by them. From the stock of cattle the poorer milkers must be eliminated and converted into beef, 10 per cent. of the milch cows to be thus disposed of. Then swine, in particular, must be slaughtered down to 65 per cent. of the present number, they being great consumers of material suitable for human food. In Germany much skim milk and buttermilk is fed to swine; the authors demand that this partial waste of very valuable albumens be stopped. The potato crop—of which Germany produces above 50,000,000 tons a year, or much more than any other land—must be more extensively drawn upon than hitherto for feeding the people. To this end potato-drying establishments must be multiplied; these will turn out a rough product for feeding animals, and a better sort for table use. It may be added here that the Prussian Government last Autumn decided to give financial aid to

agricultural organizations for erecting drying plants; also, that the Imperial Government has decreed that potatoes up to a maximum of 30 per cent. may be used by the bakers in making bread—a measure which will undoubtedly make the grain supply suffice till the 1915 crop is harvested. It is further recommended that more vegetables be preserved, whether directly in cold storage or by canning or pickling. Moreover, the industrial use of fats suitable for human food (as in making soaps, lubricating oils, &c.) must be stopped, and people must eat less meat, less butter, and more vegetables. Grain must not be converted into starch. People must burn coke rather than coal, for the coking process yields the valuable by-product of sulphate of ammonia, one of the most valuable of fertilizers, and greatly needed by German farmers now owing to the stoppage of imports of nitrate of soda from Chile.

In considering how the German people may keep up their production of food, the authors find that various factors will work against such a result. In the first place, there is a shortage of labor, nearly all the able-bodied young and middle-aged men in the farming districts being in the war. There is also a scarcity of horses, some 500,000 head having already been requisitioned for army use, and the imports of about 140,000 head (chiefly from Russia) have almost wholly ceased. The people must therefore resort more extensively to the use of motor plows, and the State Governments must give financial assistance to insure this wherever necessary; and such plows on hand must be kept more steadily in use through company ownership or rental. It may be remarked here, again, that the Prussian Government is also assisting agricultural organizations to buy motor plows. The supply of fertilizers has also been cut down by the war. Nitrate has just been mentioned. The authors recommend that the Government solve this problem by having many of the existing electrical plants turn partly to recovering nitrogen from the atmosphere. This, they say, could be done without

reducing the present production of electricity for ordinary purposes, since only 19 per cent. of the effective capacity of the 2,000,000 horse power producible by the electrical plants of Germany is actually used. The supply of phosphoric fertilizers is also endangered through the stoppage of imports of phosphate rock (nearly 1,000,000 tons a year) as well as the material from which to make sulphuric acid; also, through the reduction in the production of the iron furnaces of the country, from the slag of which over 2,000,000 tons of so-called Thomas phosphate flour was produced, will involve a big reduction in the make of that valuable fertilizer. Thus, there is a lack of horses; of fertilizers, and of the guiding hand of man. This last, however, can be partly supplied by utilizing for farm work such of the prisoners of war as come from the farm. As Germany now holds considerably more than 600,000 prisoners, it can draw many farm laborers from among them. Prisoners are already used in large numbers in recovering moorland for agricultural purposes.

This latter remark suggests one of the recommendations of the authors for increasing agricultural production—the increased recovery of moorlands. They show that Germany has at least 52,000 square miles (more than 33,000,000 acres) of moors convertible into good arable land, which, with proper fertilizing, can be made at once richly productive; they yield particularly large crops of grain and potatoes. Moreover, the State Governments must undertake the division of large landed estates among small proprietors wherever possible—and this is more possible just now than ever, owing to the fact that many large owners have been killed in battle. The reason for such a division is that the small holder gets more out of the acre than the large proprietor.

As Germany makes a large surplus of sugar, the authors advise that the area planted in beets be reduced and the land thus liberated be planted in grain, potatoes, and turnips; as a matter of fact, it is reported that the Government is now considering the question of reducing

the beetroot acreage by one-fourth. The authors also recommend that sugar be used to some extent in feeding stock, sweetening low-grade hay and roots with it to make them more palatable and nutritious. It is also regarded as profitable to leave 20 per cent. of sugar in the beets, so as to secure a more valuable feed product in the remnants. Still another agricultural change is to increase the crops of beans, peas, and lentils—vegetables which contain when dried as much nutrition as meat. Germany will need to increase its home production of these crops to replace the 300,000 tons of them hitherto imported.

Such are the principal points covered by these experts. Their conclusion is that, if their recommendations be carried out fully, and various economies be practiced—they could not be touched on in the limits of this article—Germany can manage to feed its people. But they insist, in their earnest, concluding words, that this can only be done by carrying out thoroughly all the methods of producing and saving food products advised by them. It is a serious problem, indeed, but one which, all Germany is convinced, can and will be solved.

HOCH DER KAISER

BY GEORGE DAVIES

HOCH DER KAISER! Amen! Amen!
*We of the pulpit and bar,
 We of the engine and car;
 Hail to the Caesar who's given us men.
 Our rightful heritage back again.*

Who kicks the dancing shoes from our feet;
 Snatches our mouths from the hot forced meat;
 Drags us away from our warm padded stalls;
 From our ivory keys, our song books and balls;
 Orders man's hands from the children's go-carts;
 Closes our fool schools of "ethics" and "arts."
 Puts our ten fingers on triggers and swords,
 Marshals us into War's legions by hordes.

*Hoch der Kaiser! Amen! Amen!
 We of the sea and the land;
 We of the clerking band;
 Hail to the Caesar who's given us men
 Our rightful heritage back again.*

WHO SUMMONS:

These women who write of loves that are loose,
 (Those little perversionist scribes of the Deuce!)
 Laughter of lies lilting lewd at their lips,
 Their souls and brains both in a maudlin eclipse;

Their bosoms as bare as their stories and songs;
 These coaxers of dogs with their "rights" and their wrongs.

WHO COMMANDS:

Strike from their shoulders the transparent mesh;
 Mark the Red Cross on the cloth for their flesh.

WHO ORDAINS:

Ye, men who seem women in work and at play;
 Ye, who do blindly as women may say;
 Ye, who kill life in the smug cabarets;
 Ye, all, at the beck of the little tea-tray;
 Ye, all, of the measure of daughters of clay.

Waken to face me: be women no more;
 But fellow-men-born, from top branch to the core;
 Men who must fight—who can kill, who can die,
 While women once more shall be covered and shy.

*Hoch der Kaiser! Amen! Amen!
 We of the hills and the homes;
 We of the plows and the tomes;
 Hail to the Caesar who's given us men
 Our rightful heritage back again.*

The Submarine of 1578

[From The London Times, Jan. 16, 1915.]

THE earliest description of a practical under-water boat is given by William Bourne in his book entitled "Inventions or Devices," published in 1578. Instructions for building such a boat are given in detail, and it has been conjectured that Cornelius van Drebbel, a Dutch physician, used this information for the construction of the vessel with which in the early part of the seventeenth century he carried out some experiments on the Thames. It is doubtful, however, whether van Drebbel's boat was ever entirely submerged, and the voyage with which he was credited, from Westminster to Greenwich, is supposed to have been made in an awash condition, with the head of the inventor above the surface. More than one writer at the time referred to van Drebbel's boat and en-

deavored to explain the apparatus by which his rowers were enabled to breathe under water.

Van Drebbel died in 1634, and no illustration of his boat has been discovered. Nineteen years later the vessel illustrated here was constructed at Rotterdam from the designs of a Frenchman named de Son. This is supposed to be the earliest illustration of any submarine, and the inscription under the drawing, which was printed at Amsterdam in the Calverstraat, (in the Three Crabs,) is in old Dutch, of which the following is a translation

The inventor of this ship will undertake to destroy in a single day a hundred vessels, and such destruction could not be prevented by fire, storm, bad weather, or the force of the waves, saving only that the Almighty should otherwise will it.

Vain would it be for ships lying in

The figures on the drawing refer to the following explanations:

1. The beam wherewith power shall be given to the ship.
2. The rudder of the ship, somewhat aft.
3. The keel plate.
4. The two ends of the ship, iron plated.
5. Iron bolts and screws.
6. How deep the ship goes into the water when awash.
7. The pivots on which the paddle-wheel turns.
8. Air holes.
9. Gallery along which men can move.

The inset is a drawing of the paddle-wheels which fill the centre portion of the boat and which work upon the pivot marked 7.

harbor to be regarded as safe, for the inventor could reach anywhere unless prevented by betrayal. None but he could control the craft. Therefore it may truly be called the lightning of the sea.

Its power shall be proven by a trip to the East Indies in six weeks or to France and back in a day, for as fast as a bird flieth can one travel in this boat.

This boat was 72 feet in length, and her greatest height was 12 feet, while the greatest breadth was 8 feet, tapering off to points at the end. Capt. Murray Sueter in his book on submarines gives these and other particulars of the vessel. At either end the boat had a cabin, the air in which remained good for about three hours, and in the middle of the boat was a large paddlewheel rotated by clock-work mechanism, which, it was claimed,

would run for eight hours when once wound up. The iron tips at the ends of the vessel were intended for ramming, and the inventor was confident he could sink the biggest English ship afloat by crushing in her hull under water. The boat was duly launched, but on trial of the machinery being made the paddle-wheel, though it revolved in air, would not move in the water, the machinery being not powerful enough. This, says Capt. Sueter, was apparently the only reason for de Son's failure, for his principles were distinctly sound, and he was certainly the first inventor of the mechanically propelled semi-submarine boat. After her failure de Son exhibited her for a trifle to any casual passer-by.

THE TORPEDO.

By Katherine Drayton Mayrant Simons, Jr.

DEATH, our mother, gave us her three gray gifts from the sea—
(Cherish your birthright, Brothers!)—speed, cunning, and certainty.
And mailèd Mars, he blest us—but his blessing was most to me!

For the swift gun sometimes falters, sparing the foe afar,
And the hid mine wastes destruction on the drag's decoying spar,
But I am the wrath of the Furies' path—of the war god's avatar!

Mine is the brain of thinking steel man made to match his own,
To guard and guide the death disks packed in the war head's hammered cone
To drive the cask of the thin air flask as the gyroscope has shown.

My brother, the gun, shrieks o'er the sea his curse from the covered deck,
My brother, the mine, lies sullen-dumb, agape for the dreadnought's wreck,
I glide on the breath of my mother, Death, and my goal is my only check!

More strong than the strength of armored ships is the firing pin's frail spark,
More sure than the helm of the mighty fleet are my rudders to their mark,
The faint foam fades from the bright screw blades—and I strike from the under dark!

Death, our mother, gave us her three gray gifts from the sea—
(Cherish your birthright, Brothers!)—speed, cunning, and certainty.
And mailèd Mars, he blest us—but his blessing was most to me!

"God Punish England, Brother"

A New Hymn of Germany's Gospel of Hatred

[From Public Opinion, London, Feb. 5, 1915.]

THE amazing outburst of hatred against England in Germany is responsible for a new form of greeting which has displaced the conventional formulas of salutation and farewell: "God punish England!" ("Gott strafe England!") is the form of address, to which the reply is: "May God punish her!" ("Gott mög'es strafen!")

"This extraordinary formula," says The Mail, "which is now being used all over Germany, is celebrated in a set of verses by Herr Hochstetter in a recent number of the well-known German weekly, Lustige Blätter. In its way this poem is as remarkable as Herr Ernst Lissauer's famous 'Hymn of Hate.'"

Among the prayers at Bruges Cathedral on the Kaiser's birthday was this German chant of hate, "God Punish England!"

A HYMN OF HATE.

Translated by

G. VALENTINE WILLIAMS.

This is the German greeting
When men their fellows meet,
The merchants in the market-place,
The beggars in the street.
A pledge of bitter enmity,
Thus runs the wingèd word:
"God punish England, brother!—
Yea! Punish her, O Lord!"

With raucous voice, brass-throated,
Our German shells shall bear
This curse that is our greeting
To the "cousin" in his lair.
This be our German battle cry,
The motto on our sword:
"God punish England, brother!—
Yea! Punish her, O Lord!"

By shell from sea, by bomb from air,
Our greeting shall be sped,
Making each English homestead
A mansion of the dead.
And even Grey will tremble
As falls each iron word:
"God punish England, brother!—
Yea! Punish her, O Lord!"

This is the German greeting
When men their fellows meet,
The merchants in the market-place,
The beggars in the street.
A pledge of bitter enmity,
Thus runs the wingèd word:
"God punish England, brother!—
Yea! Punish her, O Lord!"

"What German Lutheran pastors think of the gospel of hate that is at present being preached throughout the Fatherland may be judged from an article on the subject written for the Vossische Zeitung of Berlin, by Dr. Julius Schiller of Nürnberg, who describes himself as a royal Protestant pastor," says The Morning Post.

"Before the war, the pastor writes, it was considered immoral to hate; now, however, Germans know that they not only may, but they must hate. Herr Lissauer's 'Hymn of Hate' against England is, he declares, a faithful expression of the feelings cherished in the depths of the German soul.

"All protests against this hate," the pastor writes, "fall on deaf ears; we strike down all hands that would avert it. We cannot do otherwise; we must hate the brood of liars. Our hate was provoked, and the German can hate more thoroughly than any one else. A feeling that this is the case is penetrating into England, but the fear of the German hate is as yet hidden. There is a grain of truth in Lord Curzon's statement that the phlegmatic temperament of his countrymen is incapable of hating as the Germans hate.

"We Germans do, as a matter of fact, hate differently than the sons of Albion. We Germans hate honorably, for our hatred is based on right and justice. England, on the other hand, hates mendaciously, being impelled by envy, ill-will, and jealousy. It was high time that we tore the mask from England's face,

that we finally saw England as she really is.

"We hate with a clean conscience, although religion seems to condemn as unæsthetic everything that is included in the word hate.' The Pastor concludes by asserting that 'we, who are fighting for truth and right with clean hands and a clean conscience, must have Him on our side Who is stronger than the strongest battalions. Hence our courage and our confidence in a fortunate outcome of the world conflagration. The dawn will soon appear that announces that the "Day of Harvest" for Germany has broken.'"

"The avowal that the love of good Germans for Germany is inseparable from hatred of other countries shows how deeply the aggressiveness of German

policy has sunk into the nation's mood," says The Times. "Only by constantly viewing their own country as in a natural state of challenge to all others can Germans have come to absorb the view that hatred is the normal manifestation of patriotism. It is a purely militarist conception.

"Hate is at bottom a slavish passion, and remote from that heroic spirit of the warrior with which the Germans represent themselves as facing a world in arms. The hater subjects his mind to the domination of what he hates; he loses his independence and volition and becomes the prey of the hated idea. At last he cannot free his mind from the obsession; and the deliberate cultivation of hate in the conscientious German manner is a kind of mental suicide."

THE GREAT HOUR.

By HERMANN SUDERMANN.

WHETHER, O Father in Heaven, we
still put our trust in You,
Whether You are but a dream of a
sacred past,
See now, we swear to You, Witness of
Truth,
Not we have wanted it—
This murder, this world-ending murder—
Which now, with blood-hot sighs,
Stamps o'er the shuddering earth.
True to the earth, the bread-giving earth,
Happy and cheery in business and trade,
Peaceful we sat in the oak tree's shade,
Peaceful,
Though we were born to the sword.

Circled around us, for ever and ever,
Greed, sick with envy, and nets lifted high,
Full of inherited hatred.
Every one saw it, and every one felt
The secret venom, gushing forth,
Year after year,
Heavy and breath-bated years.
But hearts did not quiver
Nor hands draw the sword.

And then it came, the hour
Of sacred need, of pregnant Fate,
And what it brings forth, we will shape,
The brown gun in our mastering hand.

Ye mothers, what ye once have borne,
In honor or in vice,
Bring forth to every sacred shrine—
Your country's sacrifice.

Ye brides, whom future happiness,
Once kissed—it but seemed true,
Bring back to fair Germania
What she has given you.

Ye women, in silks or in linen,
Offer your husbands now.
Bid them goodbye, with your children,
With smiles and a blessing vow.

Ye all are doomed to lie sleepless,
Many a desolate night,
And dream of approaching conquests
And of your hero's might.

And dream of laurel and myrtle,
Until he shall return,
Till he, your master and shepherd,
Shall make the old joys burn.

And if he fell on the Autumn heath
And fell deep into death,
He died for Germania's greatness,
He died for Germania's breath.

The Fatherland they shall let stand,
Upon his blood-soaked loam,
And ne'er again shall they approach
Our sacred, peaceful home.
—Translated by Herman J. Mankiewicz.

The Peace of the World

A Famous Englishman's Diagnosis of the War Disease and His
Prescription for a Permanent Cure

By H. G. Wells

(COPYRIGHT, 1915, BY THE NEW YORK TIMES COMPANY.)

(Copyrighted in Great Britain and Ireland.)

I.

PROBABLY there have never been before in the whole past of mankind so many people convinced of the dreadfulness of war, nor so large a proportion anxious to end war, to rearrange the world's affairs so that this huge hideousness of hardship, suffering, destruction, and killing that still continues in Europe may never again be repeated.

The present writer is one of this great majority. He wants as far as possible to end war altogether, and contrive things so that when any unavoidable outbreak does occur it may be as little cruel and mischievous as it can be.

But it is one thing to desire a thing and another thing to get it. It does not follow because this aspiration for world-peace is almost universal that it will be realized. There may be faults in ourselves, unsuspected influences within us and without, that may be working to defeat our superficial sentiments. There must be not only a desire for peace, but a will for peace, if peace is to be established forever. If out of a hundred men ninety-nine desire peace and trouble no further, the one man over will arm himself and set up oppression and war again. Peace must be organized and maintained. This present monstrous catastrophe is the outcome of forty-three years of skillful, industrious, systematic world armament. Only by a disarmament as systematic, as skillful, and as devoted may we hope to achieve centuries of peace.

No apology is needed, therefore, for a discussion of the way in which peace

may be organized and established out of the settlement of this war. I am going to set out and estimate as carefully as I can the forces that make for a peace organization and the forces that make for war. I am going to do my best to diagnose the war disorder. I want to find out first for my own guidance, and then with a view to my co-operation with other people, what has to be done to prevent the continuation and recrudescence of warfare.

Such an inquiry is manifestly the necessary first stage in any world pacification. So manifestly that, of course, countless others are also setting to work upon it. It is a research. It is a research exactly like a scientific exploration. Each of us will probably get out a lot of truth and a considerable amount of error; the truth will be the same and the errors will confute and disperse each other. But it is clear that there is no simple panacea in this matter, and that only by intentness and persistence shall we disentangle a general conception of the road the peace-desiring multitude must follow.

Now, first be it noted that there is in every one a certain discord with regard to war. Every man is divided against himself. On the whole, most of us want peace. But hardly any one is without a lurking belligerence, a lurking admiration for the vivid impacts, the imaginative appeals of war. I am sitting down to write for the peace of the world, but immediately before I sat down to write I was reading the morning's paper, and particularly of the fight between the

Sydney and the Emden at Cocos Island.

I confess to the utmost satisfaction in the account of the smashing blows delivered by the guns of the Australian. There is a sensation of greatness, a beautiful tremendousness, in many of the crude facts of war; they excite in one a kind of vigorous exaltation; we have that destructive streak in us, and it is no good pretending that we have not; the first thing we must do for the peace of the world is to control that. And to control it one can do nothing more effective than to keep in mind the other side of the realities of war.

As my own corrective I have at hand certain letters from a very able woman doctor who returned last week from Calais. Lockjaw, gangrene, men tied with filthy rags and lying bitterly cold in coaly sheds; men unwounded, but so broken by the chill horrors of the Yser trenches as to be near demented—such things make the substance of her picture. One young officer talked to her rather dryly of the operations, of the ruined towns and villages, of the stench of dead men and horses, of the losses and wounds and mutilations among his men, of the list of pals he had lost. "Suddenly he began to cry. He broke down just like an overtaxed child. And he could not stop crying. He cried and cried, and I could do nothing to help him." He was a strong man and a brave man, and to that three months of war had brought him.

And then this again:

There were a fair number of Belgian doctors, but no nurses except the usual untrained French girls, almost no equipment, and no place for clean surgery. We heard of a house containing sixty-one men with no doctor or nurses—several died without having received any medical aid at all. Mrs. ——— and I even on the following Wednesday found four men lying on straw in a shop with leg and foot wounds who had not been dressed since Friday and had never been seen by a doctor. In addition there were hundreds and hundreds of wounded who could walk trying to find shelter in some corner, besides the many unwounded French and Belgian soldiers quartered in the town.

As if this inferno of misery were not enough, there were added the refugees! These were not Belgians, as I had imagined, but French. It appears that both

English and French armies have to clear the civil population out of the whole fighting area—partly to prevent spying and treachery, (which has been a curse to both armies,) and partly because they would starve. They are sent to Calais, and then by boat to Havre.

That first Sunday evening an endless procession flowed from the station to the quays in the drenching rain. Each family had a perambulator, (a surprisingly handsome one, too,) piled with sticks of bread, a few bundles of goods, and, when we peered inside, a couple of crying babies. There were few young people; mostly it was whimpering, frightened-looking children and wretched, bent old men and women. It seemed too bad to be true; even when they brushed past us in the rain we could not believe that their sodden figures were real. They were dematerialized by misery in some odd way.

Some of them slept in skating rinks, trucks, some in the Amiral Ganteaume. (One's senses could not realize that to the horrors of exile these people had added those of shipwreck next day.) Some certainly stood in the Booking Hall outside our hotel all night through. This sort of thing went on all the week, and was going on when we left.

Nevertheless, I was stirred agreeably by the imagination of the shells smashing the Emden and the men inside the Emden, and when I read the other day that the naval guns had destroyed over 4,000 men in the German trenches about Middlekirche I remarked that we were "doing well." It is only on the whole that we who want to end war hate and condemn war; we are constantly lapsing into fierceness, and if we forget this lurking bellicosity and admiration for hard blows in our own nature then we shall set about the task of making an end to it under hopelessly disabling misconceptions. We shall underrate and misunderstand altogether the very powerful forces that are against pacifist effort.

Let us consider first, then, the forces that are directly opposed to the pacification of the world, the forces that will work openly and definitely for the preservation of war as a human condition. And it has to be remembered that the forces that are for a thing are almost always more unified, more concentrated and effective than the forces that are against it. We who are against war and want to stop it are against it for a

great multitude of reasons. There are other things in life that we prefer, and war stops these other things. Some of us want to pursue art, some want to live industrious lives in town or country, some would pursue scientific developments, some want pleasures of this sort or that, some would live lives of religion and kindness, or religion and austerity.

But we all agree in fixing our minds upon something else than war. And since we fix our minds on other things, war becomes possible and probable through our general inattention. We do not observe it, and meanwhile the people who really care for war and soldiering fix their minds upon it. They scheme how it shall be done, they scheme to bring it about. Then we discover suddenly—as the art and social development, the industry and pleasant living, the cultivation of the civil enterprise of England, France, Germany, and Russia have discovered—that everything must be pushed aside when the war thinkers have decided upon their game. And until we of the pacific majority contrive some satisfactory organization to watch the war-makers we shall never end war, any more than a country can end crime and robbery without a police. Specialist must watch specialist in either case. Mere expressions of a virtuous abhorrence of war will never end war until the crack of doom.

The people who actually want war are perhaps never at any time very numerous. Most people sometimes want war, and a few people always want war. It is these last who are, so to speak, the living nucleus of the war creature that we want to destroy. That liking for an effective smash which gleamed out in me for a moment when I heard of the naval guns is with them a dominating motive. It is not outweighed and overcome in them as it is in me by the sense of waste, and by pity and horror and by love for men who can do brave deeds and yet weep bitterly for misery and the deaths of good friends. These war-lovers are creatures of a simpler constitution. And they seem capable of an ampler hate.

You will discover, if you talk to them

skillfully, that they hold that war “ennobles,” and that when they say ennobles they mean that it is destructive to the ten thousand things in life that they do not enjoy or understand or tolerate, things that fill them, therefore, with envy and perplexity—such things as pleasure, beauty, delicacy, leisure. In the cant of modern talk you will find them call everything that is not crude and forcible in life “degenerate.” But back to the very earliest writings, in the most bloodthirsty outpourings of the Hebrew prophets, for example, you will find that at the base of the warrior spirit is hate for more complicated, for more refined, for more beautiful and happier living.

The military peoples of the world have almost always been harsh and rather stupid peoples, full of a virtuous indignation of all they did not understand. The modern Prussian goes to war today with as supreme a sense of moral superiority as the Arabs when they swept down upon Egypt and North Africa. The burning of the library of Alexandria remains forever the symbol of the triumph of a militarist “culture” over civilization. This easy belief of the dull and violent that war “braces” comes out of a real instinct of self-preservation against the subtler tests of peace. This type of person will keep on with war if it can. It is to politics what the criminal type is to social order; it will be resentful and hostile to every attempt to fix up a pacific order in the world.

This heavy envy which is the dominant characteristic of the pro-military type is by no means confined to it. More or less it is in all of us. In England one finds it far less frequently in professional soldiers than among sedentary learned men. In Germany, too, the more uncompromising and ferocious pro-militarism is to be found in the frock coats of the professors. Just at present England is full of virtuous reprehension of German military professors, but there is really no monopoly of such in Germany, and before Germany England produced some of the most perfect specimens of aggressive militarist conceivable. To read Froude upon Ireland or

Carlyle upon the Franco-German War is to savor this hate-dripping temperament in its perfection.

Much of this literary bellicosity is pathological. Men overmuch in studies and universities get ill in their livers and sluggish in their circulations; they suffer from shyness, from a persuasion of excessive and neglected merit, old maid's melancholy, and a detestation of all the levities of life. And their suffering finds its vent in ferocious thoughts. A vigorous daily bath, a complete stoppage of wine, beer, spirits, and tobacco, and two hours of hockey in the afternoon would probably make decently tolerant men of all these fermenting professional militarists. Such a regimen would certainly have been the salvation of both Froude and Carlyle. It would probably have saved the world from the vituperation of the Hebrew prophets—those models for infinite mischief.

The extremist cases pass to the average case through insensible degrees. We are all probably, as a species, a little too prone to intolerance, and if we do in all sincerity mean to end war in the world we must prepare ourselves for considerable exercises in restraint when strange people look, behave, believe, and live in a manner different from our own. The minority of permanently bitter souls who want to see objectionable cities burning and men fleeing and dying form the real strength in our occasional complicities.

The world has had its latest object lesson in the German abuse of English and French as "degenerates," of the Russians as "Mongol hordes," of the Japanese as "yellow savages," but it is not only Germans who let themselves slip into national vanity and these ugly hostilities to unfamiliar life. The first line of attack against war must be an attack upon self-righteousness and intolerance. These things are the germ of uncompromising and incurable militarism everywhere.

Now, the attack upon self-righteousness and intolerance and the stern, self-satisfied militarism that arises naturally out of these things is to be made in a

number of ways. The first is a sedulous propaganda of the truth about war, a steadfast resolve to keep the pain of warfare alive in the nerves of the careless, to keep the stench of war under the else indifferent nose. It is only in the study of the gloomily megalomaniac historian that aggressive war becomes a large and glorious thing. In reality it is a filthy outrage upon life, an idiot's smashing of the furniture of homes, a mangling, a malignant mischief, a scalding of stokers, a disemboweling of gunners, a raping of caught women by drunken soldiers. By book and pamphlet, by picture and cinematograph film, the pacifist must organize wisdom in these matters.

And not only indignation and distress must come to this task. The stern, uncompromising militarist will not be moved from his determinations by our horror and hostility. These things will but "brace" him. He has a more vulnerable side. The ultimate lethal weapon for every form of stupidity is ridicule, and against the high silliness of the militarist it is particularly effective. It is the laughter of wholesome men that will finally end war. The stern, strong, silent man will cease to trouble us only when we have stripped him of his last rag of pretension and touched through to the quick of his vanity with the realization of his apprehended foolishness. Literature will have failed humanity if it is so blinded by the monstrous agony in Flanders as to miss the essential triviality at the head of the present war. Not the slaughter of ten million men can make the quality of the German Kaiser other than theatrical and silly.

The greater part of the world is in an agony, a fever, but that does not make the cause of that fever noble or great. A man may die of yellow fever through the bite of a mosquito; that does not make a mosquito anything more than a dirty little insect or an aggressive imperialist better than a pothouse fool.

Henceforth we must recognize no heroic war but defensive war, and as the only honorable warriors such men as those peasants of Visé who went out with shotguns against the multitudinous

overwhelming nuisance of invasion that trampled down their fields.

Or war to aid such defensive war.

II.

But the people who positively admire and advocate and want war for its own sake are only a small, feverish minority of mankind. The greater obstacle to the pacification of the world is not the war-seeker, but the vast masses of people who for the most various motives support and maintain all kinds of institutions and separations that make for war. They do not want war, they do not like war, but they will not make sacrifices, they will not exert themselves in any way to make war difficult or impossible.

It is they who give the war maniac his opportunity. They will not lock the gun away from him, they will not put a reasonable limit to the disputes into which he can ultimately thrust his violent substitute for a solution. They are like the people who dread and detest yellow fever, but oppose that putting of petrol on the ponds which is necessary to prevent it because of the injury to the water flowers.

Now, it is necessary, if we are to have an intelligently directed anti-war campaign, that we should make a clear, sound classification of these half-hearted people, these people who do not want war, but who permit it. Their indecisions, their vagueness, these are the really effective barriers to our desire to end war forever.

And first, there is one thing very obvious, and that is the necessity for some controlling world authority if treaties are to be respected and war abolished. While there are numerous sovereign States in the world each absolutely free to do what it chooses, to arm its people or repudiate engagements, there can be no sure peace. But great multitudes of those who sincerely desire peace forever cannot realize this. There are, for example, many old-fashioned English liberals who denounce militarism and "treaty entanglements" with equal ardor; they want Britain to stand alone, unaggressive, but free; not realizing

that such an isolation is the surest encouragement to any war-enamored power. Exactly the same type is to be found in the United States, and is probably even more influential there. But only by so spinning a web of treaties that all countries are linked by general obligations to mutual protection can a real world-pacification be achieved.

The present alliance against the insufferable militarism of Germany may very probably be the precursor of a much wider alliance against any aggression whatever in the future. Only through some such arrangement is there any reasonable hope of a control and cessation of that constant international bickering and pressure, that rivalry in finance, that competition for influence in weak neutral countries, which has initiated all the struggles of the last century, and which is bound to accumulate tensions for fresh wars so long as it goes on.

Already several States, and particularly the Government of the United States of America, have signed treaties of arbitration, and The Hague Tribunal spins a first web of obligations, exemplary if gossamer, between the countries of the world. But these are but the faint initial suggestions of much greater possibilities, and it is these greater possibilities that have now to be realized if all the talk we have had about a war to end war is to bear any fruit. What is now with each week of the present struggle becoming more practicable is the setting up of a new assembly that will take the place of the various embassies and diplomatic organizations, of a mediaeval pattern and tradition, which have hitherto conducted international affairs.

This war must end in a public settlement, to which all of the belligerents will set their hands; it will not be a bundle of treaties, but one treaty binding eight or nine or more powers. This settlement will almost certainly be attained at a conference of representatives of the various Foreign Offices involved. Quite possibly interested neutral powers will also send representatives. There is no reason whatever why this conference

should dissolve, why it should not become a permanent conference upon the inter-relations of the participating powers and the maintenance of the peace of the world. It could have a seat and officials, a staff, and a revenue of its own; it could sit and debate openly, publish the generally binding treaties between its constituent powers, and claim for the support of its decisions their military and naval resources.

The predominance of the greater powers could be secured either by the representatives having multiple votes, according to the population represented, or by some sort of proportional representation. Each power could appoint its representatives through its Foreign Office or by whatever other means it thought fit. They could as conveniently be elected by a legislature or a nation. And such a body would not only be of enormous authority in the statement, interpretation, and enforcement of treaties, but it could also discharge a hundred useful functions in relation to world hygiene, international trade and travel, the control of the ocean, the exploration and conservation of the world's supplies of raw material and food supply. It would be, in fact, a World Council.

Today this is an entirely practicable and hopeful proposal if only we can overcome the opposition of those who cling to the belief that it is possible for a country to be at the same time entirely pacific and entirely irresponsible to and detached from the rest of mankind.

Given such a body, such a great alliance of world powers, much else in the direction of world pacification becomes possible. Without it we may perhaps expect a certain benefit from the improved good feeling of mankind and the salutary overthrow of the German military culture, but we cannot hope for any real organized establishment of peace.

I believe that a powerful support for the assembly and continuance of such a world congress as this could be easily and rapidly developed in North and South America, in Britain and the British Empire generally, in France and

Italy, in all the smaller States of northern, central, and western Europe. It would probably have the personal support of the Czar, unless he has profoundly changed the opinions with which he opened his reign, the warm accordance of educated China and Japan, and the good will of a renascent Germany. It would open a new era for mankind.

III.

Now, this idea of a congress of the belligerents to arrange the peace settlements after this war, expanding by the accession of neutral powers into a permanent world congress for the enforcement of international law and the maintenance of the peace of mankind, is so reasonable and attractive and desirable that if it were properly explained it would probably receive the support of nineteen out of every twenty intelligent persons.

Nevertheless, its realization is, on the whole, improbable. A mere universal disgust with war is no more likely to end war than the universal dislike for dying has ended death. And though war, unlike dying, seems to be an avoidable fate, it does not follow that its present extreme unpopularity will end it unless people not only desire but see to the accomplishment of their desire.

And here again one is likely to meet an active and influential opposition. Though the general will and welfare may point to the future management of international relations through a world congress, the whole mass of those whose business has been the direction of international relations is likely to be either skeptical or actively hostile to such an experiment. All the foreign offices and foreign ministers, the diplomatists universally, the politicians who have specialized in national assertion, and the courts that have symbolized and embodied it, all the people, in fact, who will be in control of the settlement, are likely to be against so revolutionary a change.

For it would be an entirely revolutionary change. It would put an end to secrecy. It would end all that is usually understood by diplomacy. It would clear

the world altogether of those private understandings and provisional secret agreements, those intrigues, wire-pullings, and quasi-financial operations that have been the very substance of international relations hitherto. To these able and interested people, for the most part highly seasoned by the present conditions, finished and elaborated players at the old game, this is to propose a new, crude, difficult, and unsympathetic game. They may all of them, or most of them, hate war, but they will cling to the belief that their method of operating may now, after a new settlement, be able to prevent or palliate war.

All men get set in a way of living, and it is as little in human nature to give up cheerfully in the middle of life a familiar method of dealing with things in favor of a new and untried one as it is to change one's language or emigrate to an entirely different land. I realize what this proposal means to diplomatists when I try to suppose myself united to assist in the abolition of written books and journalism in favor of the gramophone and the cinematograph. Or united to adopt German as my means of expression. It is only by an enormous pressure of opinion in the world behind these monarchs, ministers, and representatives that they will be induced even to consider the possibility of adapting themselves to this novel style of international dealing through a permanent congress. It is only the consideration of its enormous hopefulness for the rest of the world that gives one the courage to advocate it.

In the question of the possible abolition of the present diplomatic system, just as in the case of the possible abolition of war, while on the side for abolition there must be a hugely preponderating interest and a hugely preponderating majority, it is, nevertheless, a dispersed interest and an unorganized, miscellaneous majority. The minority is, on the other hand, compact, more intensively and more immediately interested and able to resist such great changes with a maximum of efficiency. There is a tremendous need, therefore, for a world congress organization propaganda

if this advantageously posted minority is to be overcome.

And from such countries as the American States in particular, and from the small liberal neutrals in Europe, whose diplomacy is least developed and least influential, liberal-minded people through the world are most disposed to expect, and do expect, a lead in this particular matter. The liberal forces in Britain, France, and Russia are extraordinarily embarrassed and enslaved by the vast belligerent necessities into which their lives have been caught. But they would take up such a lead with the utmost vigor and enthusiasm.

No one who has followed the diplomatic history of the negotiations that led to this war can doubt that if there had been no secret treaties, but instead open proclamations of intentions and an open discussion of international ambitions, the world might have been saved this catastrophe. It is no condemnation of any person or country to say this. The reserves and hesitations and misconceptions that led Germany to suppose that England would wait patiently while France and Belgium were destroyed before she herself received attention were unavoidable under the existing diplomatic conditions. What reasonable people have to do now is not to recriminate over the details in the working of a system that we can now all of us perceive to be hopelessly bad, but to do our utmost in this season of opportunity to destroy the obscurities in which fresh mischief may fester for our children.

Let me restate this section in slightly different words. At the end of this war there must be a congress of adjustment. The suggestion in this section is to make this congress permanent, to use it as a clearing house of international relationships and to abolish embassies.

Instead of there being a British Ambassador, for example, at every sufficiently important capital, and an ambassador from every important State in London, and a complex tangle of relationships, misstatements, and misconceptions arising from the ill-co-ordinated activities of this double system of agents, it is proposed to send one or several

ambassadors to some central point, such as The Hague, to meet there all the ambassadors of all the significant States in the world and to deal with international questions with a novel frankness in a collective meeting.

This has now become a possible way of doing the world's business because of the development of the means of communication and information. The embassy in a foreign country, as a watching, remonstrating, proposing extension of its country of origin, a sort of eye and finger at the heart of the host country, is now clumsy, unnecessary, inefficient, and dangerous. For most routine work, for reports of all sorts, for legal action, and so forth, on behalf of traveling nationals, the consular service is adequate, or can easily be made adequate. What remains of the ambassadorial apparatus might very well merge with the consular system and the embassy become an international court civility, a ceremonial vestige without any diplomatic value at all.

IV.

Given a permanent world congress developed out of the congress of settlement between the belligerents, a world alliance, with as a last resort a call upon the forces of the associated powers, for dealing with recalcitrants, then a great number of possibilities open out to humanity that must otherwise remain inaccessible. But before we go on to consider these it may be wise to point out how much more likely a world congress is to effect a satisfactory settlement at the end of this war than a congress confined to the belligerents.

The war has progressed sufficiently to convince every one that there is now no possibility of an overwhelming victory for Germany. It must end in a more or less complete defeat of the German and Turkish alliance, and in a considerable readjustment of Austrian and Turkish boundaries. Assisted by the generosity of the doomed Austrians and Turks, the Germans are fighting now to secure a voice as large as possible in the final settlement, and it is conceivable that in the end that settlement may

be made quite an attractive one for Germany proper by the crowning sacrifice of suicide on the part of her two subordinated allies.

There can be little doubt that Russia will gain the enormous advantage of a free opening into the Mediterranean and that the battle of the Marne turned the fortunes of France from disaster to expansion. But the rest of the settlement is still vague and uncertain, and German imperialism, at least, is already working hard and intelligently for a favorable situation at the climax, a situation that will enable this militarist empire to emerge still strong, still capable of recuperation and of a renewal at no very remote date of the struggle for European predominance. This is a thing as little for the good of the saner German people as it is for the rest of the world, but it is the only way in which militant imperialism can survive at all.

The alternative of an imperialism shorn of the glamour of aggression, becoming constitutional and democratic—the alternative, that is to say, of a great liberal Germany—is one that will be as distasteful almost to the people who control the destinies of Germany today, and who will speak and act for Germany in the final settlement, as a complete submission to a Serbian conqueror would be.

At the final conference of settlement Germany will not be really represented at all. The Prussian militarist empire will still be in existence, and it will sit at the council, working primarily for its own survival. Unless the Allies insist upon the presence of representatives of Saxony, Bavaria, and so forth, and demand the evidence of popular sanctions—a thing they are very unlikely to demand—that is what "Germany" will signify at the conference. And what is true of Germany will be true, more or less, of several other of the allied powers.

A conference confined purely to the belligerents will be, in fact, a conference not even representative of the belligerents. And it will be tainted with all the traditional policies, aggressions, suspicions, and subterfuges that led up to the war. It will not be the end of the

old game, but the readjustment of the old game, the old game which is such an abominable nuisance to the development of modern civilization. The idealism of the great alliance will certainly be subjected to enormous strains, and the whole energy of the Central European diplomatists will be directed to developing and utilizing these stresses.

This, I think, must be manifest even to the foreign offices most concerned. They must see already ahead of them a terrible puzzle of arrangement, a puzzle their own bad traditions will certainly never permit them to solve. "God save us," they may very well pray, "from our own cleverness and sharp dealing," and they may even welcome the promise of an enlarged outlook that the entry of the neutral powers would bring with it.

Every foreign office has its ugly, evil elements, and probably every foreign office dreads those elements. There are certainly Russian fools who dream about India, German fools who dream about Canada and South America, British fools who dream about Africa and the East; aggressionists in the blood, people who can no more let nations live in peace than kleptomaniacs can keep their hands in their own pockets. But quite conceivably there are honest monarchs and sane foreign ministers very ready to snatch at the chance of swamping the evil in their own Chancelleries.

It is just here that the value of neutral participation will come in. Whatever ambitions the neutral powers may have of their own, it may be said generally that they are keenly interested in preventing the settlement from degenerating into a deal in points of vantage for any further aggressions in any direction. Both the United States of America and China are traditionally and incurably pacific powers, professing and practicing an unaggressive policy, and the chief outstanding minor States are equally concerned in securing a settlement that shall settle.

And moreover, so wide reaching now are all international agreements that they have not only a claim to intervene juridically, but they have the much more

pressing claim to participate on the ground that no sort of readjustment of Europe, Western Asia, and Africa can leave their own futures unaffected. They are wanted not only in the interests of the belligerent peoples, but for their own sakes and the welfare of the world all together.

V.

Now a world conference, once it is assembled, can take up certain questions that no partial treatment can ever hope to meet. The first of the questions is disarmament. No one who has watched the politics of the last forty years can doubt the very great share the business and finance of armament manufacture has played in bringing about the present horrible killing, and no one who has read accounts of the fighting can doubt how much this industry has enhanced the torment, cruelty, and monstrosity of war.

In the old warfare a man was either stabbed, shot, or thrust through after an hour or so of excitement, and all the wounded on the field were either comfortably murdered or attended to before the dawn of the next day. One was killed by human hands, with understandable and tolerable injuries. But in this war the bulk of the dead—of the western Allies, at any rate—have been killed by machinery, the wounds have been often of an incncceivable horribleness, and the fate of the wounded has been more frightful than was ever the plight of wounded in the hands of victorious savages. For days multitudes of men have been left mangled, half buried in mud and filth, or soaked with water, or frozen, crying, raving between the contending trenches. The number of men that the war, without actual physical wounds, has shattered mentally and driven insane because of its noise, its stresses, its strange unnaturalness, is enormous. Horror in this war has overcome more men than did all the arrows of Cressy.

Almost all this enhanced terribleness of war is due to the novel machinery of destruction that science has rendered possible. The wholesale mangling and

destroying of men by implements they have never seen, without any chance of retaliation, has been its most constant feature. You cannot open a paper of any date since the war began without reading of men burned, scalded, and drowned by the bursting of torpedoes from submarines, of men falling out of the sky from shattered aeroplanes, of women and children in Antwerp or Paris mutilated frightfully or torn to ribbons by aerial bombs, of men smashed and buried alive by shells. An indiscriminate, diabolical violence of explosives resulting in cruelties for the most part ineffective from the military point of view is the incessant refrain of this history.

The increased dreadfulness of war due to modern weapons is, however, only one consequence of their development. The practicability of aggressive war in settled countries now is entirely dependent on the use of elaborate artillery on land and warships at sea. Were there only rifles in the world, were an ordinary rifle the largest kind of gun permitted, and were ships specifically made for war not so made, then it would be impossible to invade any country defended by a patriotic and spirited population with any hopes of success because of the enormous defensive capacity of entrenched riflemen not subjected to an unhampered artillery attack.

Modern war is entirely dependent upon equipment of the most costly and elaborate sort. A general agreement to reduce that equipment would not only greatly minimize the evil of any war that did break out, but it would go a long way toward the abolition of war. A community of men might be unwilling to renounce their right of fighting one another if occasion arose, but they might still be willing to agree not to carry arms or to carry arms of a not too lethal sort, to carry pistols instead of rifles or sticks instead of swords. That, indeed, has been the history of social amelioration in a number of communities; it has led straight to a reduction in the number of encounters. So in the same way the powers of the world might be willing to adopt such a limitation of armaments,

while still retaining the sovereign right of declaring war in certain eventualities. Under the assurances of a world council threatening a general intervention, such a partial disarmament would be greatly facilitated.

And another aspect of disarmament which needs to be taken up and which only a world congress can take up must be the arming of barbaric or industrially backward powers by the industrially and artillery forces in such countries as efficient powers, the creation of navies Turkey, Servia, Peru, and the like. In Belgium countless Germans were blown to pieces by German-made guns, Europe arms Mexico against the United States; China, Africa, Arabia are full of European and American weapons. It is only the mutual jealousies of the highly organized States that permit this leakage of power. The tremendous warnings of our war should serve to temper their foolish hostilities, and now, if ever, is the time to restrain this insane arming of the less advanced communities.

But before that can be done it is necessary that the manufacture of war material should cease to be a private industry and a source of profit to private individuals, that all the invention and enterprise that blossoms about business should be directed no longer to the steady improvement of man-killing. It is a preposterous and unanticipated thing that respectable British gentlemen should be directing magnificently organized masses of artisans upon the Tyne-side in the business of making weapons that may ultimately smash some of those very artisans to smithereens.

At the risk of being called "Utopian" I would submit that the world is not so foolish as to allow that sort of thing to go on indefinitely. It is, indeed, quite a recent human development. All this great business of armament upon commercial lines is the growth of half a century. But it has grown with the vigor of an evil weed, it has thrown out a dark jungle of indirect advertisement, and it has compromised and corrupted great numbers of investors and financial people. It is perhaps the most powerful single interest of all those that will fight

against the systematic minimization and abolition of war, and rather than lose his end it may be necessary for the pacifist to buy out all these concerns, to insist upon the various States that have sheltered them taking them over, lock, stock, and barrel, as going businesses.

From what we know of officialism everywhere, the mere transfer will involve almost at once a decline in their vigor and innovating energy. It is perhaps fortunate that the very crown of the private armaments business is the Krupp organization and that its capture and suppression is a matter of supreme importance to all the allied powers. Russia, with her huge population, has not as yet developed armament works upon a very large scale and would probably welcome proposals that minimized the value of machinery and so enhanced that of men. Beyond this and certain American plants for the making of rifles and machine guns only British and French capital is very deeply involved in the armaments trade. The problem is surely not too difficult for human art and honesty.

It is not being suggested that the making of arms should cease in the world, but only that in every country it should become a State monopoly and so completely under Government control. If the State can monopolize the manufacture and sale of spirits, as Russia has done, if it can, after the manner of Great Britain, control the making and sale of such a small, elusive substance as saccharin, it is ridiculous to suppose that it cannot keep itself fully informed of the existence of such elaborated machinery as is needed to make a modern rifle barrel. And it demands a very minimum of alertness, good faith, and good intentions for the various manufacturing countries to keep each other and the world generally informed upon the question of the respective military equipments. From this state of affairs to a definition of a permissible maximum of strength on land and sea for all the high contracting powers is an altogether practicable step. Disarmament is not a dream; it is a thing more practicable than a general hygienic convention and

more easily enforced than custom and excise.

Now none of this really involves the abandonment of armies or uniforms or national service. Indeed, to a certain extent it restores the importance of the soldier at the expense of machinery. A world conference for the suppressing of the peace and the preservation of armaments would neither interfere with such dear incorrigible squabbles as that of the orange and green factions in Ireland, (though it might deprive them of their more deadly weapons,) nor absolutely prohibit war between adjacent States. It would, however, be a very powerful delaying force against the outbreak of war, and it would be able to insist with a quite novel strength upon the observation of the rules of war.

It is no good pretending that mere pacifism will end war; what will end war, what, indeed, may be ending war at the present time, is war—against militarism. Force respects itself and no other power. The hope for a world of peace in the future lies in that, in the possibility of a great alliance, so powerful that it will compel adhesions, an alliance prepared to make war upon and destroy and replace the Government of any State that became aggressive in its militarism. This alliance will be in effect a world congress perpetually restraining aggressive secession, and obviously it must regard all the No-Man's Lands—and particularly that wild waste, the ocean—as its highway. The fleets and marines of the allied world powers must become the police of the wastes and waters of the earth.

VI.

Now, such a collective control of belligerence and international relations is the obvious common sense settlement of the present world conflict, it is so manifest, so straight-forward that were it put plainly to them it would probably receive the assent of nineteen sane men out of twenty in the world. This, or some such thing as this, they would agree, is far better than isolations and the perpetual threat of fresh warfare.

But against it there work forces, within these people and without, that render the attainment of this generally acceptable solution far less probable than a kind of no-solution that will only be a reopening of all our hostilities and conflicts upon a fresh footing. Some of these forces are vague and general, and can only be combated by a various and abundant liberal literature, in a widely dispersed battle in which each right-thinking man must do as his conscience directs him. There are the vague national antagonisms, the reservations in favor of one's own country's righteousness, harsh religious and social and moral cant of the Carlyle type, greed, resentment, and suspicion. The greatest of these vague oppositions is that want of faith which makes man say war has always been and must always be, which makes them prophesy that whatever we do will become corrupted and evil, even in the face of intolerable present evils and corruptions.

When at the outbreak of the war I published an article headed "The War That Will End War," at once Mr. W. L. George hastened to reprove my dreaming impracticability. "War there has always been." Great is the magic of a word! He was quite oblivious to the fact that war has changed completely in its character half a dozen times in half a dozen centuries; that the war we fought in South Africa and the present war and the wars of mediaeval Italy and the wars of the Red Indians have about as much in common as a cat and a man and a pair of scissors and a motor car—namely, that they may all be the means of death.

If war can change its character as much as it has done it can change it altogether; if peace can be kept indefinitely in India or North America, it can be kept throughout the world. It is not I who dream, but Mr. George and his like who are not yet fully awake, and it is their somnolence that I dread more than anything else when I think of the great task of settlement before the world.

It is this rather hopeless, inert, pseudo-sage mass of unbelievers who

render possible the continuation of war dangers. They give scope for the activities of the evil minority which hates, which lives by pride and grim satisfactions, and which is therefore anxious to have more war and more. And it is these inert half-willed people who will obstruct the disentanglement of the settlement from diplomatic hands. "What do we know about the nuance of such things?" they will ask, with that laziness that apes modesty. It is they who will complain when we seek to buy out the armaments people. Probably all the private armament firms in the world could be bought up for seventy million pounds, but the unbelievers will shake their heads and say: "Then there will only be something else instead."

Yet there are many ungauged forces on the side of the greater settlement. Cynicism is never more than a half-truth, and because man is imperfect it does not follow that he must be futile. Russia is a land of strange silences, but it is manifest that whatever the innermost quality of the Czar may be, he is no clap-trap vulgar conqueror of the Wilhelm-Napoleon pattern. He began his reign, and he may yet crown his reign, with an attempt to establish peace on a newer, broader foundation. His religion, it would seem, is his master and not his servant. There has been no Russian Bernhardt.

And there has been much in America, much said and much done, since the war broke out that has surprised the world. I may confess for myself, and I believe that I shall speak for many other Europeans in this matter, that what we feared most in the United States was levity. We expected mere excitement, violent fluctuations of opinion, a confused irresponsibility, and possibly mischievous and disastrous interventions. It is no good hiding an open secret. We judged America by the peace headline. It is time we began to offer our apologies to America and democracy. The result of reading endless various American newspapers and articles, of following the actions of the American Government, of talking to representative Americans, is to realize the existence of a very clear,

strong national mentality, a firm, self-controlled, collective will, far more considerable in its totality than the world has ever seen before.

We thought the United States would be sentimentally patriotic and irresponsible, that they would behave as though the New World was, indeed, a separate planet, and as though they had neither duties nor brotherhood in Europe. It is quite clear, on the contrary, that the people of the United States consider this war as their affair also, and that they have the keenest sense of their responsibility for the general welfare of mankind.

So that as a second chance, after the possibility of a broad handling of the settlement by the Czar, and as a very much bigger probability, is the insistence by America upon her right to a voice in the ultimate settlement and an initiative from the Western Hemisphere that will lead to a world congress. There are the two most hopeful sources of that great proposal. It is the tradition of British national conduct to be commonplace to the pitch of dullness, and all the stifled intelligence of Great Britain will beat in vain against the national passion for the ordinary. Britain, in the guise of Sir Edward Grey, will come to the congress like a family solicitor among the Gods. What is the good of shamming about this least heroic of

Fatherlands? But Britain would follow a lead; the family solicitor is honest and well-meaning. France and Belgium and Italy are too deeply in the affair, or without sufficient moral prestige, for a revolutionary initiative in international relationship.

There is, however, a possible third source from which the proposal for a world congress might come, with the support of both neutrals and belligerents, and that is The Hague. Were there a man of force and genius at The Hague now, a man speaking with authority and not as the scribes, he might thrust enormous benefits upon the world.

It is from these three sources that I most hope for leading now. Of the new Pope and his influence I know nothing. But in the present situation of the world's affairs it behooves us ill to wait idle until leaders clear the way for us. Every man who realizes the broad conditions of the situation, every one who can talk or write or echo, can do his utmost to spread his realization of the possibilities of a world congress and the establishment of world law and world peace that lie behind the monstrous agonies and cruelties and confusions of this catastrophic year. Given an immense body of opinion initiatives may break out effectively anywhere; failing it, they will be fruitless everywhere.

SMALL BUT GREAT-SOULED.

By EMMELINE PANKHURST.

[From King Albert's Book.]

THE women of Great Britain will never forget what Belgium has done for all that women hold most dear.

In the days to come mothers will tell their children how a small but great-souled nation fought to the death against overwhelming odds and sacrificed all things to save the world from an intolerable tyranny.

The story of the Belgian people's defense of freedom will inspire countless generations yet unborn.

Zeppelin Raids on London

By the Naval Correspondent of The London Times

[From The London Times, Jan. 22, 1915.]

SOME doubt has been thrown by correspondents upon the ability of the Zeppelins to reach London from Cuxhaven, the place from which the raiders of Tuesday night appear to have started. The distance which the airships traveled, including their manoeuvres over the land, must have been quite 650 miles. This is not nearly as far as similar airships have traveled in the past. One of the Zeppelins flew from Friedrichshafen, on Lake Constance, to Berlin, a continuous flight of about 1,000 miles, in thirty-one hours. Our naval officers will also recall the occasion of the visit of the First Cruiser Squadron to Copenhagen in September, 1912, when the German passenger airship *Hansa* was present. The *Hansa* made the run from Hamburg to Copenhagen, a distance of 198 miles, in seven hours, and Count Zeppelin was on board her. Supposing an airship left Cuxhaven at noon on some day when the conditions were favorable and traveled to London, she could not get back again by noon next day if she traveled at the half-power speed which the vessels on Tuesday appear to have used. But if she did the run at full speed—that is to say, at about fifty miles an hour—she could reach London by 9 o'clock the same evening, have an hour to manoeuvre over the capital, and return by 7 o'clock next morning. With a favorable wind for her return journey, she might make an even longer stay. Given suitable conditions, therefore, as on Tuesday, there appears to be no reason why, as far as speed and fuel endurance are concerned, these vessels should not reach London from Cuxhaven.

With regard also to the amount of ammunition a Zeppelin can carry, this depends, of course, on the lifting power of the airship and the way in which it is

distributed. The later Zeppelins are said to be able to carry a load of about 15,000 pounds, which is available for the crew, fuel for the engines, ballast, provisions, and spare stores, a wireless installation, and armament or ammunition. With engines of 500 horse power, something like 360 pounds of fuel is used per hour to drive them at full speed. Thus for a journey of twenty hours the vessel would need at least 7,200 pounds of fuel. The necessary crew would absorb 2,000 pounds more, and probably another 1,500 pounds would be taken up for ballast and stores. Allowing a weight of 250 pounds for the wireless equipment, there would remain about 4,000 pounds for bombs, or something less than two tons of explosives, for use against a target 458 miles from the base. This amount of ammunition could be increased proportionately as the conditions were altered by using a nearer base, or by proceeding at a slower and therefore more economical speed, &c.

It is noteworthy that although the German airships were expected to act as scouts in the North Sea they do not appear to have accomplished anything in this direction. Possibly this has been due to the fear of attack by our men-of-war or aircraft if the movements were made in daytime, when alone they would be useful for this purpose. What happened during the Christmas Day affair, when, as the official report said, "a novel combat" ensued between the most modern cruisers on the one hand and the enemy's aircraft and submarines on the other, would not tend to lessen this apprehension. On the other hand, the greater stability of the atmosphere at night makes navigation after dark easier, and I believe that it has been usual in all countries for airships to make their trial trips at night.

It is customary also for the airships to

Radius of Action of a Modern Zeppelin

The above outline map, which we reproduce from "The Naval Annual," shows in the dotted circle the comparative radius of action of a modern Zeppelin at half-power—about 36 knots speed—with other types of air machines, assuming her to be based on Cologne. It is estimated that aircraft of this type, with a displacement of about 22 tons, could run for 60 hours at half-speed, and cover a distance equivalent to about 2,160 sea miles. This would represent the double voyage, out and home, from Cologne well to the north of the British Isles, to Petrograd, to Athens, or to Lisbon. The inner circle shows the radius of action of a Parseval airship at half-power—about 30 knots—based on Farnborough, and the small inner circle represents the radius of action of a hydro-aeroplane based on the Medway.

carry, in addition to explosive and incendiary bombs, others which on being dropped throw out a light and thereby help to indicate to the vessel above the object which it is desired to aim at. Probably some of the bombs which were thrown in Norfolk were of this character. It is understood that all idea of carrying an armament on top of the Zeppelins has now been abandoned, and it is obvious that if searchlight equipment or guns of any sort were carried the useful weight for bombs would have to be reduced unless the range of action was diminished. It will have been noticed that the Zeppelins which came on Tuesday appear to have been anxious to get back before daylight, which looks as if they expected to be attacked if they were seen, as it is fairly certain they would have been.

Assuming the raid of Tuesday to have been in the nature of a trial trip, it is

rather curious that it was not made before. Apparently the Zeppelins can only trust themselves to make a raid of this description in very favorable circumstances. Strong winds, heavy rain, or even a damp atmosphere are all hindrances to be considered. That there will be more raids is fairly certain, but there cannot be many nights when the Germans can hope to have a repetition of the conditions of weather and darkness which prevailed this week. It should be possible, more or less, to ascertain the nights in every month in which, given other suitable circumstances, raids are likely to be made. In view of the probability that the attacks made by British aviators on the Zeppelin bases at Düsseldorf and Friedrichshafen caused a delay in the German plans for making this week's attack, it would appear that the most effective antidote would be a repetition of such legitimate operations.

JULIUS CAESAR ON THE AISNE

[From The New Yorker Herald (Morgenblatt).]

IT has repeatedly been pointed out that 2,000 years ago Julius Caesar fought on the battlegrounds of the Aisne, which are now the location of the fierce fighting between the Germans and the French. It is probably less known, however, that in this present war Caesar's "*Commentarii de Bello Gallico*" are used by French officers as a practical text book on strategy. The war correspondent of the *Corriere della Serra* reports this some what astonishing fact.

A few weeks ago he visited his friend, a commanding Colonel of a French regiment, in his trench, which was furnished with bare necessities only. In a corner on a small table lay the open volume of "*Commentarii Caesaris*," which the visitor took into his hand out of curiosity in order to see what passage the Colonel had just been reading. There he found the description of the fight against the Remer, who, at that time, lived in the neighborhood of the present city of Rheims. Principally with the aid of his Numidian troops, Caesar at that time had prevented the Remer from crossing the River Axona, today called the Aisne.

Caesar's camp was only a few kilometers from Berry-au-Bac, in the vicinity of Pontavert, the headquarters of the division to which the regiment of the Colonel belonged. This Colonel had received the order to cross the River Aisne with Moroccans and Spahis, and for this purpose he had studied the description of Caesar. To the astonished question of the reporter, what made him occupy his mind with the study of Caesar, the Frenchman replied:

"Caesar's battle descriptions form a book from which even in this present-day war a great deal may be learned. Caesar is by no means as obsolete as you seem to think. I ask you to consider, for instance, that the trenches which have gained so much importance in this war date back to Julius Caesar."

Sir John French's Own Story

Continuing the Famous Dispatches of the British Commander in Chief to Lord Kitchener

The previous dispatches, reviewing the operations of the British regular and territorial troops on the Continent under Field Marshal French's chief command, appeared in *THE NEW YORK TIMES CURRENT HISTORY* of Jan. 23, 1915, bringing the account of operations to Nov. 20, 1914. The official dispatch to Earl Kitchener presented below records the bitter experiences of the Winter in the trenches from the last week of November until Feb. 2, 1915.

The following dispatch was received on Feb. 12, 1915, from the Field Marshal Commanding in Chief, the British Army in the Field.

*To the Secretary of State for War,
War Office, London, S. W.*

General Headquarters,

Feb. 2, 1915.

MY Lord: I have the honor to forward a further report on the operations of the army under my command.

1. In the period under review the salient feature was the presence of his Majesty the King in the field. His Majesty arrived at Headquarters on Nov. 30 and left on Dec. 5.

At a time when the strength and endurance of the troops had been tried to the utmost throughout the long and arduous battle of Ypres-Armentières the presence of his Majesty in their midst was of the greatest possible help and encouragement.

His Majesty visited all parts of the extensive area of operations and held numerous inspections of the troops behind the line of trenches.

On Nov. 16 Lieutenant his Royal Highness the Prince of Wales, K. G., Grenadier Guards, joined my staff as aide de camp.

2. Since the date of my last report the operations of the army under my command have been subject almost entirely to the limitations of weather.

History teaches us that the course of campaigns in Europe, which have been actively prosecuted during the months of December and January, have been largely influenced by weather conditions. It should, however, be thoroughly under-

stood throughout the country that the most recent development of armaments and the latest methods of conducting warfare have added greatly to the difficulties and drawbacks of a vigorous Winter campaign.

To cause anything more than a waste of ammunition long-range artillery fire requires constant and accurate observation; but this most necessary condition is rendered impossible of attainment in the midst of continual fog and mist.

Again, armies have now grown accustomed to rely largely on aircraft reconnaissance for accurate information of the enemy, but the effective performance of this service is materially influenced by wind and weather.

The deadly accuracy, range, and quick-firing capabilities of the modern rifle and machine gun require that a fire-swept zone be crossed in the shortest possible space of time by attacking troops. But if men are detained under the enemy's fire by the difficulty of emerging from a water-logged trench, and by the necessity of passing over ground knee-deep in holding mud and slush, such attacks become practically prohibitive owing to the losses they entail.

During the exigencies of the heavy fighting which ended in the last week of November the French and British forces had become somewhat mixed up, entailing a certain amount of difficulty in matters of supply and in securing unity of command.

By the end of November I was able to concentrate the army under my command in one area, and, by holding a shorter line, to establish effective reserves.

By the beginning of December there

was a considerable falling off in the volume of artillery fire directed against our front by the enemy. Reconnaissance and reports showed that a certain amount of artillery had been withdrawn. We judged that the cavalry in our front, with the exception of one division of the Guard, had disappeared.

There did not, however, appear to have been any great diminution in the numbers of infantry holding the trenches.

3. Although both artillery and rifle fire were exchanged with the enemy every day, and sniping went on more or less continuously during the hours of daylight, the operations which call for special record or comment are comparatively few.

During the last week in November some successful minor night operations were carried out in the Fourth Corps.

On the night of Nov. 23-24 a small party of the Second Lincolnshire Regiment, under Lieut. E. H. Impey, cleared three of the enemy's advanced trenches opposite the Twenty-fifth Brigade, and withdrew without loss.

On the night of the 24th-25th Capt. J. R. Minshall Ford, Royal Welsh Fusiliers, and Lieut. E. L. Morris, Royal Engineers, with fifteen men of the Royal Engineers and Royal Welsh Fusiliers, successfully mined and blew up a group of farms immediately in front of the German trenches on the Touquet-Bridoux Road which had been used by German snipers.

On the night of Nov. 26-27 a small party of the Second Scots Guards, under Lieut. Sir E. H. W. Hulse, Bart., rushed the trenches opposite the Twentieth Brigade, and after pouring a heavy fire into them returned with useful information as to the strength of the Germans and the position of machine guns.

The trenches opposite the Twenty-fifth Brigade were rushed the same night by a patrol of the Second Rifle Brigade, under Lieut. E. Durham.

On Nov. 23 the One Hundred and Twelfth Regiment of the Fourteenth German Army Corps succeeded in capturing some 800 yards of the trenches held by the Indian Corps, but the general officer commanding the Meerut Division organized a powerful counter-attack, which

lasted throughout the night. At day-break on Nov. 24 the line was entirely re-established.

The operation was a costly one, involving many casualties, but the enemy suffered far more heavily.

We captured over 100 prisoners, including 3 officers, as well as 3 machine guns and two trench mortars.

On Dec. 7 the concentration of the Indian Corps was completed by the arrival of the Sirhind Brigade from Egypt.

On Dec. 9 the enemy attempted to commence a strong attack against the Third Corps, particularly in front of the trenches held by the Argyll and Sutherland Highlanders and the Middlesex Regiment.

They were driven back with heavy loss, and did not renew the attempt. Our casualties were very slight.

During the early days of December certain indications along the whole front of the allied line induced the French commanders and myself to believe that the enemy had withdrawn considerable forces from the western theatre.

Arrangements were made with the commander of the Eighth French Army for an attack to be commenced on the morning of Dec. 14.

Operations began at 7 A. M. by a combined heavy artillery bombardment by the two French and the Second British Corps.

The British objectives were the Petit Bois and the Maedelsteed Spur, lying respectively to the west and the southwest of the village of Wytschaete.

At 7:45 A. M. the Royal Scots, with great dash, rushed forward and attacked the former, while the Gordon Highlanders attacked the latter place.

The Royal Scots, commanded by Major F. J. Duncan, D. S. O., in face of a terrible machine gun and rifle fire, carried the German trench on the west edge of the Petit Bois, capturing two machine guns and fifty-three prisoners, including one officer.

The Gordon Highlanders, with great gallantry, advanced up the Maedelsteed Spur, forcing the enemy to evacuate their front trench. They were, however, losing heavily, and found themselves unable to

get any further. At nightfall they were obliged to fall back to their original position.

Capt. C. Boddam-Whetham and Lieut. W. F. R. Dobie showed splendid dash, and with a few men entered the enemy's leading trenches; but they were all either killed or captured.

Lieut. G. R. V. Hume-Gare and Lieut. W. H. Paterson also distinguished themselves by their gallant leading.

Although not successful, the operation was most creditable to the fighting spirit of the Gordon Highlanders, most ably commanded by Major A. W. F. Baird, D. S. O.

As the Thirty-second French Division on the left had been unable to make any progress, the further advance of our infantry into the Wytschaete Wood was not practicable.

Possession of the western edge of the Petit Bois was, however, retained.

The ground was devoid of cover and so water-logged that a rapid advance was impossible, the men sinking deep in the mud at every step they took.

The artillery throughout the day was very skillfully handled by the C. A. R. A.'s of the Fourth and Fifth Divisions—Major Gen. F. D. V. Wing, C. B.; Brig. Gen. G. F. Milne, C. B., D. S. O., and Brig. Gen. J. E. W. Headlam, C. B., D. S. O.

The casualties during the day were about 17 officers and 407 other ranks. The losses of the enemy were very considerable, large numbers of dead being found in the Petit Bois and also in the communicating trenches in front of the Gordon Highlanders, in one of which a hundred were counted by a night patrol.

On this day the artillery of the Fourth Division, Third Corps, was used in support of the attack, under orders of the General Officer Commanding Second Corps.

The remainder of the Third Corps made demonstrations against the enemy with a view to preventing him from detaching troops to the area of operations of the Second Corps.

From Dec. 15 to 17 the offensive operations which were commenced on the 14th were continued, but were confined chiefly to artillery bombardment.

The infantry advance against Wytschaete Wood was not practicable until the French on our left could make some progress to afford protection to that flank.

On the 17th it was agreed that the plan of attack as arranged should be modified; but I was requested to continue demonstrations along my line in order to assist and support certain French operations which were being conducted elsewhere.

4. In his desire to act with energy up to his instructions to demonstrate and occupy the enemy, the General Officer Commanding the Indian Corps decided to take the advantage of what appeared to him a favorable opportunity to launch attacks against the advanced trenches in his front on Dec 18 and 19.

The attack of the Meerut Division on the left was made on the morning of the 19th with energy and determination, and was at first attended with considerable success, the enemy's advanced trenches being captured. Later on, however, a counter-attack drove them back to their original position with considerable loss.

The attack of the Lahore Division commenced at 4:30 A. M. It was carried out by two companies each of the First Highland Light Infantry and the First Battalion, Fourth Gurkha Rifles of the Sirhind Brigade, under Lieut. Col. R. W. H. Ronaldson. This attack was completely successful, two lines of the enemy's trenches being captured with little loss.

Before daylight the captured trenches were filled with as many men as they could hold. The front was very restricted, communication to the rear impossible.

At daybreak it was found that the position was practically untenable. Both flanks were in the air, and a supporting attack, which was late in starting, and, therefore, conducted during daylight, failed, although attempted with the greatest gallantry and resolution.

Lieut. Col. Ronaldson held on till dusk, when the whole of the captured trenches had to be evacuated, and the detachment fell back to its original line.

By the night of Dec. 19 nearly all the

ground gained during the day had been lost.

From daylight on Dec. 20 the enemy commenced a heavy fire from artillery and trench mortars on the whole front of the Indian Corps. This was followed by infantry attacks, which were in especial force against Givenchy, and between that place and La Quinque Rue.

At about 10 A. M. the enemy succeeded in driving back the Sirhind Brigade and capturing a considerable part of Givenchy, but the Fifty-seventh Rifles and Ninth Bhopals, north of the canal, and the Connaught Rangers, south of it, stood firm.

The Fifteenth Sikhs of the Divisional Reserve were already supporting the Sirhind Brigade. On the news of the retirement of the latter being received, the Forty-seventh Sikhs were also sent up to reinforce Gen. Brunker. The First Manchester Regiment, Fourth Suffolk Regiment, and two battalions of French territorials under Gen. Carnegy were ordered to launch a vigorous counter-attack to retake by a flank attack the trenches lost by the Sirhind Brigade.

Orders were sent to Gen. Carnegy to divert his attack on Givenchy village, and to re-establish the situation there.

A battalion of the Fifty-eighth French Division was sent to Annequin in support.

About 5 P. M. a gallant attack by the First Manchester Regiment and one company of the Fourth Suffolk Regiment had captured Givenchy, and had cleared the enemy out of the two lines of trenches to the northeast. To the east of the village the Ninth Bhopal Infantry and Fifty-seventh Rifles had maintained their positions, but the enemy were still in possession of our trenches to the north of the village.

Gen. Macbean, with the Secunderabad Cavalry Brigade, Second Battalion, Eighth Gurkha Rifles, and the Forty-seventh Sikhs, was sent up to support Gen. Brunker, who, at 2 P. M., directed Gen. Macbean to move to a position of readiness in the second line trenches from Maris northward, and to counter-attack vigorously if opportunity offered.

Some considerable delay appears to

have occurred, and it was not until 1 A. M. on the 21st that the Forty-seventh Sikhs and the Seventh Dragoon Guards, under the command of Lieut. Col. H. A. Lempriere, D. S. O., of the latter regiment, were launched in counter-attack.

They reached the enemy's trenches, but were driven out by enfilade fire, their gallant commander being killed.

The main attack by the remainder of Gen. Macbean's force, with the remnants of Lieut. Col. Lempriere's detachment, (which had again been rallied,) was finally rushed in at about 4:30 A. M., and also failed.

In the northern section of the defensive line the retirement of the Second Battalion, Second Gurkha Rifles, at about 10 A. M. on the 20th, had left the flank of the First Seaforth Highlanders, on the extreme right of the Meerut Division line, much exposed. This battalion was left shortly afterward completely in the air by the retirement of the Sirhind Brigade.

The Fifty-eighth Rifles, therefore, were ordered to support the left of the Seaforth Highlanders, to fill the gap created by the retirement of the Gurkhas.

During the whole of the afternoon strenuous efforts were made by the Seaforth Highlanders to clear the trenches to their right and left. The First Battalion, Ninth Gurkha Rifles, reinforced the Second Gurkhas near the orchard where the Germans were in occupation of the trenches abandoned by the latter regiment. The Garhwal Brigade was being very heavily attacked, and their trenches and loopholes were much damaged; but the brigade continued to hold its front and attack, connecting with the Sixth Jats on the left of the Dehra Dun Brigade.

No advance in force was made by the enemy, but the troops were pinned to their ground by heavy artillery fire, the Seaforth Highlanders especially suffering heavily.

Shortly before nightfall the Second Royal Highlanders, on the right of the Seaforth Highlanders, had succeeded in establishing touch with the Sirhind Brigade; and the continuous line (though dented near the orchard) existed throughout the Meerut Division.

Early in the afternoon of Dec. 20 orders were sent to the First Corps, which was then in general army reserve, to send an infantry brigade to support the Indian Corps.

The First Brigade was ordered to Bethune, and reached that place at midnight on Dec. 20-21. Later in the day Sir Douglas Haig was ordered to move the whole of the First Division in support of the Indian Corps.

The Third Brigade reached Bethune between 8 A. M. and 9 A. M. on the 21st, and on the same date the Second Brigade arrived at Lacon at 1 P. M.

The First Brigade was directed on Givenchy, via Pont Fixe, and the Third Brigade, through Gorre, on the trenches evacuated by the Sirhind Brigade. The Second Brigade was directed to support, the Dehra Dun Brigade being placed at the disposal of the General Officer Commanding Meerut Division.

At 1 P. M. the General Officer Commanding First Division directed the First Brigade in attack from the west of Givenchy in a northeasterly direction, and the Third Brigade from Festubert in an east-northeasterly direction, the object being to pass the position originally held by us and to capture the German trenches 400 yards to the east of it.

By 5 P. M. the First Brigade had obtained a hold in Givenchy, and the ground south as far as the canal; and the Third Brigade had progressed to a point half a mile west of Festubert.

By nightfall the First South Wales Borderers and the Second Welsh Regiment of the Third Brigade had made a lodgment in the original trenches to the northeast of Festubert, the First Gloucestershire Regiment continuing the line southward along the track east of Festubert.

The First Brigade had established itself on the east side of Givenchy.

By 3 P. M. the Third Brigade was concentrated at Le Touret, and was ordered to retake the trenches which had been lost by the Dehra Dun Brigade.

By 10 P. M. the support trenches west of the orchard had been carried, but the original fire trenches had been so com-

pletely destroyed that they could not be occupied.

This operation was performed by the First Loyal North Lancashire Regiment and the First Northamptonshire Regiment, supported by the Second King's Royal Rifle Corps, in reserve.

Throughout this day the units of the Indian Corps rendered all the assistance and support they could in view of their exhausted condition.

At 1 P. M. on the 22d Sir Douglas Haig took over command from Sir James Willcocks. The situation in the front line was then approximately as follows:

South of the La Bassée Canal the Connaught Rangers of the Ferozepore Brigade had not been attacked. North of the canal a short length of our original line was still held by the Ninth Bhopals and the Fifty-seventh Rifles of the same brigade. Connecting with the latter was the First Brigade, holding the village of Givenchy and its eastern and northern approaches. On the left of the First Brigade was the Third Brigade. Tenth had been lost between the left of the former and the right of the latter. The Third Brigade held a line along, and in places advanced to, the east of the Festubert Road. Its left was in communication with the right of the Meerut Division line, where troops of the Second Brigade had just relieved the First Seaforth Highlanders. To the north, units of the Second Brigade held an indented line west of the orchard, connecting with half of the Second Royal Highlanders, half of the Forty-first Dogras, and the First Battalion Ninth Gurkha Rifles. From this point to the north the Ninth Jats and the whole of the Garhwal Brigade occupied the original line which they had held from the commencement of the operations.

The relief of most units of the southern sector was effected on the night of Dec. 22. The Meerut Division remained under the orders of the First Corps, and was not completely withdrawn until Dec. 27.

In the evening the position at Givenchy was practically re-established, and the Third Brigade had reoccupied the old line of trenches.

During the 23d the enemy's activities ceased, and the whole position was restored to very much its original condition.

In my last dispatch I had occasion to mention the prompt and ready help I received from the Lahore Division, under the command of Major Gen. H. B. B. Watkis, C. B., which was thrown into action immediately on arrival, when the British forces were very hard pressed during the battle of Ypres-Armentières.

The Indian troops have fought with the utmost steadfastness and gallantry whenever they have been called upon.

Weather conditions were abnormally bad, the snow and floods precluding any active operations during the first three weeks of January.

5. At 7:30 A. M. on Jan. 25 the enemy began to shell Bethune, and at 8 A. M. a strong hostile infantry attack developed south of the canal, preceded by a heavy bombardment of artillery, minenwerfers, and, possibly, the explosion of mines, though the latter is doubtful.

The British line south of the canal formed a pronounced salient from the canal on the left, thence running forward toward the railway triangle and back to the main La Bassée-Bethune Road, where it joined the French. This line was occupied by half a battalion of the Scots Guards, and half a battalion of the Coldstream Guards, of the First Infantry Brigade. The trenches in the salient were blown in almost at once, and the enemy's attack penetrated this line. Our troops retired to a partially prepared second line, running approximately due north and south from the canal to the road, some 500 yards west of the railway triangle. This second line had been strengthened by the construction of a keep half way between the canal and the road. Here the other two half battalions of the above-mentioned regiments were in support.

These supports held up the enemy, who, however, managed to establish himself in the brick stacks and some communication trenches between the keep, the road, and the canal—and even

beyond the west of the keep on either side of it.

The London Scottish had in the meantime been sent up in support, and a counter-attack was organized with the First Royal Highlanders, part of the First Cameron Highlanders, and the Second King's Royal Rifle Corps, the latter regiment having been sent forward from the Divisional Reserve.

The counter-attack was delayed in order to synchronize with a counter-attack north of the canal which was arranged for 1 P. M.

At 1 P. M. these troops moved forward, their flanks making good progress near the road and the canal, but their centre being held up. The Second Royal Sussex Regiment was then sent forward, late in the afternoon, to reinforce. The result was that the Germans were driven back far enough to enable a somewhat broken line to be taken up, running from the culvert on the railway, almost due south to the keep, and thence southeast to the main road.

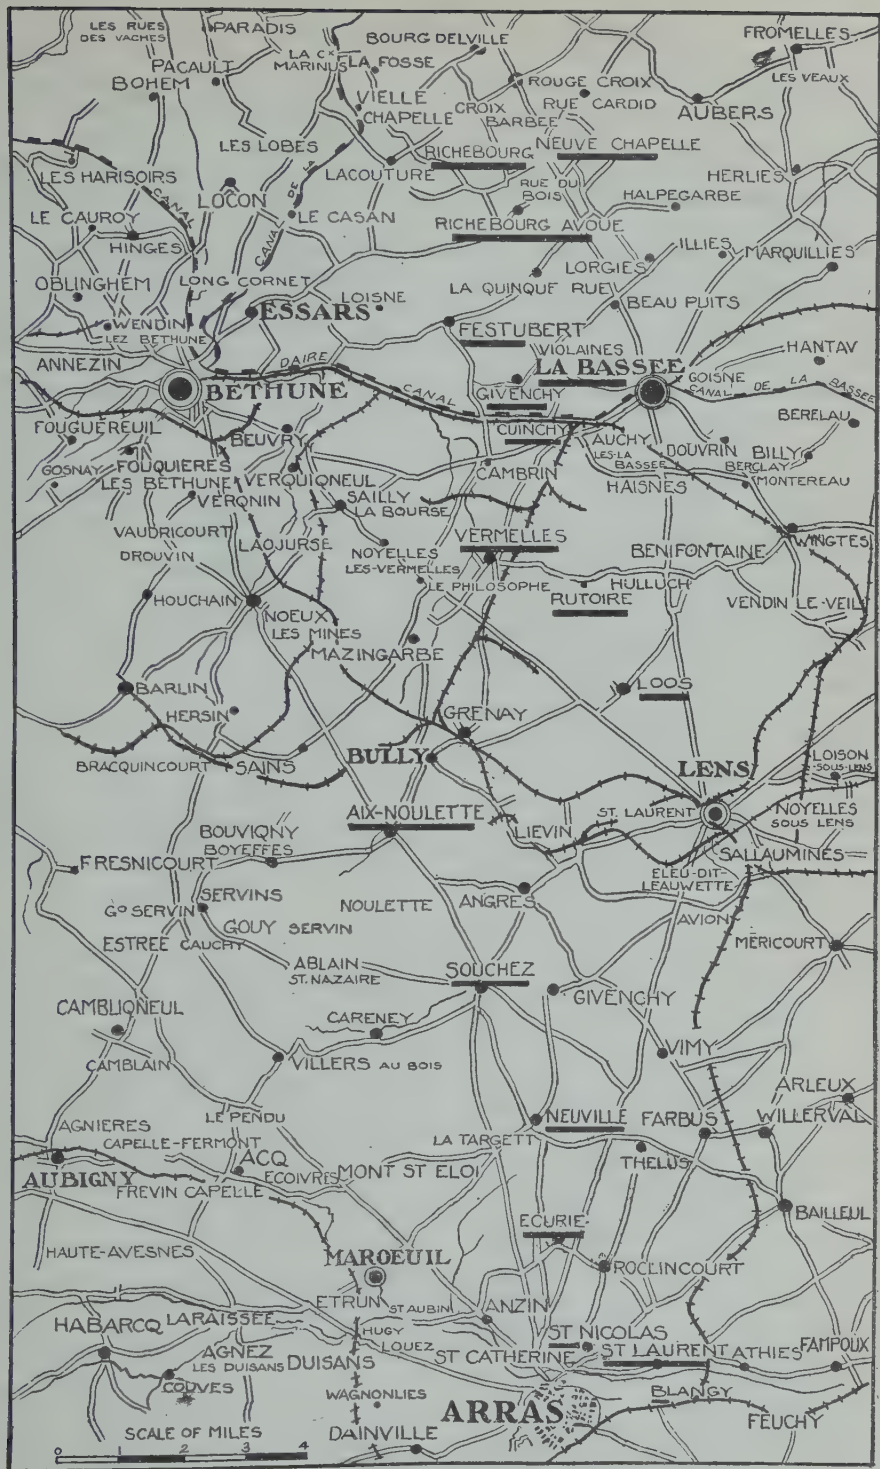

The French left near the road had also been attacked and driven back a little, but not to so great an extent as the British right. Consequently the French left was in advance of the British right, and exposed to a possible flank attack from the north.

The Germans did not, however, persevere further in their attack.

The above-mentioned line was strengthened during the night, and the First Guards Brigade, which had suffered severely, was withdrawn into reserve and replaced by the Second Infantry Brigade.

While this was taking place another and equally severe attack was delivered north of the canal against the village of Givenchy.

At 8:15 A. M., after a heavy artillery bombardment with high explosive shells, the enemy's infantry advanced under the effective fire of our artillery, which, however, was hampered by the constant interruption of telephonic communication between the observers and batteries. Nevertheless, our artillery fire, combined with that of the infantry in the fire trenches, had the effect of driving the enemy from its original direction of ad-

The places underlined in the above map indicate the points around La Bassée and southward to Arras, where part of the British Expeditionary Force was heavily engaged.

vance, with the result that his troops crowded together on the northeast corner of the village and broke through into the centre of the village as far as the keep, which had been previously put in a state of defense.

The Germans had lost heavily, and a well-timed local counter-attack, delivered by the reserves of the Second Welsh Regiment and First South Wales Borderers, and by a company of the First Royal Highlanders, (lent by the First Brigade as a working party—this company was at work on the keep at the time,) was completely successful, with the result that after about an hour's street fighting all who had broken into the village were either captured or killed, and the original line around the village was re-established by noon.

South of the village, however, and close to the canal, the right of the Second Royal Munster Fusiliers fell back in conformity with the troops south of the canal, but after dark that regiment moved forward and occupied the old line.

During the course of the attack on Givenchy the enemy made five assaults on the salient at the northeast of the village about French Farm, but was repulsed every time with heavy loss.

6. On the morning of Jan. 29 attacks were made on the right of the First Corps, south of the canal in the neighborhood of La Bassée.

The enemy, (part of the Fourteenth German Corps,) after a severe shelling, made a violent attack with scaling ladders on the keep, also to the north and south of it. In the keep and on the north side the Sussex Regiment held the enemy off, inflicting on him serious losses. On the south side the hostile infantry succeeded in reaching the Northamptonshire Regiment's trenches, but were immediately counter-attacked and all killed. Our artillery co-operated well with the infantry in repelling the attack.

In this action our casualties were inconsiderable, but the enemy lost severely, more than 200 of his killed alone being left in front of our position.

7. On Feb. 1 a fine piece of work

was carried out by the Fourth Brigade in the neighborhood of Cuinchy.

Some of the Second Coldstream Guards were driven from their trenches at 2:30 A. M., but made a stand some twenty yards east of them in a position which they held till morning.

A counter-attack, launched at 3:15 A. M., by one company of the Irish Guards and half a company of the Second Coldstream Guards, proved unsuccessful, owing to heavy rifle fire from the east and south.

At 10:05 A. M., acting under orders of the First Division, a heavy bombardment was opened on the lost ground for ten minutes; and this was followed immediately by an assault by about fifty men of the Second Coldstream Guards with bayonets, led by Capt. A. Leigh Bennett, followed by thirty men of the Irish Guards, led by Second Lieut. F. F. Graham, also with bayonets. These were followed by a party of Royal Engineers with sand bags and wire.

All the ground which had been lost was brilliantly retaken, the Second Coldstream Guards also taking another German trench and capturing two machine guns.

Thirty-two prisoners fell into our hands.

The General Officer Commanding First Division describes the preparation by the artillery as "splendid, the high explosive shells dropping in the exact spot with absolute precision."

In forwarding his report on this engagement, the General Officer Commanding First Army writes as follows:

Special credit is due—

(i) To Major Gen. Haking, commanding First Division, for the prompt manner in which he arranged this counter-attack and for the general plan of action, which was crowned with success.

(ii) To the General Officer commanding the Fourth Brigade (Lord Cavan) for the thorough manner in which he carried out the orders of the General Officer commanding the division.

(iii) To the regimental officers, non-commissioned officers, and men of the Second Coldstream Guards and Irish Guards, who, with indomitable pluck, stormed two sets of barricades, captured three German trenches, two machine guns, and killed or made prisoners many of the enemy.

8. During the period under report the Royal Flying Corps has again performed splendid service.

Although the weather was almost uniformly bad and the machines suffered from constant exposure, there have been only thirteen days on which no actual reconnoissance has been effected. Approximately, 100,000 miles have been flown.

In addition to the daily and constant work of reconnoissance and co-operation with the artillery, a number of aerial combats have been fought, raids carried out, detachments harassed, parks and petrol depots bombed, &c.

Various successful bomb-dropping raids have been carried out, usually against the enemy's aircraft material. The principle of attacking hostile aircraft whenever and wherever seen (unless highly important information is being delivered) has been adhered to, and has resulted in the moral fact that enemy machines invariably beat immediate retreat when chased.

Five German aeroplanes are known to have been brought to the ground, and it would appear probable that others, though they have managed to reach their own lines, have done so in a considerably damaged condition.

9. In my dispatch of Nov. 20, 1914, I referred to the reinforcements of territorial troops which I had received, and I mentioned several units which had already been employed in the fighting line.

In the positions which I held for some years before the outbreak of this war I was brought into close contact with the territorial force, and I found every reason to hope and believe that, when the hour of trial arrived, they would justify every hope and trust which was placed in them.

The Lords Lieutenant of Counties and the associations which worked under them bestowed a vast amount of labor and energy on the organization of the territorial force; and I trust it may be some recompense to them to know that I, and the principal commanders serving under me, consider that the territorial force has far more than justified the most sanguine hopes that any of us ventured

to entertain of their value and use in the field. Commanders of cavalry divisions are unstinted in their praise of the manner in which the yeomanry regiments attached to their brigades have done their duty, both in and out of action. The service of divisional cavalry is now almost entirely performed by yeomanry, and divisional commanders report that they are very efficient.

Army corps commanders are loud in their praise of the territorial battalions, which form part of nearly all the brigades at the front in the first line, and more than one of them have told me that these battalions are fast approaching—if they have not already reached—the standard of efficiency of regular infantry.

I wish to add a word about the Officers' Training Corps. The presence of the Artists' Rifles (Twenty-eighth Battalion, the London regiment) with the army in France enabled me also to test the value of this organization.

Having had some experience in peace of the working of the Officers' Training Corps, I determined to turn the Artists' Rifles (which formed part of the Officers' Training Corps in peace time) to its legitimate use. I therefore established the battalion as a training corps for officers in the field.

The cadets passed through a course, which includes some thoroughly practical training, as all cadets do a tour of forty-eight hours in the trenches, and afterward write a report on what they see and notice. They also visit an observation post of a battery or group of batteries, and spend some hours there.

A commandant has been appointed, and he arranges and supervises the work, sets schemes for practice, administers the school, delivers lectures, and reports on the candidates.

The cadets are instructed in all branches of military training suitable for platoon commanders.

Machine-gun tactics, a knowledge of which is so necessary for all junior officers, is a special feature of the course of instruction.

When first started, the school was

able to turn out officers at the rate of seventy-five a month. This has since been increased to 100.

Reports received from divisional and army corps commanders on officers who have been trained at the school are most satisfactory.

10. Since the date of my last report I have been able to make a close personal inspection of all the units in the command. I was most favorably impressed by all I saw.

The troops composing the army in France have been subjected to as severe a trial as it is possible to impose upon any body of men. The desperate fighting described in my last dispatch had hardly been brought to a conclusion when they were called upon to face the rigors and hardships of a Winter campaign. Frost and snow have alternated with periods of continuous rain.

The men have been called upon to stand for many hours together almost up to their waists in bitterly cold water, only separated by one or two hundred yards from a most vigilant enemy.

Although every measure which science and medical knowledge could suggest to mitigate these hardships was employed, the sufferings of the men have been very great.

In spite of all this they presented, at the inspections to which I have referred, a most soldierlike, splendid, though somewhat war-worn, appearance. Their spirit remains high and confident; their general health is excellent, and their condition most satisfactory.

I regard it as most unfortunate that circumstances have prevented any account of many splendid instances of courage and endurance, in the face of almost unparalleled hardship and fatigue in war, coming regularly to the knowledge of the public.

Reinforcements have arrived from England with remarkable promptitude and rapidity. They have been speedily drafted into the ranks, and most of the units I inspected were nearly complete when I saw them. In appearance and quality the drafts sent out have exceeded my most sanguine expectations, and I

consider the army in France is much indebted to the Adjutant General's Department at the War Office for the efficient manner in which its requirements have been met in this most essential respect.

With regard to these inspections I may mention in particular the fine appearance presented by the Twenty-seventh and Twenty-eighth Divisions, composed principally of battalions which had come from India. Included in the former division was the Princess Patricia's Royal Canadian Regiment. They are a magnificent set of men, and have since done excellent work in the trenches.

It was some three weeks after the events recorded in Paragraph 4 that I made my inspection of the Indian Corps, under Sir James Willcocks. The appearance they presented was most satisfactory and fully confirmed my opinion that the Indian troops only required rest and a little acclimatizing to bring out all their fine inherent fighting qualities.

I saw the whole of the Indian Cavalry Corps, under Lieut. Gen. Rimington, on a mounted parade soon after their arrival. They are a magnificent body of cavalry and will, I feel sure, give the best possible account of themselves when called upon.

In the meantime, at their own particular request, they have taken their turn in the trenches and performed most useful and valuable service.

11. The Right Rev. Bishop Taylor Smith, C. V. O., D. D., Chaplain General to the Forces, arrived at my headquarters on Jan. 6, on a tour of inspection throughout the command.

The Cardinal Archbishop of Westminster has also visited most of the Irish regiments at the front and the principal centres on the line of communications.

In a quiet and unostentatious manner the Chaplains of all denominations have worked with devotion and energy in their respective spheres.

The number with the forces in the field at the commencement of the war was comparatively small, but toward the end of last year the Rev. J. M. Simms, D. D.,

K. H. C., principal Chaplain, assisted by his secretary, the Rev. W. Drury, re-organized the branch and placed the spiritual welfare of the soldier on a more satisfactory footing. It is hoped that the further increase of personnel may be found possible.

I cannot speak too highly of the devoted manner in which all the Chaplains, whether with the troops in the trenches or in attendance on the sick and wounded in casualty clearing stations and hospitals on the line of communications, have worked throughout the campaign.

Since the commencement of hostilities the work of the Royal Army Medical Corps has been carried out with untiring zeal, skill, and devotion. Whether at the front under conditions such as obtained during the fighting on the Aisne, when casualties were heavy and accommodation for their reception had to be improvised, or on the line of communications, where an average of some 11,000 patients have been daily under treatment, the organization of the medical service has always been equal to the demands made upon it.

The careful system of sanitation introduced into the army has, with the assistance of other measures, kept the troops free from any epidemic, in support of which it is to be noticed that since the commencement of the war some 500 cases only of enteric have occurred.

The organization for the first time in war of motor ambulance convoys is due to the initiative and organizing powers of Surgeon General T. J. O'Donnell, D. S. O., ably assisted by Major P. Evans, Royal Army Medical Corps.

Two of these convoys, composed entirely of Red Cross Society personnel, have done excellent work under the superintendence of regular medical officers.

Twelve hospital trains ply between the front and the various bases. I have visited several of the trains when halted in stations, and have found them conducted with great comfort and efficiency.

During the more recent phase of the campaign the creation of rest depots at

the front has materially reduced the wastage of men to the line of communications.

Since the latter part of October, 1914, the whole of the medical arrangements have been in the hands of Surgeon General Sir A. T. Sloggett, C. M. G., K. H. S., under whom Surgeon General T. P. Woodhouse and Surgeon General T. J. O'Donnell have been responsible for the organization on the line of communications and at the front respectively.

12. The exceptional and peculiar conditions brought about by the weather have caused large demands to be made upon the resources and skill of the Royal Engineers.

Every kind of expedient has had to be thought out and adopted to keep the lines of trenches and defense work effective.

The Royal Engineers have shown themselves as capable of overcoming the ravages caused by violent rain and floods as they have been throughout in neutralizing the effect of the enemy's artillery.

In this connection I wish particularly to mention the excellent services performed by my Chief Engineer, Brig. Gen. G. H. Fowke, who has been indefatigable in supervising all such work. His ingenuity and skill have been most valuable in the local construction of the various expedients which experience has shown to be necessary in prolonged trench warfare.

13. I have no reason to modify in any material degree my views of the general military situation, as expressed in my dispatch of Nov. 20, 1914.

14. I have once more gratefully to acknowledge the valuable help and support I have received throughout this period from Gen. Foch, Gen. D'Urbal, and Gen. Maud'huy of the French Army. I have the honor to be, your Lordship's most obedient servant,

J. D. P. FRENCH, Field Marshal,
Commanding in Chief, the British Army
in the Field.

The Cathedral of Rheims

BY EMILE VERHAEREN

(From *Les Blés Mouvants*)

Done into English verse by Joyce Kilmer.

HE who walks through the meadows
of Champagne
At noon in Fall, when leaves like
gold appear,
Sees it draw near

Like some great mountain set upon the plain,
From radiant dawn until the close of day,
Nearer it grows
To him who goes

Across the country. When tall towers lay
Their shadowy pall
Upon his way,
He enters, where
The solid stone is hollowed deep by all
Its centuries of beauty and of prayer.

Ancient French temple! thou whose hundred
Kings

Watch over thee, emblazoned on thy walls,
Tell me, within thy memory-hallowed halls
What chant of triumph, or what war-song
rings?

Thou hast known Clovis and his Frankish
train,

Whose mighty hand Saint Remy's hand did
keep

And in thy spacious vault perhaps may sleep
An echo of the voice of Charlemagne.

For God thou hast known fear, when from
His side

Men wandered, seeking alien shrines and new,
But still the sky was bountiful and blue
And thou wast crowned with France's love
and pride.

Sacred thou art, from pinnacle to base;
And in thy panes of gold and scarlet glass

The setting sun sees thousandfold his face;
Sorrow and joy, in stately silence pass

Across thy walls, the shadow and the light;
Around thy lofty pillars, tapers white

Illuminate, with delicate sharp flames,
The brows of saints with venerable names,

And in the night erect a fiery wall,
A great but silent fervor burns in all

Those simple folk who kneel, pathetic, dumb,
And know that down below, beside the Rhine—

Cannon, horses, soldiers, flags in line—
With blare of trumpets, mighty armies come.

Suddenly, each knows fear;

Swift rumors pass, that every one must hear,
The hostile banners blaze against the sky

And by the embassies mobs rage and cry.
Now war has come, and peace is at an end,

On Paris town the German troops descend.
They turned back, and driven to Champagne,

And now, as to so many weary men,
The glorious temple gives them welcome,

when,

It meets them at the bottom of the plain.

At once, they set their cannon in its way.

There is no gable now, nor wall
That does not suffer, night and day,
As shot and shell in crushing torrents fall,
The stricken tocsin quivers through the
tower;

The triple nave, the apse, the lonely choir
Are circled, hour by hour,
With thundering bands of fire
And Death is scattered broadcast among
men.

And then
That which was splendid with baptismal
grace;

The stately arches soaring into space,
The transepts, columns, windows gray and
gold,

The organ, in whose tones the ocean rolled,
The crypts, of mighty shades the dwelling
places,

The Virgin's gentle hands, the Saints' pure
faces,

All, even the pardoning hands of Christ the
Lord

Were struck and broken by the wanton
sword
Of sacrilegious lust.

O beauty slain, O glory in the dust!
Strong walls of faith, most basely over-
thrown!

The crawling flames, like adders glistening
Ate the white fabric of this lovely thing.
Now from its soul arose a piteous moan,
The soul that always loved the just and
fair.

Granite and marble loud their woe confessed,
The silver monstrances that Pope has
blessed,

The chalices and lamps and crosiers rare
Were seared and twisted by a flaming
breath;

The horror everywhere did rage and swell,
The guardian Saints into this furnace fell,
Their bitter tears and screams were stilled
in death.

Around the flames armed hosts are skir-
mishing,

The burning sun reflects the lurid scene;
The German Army fighting for its life,
Rallies its torn and terrified left wing;

And, as they near this place
The imperial eagles see
Before them in their flight,

Here, in the solemn night,
The old cathedrals, to the years to be
Showing, with wounded arms, their own
disgrace.

Music of War

By Rudyard Kipling

The following speech was delivered by Mr. Kipling on Jan. 27, 1915, at a meeting in London promoted by the Recruiting Bands Committee, and held with the object of raising bands in the London district as an aid to recruiting.

THE most useful thing that a civilian can do in these busy days is to speak as little as possible, and if he feels moved to write, to confine his efforts to his check book. [Laughter.] But this is an exception to that very sound rule. We do not know the present strength of the new armies. Even if we did it would not be necessary to make it public. But we may assume that there are several battalions in Great Britain which were not in existence at the end of last July, and some of them are in London. Nor is it any part of our national policy to explain how far these battalions are prepared for the work which is ahead of them. They were born quite rightly in silence. But that is no reason why they should continue to walk in silence for the rest of their lives. [Cheers.] Unfortunately up to the present most of them have been obliged to walk in silence or to no better accompaniment than whistles and concertinas and other meritorious but inadequate instruments of music with which they have provided themselves. In the beginning this did not matter so much. More urgent needs had to be met; but now that the new armies are what they are, we who cannot assist them by joining their ranks owe it to them to provide them with more worthy music for their help, their gratification, and their honor. [Cheers.]

I am not a musician, so if I speak as a barbarian I must ask you and several gentlemen on the platform here to forgive me. From the lowest point of view a few drums and fifes in the battalion mean at least five extra miles in a route march, quite apart from the fact that they can swing a battalion back to quarters happy and composed in its mind, no matter how wet or tired its body may

be. Even when there is no route marching, the mere come and go, the roll and flourishing of drums and fifes around the barracks is as warming and cheering as the sight of a fire in a room. A band, not necessarily a full band, but a band of a dozen brasses and wood-winds, is immensely valuable in the district where men are billeted. It revives memories, it quickens association, it opens and unites the hearts of men more surely than any other appeal can, and in this respect it aids recruiting perhaps more than any other agency. I wonder whether I should say this—the tune that it employs and the words that go with that tune are sometimes very remote from heroism or devotion, but the magic and the compelling power is in them, and it makes men's souls realize certain truths that their minds might doubt.

Further, no one, not even the Adjutant, can say for certain where the soul of the battalion lives, but the expression of that soul is most often found in the band. [Cheers.] It stands to reason that 1,200 men whose lives are pledged to each other must have some common means of expression, some common means of conveying their moods and their thoughts to themselves and their world. The band feels the moods and interprets the thoughts. A wise and sympathetic bandmaster—and the masters that I have met have been that—can lift a battalion out of depression, cheer it in sickness, and steady and recall it to itself in times of almost unendurable stress. [Cheers.] You may remember a beautiful poem by Sir Henry Newbolt, in which he describes how a squadron of weary big dragoons were led to renewed effort by the strains of a penny whistle and a child's drum taken from a toyshop in a wrecked French town. I remember in India, in a

cholera camp, where the men were suffering very badly, the band of the Tenth Lincolns started a regimental sing-song and went on with that queer, defiant tune, "The Lincolnshire Poacher." It was their regimental march that the men had heard a thousand times. There was nothing in it—nothing except all England, all the East Coast, all the fun and daring and horse play of young men bucketing about big pastures in the moonlight. But as it was given, very softly at that bad time in that terrible camp of death, it was the one thing in the world that could have restored, as it did restore, shaken men back to their pride, humor, and self-control. [Cheers.] This may be an extreme instance, but it is not an exceptional one. Any man who has had anything to do with the service will tell you that the battalion is better for music at every turn, happier, more easily handled, with greater zest in its daily routine, if that routine is sweetened with melody and rhythm—melody for the mind and rhythm for the body.

Our new armies have been badly served in this essential. Of all the admirable qualities which they have shown none is more wonderful than the spirit which has carried them through the laborious and distasteful groundwork of their calling without one note of music, except that which the same indomitable spirit provided out of their own heads. We have all seen them marching through the country, through the streets of London, in absolute silence and the crowds through which they passed as silent as themselves for the lack of the one medium that could convey and glorify the thoughts that are in us all today.

We are a tongue-tied brood at the best. The bands can declare on our behalf

without shame and without shyness something of what we all feel and help us to reach a hand toward the men who have risen up to save us. In the beginning the more urgent requirements of the new armies overrode all other considerations. Now we can get to work on some other essentials. The War Office has authorized the formation of bands for some of the London battalions, and we may hope presently to see the permission extended throughout Great Britain. We must not, however, cherish unbridled musical ambitions, because a full band means more than forty pieces, and on that establishment we should even now require a rather large number of men; but I think it might be possible to provide drums and fifes for every battalion, full bands at the depots, and a proportion of battalion bands on half, or even one-third, establishments.

But this is not a matter to be settled by laymen; it must be discussed seriously between bandmasters and musicians—present, past, and dug up. [Laughter.] They may be trusted to give their services with enthusiasm. We have had many proofs in the last six months that people only want to know what the new army needs, and it will be gladly and cheerfully given. The army needs music, its own music, for, more than in any other calling, soldiers do not live by bread alone. From time immemorial the man who offers his life for his land has been compassed at every turn of his service with elaborate ceremonial and observance, of which music is no small part, all carefully designed to support and uphold him. It is not seemly and it is not expedient that any portion of that ritual should be slurred or omitted now. [Cheers.]

America and a New World State

How the United States May Take the Lead in the Formation of a World Confederation for the Prevention of Future Wars

By Norman Angell

The object of this article is to show that however much America may attempt to hold herself free in Europe she will very deeply feel the effects, both material and moral, of upheavals like that which is now shaking the old Continent; that even though there be no aggressive action against her, the militarization of Europe will force upon America also a militarist development; and that she can best avoid these dangers and secure her own safety and free development by taking the lead in a new world policy which is briefly this:

To use her position to initiate and guide a grouping of all the civilized powers having as its object the protection of any one of its members that is the victim of aggression. The aid to be given for such an object should not be, in the case of the United States, military but economic, by means of the definite organization of non-intercourse against the recalcitrant power. America's position of geographical and historical remoteness from European quarrels places her in a particularly favorable position to direct this world organization, and the fact of undertaking it would give her in some sense the moral leadership of the western world, and make her the centre of the World State of the future.

(COPYRIGHT, 1915, BY THE NEW YORK TIMES COMPANY.)

I.

IN the discussion of America's relation to the rest of the world we have always assumed almost as an axiom that America has nothing to do with Europe, is only in the faintest degree concerned with its politics and developments, that by happy circumstance of geography and history we are isolated and self-sufficing, able to look with calm detachment upon the antics of the distant Europeans. When a European landed on these shores we were pretty certain that he left Europe behind him; only quite recently, indeed, have we realized that we were affected by what he brought with him in the way of morals and traditions, and only now are we beginning dimly to realize that what goes on on the other side of the world can be any affair of ours. The famous query of a certain American statesman, "What has America to do with abroad?" probably represented at bottom the feelings of most of us.

In so far as we established commercial relations with Europe at all, we felt and still feel probably that they were relations of hostility, that we were one

commercial unit, Europe another, and that the two were in competition. In thinking thus, of course, we merely accepted the view of international politics common in Europe itself, the view, namely, that nations are necessarily trade rivals—the commercial rivalry of Britain and Germany is presumed to be one of the factors explaining the outbreak of the present war. The idea that nations do thus compete together for the world's trade is one of the axioms of all discussion in the field of international politics.

Well, both these assumptions in the form in which we make them involve very grave fallacies, the realization of which will shortly become essential to the wise direction of this country's policy. If our policy, in other words, is to be shrewd and enlightened, we must realize just how both the views of international relationship that I have indicated are wrong.

I will take first the more special one—that of the assumed necessary rivalry of nations in trade—as its clearer understanding will help in what is for us the larger problem of the general relationship of this country to other civilized

powers. I will therefore try and establish first this proposition—that nations are not and can not be trade rivals in the sense usually accepted; that, in other words, there is a fundamental misconception in the prevailing picture of nations as trading units—one might as well talk of red-haired people being the trade rivals of black-haired people.

And I will then try and establish a second proposition, namely, that we are intimately concerned with the condition of Europe, and are daily becoming more so, owing to processes which have become an integral part of our fight against nature, of the feeding and clothing of the world; that we cannot much longer ignore the effects of those tendencies which bind us to our neighbors; that the elementary consideration of self-protection will sooner or later compel us to accept the facts and recognize our part and lot in the struggles of Christendom; and that if we are wise, we shall not take our part therein reluctantly, dragged at the heels of forces we cannot resist, but will do so consciously, anticipating events. In other words, we shall take advantage of such measure of detachment as we do possess, to take the lead in a saner organization of western civilization; we shall become the pivot and centre of a new world State.

There is not the faintest hope of America taking this lead unless a push or impetus is given to her action by a widespread public feeling, based on the recognition of the fallacy of the two assumptions with which I began this article. For if America really is independent of the rest of the world, little concerned with what goes on therein, if she is in a position to build a sort of Chinese wall about herself, and, secure in her own strength, to develop a civilization and future of her own, still more if the weakness and disintegration of foreign nations, however unfortunate for them, is for America an opportunity of expanding trade and opportunities, why then, of course, it would be the height of folly for the United States to incur all the risks and uncertainties of an adventure into the sea of foreign politics.

What as a matter of simple fact is the

real nature of trade between nations? If we are to have any clear notion at all as to just what truth there is in the notion of the necessary commercial rivalry of States, we must have some fairly clear notion of how the commercial relationship of nations works. And that can best be illustrated by a supposititious example. At the present time we are talking, for instance, of "capturing" German or British or French trade.

Now, when we talk thus of "German" trade in the international field, what do we mean? Here is the ironmaster in Essen making locomotives for a light railway in an Argentine province, (the capital for which has been subscribed in Paris)—which has become necessary because of the export of wool to Bradford, where the trade has developed owing to sales in the United States, due to high prices produced by the destruction of sheep runs, owing to the agricultural development of the West.

But for the money found in Paris, (due, perhaps, to good crops in wine and olives, sold mainly in London and New York,) and the wool needed by the Bradford manufacturer, (who has found a market for blankets among miners in Montana, who are smelting copper for a cable to China, which is needed because the encouragement given to education by the Chinese Republic has caused Chinese newspapers to print cable news from Europe)—but for such factors as these, and a whole chain of equally interdependent ones throughout the world, the ironmaster in Essen would not have been able to sell his locomotives.

How, therefore, can you describe it as part of the trade of "Germany" which is in competition with the trade of "Britain" or "France" or "America"? But for the British, French, and American trade, it could not have existed at all. You may say that if the Essen ironmaster could have been prevented from selling his locomotives the order would have gone to an American one.

But this community of German workmen, called into existence by the Argentina trade, maintains by its consumption of coffee a plantation in Brazil, which buys its machinery in Chicago. The de-

struction; therefore, of the Essen trade, while it might have given business to the American locomotive maker, would have taken it from, say, an American agricultural implement maker. The economic interests involved sort themselves, irrespective of the national groupings. I have summarized the whole process as follows, and the need for getting some of these simple things straight is my excuse for quoting myself:

Co-operation between nations has become essential for the very life of their peoples. But that co-operation does not take place as between States at all. A trading corporation, "Britain" does not buy cotton from another corporation, "America." A manufacturer in Manchester strikes a bargain with a merchant in Louisiana in order to keep a bargain with a dyer in Germany, and three or a much larger number of parties enter into virtual, or, perhaps, actual, contract, and form a mutually dependent economic community, (numbering, it may be, with the work people in the group of industries involved, some millions of individuals)—an economic entity, so far as one can exist, which does not include all organized society.

The special interests of such a community may become hostile to those of another community, but it will almost certainly not be a "national" one, but one of a like nature, say a shipping ring or groups of international bankers or Stock Exchange speculators. The frontiers of such communities do not coincide with the areas in which operate the functions of the State.

How could a State, say Britain, act on behalf of an economic entity such as that just indicated? By pressure against America or Germany? But the community against which the British manufacturer in this case wants pressure exercised is not "America" or "Germany"—both Americans and Germans are his partners in the matter. He wants it exercised against the shipping ring or the speculators or the bankers who are in part British. * * *

This establishes two things, therefore: The fact that the political and economic units do not coincide, and the fact which follows as a consequence—that action by political authorities designed to control economic activities which take no account of the limits of political jurisdiction is necessarily irrelevant and ineffective.—(From "Arms and Industry: A Study of the Foundations of International Polity." Page 28. Putnam's: New York.)

The fallacy of the idea that the groups we call nations must be in conflict because they struggle together for bread and the means of sustenance is demonstrated immediately when we recall the

simple facts of historical development. When, in the British Islands, the men of Wessex were fighting with the men of Sussex, far more frequently and bitterly than today the men of Germany fight with those of France, or either with those of Russia, the separate States which formed the island were struggling with one another for sustenance, just as the tribes which inhabited the North American Continent at the time of our arrival there were struggling with one another for the game and hunting grounds. It was in both cases ultimately a "struggle for bread."

At that time, when Britain was composed of several separate States, that struggled thus with one another for land and food, it supported with great difficulty anything between one and two million inhabitants, just as the vast spaces now occupied by the United States supported about a hundred thousand, often subject to famine, frequently suffering great shortage of food, able to secure just the barest existence of the simplest kind.

Today, although Britain supports anything from twenty to forty times, and North America something like a thousand times, as large a population in much greater comfort, with no period of famine, with the whole population living much more largely and deriving much more from the soil than did the men of the Heptarchy, or the Red Indians, the "struggle for bread" does not now take the form of struggle between groups of the population. The more they fought, the less efficiently did they support themselves; the less they fought one another, the more efficiently did they all support themselves.

This simple illustration is at least proof of this, that the struggle for material things did not involve any necessary struggle between the separate groups or States; for those material things are given in infinitely greater abundance when the States cease to struggle. What, therefore, was the origin of those conflicts, that origin was not any inevitable conflict in the exploitation of the earth. If those conflicts were concerned with material things at all, they arose

from a mistake about the best means of obtaining them, exploiting the earth, and ceased when those concerned realized the mistake.

Just as Britain supported its population better when Englishmen gave up fighting between themselves, so the world as a whole could support its population better if it gave up fighting.

Moreover, we have passed out of the stage when we could massacre a conquered population to make room for us. When we conquer an inferior people like the Filipinos, we don't exterminate them, we give them an added chance of life. The weakest don't go to the wall.

But at this point parenthetically I want to enter a warning. You may say, if this notion of the rivalry of nations is false, how do you account for the fact of its playing so large a part in the present war?

Well, that is easily explained—men are not guided necessarily by their interest even in their soberest moments, but by what they believe to be their interest. Men do not judge from the facts, but from what they believe to be the facts. War is the "failure of human understanding." The religious wars were due to the belief that two religions could not exist side by side. It was not true, but the false belief provoked the wars. Our notions as to the relation of political power to a nation's prosperity are just as false, and this fallacy, like the older one, plays its part in the causation of war.

Now, let us for a moment apply the very general rule thus revealed to the particular case of the United States at this present juncture.

American merchants may in certain cases, if they are shrewd and able, do a very considerably increased trade, though it is just as certain that other merchants will be losing trade, and I think there is pretty general agreement that as a matter of simple fact the losses of the war so far have for America very considerably and very obviously overbalanced the gains. The loss has been felt so tangibly by the United States Government, for instance, that a special loan had to be voted in order to stop some of the gaps.

Whole States, whose interests are bound up with staples like cotton, were for a considerable time threatened with something resembling commercial paralysis.

While we may admit advances and gains in certain isolated directions, the extra burden is felt in all directions of commerce and industry. And that extra burden is visible through finance—the increased cost of money, the scarcity of capital, the lower negotiability of securities, the greater uncertainty concerning the future. It is by means of the financial reaction that America, as a whole, has felt the adverse effects of this war. There is not a considerable village, much less a considerable city, not a merchant, not a captain of industry in the United States that has not so felt it. It is plainly evident that by the progressive dearness of money, the lower standard of living that will result in Europe, the effect on immigration, and other processes which I will touch upon at greater length later, any temporary stimulus which a trade here and there may receive will be more than offset by the difficulties due to financial as apart from industrial or commercial reactions.

This war will come near to depriving America for a decade or two of its normal share of the accumulated capital of the older peoples, whether that capital be used in paying war indemnities or in paying off the cost of the war or in repairing its ravages. In all cases it will make capital much dearer, and many enterprises which with more abundant capital might have been born and might have stimulated American industry will not be born. For the best part of a generation perhaps the available capital of Europe will be used to repair the ravages of war there, to pay off the debts created by war, and to start life normally once more. We shall suffer in two ways.

In a recent report issued by the Agricultural Department at Washington is a paragraph to the effect that one of the main factors which have operated against the development of the American farm is the difficulty that the farmer has found in securing abundant capital and the high price that he has to pay for it

when he can secure it. It will in the future be of still higher price, and still less abundant, because, of course, the capital of the world is a common reservoir—if it is dearer in one part, it is dearer to some extent in all parts.

So that if for many years the American farmhouse is not so well built as it might be, the farm not so well worked, rural life in America not so attractive as it might be, the farmer's wife burdened with a little more labor than she might otherwise have, and if she grows old earlier than she might otherwise, it will be in part because we are paying our share of the war indemnities and the war costs.

But this scarcity of capital operates in another way. One of the most promising fields for American enterprise is, of course, in the undeveloped lands to the south of us, but in the development of those lands we have looked and must look for the co-operation of European capital. Millions of French and British money have poured into South America, building docks and railroads and opening up the country, and that development of South America has been to our advantage because quite frequently these enterprises were under the actual management of Americans, using to the common advantage the savings of the thrifty Frenchman and the capital of the wealthy Englishman.

For, of course, as between the older and the newer worlds there has gone on this very beneficent division of labor: the Old World having developed its soil, built its cities, made its roads, has more capital available for outside employment than have the population of newer countries that have so much of this work before them. And now this possibility of fruitful co-operation is, for the time being, and it may be for many years, suspended. I say nothing of the loss of markets in the older countries which will be occasioned by sheer loss of population and the lower standard of living. That is one of the more obvious but not perhaps the most important of the ways in which the war affects us commercially.

Speaking purely in terms of commercial advantage—and these, I know, do not

tell the whole story (I am not for a moment pretending they do)—the losses that we shall suffer through this war are probably very much more considerable than those we should suffer by the loss of the Philippines in the event, say, of their being seized by some hostile power; and we suffer these losses, although not a single foreign soldier lands upon our soil. It is literally and precisely true to say that there is not one person from Hudson Bay to Cape Horn that will not be affected in some degree by what is now going on in Europe. And it is at least conceivable that our children and children's children will feel its effects more deeply still.

Nor is America escaping the military any more than she has escaped the commercial and financial effects of this war. She may never be drawn into active military co-operation with other nations, but she is affected none the less. Indeed the military effects of this war are already revealing themselves in a demand for a naval programme immensely larger than any American could have anticipated a year ago, by plans for an enormously enlarged army. All this is the most natural result.

Just consider, for instance, the ultimate effect of a quite possible outcome of the present conflict—Germany victorious and the Prussian effort next directed at, say, the conquest of India. Imagine India Prussianized by Germany, so that, with the marvelous efficiency in military organization which she has shown, she is able to draw on an Asiatic population of something approaching 400,000,000.

Whether the situation then created would really constitute a menace for us or not, this much would be certain—that the more timid and timorous among us would believe it to be a menace, and it would furnish an irresistible plea for a very greatly enlarged naval and military establishment. We too, in that case would probably be led to organize our nation on the lines on which the European military nations have organized theirs, with compulsory military service, and so forth.

Indeed, even if Germany is not victorious the future contains possibilities of a

like result; imagine, what is quite possible, that Russia becomes the dominant factor in Europe after this war and places herself at the head of a great Slav confederacy of 200,000,000, with her power extending incidentally to the Pacific coast of Asia, and, it may be the day after tomorrow, over 100,000,000 or 200,000,000 of Asiatics. We should thus have a militarized power of 200,000,000 or 300,000,000 or 400,000,000 souls, autocratically governed, endowed with western technical knowledge in the manipulation of the instruments of war, occupying the Pacific coast line directly facing our Pacific coast line. It is quite conceivable, therefore, that as the outcome of either of the two possible results of this war we may find ourselves embarked upon a great era of militarization.

Our impregnability does not protect us from militarism. It is quite true that this country, like Russia, cannot be permanently invaded; it is quite true that hostile navies need not necessarily be resisted by navies of our own so far as the protection of our coasts is concerned. But there is no such thing as absolute certainty in these matters. While personally I believe that no country in the world will ever challenge the United States, that the chances are a hundred to one against it, it is on just that one chance that the militarist bases his plea for armaments and secures them.

But, unfortunately, we are already committed to a good deal more than just mere defense of American territory; problems arising out of the Philippines and the Panama Canal and the Monroe Doctrine have already committed us to a measure of intervention in the political affairs of the outside world. In brief, if the other nations of the world have great armies and navies—and tomorrow those other nations will include a reorganized China as they already include a westernized Japan—if there is all that weight of military material which might be used against us, then in the absence of those other guarantees which I shall suggest, we shall be drawn into piling up a corresponding weight of material as against that of the outside world.

And, of course, just as we cannot es-

cape the economic and the military reaction of European development, neither can we escape the moral. If European thought and morality did, by some fatality, really develop in the direction of a Nietzschean idealization of military force, we might well get in the coming years a practical submergence of that morality which we believe to be distinctively American, and get throughout the older hemisphere a type of society based upon authority, reproducing it may be some features of past civilizations, Mongol, Asiatic, or Byzantine. If that were to happen, if Europe were really to become a mere glorified form of, say, certain Asiatic conceptions that we all thought had had their day, why, then, of course America could not escape a like transformation of outlook, ideals, and morals.

For there is no such thing as one nation standing out and maintaining indefinitely a social spirit, an attitude toward life and society absolutely distinct and different from that of the surrounding world. The character of a society is determined by the character of its ideas, and neither tariffs nor coastal defenses are really efficient in preventing the invasion of ideas, good or bad. The difference between the kind of society which exists in Illinois today and that which existed there 500 years ago is not a difference of physical vigor or of the raw materials of nature; the Indian was as good a man physically as the modern Chicagoan, and possessed the same soil. What makes the difference between the two is accumulated knowledge, the mind. And there never was yet on this planet a change of ideas which did not sooner or later affect the whole planet.

The "nations" that inhabited this continent a couple of thousand years ago were apparently quite unconcerned with what went on in Europe or Asia, say, in the domain of mathematical and astronomical knowledge. But the ultimate effect of that knowledge on navigation and discovery was destined to affect them—and us—profoundly. But the reaction of European thought upon this continent, which originally required twenty, or, for that matter, two hundred or two thousand years to show itself, now shows it-

self, in the industrial and commercial field, for instance, through our banking and Stock Exchanges, in as many hours, or, for that matter, minutes.

It is difficult, of course, for us to realize the extent to which each nation owes its civilization to others, how we have all lived by taking in each other's washing. As Americans, for instance, we have to make a definite effort properly to realize that our institutions, the sanctity of our homes and all the other things upon which we pride ourselves, are the result of anything but the unaided efforts of a generation or two of Americans, perhaps owing a little to certain of the traditions that we may have taken from Britain.

One has to stop and uproot impressions that are almost instinctive, to remember that our forefathers reached these shores by virtue of knowledge which they owed to the astronomical researches of Egyptians and Chaldeans, who inspired the astronomers of Greece, who inspired those of the Renaissance in Italy, Spain, and Germany, keeping alive and developing not merely the art of measuring space and time, but also that conception of order in external nature without which the growth of organized knowledge, which we call science, enabling men to carry on their exploitation of the world, would have been impossible; that our very alphabet comes from Rome, who owed it to others; that the mathematical foundation of our modern mechanical science—without which neither Newton nor Watt nor Stevenson nor Ericson nor Faraday nor Edison could have been—is the work of Arabs, strengthened by Greeks, protected and enlarged by Italians; that our conceptions of political organization, which have so largely shaped our political science, come mainly from the Scandinavian colonists of a French province; that British intellect, to which perhaps we owe the major part of our political impulses, has been nurtured mainly by Greek philosophy; that our Anglo-Saxon law is principally Roman, and our religion almost entirely Asiatic in its origins; that for those things which we deem to be the most important in our lives, our spiritual and religious aspirations, we go to a Jewish book interpreted

by a Church Roman in origin, reformed mainly by the efforts of Swiss and German theologians.

And this interaction of the respective elements of the various nations, the influence of foreigners, in other words, and of foreign ideas, is going to be far more powerful in the future than it has been in the past. Morally, as well as materially, we are a part of Europe. The influence which one group exercises on another need not operate through political means at all; indeed, the strongest influences are non-political.

American life and civilization may be transformed by European developments, though the Governments of Europe may leave us severely alone. Luther and Calvin had certainly a greater effect in England than Louis XIV. or Napoleon. Gutenberg created in Europe a revolution more powerful than all the military revolutions of the last ten centuries. Greece and Palestine did not transform the world by their political power. Yet these simple and outstanding truths are persistently ignored by our political and historical philosophers and theorists. For the most part our history is written with a more sublime disregard of the simple facts of the world than is shown perhaps in any other department of human thought and inquiry.

You may today read histories of Europe written by men of worldwide and pre-eminent reputation, professing to tell the story of the development of human society, in which whole volumes will be devoted to the effect of a particular campaign or military alliance in influencing the destinies of a people like the French or the German. But in those histories you will find no word as to the effect of such trifles as the invention of the steam engine, the coming of the railroad, the introduction of the telegraph and cheap newspapers and literature on the destiny of those people; volumes as to the influence which Britain may have had upon the history of France or Germany by the campaigns of Marlborough, but absolutely not one word as to the influence which Britain had upon the destinies of those people by the work of Watt and Stephenson.

A great historian philosopher laying it down that the "influence" of England was repelled or offset by this or that military alliance, seriously stated that "England" was losing her influence on the Continent at a time when her influence was transforming the whole lives of Continental people to a greater degree than they had been transformed since the days of the Romans.

I have gone into this at some length to show mainly two things—first, that neither morally nor materially, neither in our trade nor in our finance, nor in our industry, nor in all those intangible things that give value to life can there be such a thing as isolation from the rest of Christendom. If European civilization takes a "wrong turning"—and it has done that more than once in the past—we can by no means escape the effects of that catastrophe. We are deeply concerned, if only because we may have to defend ourselves against it and in so doing necessarily transform in some degree our society and ourselves.

And I wanted to show, secondly, that not only as a simple matter of fact as things stand are we in a very real sense dependent upon Europe, that we want European capital and European trade, and that if we are to do the best for American prosperity we must increase that dependence, but that if we are effectively to protect those things that go deeper even than trade and prosperity, we must co-operate with Europe intellectually and morally. It is not for us a question of choice. For good or evil, we are part of the world affected by what the rest of the world becomes and affected by what it does. And I want to show in my next article that only by frankly facing the fact (which we cannot deny) that we are a part of the civilized world and must play our part in it, shall we achieve real security for our material and moral possessions and do the best that we know for the general betterment of American life.

II.

AMERICA'S FUTURE ATTITUDE

In my last article I attempted to show how deeply must America feel, sooner or later, and for good or evil, the

moral and material results of the upheavals in Europe and the new tendencies that will be generated by them. I attempted to show, too, how impossible it is for us to escape our part of all the costs, how we shall pay our share of the indemnities, and how our children and children's children may be affected even more profoundly than we ourselves.

The shells may not hit us, yet there is hardly a farmhouse in our country that will not, however unconsciously, be affected by these far-off events. We may not witness the trains of weary refugees trailing over the roads, but (if we could but see the picture) there will be an endless procession of our own farmers' wives with a hardened and shortened life and their children with less ample opportunities.

And our ideals of the future will in some measure be twisted by the moral and material bankruptcy of Europe. Those who consider at all carefully the facts hinted at in my last article—too complex to be more than hinted at in the space available—will realize that the "isolation" of America is an illusion of the map, and is becoming more so every day; that she is an integral part of Occidental civilization whether she wishes it or not, and that if civilization in Europe takes the wrong turn we Americans would suffer less directly but not less vitally than France or Britain or Germany.

All this, of course, is no argument for departing from our traditional isolation. Our entrance into the welter might not change things or it might change them for the worse or the disadvantages might be such as to outweigh the advantages. The sensible question for America is this: "Can we affect the general course of events in Europe—in the world, that is—to our advantage by entering in; and will the advantage of so doing be of such extent as to offset the risks and costs?"

Before answering that question I want to indicate by very definite proposals or propositions a course of action and a basis for estimating the effect. I will

put the proposal with reference to America's future attitude to Europe, in the form of a definite proposition thus:

That America shall use her influence to secure the abandonment by the powers of Christendom of rival group alliances and the creation instead of an alliance of all the civilized powers having as its aim some common action—not necessarily military—which will constitute a collective guarantee of each against aggression.

Thus when Germany, asked by the Allies at the prospective peace to remove the menace of her militarism by reducing her armaments, replies, "What of my protection against Russia?" Christendom should, with America's help, be in a position to reply: "We will all protect you against Russia, just as we would all protect Russia against you."

The considerations which support such a policy on America's part are mainly these: First, that if America does not lend the assistance of her detachment from European quarrels to such an arrangement, Europe of herself may not prove capable of it. Second, that if Europe does not come to some such arrangement the resulting unrest, militarism, moral and material degeneration, for the reasons above indicated and for others to be indicated presently, will most unfavorably affect the development of America, and expose her to dangers internal and external much greater than those which she would incur by intervention. Third, that if America's influence is in the manner indicated made the deciding factor in the establishment of a new form of world society, she would virtually take the leadership of Western civilization, and her capital become the centre of the political organization of the new world State. While "world domination" by military means has always proved a dangerous diet for all nations that have eaten of it heretofore, the American form of that ambition would have this great difference from earlier forms—that it would be welcomed instead of being resisted by the dominated. America would have given a new meaning to the term and found a means of satisfying national pride, certainly more beneficial than that which comes of military glory.

I envisage the whole problem, however, first and last in this discussion on the basis of America's interest; and the test which I would apply to the alternatives now presenting themselves is simply this: What on balance is most advantageous, in the broadest and largest sense of the term, in its moral as well as its material sense, to American interest?

Now I know full well that there is much to be said against the step which I think America should initiate. I suppose the weight of the reasons against it would be in some such order as the following: First, that it is a violation of the ancient tradition of American statecraft and of the rule laid down by Washington concerning the avoidance of entangling alliances. Second, that it may have the effect which he feared of dragging this country into war on matters in which it had no concern. Third, that it will militarize the country, and so, Fourth, lead to the neglect of those domestic problems upon which the progress of our nation depends.

I will take the minor points first and will deal with the major consideration presently.

First, I would remind the reader of what I pointed out in the last article, that there is no such thing as being unaffected by the military policies of Europe, and there never has been. At this present moment a campaign for greatly increased armaments is being waged on the strength of what is taking place in the Old World, and our armaments are directly and categorically dictated by what foreign nations do in the matter. So that it is not a question in practice of being independent of the policies of other nations; we are not independent of their policies.

We may refuse to co-operate with them, to have anything to do with them. Even then our military policy will be guided by theirs, and it is at least conceivable that in certain circumstances we should become thoroughly militarized by the need for preparing against what our people would regard as the menace of European military ambitions. This tendency, if it became sufficiently acute, would

cause neglect of domestic problems hardly less mischievous than that occasioned by war.

In my last article I touched upon a quite possible turn of the alliance groupings in Europe—the growing influence of Russia, the extension of that influence to the Asiatic populations on her borders, (Japan and Russia are already in alliance,) so that within the quite measurable future we may be confronted by a military community drawing on a population of 500,000,000 souls, autocratically governed and endowed with all the machinery of destruction which modern science has given to the world. A Russo-Chino-Japanese alliance might on behalf of the interest or dignity of one of the members of such a group challenge this country in some form or another, and a Western Europe with whom we had refused to co-operate for a common protection might as a consequence remain an indifferent spectator of the conflict.

Such a situation would certainly not relieve us from the burdens of militarism merely because we declined to enter into any arrangement with the European powers. As a matter of fact, of course, this present war destroyed the nationalist basis of militarism itself. The militarist may continue to talk about international agreement between nations being impossible as a means of insuring a nation's safety, and a nation having no security but the strength of its own arms, but when it actually comes to the point even he is obliged to trust to agreement with other nations and to admit that even in war a nation can no longer depend merely upon the strength of its arms; it has to depend upon co-operation, which means an agreement of some kind with other nations as well.

Just as the nations have by forces stronger than their own volition been brought into industrial and commercial co-operation, so, strangely enough, have they been brought by those same forces into military co-operation. While the warrior and militarist have been talking the old jargon of nationalism and holding international co-operation up to derision as a dream, they have themselves been

brought to depend upon foreigners. War itself has become internationalist.

There is something of sardonic humor in the fact that it is the greatest war of history which is illustrating the fact that even the most powerful of the European nations must co-operate with foreigners for its security. For no one of the nine or ten combatants of the present war could have maintained its position or defended itself alone. There is not one nation involved that would not believe itself in danger of destruction but for the help of foreigners; there is not one whose national safety does not depend upon some compact or arrangement with foreign nations. France would have been helpless but for the help of Britain and of Russia. Russia herself could not have imposed her will upon Germany if Germany could have thrown all her forces on the eastern frontier. Austria could certainly not have withstood the Russian flood single handed. Quite obviously the lesser nations, Serbia, Belgium, and the rest, would be helpless victims but for the support of their neighbors.

And it should be noted that this international co-operation is not by any means always with similar and racially allied nations. Republican France finds itself, and has been for a generation, the ally of autocratic Russia. Australia, that much more than any other country has been obsessed by the yellow peril and the danger from Japan, finds herself today fighting side by side with the Japanese. And as to the ineradicable hostility of races preventing international co-operation, there are fighting together on the soil of France as I write, Flemish, Walloons, and negroes from Senegal, Turcos from Northern Africa, Gurkhas from India, co-operating with the advance on the other frontier of Cossacks, and Russians of all descriptions. This military and political co-operation has brought together Mohammedan and Christian; Catholic, Protestant, and Orthodox; negro, white and yellow; African, Indian, and European; monarchist, republican, Socialist, reactionary — there seems hardly a racial, religious, or political difference that has stood in the way

of rapid and effective co-operation in the common need.

Thus the soldier himself, while defending the old nationalist and exclusive conceptions, is helping to shrink the spaces of the world and break down old isolations and show how interests at the uttermost ends of the earth react one upon the other.

But even apart from this influence, as already noted, America cannot escape the military any more than she has escaped the commercial and financial effects of this war. She may never be drawn into active military co-operation with other nations, but she is affected none the less—by a demand for a naval programme immensely larger than any American could have anticipated a year since, by plans for an enormously enlarged army.

That, it will be argued, is the one thing needed—to be stronger than our prospective enemy. And, of course, any enemy—whether he be one nation or a group—who really does contemplate aggression, would on his side take care to be stronger than us. War and peace are matters of two parties, and any principle which you may lay down for one is applicable to the other. When we say "*Si vis pacem, para bellum*," we must apply it to all parties. One eminent upholder of this principle has told us that the only way to be sure of peace is to be so much stronger than your enemy that he will not dare to attack you. Apply that to the two parties and you get this result—here are two nations or two groups of nations likely to quarrel. How shall they keep the peace? And we say quite seriously that they will keep the peace if each is stronger than the other.

This principle, therefore, which looks at first blush like an axiom, is, as a matter of fact, an attempt to achieve a physical impossibility and always ends, as it has ended in Europe on this occasion, in explosion. You cannot indefinitely pile up explosive material without an accident of some sort occurring; it is bound to occur. But you will note this: that the militarist—while avowing by his conduct that nations can no longer in a military sense be independent, that

they are obliged to co-operate with others and consequently depend upon some sort of an arrangement, agreement, compact, alliance with others—has adopted a form of compact which merely perpetuates the old impossible situation on a larger scale! He has devised the "balance of power."

For several generations Britain, which has occupied with reference to the Continent of Europe somewhat the position which we are now coming to occupy with regard to Europe as a whole, has acted on this principle—that so long as the powers of the Continent were fairly equally divided she felt she could with a fair chance of safety face either one or the other. But if one group became so much stronger than the other that it was in danger of dominating the whole Continent, then Britain might find herself faced by an overwhelming power with which she would be unable to deal. To prevent this she joined the weaker group. Thus Britain intervened in Continental politics against Napoleon as she has intervened today against the Kaiser.

But this policy is merely a perpetuation on a larger scale of the principle of "each being stronger than the other." Military power, in any case, is a thing very difficult to estimate; an apparently weaker group or nation has often proved, in fact, to be the stronger, so that there is a desire on the part of both sides to give the benefit of the doubt to themselves. Thus the natural and latent effort to be strongest is obviously fatal to any "balance." Neither side, in fact, desires a balance; each desires to have the balance tilted in its favor. This sets up a perpetual tendency toward rearrangement, and regroupings and reshufflings in these international alliances sometimes take place with extraordinary and startling rapidity, as in the case of the Balkan States.

It is already illustrated in the present war; Italy has broken away from a definite and formal alliance which every one supposed would range her on the German side. There is at least a possibility that she may finally come down upon the Anglo-Franco-Russian side. You have Japan, which little more than a

decade ago was fighting bitterly against Russia, today ranged upon the side of Russia.

The position of Russia is still more startling. In the struggles of the eighteenth and early nineteenth centuries Britain was almost always on the side of Russia; then for two generations she was taught that any increase of the power of Russia was a particularly dangerous menace. That once more was a decade ago suddenly changed, and Britain is now fighting to increase both relatively and absolutely the power of a country which her last war on the Continent was fought to check. The war before that which Great Britain fought upon the Continent was fought in alliance with Germans against the power of France. As to the Austrians, whom Britain is now fighting, they were for many years her faithful allies. So it is very nearly true to say of nearly all the combatants respectively that they have no enemy today that was not, historically speaking, quite recently an ally, and not an ally today that was not in the recent past an enemy.

These combinations, therefore, are not, never have been, and never can be permanent. If history, even quite recent history, has any meaning at all, the next ten or fifteen or twenty years will be bound to see among these ten combatants now in the field rearrangements and permutations out of which the crushed and suppressed Germany that is to follow the war—a Germany which will embrace, nevertheless, a hundred million of the same race, highly efficient, highly educated, trained for co-ordination and common action—will be bound sooner or later to find her chance.

If America should by any catastrophe join Britain or any other nation for the purpose of maintaining a "balance of power" in the world, then indeed would her last state be worse than her first. The essential vice of the balance of power is that it is based upon a fundamentally false assumption as to the real relationship of nations and as to the function and nature of force in human affairs. The limits of the present article preclude any analysis of most of the

monstrous fallacies, but a hint can be given of one or two.

First, of course, if you could get such a thing as a real "balance of power"—two parties confronting one another with about equal forces—you would probably get a situation most favorable to war. Neither being manifestly inferior to the other, neither would be disposed to yield; each being manifestly as good as the other, would feel in "honor" bound to make no concession. If a power quite obviously superior to its rival makes concessions the world may give it credit for magnanimity in yielding, but otherwise it would always be in the position of being compelled to vindicate its courage. Our notions of honor and valor being what they are, no situation could be created more likely to bring about deadlocks and precipitate fights. All the elements are there for bringing about that position in which the only course left is "to fight it out."

The assumption underlying the whole theory of the balance of power is that predominant military power in a nation will necessarily—or at least probably—be exercised against its weaker neighbors to their disadvantage. Thus Britain has acted on the assumption that if one power dominated the Continent, British independence, more truly perhaps British predominance in the world would be threatened.

Now, how has a society of individuals—the community within the frontiers of a nation—met this difficulty which now confronts the society of nations, the difficulty that is of the danger of the power of an individual or a group? They have met it by determining that no individual or group shall exercise physical power or predominance over others; that the community alone shall be predominant. How has that predominance been secured? By determining that any one member attacked shall be opposed by the whole weight of the community, (exercised, say, through the policeman.) If A flies at B's throat in the street with the evident intention of throttling him to death, the community, if it is efficient, immediately comes to the support of B.

And you will note this: that it does not allow force to be used for the settlement of differences by anybody. The community does not use force as such at all; it merely cancels the force of units and determines that nobody shall use it. It eliminates force. And it thus cancels the power of the units to use it against other units (other than as a part of the community) by standing ready at all times to reduce the power of any one unit to futility. If A says that B began it, the community does not say, "Oh, in that case you may continue to use your force; finish him off." It says, on the contrary, "Then we'll see that B does not use his force; we'll restrain him, we won't have either of you using force. We'll cancel it and suppress it wherever it rears its head." For there is this paradox at the basis of all civilized intercourse: force between men has but one use—to see that force settles no difference between them.

And this has taken place because men—individually—have decided that the advantage of the security of each from aggression outweighs the advantage which each has in the possible exercise of aggression. When nations have come to the same decision—and not a moment before—they will protect themselves from aggression in precisely the same way—by agreeing between them that they will cancel by their collective power the force of any one member exercised against another.

I emphasize the fact that you must get this recognition of common interest in a given action before you can get the common action. We have managed it in the relations between individuals because, the numbers being so much greater than in the case of nations, individual dissent goes for less. The policeman, the judge, the jailer have behind them a larger number relatively to individual exceptions than is the case with nations. For the existence of such an arrangement by no means implies that men shall be perfect, that each shall willingly obey all the laws which he enforces. It merely implies that his interest in the law as a whole is greater than his interest in its general violation.

No man for a single day of his life observes all the Ten Commandments, yet you can always secure a majority for the support of the Ten Commandments, for the simple reason that while there are a great many who would like to rob, all are in favor of being protected against the robber. While there are a great many who would like on occasion to kill, all are in favor of being protected against being killed. The prohibition of this act secures universal support embracing "all of the people all of the time"; the positive impulse to it is isolated and occasional—with some individuals perhaps all the time, but with all individuals only some of the time, if ever.

When you come to the nations, there is less disproportion between the strength of the unit and the society. Hence nations have been slower than individuals in realizing their common interest. Each has placed greater reliance on its own strength for its protection. Yet the principle remains the same. There may be nations which desire for their own interest to go to war, but they all want to protect themselves against being beaten. You have there an absolutely common interest. The other interest, the desire to beat, is not so universal; in fact, if any value can be given whatever to the statement of the respective statesmen, such an interest is non-existent.

There is not a single statesman in Christendom today who would admit for a moment that it is his desire to wage war on a neighboring nation for the purpose of conquering it. All this warfare is, each party to it declares, merely a means of protecting itself against the aggression of neighbors. Whatever insincerity there may be in these declarations we can at least admit this much, that the desire to be safe is more widespread than the desire to conquer, for the desire to be safe is universal.

We ought to be able, therefore, to achieve, on the part of the majority, action to that end. And on this same principle there can be no doubt that the nations as a whole would give their support to any plan which would help to secure them from being attacked. It is time for the society of nations to take

this first step toward the creation of a real community; to agree, that is, that the influence of the whole shall be thrown against the one recalcitrant member.

The immensely increased contact between nations which has set up a greater independence (in the way hinted at in my last article) has given weight to the interest in security and taken from the interest in aggression. The tendency to aggression is often a blind impulse due to the momentum of old ideas which have not yet had time to be discredited and disintegrated by criticism. And of organization for the really common interest—that of security against aggression—there has, in fact, been none. If there is one thing certain it is that in Europe last July the people did not want war; they tolerated it, passively dragged by the momentum of old forces which they could not even formulate. The really general desire has never been organized; any means of giving effect to a common will—such as is given it in society within the frontiers—has never so far been devised.

I believe that it is the mission of America in her own interest to devise it; that the circumstances of her isolation, historical and geographical, enable her to do for the older peoples—and herself—a service which by reason of their circumstances, geographical and historical, they cannot do for themselves.

The power that she exercises to this end need not be military. I do not think that it should be military. This war has shown that the issues of military conflict are so uncertain, depending upon all sorts of physical accidents, that no man can possibly say which side will win. The present war is showing daily that the advantage does not always go with numbers, and the outcome of war is always to some extent a hazard and a gamble, but there are certain forces that can be set in operation by nations situated as the United States, that are not in any way a gamble and a hazard, the effect of which will be quite certain.

I refer to the pressure of such a thing as organized non-intercourse, the sending of a country to moral, social, economic Coventry. We are, I know, here

treading somewhat unknown ground, but we have ample evidence to show that there do exist forces capable of organization, stronger, and more certain in their operation than military forces. That the world is instinctively feeling this is demonstrated by the present attitude of all the combatants in Europe to the United States. The United States relatively to powers like Russia, Britain, and Germany is not a great military power, yet they are all pathetically anxious to secure the good-will of the United States.

Why?

It can hardly be to save the shock to their moral feelings which would come from the mere disapproval of people on the other side of the world. If any percentage of what we have read of German methods is true, if German ethics bear the faintest resemblance to what they are so often represented to be, Germany must have no feeling in the political sphere to be hurt by the moral disapproval of the people of the United States. If German statesmen are so desperately anxious as they evidently are to secure the approval and good-will of the United States it is because they realize, however indistinctly, that there lie in the hands of the United States powers which could be loosed, more portentous than those held by the masters of many legions.

Just what these powers are and how they might be used to give America greater security than she could achieve by arms, to place her at the virtual head of a great world State, and to do for mankind as a whole a service greater than any yet recorded in written history, must be left to the third and concluding article of this series.

III.

AMERICA AS LEADER.

In the preceding article I indicated that America might undertake at this juncture of international affairs an intervention in the politics of the Old World which is of a kind not heretofore attempted by any nation, an intervention, that is to say, that should not be military, but in the first instance mediatory and moral, having in view if needs be the employment of certain organized

social and economic forces which I will detail presently.

The suggestion that America should take any such lead is resisted first on the ground that it is a violation of her traditional policy, and secondly that "economic and social forces" are bound to be ineffective unless backed by military, so that the plea would involve her in a militarist policy. With reference to these two points, I pointed out in the preceding article that America's isolation from a movement for world agreement would infallibly land her in a very pronounced militarist policy, the increase of her armaments, the militarization of her civilization and all that that implies.

There are open to America at this present moment two courses: one which will lead her to militarism and the indefinite increase of armaments—that is the course of isolation from the world's life, from the new efforts that will be made toward world organization; the other to anticipate events and take the initiative in the leadership of world organization, which would have the effect of rendering western civilization, including herself, less military, less dependent upon arms, and put the development of that civilization on a civilist rather than a militarist basis.

I believe that it is the failure to realize that this intervention can be non-military in character which explains the reluctance of very many Americans to depart from their traditional policy of non-intervention. With reference to that point it is surely germane to remember that the America of 1914 is not the America of 1776; circumstances which made Washington's advice sound and statesmanlike have been transformed. The situation today is not that of a tiny power not yet solidified, remote from the main currents of the world's life, out-matched in resources by any one of the greater powers of Europe. America is no longer so remote as to have little practical concern with Europe. Its contacts with Europe are instantaneous, daily, intimate, innumerable—so much so indeed that our own civilization will be intimately affected and modified by cer-

tain changes which threaten in the older world.

I will put the case thus: Suppose that there are certain developments in Europe which would profoundly threaten our own civilization and our own security, and suppose further that we could without great cost to ourselves so guide or direct those changes and developments as to render them no longer a menace to this country. If such a case could be established, would not adherence to a formula established under eighteenth century conditions have the same relation to sound politics that the incantations and taboos of superstitious barbarians have to sound religion? And I think such a case can be established.

I wonder whether it has occurred to many Americans to ask why all the belligerents in this present war are showing such remarkable deference to American public opinion. Some Americans may, of course, believe that it is the sheer personal fascination of individual Americans or simple tenderness of moral feeling that makes Great Britain, France, Russia, Germany, and Austria take definitely so much trouble at a time when they have sufficient already, to demonstrate that they have taken the right course, that they are obeying all the laws of war, that they are not responsible for the war in any way, and so forth. Is it simply that our condemnation would hurt their feelings? This hardly agrees with certain other ideas which we hold as to the belligerents.

There is something beyond this order of motive at the bottom of the immense respect which all the combatants alike are paying to American opinion. It happened to the writer recently to meet a considerable number of Belgian refugees from Brussels, all of them full of stories (which I must admit were second or third or three-hundredth hand) of German barbarity and ferocity. Yet all were obliged to admit that German behavior in Brussels had on the whole been very good. But that, they explained, was "merely because the American Consul put his foot down." Yet one is not aware that President Wilson had author-

ized the American Consul so much as to hint at the possible military intervention of America in this war. Nevertheless there can be no doubt that these "Huns," so little susceptible in our view for the most part to moral considerations, were greatly influenced by the opinion of America; and we know also that the other belligerents have shown the same respect for the attitude of the United States.

I think we have here what so frequently happens in the development of the attitude of men toward large general questions: the intuitive recognition of a truth which those who recognize it are quite unable to put into words. It is a self-protective instinct, a movement that is made without its being necessary to think it out. (In the way that the untaught person is able instantly to detect the false note in a tune without knowing that such things as notes or crotchets and quavers exist.)

It is quite true that the Germans feared the bad opinion of the world because the bad opinion of the world may be translated into an element of resistance to the very ends which it is the object of the war to achieve for Germany.

Those ends include the extension of German influence, material and moral, of German commerce and culture. But a world very hostile to Germany might quite conceivably check both. We say, rightly enough, probably, that pride of place and power had its part—many declare the prominent part—in the motives that led Germany into this war. But it is quite conceivable that a universal revulsion of feeling against a power like Germany might neutralize the influence she would gain in the world by a mere extension of her territorial conquests.

Russia, for instance, has nearly five times the population and very many times the area of France; but one may doubt whether even a Russian would assert that Russian influence is five or ten times greater than that of France; still less that the world yielded him in any sense a proportionately greater deference than it yields the Frenchman. The extent to which the greatest power can impose itself by bayonets is very lim-

ited in area and depth. All the might of the Prussian Army cannot compel the children of Poland or of Lorraine to say their prayers in German; it cannot compel the housewives of Switzerland or Paraguay or of any other little State that has not a battleship to its name to buy German saucepans if so be they do not desire to. There are so many other things necessary to render political or military force effective, and there are so many that can offset it altogether.

We see these forces at work around us every day accomplishing miracles, doing things which a thousand years of fighting was never able to do—and then say serenely that they are mere "theories." Why do Catholic powers no longer execute heretics? They have a perfect right—even in international law—to do so. What is it that protects the heretic in Catholic countries? The police? But the main business of the police and the army used to be to hunt him down. What is controlling the police and the army?

By some sort of process there has been an increasing intuitive recognition of a certain code which we realize to be necessary for a decent society. It has come to be a sanction much stronger than the sanction of law, much more effective than the sanction of military force. During the German advance on Paris in August last I happened to be present at a French family conference. Stories of the incredible cruelties and ferocity of the Germans were circulating in the Northern Department, where I happened to be staying.

Every one was in a condition of panic, and two Frenchmen, fathers of families, were seeing red at the story of all these barbarities. But they had to decide—and the thing was discussed at a little family conference—where they should send their wives and children. And one of these Frenchmen, the one who had been most ferocious in his condemnation of the German barbarian, said quite naïvely and with no sense of irony or paradox: "Of course, if we could find an absolutely open town which would not be defended at all the women folk and children would be all right." His instinct, of course, was perfectly just. The Ger-

man "savage" had had three quarters of a million people in his absolute power in Brussels, and so far as we know, not a child or a woman has been injured.

Indeed, in normal times our security against foreigners is not based upon physical force at all. I suppose during the last century some hundreds of thousands of British and American tourists have traveled through the historic cities of Germany, their children have gone to the German educational institutions, their invalids have been attended by German doctors and cut up by German surgeons in German sanatoria and health resorts, and I am quite sure that it never occurred to any one of these hundreds of thousands that their little children when in the educational institutions of these "Huns" were in any way in danger. It was not the guns of the American Navy or the British Navy that were protecting them; the physical force of America or of Great Britain could not certainly be the factor operative in, say, Switzerland or Austria, yet every Summer tens of thousands of them trust their lives and those of their women and children in the remote mountains of Switzerland on no better security than the expectation that a foreign community over whom we have no possibility of exercising force will observe a convention which has no sanction other than the recognition that it is to their advantage to observe it.

And we thus have the spectacle of millions of Anglo-Saxons absolutely convinced that the sanctity of their homes and the safety of their property are secure from the ravages of the foreigner only because they possess a naval and military force that overawes him, yet serenely leaving the protection of that military force, and placing life and property alike within the absolute power of that very foreigner against whose predatory tendencies we spend millions in protecting ourselves.

No use of military power, however complete and overwhelming, would pretend to afford a protection anything like as complete as that afforded by these moral forces. Sixty years ago Britain

had as against Greece a preponderance of power that made her the absolute dictator of the latter's policy, yet all the British battleships and all the threats of "consequences" could not prevent British travelers being murdered by Greek brigands, though in Switzerland only moral forces—the recognition by an astute people of the advantage of treating foreigners well—had already made the lives and property of Britons as safe in that country as in their own.

In the same way, no scheme of arming Protestants as against Catholics, or Catholics as against Protestants (the method which gave us the wars of religion and massacre of St. Bartholomew) could assure that general security of spiritual and intellectual possessions which we now in large measure enjoy. So indeed with the more material things, France, Great Britain, and some of the older nations have sunk thousands of millions in foreign investments, the real security of which is not in any physical force which their Government could possibly exercise, but the free recognition of foreigners that it is to their advantage to adhere to financial obligations. Englishmen do not even pretend that the security of their investments in a country like the United States or the Argentine is dependent upon the coercion which the British Government is able to exercise over these communities.

The reader will not, I think, misunderstand me. I am not pleading that human nature has undergone or will undergo any radical transformation. Rather am I asserting that it will not undergo any; that the intention of the man of the tenth century in Europe was as good as that of the man of the twentieth, that the man of the tenth century was as capable of self-sacrifice—was, it may be, less self-seeking. But what I am trying to hint is that the shrinking of the world by our developed intercommunication has made us all more interdependent.

The German Government moves its troops against Belgium; a moratorium is immediately proclaimed in Rio de Janeiro, a dozen American Stock Exchanges are promptly closed and some hundreds of thousands of our people are

affected in their daily lives. This world-wide effect is not a matter of some years or a generation or two. It is a matter of an hour; we are intimately concerned with the actions of men on the other side of the world that we have never seen and never shall see; and they are intimately concerned with us. We know without having thought it out that we are bound together by a compact; the very fact that we are dependent upon one another creates as a matter of fact a partnership. We are expecting the other man to perform his part; he has been doing so uninterruptedly for years, and we send him our goods or we take his bill of exchange, or our families are afloat in his ships, expecting that he will pay for his goods, honor the bill of exchange, navigate safely his ship—he has undertaken to do these things in the world-wide partnership of our common labor and then he fails. He does not do these things, and we have a very lively sense of the immorality of the doctrine which permits him to escape doing them.

And so there are certain things that are not done, certain lengths to which even in war time we cannot go. What will stop the war is not so much the fighting, any more than Protestant massacres prevented Catholic massacres. Men do not fear the enemy soldiers; they do fear the turning of certain social and moral forces against them. The German Government does not hesitate for a moment to send ten thousand of its own people to certain death under enemy guns even though the military advantage of so doing may be relatively trifling. But it dare not order the massacre of ten thousand foreign residents in Berlin. There is some force which makes it sometimes more scrupulous of the lives of its enemy than of the lives of its own people.

Yet why should it care? Because of the physical force of the armies ranged against it? But it has to meet that force in any case. It fears that the world will be stirred. In other words, it knows that the world at large has a very lively realization that in its own interest certain things must not be done, that the world would not live together as we now

know it, if it permitted those things to be done. It would not so permit them.

At the bottom of this moral hesitation is an unconscious realization of the extent of each nation's dependence upon the world partnership. It is not a fear of physical chastisement; any nation will go to war against desperate odds if a foreign nation talks of chastising it. It is not that consideration which operates, as a thousand examples in history prove to us. There are forces outside military power more visible and ponderable than these.

There exists, of course, already a world State which has no formal recognition in our paper constitutions at all, and no sanction in physical force. If you are able to send a letter to the most obscure village of China, a telegram to any part of the planet, to travel over most of the world in safety, to carry on trade therewith, it is because for a generation the Post Office Departments of the world have been at work arranging traffic and communication details, methods of keeping their accounts; because the ship owner has been devising international signal codes; the banker arranging conditions of international credit; because, in fact, not merely a dozen but some hundreds of international agreements, most of them made not between Governments at all, but between groups and parties directly concerned, have been devised.

There is no overlord enforcing them, yet much of our daily life depends upon their normal working. The bankers or the shipowners or the makers of electric machinery have met in Paris or Brussels and decided that such shall be the accepted code, such the universal measurement for the lamp or instrument, such the conditions for the bill of exchange and from the moment that there is an agreement you do not need any sanction. If the instrument does not conform to the measurement it is unsalable and that is sanction enough.

We have seen in the preceding article that the dependence of the nations goes back a good deal further than we are apt to think; that long before the period of fully developed intercommunication, all

JAMES W. GERARD
American Ambassador to the German Empire

nations owed their civilization to foreigners. It was to their traffic with Gaul and the visits of the Phoenician traders that the early inhabitants of the British Isles learned their first steps in arts and crafts and the development of a civilized society, and even in what we know as the Dark Ages we find Charlemagne borrowing scholars from York to assist him in civilizing the Continent.

The civilization which our forefathers brought with them to America was the result of centuries of exchange in ideas between Britain and the Continent, and though in the course of time it had become something characteristically Anglo-Saxon, its origins were Greek and Arabic and Roman and Jewish. But the interdependence of nations today is of an infinitely more vital and insistent kind, and despite superficial setbacks becomes more vital every day. As late as the first quarter of the nineteenth century, for instance, Britain was still practically self-sufficing; her very large foreign trade was a trade in luxuries. She could still produce her own food, her population could still live on her own soil.

But if today by some sort of magic Britain could kill off all foreigners the means of livelihood for quite an appreciable portion of her population would have disappeared. Millions would be threatened by actual starvation. For Britain's overseas trade, on which so large a proportion of the population actually lives, is mainly with the outside world and not with her own empire. We have seen what isolation merely from two countries has meant for Great Britain. Britain is still maintaining her contacts with the world as a whole, but the cessation of relationship with two countries has precipitated the gravest financial crisis known in all her history, has kept her Stock Exchanges closed for months, has sent her Consols to a lower point than any known since the worst period of the Napoleonic wars, and has compelled the Government ruthlessly to pledge its credit for the support of banking institutions and all the various trades that have been most seriously hit.

Nor is Germany's isolation altogether complete. She manages through neutral

countries and otherwise to maintain a considerable current of relationship with the outside world, but how deeply and disastrously the partial severance of contact has affected Germany we shall not at present, probably at no time, in full measure know.

All this gives a mere hint of what the organized isolation by the entire world would mean to any one nation. Imagine the position of a civilized country whose ports no ship from another country would enter, whose bills no banker would discount, a country unable to receive a telegram or a letter from the outside world or send one thereto, whose citizens could neither travel in other countries or maintain communications therewith. It would have an effect in the modern world somewhat equivalent to that of the dreadful edicts of excommunication and interdict which the papal power was able to issue in the mediaeval world.

I am aware, of course, that such a measure would fall very hardly upon certain individuals in the countries inflicting this punishment, but it is quite within the power of the Governments of those countries to do what the British Government has done in the case of persons like acceptors of German bills who found themselves threatened with bankruptcy and who threatened in consequence to create great disturbance around them because of the impossibility of securing payment from the German indorsers. The British Government came to the rescue of those acceptors, used the whole national credit to sustain them. It is expensive, if you will, but infinitely less expensive than a war, and, finally, most of the cost of it will probably be recovered.

Now if that were done, how could a country so dealt with retaliate? She could not attack all the world at once. Upon those neighbors more immediately interested could be thrown the burden of taking such defensive military measures as the circumstances might dictate. You might have a group of powers probably taking such defensive measures and all the powers of Christendom co-operating economically by this suggested non-intercourse. It is possible even that the

powers as a whole might contribute to a general fund indemnifying individuals in those States particularly hit by the fact of non-intercourse. I am thinking, for instance, of shipping interests in a port like Amsterdam if the decree of non-intercourse were proclaimed against a power like Germany.

We have little conception of the terror which such a policy might constitute to a nation. It has never been tried, of course, because even in war complete non-intercourse is not achieved. At the present time Germany is buying and selling and trading with the outside world, cables from Berlin are being sent almost as freely to New York as cables from London and German merchants are making contracts, maintaining connections of very considerable complexity. But if this machinery of non-intercourse were organized as it might be, there would be virtually no neutrals, and its effect in our world today would be positively terrifying.

It is true that the American administration did try something resembling a policy of non-intercourse in dealing with Mexico. But the thing was a fiction. While the Department of State talked of non-intercourse the Department of the Treasury was busy clearing ships for Mexico, facilitating the dispatch of mails, &c. And, of course, Mexico's communication with Europe remained unimpaired; at the exact moment when the President of the United States was threatening Huerta with all sorts of dire penalties Huerta's Government was arranging in London for the issue of large loans and the advertisements of these Mexican loans were appearing in *The London Times*. So that the one thing that might have moved Huerta's Government the United States Government was unable to enforce. In order to enforce it, it needed the co-operation of other countries.

I have spoken of the economic world State—of all those complex international arrangements concerning Post Offices, shipping, banking, codes, sanctions of law, criminal research, and the rest, on which so much of our civilized life de-

pends. This world State is unorganized, incoherent. It has neither a centre nor a capital, nor a meeting place. The shipowners gather in Paris, the world's bankers in Madrid or Berne, and what is in effect some vital piece of world regulation is devised in the smoking room of some Brussels hotel. The world State has not so much as an office or an address. The United States should give it one. Out of its vast resources it should endow civilization with a Central Bureau of Organization—a Clearing House of its international activities as it were, with the funds needed for its staff and upkeep.

If undertaken with largeness of spirit, it would become the capital of the world. And the Old World looks to America to do this service, because it is the one which it cannot do for itself. Its old historic jealousies and squabbles, from which America is so happily detached, prevent any one power taking up and putting through this work of organization, but America could do it, and do it so effectively that from it might well flow this organization of that common action of all the nations against any recalcitrant member of which I have spoken as a means of enforcing non-militarily a common decision.

It is this world State which it should be the business of America during the next decade or two to co-ordinate, to organize. Its organization will not come into being as the result of a week-end talk between Ambassadors. There will be difficulties, material as well as moral, jealousies to overcome, suspicions to surmount. But this war places America in a more favorable position than any one European power. The older powers would be less suspicious of her than of any one among their number. America has infinitely greater material resources, she has a greater gift for improvised organization, she is less hidebound by old traditions, more disposed to make an attempt along new lines.

That is the most terrifying thing about the proposal which I make—it has never been tried. But the very difficulties constitute for America also an immense op-

portunity. We have had nations give their lives and the blood of their children for a position of supremacy and superiority. But we are in a position of superiority and supremacy which for the most part would be welcomed by the world as a whole and which would not demand of America the blood of one of her children. It would demand some enthusiasm, some moral courage, some sustained effort, faith, patience, and persistence. It would establish new standards in, and let us hope a new kind of, international rivalry.

One word as to a starting point and a possible line of progress. The first move toward the ending of this present war may come from America. The President of the United States will probably act as mediator. The terms of peace will probably be settled in Washington. Part of the terms of peace to be exacted by the Allies will probably be, as I have already hinted, some sort of assurance against future danger from German militarist aggression.

The German, rightly or wrongly, does not believe that he has been the aggressor—it is not a question at all of whether he is right or wrong; it is a question of what he believes. And he believes quite honestly and sincerely that he is merely defending himself. So what he will be mainly concerned about in the future is his security from the victorious Allies.

Around this point much of the discussion at the conclusion of this present war will range. If it is to be a real peace and not a truce an attempt will have to be made to give to each party security from the other, and the question will then arise whether America will come into that combination or not. I have already indicated that I think she should not come in, certainly I do not think she will come in, with the offer of military aid. But if she stays out of it altogether she will have withdrawn from this world congress that must sit at the end of the war a mediating influence which may go far to render it nugatory.

And when, after it may be somewhat weary preliminaries, an international council of conciliation is established to

frame the general basis of the new alliance between the civilized powers for mutual protection along the lines indicated, America, if she is to play her part in securing the peace of the world, must be ready to throw at least her moral and economic weight into the common stock, the common moral and economic forces which will act against the common enemy, whoever he may happen to be.

That does not involve taking sides, as I showed in my last article. The policeman does not decide which of two quarrelers is right; he merely decides that the stronger shall not use his power against the weaker. He goes to the aid of the weaker, and then later the community deals with the one who is the real aggressor. One may admit, if you will, that at present there is no international law, and that it may not be possible to create one. But we can at least exact that there shall be an inquiry, a stay; and more often than not that alone would suffice to solve the difficulty without the application of definite law.

It is just up to that point that the United States should at this stage be ready to commit herself in the general council of conciliation, namely, to say this: "We shall throw our weight against any power that refuses to give civilization an opportunity at least of examining and finding out what the facts of the dispute are. After due examination we may reserve the right to withdraw from any further interference between such power and its antagonist. But, at least, we pledge ourselves to secure that by throwing the weight of such non-military influence as we may have on to the side of the weaker." That is the point at which a new society of nations would begin, as it is the point at which a society of individuals has begun. And it is for the purpose of giving effect to her undertaking in that one regard that America should become the centre of a definite organization of that world State which has already cut athwart all frontiers and traversed all seas.

It is not easy without apparent hyperbole to write of the service which America would thus render to mankind. She

would have discovered a new sanction for human justice, would have made human society a reality. She would have done something immeasurably greater, immeasurably more beneficent than any of the conquests recorded in the long story of man's mostly futile struggles. The democracy of America would have done something which the despots and

the conquerors of all time, from Alexander and Caesar to Napoleon and the Kaiser, have found to be impossible. Dangerous as I believe national vanity to be, America would, I think, find in the pride of this achievement—this American leadership of the human race—a glory that would not be vain, a world victory which the world would welcome.

SIR CHRISTOPHER CRADOCK.

By JOHN E. DOLSON.

THROUGH the fog of the fight we could dimly see,
As ever the flame from the big guns flashed,
That Cradock was doomed, yet his men and he,
With their plates shot to junk, and their turrets smashed,
Their ship heeled over, her funnels gone,
Were fearlessly, doggedly fighting on.

Out-speeded, out-metalead, out-ranged, out-shot

By heavier guns, they were not out-fought.
Those men—with the age-old British phlegm,
That has conquered and held the seas for them,

And the courage that causes the death-struck man

To rise on his mangled stumps and try,
With one last shot from his heated gun,
To score a hit ere his spirit fly,
Then sink in the welter of red, and die
With the sighting squint fixed on his dead,
glazed eye—

Accepted death as part of the plan.

So the guns belched flame till the fight had run

Into night; and now, in the distance dim,
We could see, by the flashes, the dull, dark loom

Of their hull, as it bore toward the Port of Doom,

Away on the water's misty rim—
Cradock and his few hundred men,
Never, in time, to be seen again.

While into the darkness their great shells streamed,

Little the valiant Germans dreamed
That Cradock was teaching them how to go
When the fate their daring, itself, had sealed,

Waiting, as yet, o'er the ocean's verge,

To their eyes undaunted would stand revealed;

And, snared by a swifter, stronger foe,
Out-classed, out-metalead, out-ranged, out-shot

By heavier guns, but not out-fought,
They, too, would sink in the sheltering surge.

Battle of the Suez Canal

A First-Hand Account of the Unsuccessful Turkish Invasion

[From The London Times, Feb. 19, 1915.]

ISMAILIA, Feb. 10.

THOUGH skirmishing had taken place between the enemy's reconnoitring parties and our outposts during the latter part of January, the main attack was not developed until Feb. 2, when the enemy began to move toward the Ismailia Ferry. They met a reconnoitring party of Indian troops of all arms, and a desultory engagement ensued, to which a violent sand storm put a sudden end about 3 o'clock in the afternoon. The main attacking force pushed forward toward its destination after nightfall. From twenty-five to thirty galvanized iron pontoon boats, seven and a half meters in length, which had been dragged in carts across the desert, were hauled by hand toward the water, with one or two rafts made of kerosene tins in a wooden frame. All was ready for the attack.

The first warning of the enemy's approach was given by a sentry of a mountain battery, who heard, to him, an unknown tongue across the water. The noise soon increased. It would seem that Mudjah Ideen ("Holy Warriors")—said to be mostly old Tripoli fighters—accompanied the pontoon section and regulars of the Seventy-fifth Regiment, for loud exhortations often in Arabic of "Brothers die for the faith; we can die but once," betrayed the enthusiastic irregular.

The Egyptians waited till the Turks were pushing their boats into the water; then the Maxims attached to the battery suddenly spoke and the guns opened with case at point-blank range at the men and boats crowded under the steep bank opposite them.

Immediately a violent fire broke out on both sides of the canal, the enemy replying to the rifles and machine gun fire and the battery on our bank. Around the guns it was impossible to

stand up, but the gunners stuck to the work, inflicting terrible punishment.

A little torpedo boat with a crew of thirteen patrolling the canal dashed up and landed a party of four officers and men to the south of Tussum, who climbed up the eastern bank and found themselves in a Turkish trench, and escaped by a miracle with the news. Promptly the midget dashed in between the fires and enfiladed the eastern bank amid a hail of bullets, and destroyed several pontoon boats lying unlaunched on the bank. It continued to harass the enemy, though two officers and two men were wounded.

As the dark, cloudy night lightened toward dawn fresh forces came into action. The Turks, who occupied the outer, or day, line of the Tussum post, advanced, covered by artillery, against the Indian troops holding the inner, or night, position, while an Arab regiment advanced against the Indian troops at the Serapeum post.

The warships on the canal and lake joined in the fray. The enemy brought some six batteries of field guns into action from the slopes west of Kataib-el-Kheil. Shells admirably fused made fine practice at all the visible targets, but failed to find the battery above mentioned, which, with some help from a detachment of infantry, beat down the fire of the riflemen on the opposite bank and inflicted heavy losses on the hostile supports advancing toward the canal. A chance salvo wounded four men of the battery, but it ran more risk from a party of about twenty of the enemy who had crossed the canal in the dark and sniped the gunners from the rear till they were finally rounded up by the Indian cavalry and compelled to surrender.

Supported by land naval artillery the Indian troops took the offensive. The

Serapeum garrison, which had stopped the enemy three-quarters of a mile from the position, cleared its front, and the Tussum garrison by a brilliant counter-attack drove the enemy back. Two battalions of Anatolians of the Twenty-eighth Regiment were thrown vainly into the fight. Our artillery gave them no chance, and by 3:30 in the afternoon a third of the enemy, with the exception of a force that lay hid in bushy hollows on the east bank between the two posts, were in full retreat, leaving many dead, a large proportion of whom had been killed by shrapnel.

Meanwhile the warships on the lake had been in action. A salvo from a battleship woke up Ismailia early, and crowds of soldiers and some civilians climbed every available sandhill to see what was doing till the Turkish guns sent shells sufficiently near to convince them that it was safer to watch from cover. A husband and wife took a carriage and drove along the lake front, much peppered by shells, till near the old French hospital, when they realized the danger and suddenly whisked around and drove back full gallop to Ismailia.

But the enemy's fire did more than startle. At about 11 in the morning two six-inch shells hit the Hardinge near the southern entrance of the lake. The first damaged the funnel and the second burst inboard. Pilot Carew, a gallant old merchant seaman, refused to go below when the firing opened and lost a leg. Nine others were wounded. One or two merchantmen were hit, but no lives were lost. A British gunboat was struck.

Then came a dramatic duel between the Turkish big gun or guns and a warship. The Turks fired just over and then just short of 9,000 yards. The warship sent in a salvo of more six-inch shells than had been fired that day.

During the morning the enemy moved toward Ismailia Ferry. The infantry used the ground well, digging shelter pits as they advanced, and were covered by a well-served battery. An officer, apparently a German, exposed himself with the greatest daring, and watchers were interested to see a yellow "pie dog," which also escaped, running about

the advancing line. Our artillery shot admirably and kept the enemy from coming within 1,000 yards of the Indian outposts. In the afternoon the demonstration—for it was no more—ceased but for a few shells fired as "a nightcap." During the dark night that followed some of the enemy approached the outpost line of the ferry position with a dog, but nothing happened, and day found them gone.

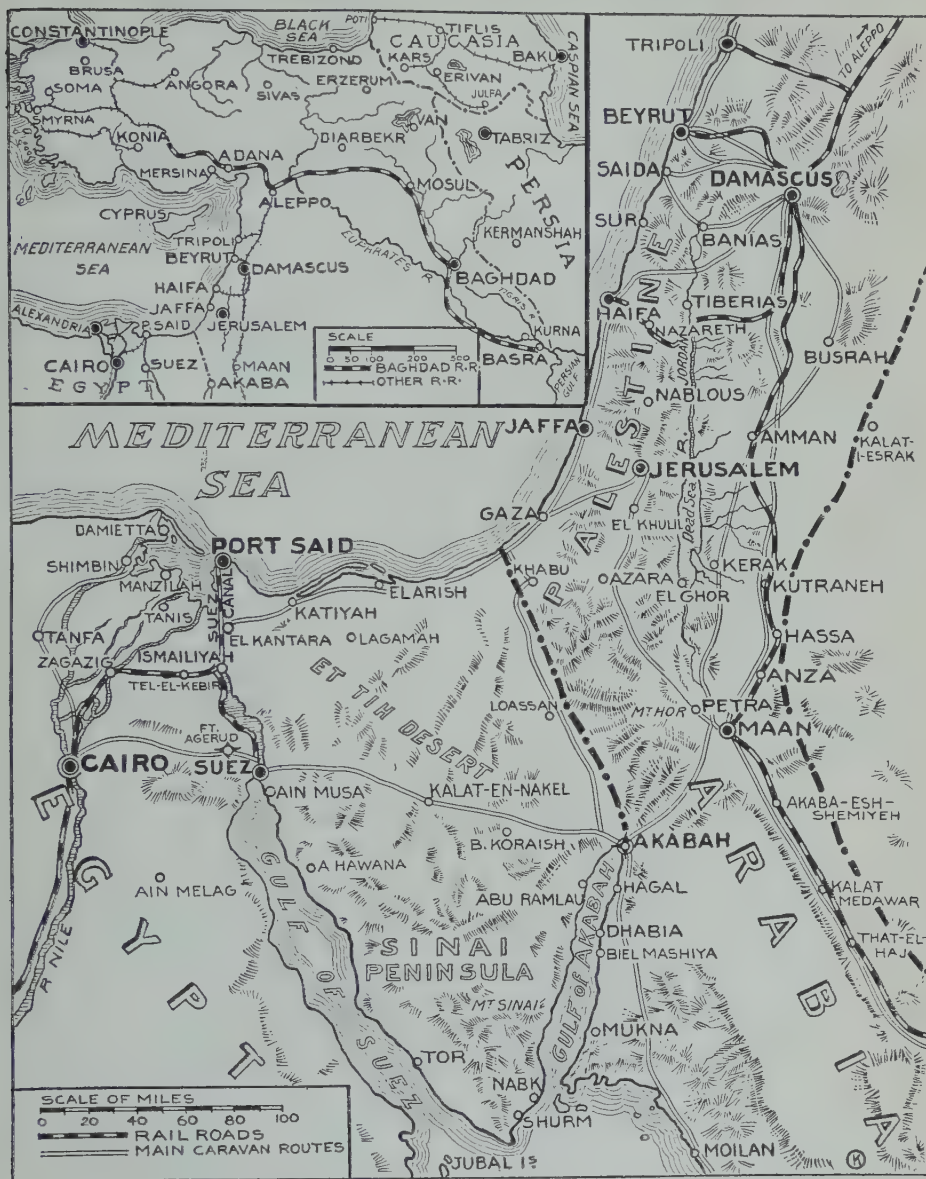

At the same time as the fighting ceased at the ferry it died down at El Kantara. There the Turks, after a plucky night attack, came to grief on our wire entanglements. Another attempt to advance from the southeast was forced back by an advance of the Indian troops. The attack, during which it was necessary to advance on a narrow front over ground often marshy with recent inundations against our strong position, never had a chance. Indeed, the enemy was only engaged with our outpost line.

Late in the afternoon of the 3d there was sniping from the east bank between Tussum and Serapeum and a man was killed in the tops of a British battleship. Next morning the sniping was renewed, and the Indian troops, moving out to search the ground, found several hundred of the enemy in the hollow previously mentioned. During the fighting some of the enemy, either by accident or design, held up their hands, while others fired on the Punjabis, who were advancing to take the surrender, and killed a British officer. A sharp fight with the cold steel followed, and a British officer killed a Turkish officer with a sword thrust in single combat. The body of a German officer with a white flag was afterward found here, but there is no proof that the white flag was used. Finally all the enemy were killed, captured, or put to flight.

With this the fighting ended, and the subsequent operations were confined to "rounding up" prisoners and to the capture of a considerable amount of military material left behind. The Turks who departed with their guns and baggage during the night of the 3d still seemed to be moving eastward.

So ended the battle of the Suez Canal. Our losses have been amazingly small, totaling about 111 killed and wounded.

Our opponents have probably lost nearly 3,000 men. The Indian troops bore the brunt of the fighting and were well sup-

Showing the Turkish points of concentration in Palestine and the principal routes leading thence to the Suez Canal. The intervening desert Peninsula of Sinai constitutes a formidable obstacle to an invading force. Inset is a map of the Ottoman Empire showing in the northeast the Caucasus, where the Turks were routed by the Russians, who later advanced on Erzerum and Tabriz. The British expedition in the Persian Gulf region occupied Basra and was on Feb. 1, 1915, at Kurna, the point of confluence of the Tigris and Euphrates.

ported by the British and French warships and by the Egyptian troops. The Turks fought bravely and their artillery shot well if unluckily, but the intentions of the higher command are still a puzzle to British officers.

Did Djemal Pasha intend to try to break through our position under cover of demonstrations along a front over ninety miles in length with a total force, perhaps, of 25,000 men, or was he attempting a reconnoissance in force? If the former is the case, he must have had a low idea of British leadership or an amazing belief in the readiness and ability of sympathizers in Egypt to support the Turk. Certainly he was misinformed as to our positions, and on the 4th we buried on the eastern bank the bodies of two men, apparently Syrians or Egyptians, who were found with their hands tied and their eyes bandaged. Probably they were guides who had been summarily killed, having unwittingly led the enemy astray. If, on the other hand, Djemal Pasha was attempting a reconnoissance, it was a costly business and gave General Wilson a very handsome victory.

Till the last week of January there had been some doubt as to the road by which the Ottoman Commander in Chief in Syria intended to advance on the canal. Before the end of the month it was quite clear that what was then believed to be the Turkish advanced guard, having marched with admirable rapidity from Beersheba via El Auja, Djebel Libni, and Djifjaffa, was concentrating in the valleys just east of Kataib-el-Kheil, a group of hills lying about ten miles east of the canal, where it enters Lake Tim-sah. A smaller column detached from this force was sighted in the hills east of Ismailia Ferry. Smaller bodies had appeared in the neighborhood of El Kantara and between Suez and the Bitter Lakes.

The attacks on our advanced posts at El Kantara on the night of Jan. 26 and 27, and at Kubri, near Suez, on the fol-

lowing night, were beaten off. Hostile guns fired occasional shells, while our warships returned the compliment at any hostile column that seemed to offer a good target, and our aeroplanes dropped bombs when they had the chance; but in general the enemy kept a long distance off and was tantalizing. Our launches and boats, which were constantly patrolling the canal, could see him methodically intrenching just out of range of the naval guns.

By the night of Feb. 1 the enemy had prepared his plan of attack. To judge both from his movements during the next two days and the documents found on prisoners and slain, it was proposed to attack El Kantara while making a demonstration at El Ferdan, further south, and prevent reinforcements at the first-named post. The demonstration at Ismailia Ferry by the right wing of the Kataib-el-Kheil force which had been partly refused till then in order to prevent a counter-attack from the ferry, was designed to occupy the attention of the Ismailia garrison, while the main attack was delivered between the Tussum post, eight miles south of Ismailia, and the Serapeum post, some three miles further south. Eshref Bey's highly irregular force in the meantime was to demonstrate near Suez.

The selection of the Tussum and Serapeum section as the principal objective was dictated both by the consideration that success here would bring the Turks a few miles from Ismailia, and by the information received from patrols that the west bank of the canal between the posts, both of which may be described as bridgeheads, were unoccupied by our troops. The west bank between the posts is steep and marked by a long, narrow belt of trees. The east bank also falls steeply to the canal, but behind it are numerous hollows, full of brushwood, which give good cover. Here the enemy's advanced parties established themselves and intrenched before the main attack was delivered.

A Full-Fledged Socialist State

While Germany's Trade and Credit Are Holding Their Breath

By J. Laurence Laughlin

[From THE NEW YORK TIMES, March 9, 1915.]

Professor Laughlin, who makes the following remarkable study of the German financial emergency, was lecturer on political economy in Berlin on the invitation of the Prussian Kultur Ministerium in 1906, and since 1892 has been head of the Department of Political Economy in the University of Chicago. He is acknowledged to be one of the foremost American economists and the views here expressed are based on wide information.

IN a great financial emergency conditions are immediately registered in the monetary and credit mechanism. Although the German Government and the Reichsbank had obviously been preparing for war long before, as soon as mobilization was ordered there was a currency panic. The private banks stopped payment in gold. Crowds then besieged the Reichsbank in order to get its notes converted into gold. Then the Banking act was suspended, so that the Reichsbank and private banks were freed from the obligation to give out gold for notes. At once all notes went to a discount in the shops as compared with gold. Thereupon, in summary fashion, the Military Governor of Berlin declared the notes to be a full legal tender and announced that any shop refusing to take them at par would be punished by confiscation of goods.

In Germany, as is well known, the main currency is supplied by the Reichsbank, covered by at least 33 1-3 per cent. in gold or silver, and the remaining two-thirds by commercial paper. Immediately after the outbreak of war there was a prodigious increase of loans at the Reichsbank, in consequence of which borrowers received notes or deposit accounts. Usually transactions are carried through by use of notes, and not by checks, as with us. On July 23, 1914, the notes stood at \$472,500,000; deposits at \$236,000,000; discounted bills and advances at \$200,000,000. On Aug. 31 notes had increased to \$1,058,500,000; deposits to \$610,000,000; discounts and advances to \$1,113,500,000, (by October

this amount was lowered to about \$750,000,000.) On the latter date the specie reserve stood at \$409,500,000, or more than the legal one-third. Loans had been increased 556 per cent.; notes 223 per cent., and deposits 258 per cent. In short, \$586,000,000 of notes had been issued beyond the amount required in normal times, (July 23.) Clearly this additional amount was not required by an increased exchange of goods, but by those persons whose resources were tied up and who needed a means of payment. The same was true of the large increase of deposits which resulted from the larger loans. A liberal policy of discounting was followed by which loans were given on the basis of securities or stocks of goods on hand. That is, non-negotiable assets were converted into a means of payment either in the form of notes or deposit credits.

At this juncture there was created a currency something after the fashion of the Aldrich-Vreeland emergency notes in this country. War credit banks were established by law to issue notes (Darlehnskassenscheine) in denominations of 10, 15, 20, and 50 marks as loans on stocks in trade and securities of all kinds, and were charged 6½ per cent. interest. The goods on which these notes could be issued were not removed, but stamped with a Government seal. While not a legal tender, the notes were receivable at all imperial agencies. On securities classed at the Reichsbank as Class I. loans could be made up to 60 per cent. of their value as of July 31; as Class II., 40 per cent.; on the other German securities bearing a fixed rate

of return, 50 per cent.; on other German securities bearing a varying rate of return, 40 per cent.; on Russian securities, a lower percentage. These institutions, therefore, took up some of the burden that would otherwise have fallen on the loan item of the Reichsbank. Hence the Reichsbank account does not show the whole situation.

To this point the methods followed were much the same as in London. Then came unusual happenings. In London for a few days the banks had wavered as to maintaining gold payments, but only temporarily. In Berlin drastic measures were undertaken to accumulate gold in the Reichsbank. Vienna reports it to be well known that Germany had been for eighteen months before straining every nerve to obtain gold. Whatever sums of gold were included in the so-called "war chest" in Spandau (said to be \$30,000,000) were also deposited with the Reichsbank. Gold was even smuggled across the borders of Holland on the persons of spies. Urgent demands were made upon the people to turn in gold from patriotic motives. In this way over \$400,000,000 of gold was gathered by July, 1914; and by the end of the year, after five months of war, it had risen to \$523,000,000. Was Germany to maintain gold payments as well as Great Britain?

Evidently not. Gold was not given for notes on presentation. For purposes of exchanging goods the notes were in excess. Inconvertible, they must go to a discount with gold or with the money of outside countries using gold. But in order to get imports from other nations, like Holland, Scandinavia, and Denmark, Germany must either send goods, or gold, or securities. German industries, except those making war supplies, were not producing over 25 per cent. of capacity, and many were closed. The Siemens-Schuckert Works, even before the Landsturm was called out, lost 40 per cent. of their men on mobilization. The Humboldt Steel Works, near Cologne, employing 4,000 men, were closed early in August, as were nearly all the great iron works in the district between

Düsseldorf and Duisburg. Probably 50 to 75 per cent. of the workers were called to the colors. The skilled artisans were in the army or in munition factories; the railways were in the hands of the military; and the merchant marine was shut up in home or foreign ports. There were said to be 1,500 idle ships in Hamburg alone. Few goods could be exported. Gold was refused for export, of course. A serious liquidation in foreign securities had been going on long before the war. Some foreign securities must have still remained. However that may be, a claim to funds in Germany (i. e., a bill drawn on Germany) was not redeemable in gold, and it fell in price. In normal times a bill could not fall below the shipping point in gold, (par with us for 4 marks is 95¼ cents in gold;) but, since gold could not be sent, exchange on Germany could fall to any figure, set only by a declining demand. Already bills on Germany have been quoted in New York at 82, showing a depreciation of German money in the international field of about 13 per cent. Likewise, as early as the first week of September, the Reichsbank notes were reported at a discount of 20 per cent., and as practically non-negotiable in a neighboring country like Holland.

The inevitable consequence of a depreciated currency must be a rise of prices, usually greater than the actual percentage of depreciation. To meet this situation there came a device possible in no other commercial country. The Government fixed prices at which goods could be sold. This mediaeval device could be enforced only in a land where such State interference had been habitual, and, of course, could give to the notes the fictitious purchasing power only inside the country. After the Christian Science fashion, one had only to believe the notes were of value to make them so; but in the cold world outside German jurisdiction their value would be gauged by the chances of getting gold for them. Here, then, we find Germany in all the mazes of our ancient "greenbackism," but still in possession

of a large stock of gold. As soon as the war ends she may be able to return to gold payments at an early date—very much as did France after the ordeal of the Franco-Prussian war of 1870-1871.

In the present war conditions, however, largely cut off from other countries, (except some small trade with Switzerland, Holland, Denmark, and the like,) all ordinary relations which would influence German credit and industry must be counted out. There is no comparison of her prices and money with those of other countries in a free market, or with even a limited transportation of exports and imports. All commercial measurements are suspended for the time. Trade and credit are holding their breath. How long can they do it? Germany may have food enough; but how long can the stoppage of industry go on?

Moreover, attention must be called to one momentous thing. We are seeing today, under military law, the greatest experiment in socialism ever witnessed. All wealth, income, industry, capital, and labor are in the direct control and use of a military State. Food, everything, may be taken and distributed in common. I think never before in history have we had such a gigantic, full-fledged illustration of socialism in actual operation.

In the meanwhile, even though food may be provided, the reduction of industry in general has cut incomes right and left. That is, fewer goods are produced and exchanged. But goods are the basis of all credit. The less the goods exchanged, the less the credit operations. Nevertheless, the extraordinary issues of banknotes, the increase of deposits, as a result of quintupling the loans, means that former commitments in goods and securities cannot be liquidated. That is, the enormous increase of bank liabilities, to a considerable and unknown percentage, is not supported by liquid assets. These assets are "canned." Will they keep sweet? There is no new business, no foreign trade, sufficient to take up old

obligations and renew those which are unpayable. Lessened incomes mean lessened consumption and lessened demand for goods. Hence the credit system is based on an uncertain and insecure foundation, dependent wholly upon contingencies far in the future which may, or may not, take the non-liquid assets out of cold storage and give them their original value.

Moreover, apart from definite destruction of wealth and capital in the war—which must be enormous, as represented by the national loans—the losses from not doing business in all main industries during the whole period of the war (except in making war supplies) must be very great. As it affects the income and expenditure of the working classes, it may be roughly measured by the great numbers of unemployed. If they are used on public works, their income is made up from taxes on the wealth of others. Luxuries will disappear, and not be produced or imported. Incomes expressed in goods, or material satisfactions, have been diminished—which is of no serious consequence, if they cover the minimum of actual subsistence. The prolongation of the war will, then, depend on the ability to provide the supplies for war.

The need for a medium of exchange is oversupplied. The lack is in the goods to be exchanged. The enormous extension of German note issues does not, and can not, diminish. In this country the expansion of credit and money immediately after the war (manifested by the issue of Clearing House certificates and emergency banknotes) has been cleared away by liquidation. In Germany the "canned" assets behind the depreciated currency cannot be liquidated until the end of the war. And their worth at that time will depend much on the future course of the war and the terms of peace. If German territory should be overrun and the tangible forms of capital in factories and fixed capital be destroyed, much of the liquidation might be indefinitely prolonged. Whatever of foreign trade is

permanently lost would also increase the difficulties.

In a great financial emergency nearly every country has, at one time or another, been tempted to confuse the monetary with the fiscal functions of the Treasury. To borrow by the issue of money seems to have a seductive charm hard to resist. Lloyd George established a new precedent for Great Britain by issuing nearly \$200,000,000 of Government currency notes, but this was done to provide notes for the public

instead of coin (£1 and 10s.) and made unnecessary any emergency issues by the Bank of England, and a large gold fund has been accumulated behind them so that they are convertible. In Germany it does not seem likely that the Treasury notes will be largely used (having increased from \$16,500,000 to about \$200,000,000) as a means of borrowing, since the new loans are being issued in terms of longer maturities.

J. LAURENCE LAUGHLIN.

LETTERS FROM WIVES

[By Cable to The New York Tribune.]

LONDON, March 8.—Edward Page Gaston, an American business man long resident in London, has just returned from Belgium, and brought with him many sad and touching relics of the battlefields in that distressful country, chiefly from the neighborhood of Mons. These pathetic memorials include letters from wives, sweethearts, and friends at home and letters written by soldiers now dead and never posted.

Turning these letters over, one comes across such an expression as this: "I congratulate you on your promotion. It seems too good to be true. Good-bye and God bless you, dear. God keep you in health and bring you safely back."

Alas! the soldier who got that letter came back no way at all to his sweetheart or his friends.

"If you don't come back, what shall I do?" is the cry that comes from another woman's heart, and he did not come back.

Mr. Gaston is going to put himself into communication with the War Office with regard to the fate of the relics, and as far as possible they will be sent to the rightful owners.

"WAR CHILDREN."

[Special Cable to THE NEW YORK TIMES.]

PARIS, Feb. 24.—Professor Pinard of the Academy of Medicine contributes an article to the *Matin* showing that "war children" are stronger and healthier than their predecessors, and that France is rapidly repairing her battle losses.

An analysis of the Paris statistics for the last six months reveals a diminution of the death rate among mothers and children and a decrease in the number of children born dead.

Dr. Pinard further asserts that an extensive comparison of living children with those born earlier shows that the average weight of "war babies" is considerably higher than it used to be. This he considers due to the giving of natural instead of artificial nourishment by the mothers in consequence of the more serious attitude they take to their duty to the State.

This, says the professor, is one more instance of the spirit of regeneration animating France.

No Premature Peace For Russia

Proceedings at Opening of the Duma, Petrograd, Feb. 9, 1915

[From The London Times.]

PETROGRAD, Feb. 9.

THE main impression left upon all who attended today's proceedings in the Duma may be summed up in a few words. The war has not shaken the determination of the Russian people to carry through the struggle to a victorious end.

Practically the whole House had assembled—the few vacant seats were due to death, chiefly on the field of battle—and the patriotic spirit permeating the proceedings was just as deeply emphasized as it was six months ago. The debates were several times interrupted by the singing of the National anthem, thunders of applause greeted the speeches of the President, the Premier, and the Foreign Minister, and the ovation to the British and French Ambassadors was, if anything, warmer and more enthusiastic than on the previous occasion.

I noticed that members applauded with special emphasis the words in which the President expressed his firm conviction that all efforts to disunite the Allies would prove fruitless.

In the course of his address the President eloquently and eulogistically referred to the rôle of Russia's allies in the present war. Speaking of England, he said:

Noble and mighty England, with all her strength, has come forward to defend the right. Her services to the common cause are great, their value inestimable. We believe in her and admire her steadfastness and valor.

The enemies of Russia have already frequently attempted to sow discord in these good and sincere relations, but such efforts are vain. The Russian truth-loving national soul, sensitive of any display of mendacity or insincerity, was able to sift the chaff from the wheat, and faith in our friends is unshaken. There is not a single cloud on the clear horizon of our lasting allied harmony. Heartfelt greetings to you, true friends, rulers of the waves and

our companions in arms. May victory and glory go with you everywhere!

These remarks were constantly interrupted by outbursts of tremendous applause and by an ovation in honor of Sir George Buchanan, who bowed his acknowledgments.

Alluding to temperance reform, the orator fervently exclaimed:

Accept, great monarch, the lowly reverence of thy people. Thy people firmly believe that an end has been put for all eternity to this ancient curse.

The terrible war can not and must not end otherwise than victoriously for us and our allies. We will fight till our foes submit to the conditions and demands which the victors dictate to them. We are weary of the incessant brandishing of the sword, the menaces to Slavdom, and the obstacles to its natural growth. We will fight till the end, till we win a lasting peace worthy of the great sacrifices we have offered to our fatherland. In the name of our electorate, we here declare, "So wishes all Russia."

And you, brave warrior knights in the cold trenches, proudly bearing the standard of Russian imperialism, hearken to this national outburst. Your task is difficult. You are surrounded with trials and privations, but then you are Russian, for whom no obstacles exist.

A scene of indescribable enthusiasm ensued, the House rising and singing the national hymn.

The President's peroration was in part as follows:

The Premier, in the opening sentences of the speech which followed, said: "Our heroic army, the flower and the pride of Russia, strong as never before in its might, notwithstanding all its losses, grows and strengthens." He did not fail to remind his hearers that the war is yet far from ended, but he added that the Government, from the first, had soberly looked the danger in the face and frankly warned the country of the forthcoming sacrifices for the common cause and also for the strengthening of the mutual grav-

itation of the Slavonic races. He briefly referred to the Turkish defeat in the Caucasus as opening before the Russians a bright historical future on the shores of the Black Sea.

The Premier alluded to the tremendous change wrought in the national life by the abolition of the liquor traffic, which he designated a second serfdom vanishing at the behest of the Czar. After a few years of sober, persistent labor, we would no longer recognize Russia. The war had further raised the question of the creation in the world's markets of favorable conditions to the export of our agricultural products, and a general revision of conditions calculated hereafter to guarantee to Russia a healthy development on the principle of entire independence of Germany in all branches of the national life. In this direction the Government had already drafted and was preparing a series of elaborate measures. He concluded with the expression of his conviction that, if all fulfilled their duty in the spirit of profound devotion to the Emperor and of deep faith in the triumph of the country, the near future would open before us perhaps the best pages in Russian history.

The speeches of a peasant Deputy and a Polish representative were particularly impressive and well received. The Socialist leader's demand for peace called forth a smart rejoinder from a member of his own party.

M. SAZANOF'S SPEECH.

This afternoon the session of the Duma was opened in the presence of the whole Cabinet, the members of the Council of the Empire, the Diplomatic Corps, and the Senators. The public galleries were filled.

M. Sazanof began his speech by recalling that six months ago in that place he had explained why Russia, in face of the brutal attempt by Germany and Austria upon the independence of Serbia and Belgium, had been able to adopt no other course than to take up arms in defense of the rights of nations. Russia, standing closely united and admirably unanimous in her enthusiasm against an enemy

which had offered provocation, did not remain isolated, because she was immediately supported by France and Great Britain and, soon afterward, by Japan.

Passing in review the events of the war, the Minister said that the valiant Russian troops, standing shoulder to shoulder with their allies, had secured fresh laurels for their crown of glory. The Russian arms were marching steadfastly toward their goal, assured of final victory against an enemy who, blinded by the hope of an easy victory, was making desperate efforts, having recourse to all kinds of subterfuges, even the distortion of the truth.

To the relations of good neighborliness, faithfully maintained by Russia, Germany had everywhere opposed resistance, seeking to embroil Russia with neighboring countries, especially those to which Russia was bound by important interests.

All this [continued M. Sazonof] is sufficient for us to judge the value of German statements regarding the alleged envelopment of Germany by the Triple Entente. Equally worthless are the assertions that it was not Germany who began the war, for irrefutable documents exist to prove the contrary. Among the malevolent German inventions figure reports of Jewish pogroms which the Russian troops are alleged to have organized. I seize this opportunity of speaking in the parliamentary tribune to deny this calumny categorically, for, if the Jewish population in the theatre of war is suffering, that is an inevitable evil, since the inhabitants of regions where hostilities are proceeding are always severely tried. Moreover, eyewitnesses are unanimous in stating that the greatest devastation in Poland is the work of the Germans and Austrians.

The German Ambassador in Washington has zealously spread these reports in the attempt to create in the United States a feeling hostile to us, but the good sense of the Americans has prevented them from falling into the clumsily laid snare. I hope that the good relations between Russia and America will not suffer from these German intrigues.

The "Orange Book" recently published proved that the events on the Bosphorus which preceded the war with Turkey were the result of German treachery toward the Ottoman Empire, which invited German instructors and the mission of General Liman von Sanders, hoping to perfect its army with the object of assuring its in-

dependence against the Russian danger insinuated by Berlin. Germany, however, took advantage of this penetration into the Turkish Army to make that army a weapon in realizing her political plans.

All the acts of the Turks since the appearance of the Goeben in the Dardanelles had been committed under the pressure of Germany, but the efforts of the Turks to evade responsibility for these acts could not prevent them from falling into the abyss into which they were rolling. The events on the Russo-Turkish frontier, while covering Russian arms with fresh glory, will bring Russia nearer to the realization of the political and economic problems bound up with the question of Russia's access to the open sea.

Passing to the documents relating to reforms in Armenia recently distributed among members of the Duma, M. Sazonof said:

The Russian Government disinterestedly endeavored to alleviate the lot of the Armenians, and the Russo-Turkish agreement of Jan. 26, 1914, is a historical document in which Turkey recognizes the privileged position of Russia in the Armenian question. When the war ends this exclusive position of Russia will be employed by the Imperial Government in a direction favorable to the Armenian population. Having drawn the sword in the defense of Serbia, Russia is acting under the influence of her sentiments toward a sister nation whose grandeur of soul in the present war has closely riveted the two countries.

After referring with satisfaction to the gallantry of Montenegro in fighting as she was doing in the common cause, M. Sazonof proceeded to speak of Greece. The relations of Russia with this tried friend of Serbia, he said, were perfectly cordial, and the tendency of the Hellenic people to put an end to the sufferings of their co-religionists groaning under the Ottoman yoke had the entire sympathy of the Imperial Government.

Passing to Rumania, M. Sazonof said that the relations between Russia and Rumania retained the friendly character which they acquired on the occasion of the visit of the Czar to Constanza. The constant Russophile demonstrations in Bucharest and throughout the whole country during the Autumn had brought into relief the hostile feelings of the

Rumanians toward Austria-Hungary. He continued:

You are probably waiting, gentlemen, for a reply to a question which interests the whole world, viz., the attitude of those non-combatant countries whose interests counsel them to embrace the cause of Russia and that of her allies. In effect, public opinion in these countries, responsive to all that is meant by the national ideal, has long since pronounced itself in this sense, but you will understand that I cannot go into this question very profoundly, seeing that the Governments of these countries, with which we enjoy friendly relations, have not yet taken a definite decision. Now, it is for them to arrive at this decision, for they alone will be responsible to their respective nations if they miss a favorable opportunity to realize their national aspirations.

I must also mention with sincere gratitude the services rendered to us by Italy and Spain in protecting our compatriots in enemy countries. I must also emphasize the care lavished by Sweden on Russian travelers who were the victims of German brutality. I hope that this fact will strengthen the relations of good neighborliness between Russia and Sweden, which we desire to see still more cordial than they are.

Referring to Russo-Persian relations, M. Sazonof said:

Before the war with Turkey, we succeeded in putting an end to the secular Turco-Persian quarrel by means of the delimitation of the Persian Gulf and Mount Ararat region, thanks to which we preserved for Persia a disputed territory with an area of almost 20,000 square versts, part of which the Turks had invaded. Since the war the Persian Government has declared its neutrality, but this has not prevented Germany, Austria, and Turkey from carrying on a propaganda with the object of gaining Persian sympathies. These intrigues have been particularly intense in Azerbaijan, where the Turks succeeded in attracting to their side some of the Kurds in that country. Afterward Ottoman troops, violating Persian neutrality, crossed the Persian frontier and, supported by Kurdish bands, penetrated the districts where our detachments were in cantonments and transformed Azerbaijan into a part of the Russo-Turkish theatre of war.

I must say in passing that the presence of our troops in Persia is in no way a violation of neutrality, for they were sent there some years ago with the object of maintaining order in our frontier territory, and preventing its invasion by the Turks, who wished to establish there an advantageous base of action against the Caucasus. The Persian Government,

powerless to take effective action against this aggression, protested, but without success. I must state that Anglo-Russian relations in regard to Persian affairs are more than ever based on mutual and sincere confidence and co-operation, which are a guarantee of the pacific settlement of any eventual conflict.

Passing to the Far East, M. Sazonof said the agreements signed in 1907 and 1910 with Japan had borne fruit during the present war, for Japan was with them. She had driven the Germans from the Pacific Ocean, and had seized the German base of Kiao-chau. Although Japan did not sign the agreement of Aug. 23, yet, since the Anglo-Japanese alliance contained an undertaking that a separate peace should not be concluded, therefore the German Government could not hope for peace with Japan before she had concluded peace with Great Britain, Russia, and France. Consequently, their relations with Japan gave them a firm friend. The demands addressed by Japan to China contain nothing contrary to our interests.

As for Russo-Chinese interests, he could state their constant improvement. The *pourparlers* in regard to Mongolia, though slow, were friendly, and he hoped to be able to announce shortly the signature of a triple Russo-Chinese-

Mongolian treaty, which, while safeguarding the interests of Russia, would not injure those of China.

In conclusion, M. Sazonof expressed the hope that the close union of all Russians around the throne, which had been manifested since the beginning of the war, would remain unchanged until the completion of the great national task.

Speakers of the Progressist, Octobrist, and Nationalist Centre Parties agreed that a premature peace would be a crime against their country and humanity, and that therefore Russia was prepared to make every sacrifice so that Germany might be definitely crushed.

At the end of the sitting the following resolution was unanimously adopted:

The Duma, saluting the glorious exploits of our soldiers, sends to the Russian Army and Navy a cordial greeting and to our allies an expression of sincere esteem and sympathy. It expresses its firm conviction that the great national and liberating objects of the present war will be achieved, and declares the inflexible determination of the Russian Nation to carry on the war until conditions shall have been imposed on the enemy assuring the peace of Europe and the restoration of right and justice.

TO THE VICTORS BELONG THE SPOILS!

By MADELEINE LUCETTE RILEY.

[From King Albert's Book.]

THE Victor true is he who conquers fear,
Who knows no time save now—no place
but here.
Who counts no cost—who only plays the
game.
To him shall go the prize—Immortal Fame!

To the illustrious ruler and his gallant
little nation, whose heroism and bravery are
surely unparalleled in the whole of our
world's history, I bow my head in respectful
homage.

Lessons of the War to March Ninth

By Charles W. Eliot

President Emeritus of Harvard University.

CAMBRIDGE, Mass., March 9, 1915.

To the Editor of *The New York Times*:

THE observant world has now had ample opportunity to establish certain conclusions about the new kind of war and its availability as means of adjusting satisfactorily international relations; and it seems desirable in the interest of durable peace in Europe that those conclusions should be accurately stated and kept in public view.

In the first place, the destructiveness of war waged on the scale and with the intensity which conscript armies, the new means of transportation and communication, the new artillery, the aeroplanes, the high explosives, and the continuity of the fighting on battle fronts of unexampled length, by night as well as by day, and in stormy and wintry as well as moderate weather, make possible, has proved to be beyond all power of computation, and could not have been imagined in advance. Never before has there been any approach to the vast killing and crippling of men, the destruction of all sorts of man's structures—buildings, bridges, viaducts, vessels, and docks—and the physical ruin of countless women and children. On the seas vessels and cargoes are sunk, instead of being carried into port as formerly.

Through the ravaging of immense areas of crop-producing lands, the driving away of the people that lived on them, and the dislocation of commerce, the food supplies for millions of non-combatants are so reduced that the rising generation in several countries is impaired on a scale never approached in any previous war.

In any country which becomes the seat

of war an immense destruction of fixed capital is wrought; and at the same time the quick capital of all the combatants, accumulated during generations, is thrown into the furnace of war and consumed unproductively.

In consequence of the enormous size of the national armies and the withdrawal of the able-bodied men from productive industries, the industries and commerce of the whole world are seriously interrupted, whence widespread, incalculable losses to mankind.

These few months of war have emphasized the interdependence of nations the world over with a stress never before equaled. Neutral nations far removed from Europe have felt keenly the effects of the war on the industries and trades by which they live. Men see in this instance that whatever reduces the buying and consuming capacity of one nation will probably reduce also the producing and selling capacity of other nations; and that the gains of commerce and trade are normally mutual, and not one-sided.

All the contending nations have issued huge loans which will impose heavy burdens on future generations; and the yield of the first loans has already been spent or pledged. The first loan issued by the British Government was nearly twice the national debt of the United States; and it is supposed that its proceeds will be all spent before next Summer. Germany has already spent \$1,600,000,000 since the war broke out—all unproductively and most of it for destruction. She will soon have to issue her second great loan. In short, the waste and ruin have been without precedent, the destruction of wealth has been

enormous, and the resulting dislocations of finance, industries, and commerce will long afflict the coming generations in all the belligerent nations.

All the belligerent nations have already demonstrated that neither urban life, nor the factory system, nor yet corroding luxury has caused in them any physical or moral deterioration which interferes with their fighting capacity. The soldiers of these civilized peoples are just as ready for hand-to-hand encounters with cold steel as any barbarians or savages have ever been. The primitive combative instincts remain in full force and can be brought into play by all the belligerents with facility. The progress of the war should have removed any delusions on this subject which Germany, Austria-Hungary, or any one of the Allies may have entertained. The Belgians, a well-to-do town people, and the Serbians, a poor rural population, best illustrate this continuity of the martial qualities; for the Belgians faced overwhelming odds, and the Serbians have twice driven back large Austrian forces, although they have a transport by oxen only, an elementary commissariat, no medical or surgical supplies to speak of, and scanty munitions of war. On the other hand, the principal combatants have proved that with money enough they can all use effectively the new methods of war administration and the new implements for destruction. These facts suggest that the war might be much prolonged without yielding any results more decisive than those it has already yielded; indeed, that its most probable outcome is a stalemate—unless new combatants enter the field.

Fear of Russian invasion seemed at first to prompt Germany to war; but now Germany has amply demonstrated that she has no reason to look with any keen apprehension on possible Russian aggression upon her territory, and that her military organization is adequate for defense against any attack from any quarter. The military experience of the last seven months proves that the defense, by the temporary intrenchment method, has a great advantage over the attack;

so that in future wars the aggressor will always be liable to find himself at a serious disadvantage, even if his victim is imperfectly prepared.

These same pregnant months have also proved that armies can be assembled and put into the field in effective condition in a much shorter time than has heretofore been supposed to be possible; provided there be plenty of money to meet the cost of equipment, transportation, and supplies. Hence, the advantages of maintaining huge active armies, ready for instant attack or defense, will hereafter be less considerable than they have been supposed to be—if the declaration of war by surprise, as in August last, can hereafter be prevented. These considerations, taken in connection with the probable inefficacy against modern artillery of elaborate fortifications, suggest the possibility of a reduction throughout Europe of the peace-footing armies. It is conceivable that the Swiss militia system should satisfy the future needs of most of the European States.

Another important result of the colossal war has been achieved in these seven months. It has been demonstrated that no single nation in any part of the world can dominate the other nations, or, indeed, any other nation, unless the other principal powers consent to that domination; and, in the present state of the world, it is quite clear that no such domination will be consented to. As soon as this proposition is accepted by all the combatants, this war, and perhaps all war between civilized nations, will cease. It is obvious that in the interest of mankind the war ought not to cease until Germany is convinced that her ambition for empire in Europe and the world cannot be gratified. *Deutschland über alles* can survive as a shout of patriotic enthusiasm; but as a maxim of international policy it is dead already, and should be buried out of the sight and memory of men.

It has, moreover, become plain that the progress in civilization of the white race is to depend not on the supreme power of any one nation, forcing its peculiar civilization on other nations,

but on the peaceful development of many different nationalities, each making contributions of its own to the progress of the whole, and each developing a social, industrial, and governmental order of its own, suited to its territory, traditions, resources, and natural capacities.

The chronic irritations in Europe which contributed to the outbreak of the war and the war, itself have emphasized the value and the toughness of natural national units, both large and small, and the inexpediency of artificially dividing such units, or of forcing natural units into unnatural associations. These principles are now firmly established in the public opinion of Europe and America. No matter how much longer the present war may last, no settlement will afford any prospect of lasting peace in Europe which does not take just account of these principles. Already the war has demonstrated that just consideration of national feelings, racial kinship, and common commercial interests would lead to three fresh groupings in Europe—one of the Scandinavian countries, one of the three sections into which Poland has been divided, and one of the Balkan States which have a strong sense of Slavic kinship. In the case of Scandinavia and the Balkan States the bond might be nothing more than a common tariff with common ports and harbor regulations; but Poland needs to be reconstructed as a separate kingdom. Thoroughly to remove political sores which have been running for more than forty years, the people of Schleswig-Holstein and Alsace-Lorraine should also be allowed to determine by free vote their national allegiance. Whether the war ends in victory for the Allies, or in a draw or deadlock with neither party victorious and neither humiliated, these new national adjustments will be necessary to permanent peace in Europe. All the wars in Europe since 1864 unite in demonstrating that necessity.

Again, the war has already demonstrated that colonies or colonial possessions in remote parts of the world are not a source of strength to a European nation when at war, unless that nation is

strong on the seas. Affiliated Commonwealths may be a support to the mother country, but colonies held by force in exclusive possession are not. Great Britain learned much in 1775 about the management of colonies, and again she learned in India that the policy of exploitation, long pursued by the East India Company, had become undesirable from every point of view. As the strongest naval power in the world, Great Britain has given an admiral example of the right use of power in making the seas and harbors of the world free to the mercantile marine of all the nations with which she competes. Her free-trade policy helped her to wise action on the subject of commercial extension. Nevertheless, the other commercial nations, watching the tremendous power in war which Great Britain possesses through her wide, though not complete, control of the oceans, will rejoice when British control, though limited and wisely used, is replaced by an unlimited international control. This is one of the most valuable lessons of the great war.

Another conviction is strongly impressed upon the commercial nations of the world by the developments of seven months of extensive fighting by land and sea, namely, the importance of making free to all nations the Kiel Canal and the passage from the Black Sea to the Aegean. So long as one nation holds the Dardanelles and the Bosphorus, and another nation holds the short route from the Baltic to the North Sea, there will be dangerous restrictions on the commerce of the world—dangerous in the sense of provoking to war, or of causing sores which develop into malignant disease. Those two channels should be used for the common benefit of mankind, just as the Panama Canal or the Suez Canal is intended to be. Free seas, free inter-ocean canals and straits, the "open door," and free competition in international trade are needed securities for peace.

These lessons of the war are as plain now as they will be after six months or six years more fighting. Can the belligerent nations—and particularly Germany—take them to heart now, or must more millions of men be slaughtered and more

billions of human savings be consumed before these teachings of seven fearful months be accepted?

For a great attainable object such dreadful losses and sufferings as continuation of the war entails might perhaps be borne; but the last seven months have proved that the objects with which Austria-Hungary and Germany went to war are unattainable in the present state of Europe. Austria-Hungary, even with the active aid of Germany and Turkey, cannot prevail in Serbia against the active or passive resistance of Serbia, Russia, Rumania, Greece, Italy, France, and Great Britain. Germany cannot crush France supported by Great Britain and Russia, or keep Belgium, except as a subject and hostile province, and in defiance of the public opinion of the civilized world. In seven months Great

Britain and France have made up for their lack of preparedness and have brought the military operations of Germany in France to a standstill. On the other hand, Great Britain and France must already realize that they cannot drive the German armies out of France and Belgium without a sacrifice of blood and treasure from which the stoutest hearts may well shrink.

Has not the war already demonstrated that jealous and hostile coalitions armed to the teeth will surely bring on Europe not peace and advancing civilization, but savage war and an arrest of civilization? Has it not already proved that Europe needs one comprehensive union or federation competent to procure and keep for Europe peace through justice? There is no alternative except more war.

CHARLES W. ELIOT.

BELGIUM'S KING AND QUEEN

By PAUL HERVIEU

Translation by Florence Simmonds.

[From King Albert's Book.]

ONCE upon a time there lived a King and a Queen. * * *
Indeed, it would be the most touching and edifying fairy-tale imaginable, this true story of H. M. Albert I. and H. M. Queen Elizabeth. It would tell of their quiet and noble devotion to their daily tasks, of the purity of their happy family life. * * *

Suddenly, the devil would intervene, with his threats and his offers. * * *
Then we should hear of the sovereigns and the people of Belgium agreeing at once in their sense of honor and heroism.

Then the dastardly invasion, and the innumerable host of infernal spirits breathing out sulphur, belching torrents of iron, and raining fire; city dwellings transformed into the shattered columns of cemeteries; innocent creatures tortured and victimized; and the King and Queen with their kingdom reduced to a sandhill on the shore, and the remnant of their valiant army around them.

And at last, at last! That turn of the tide which all humanity worthy of the name desires so ardently, and which even the baser sort now sees to be surely approaching.

At this point in the story, at this page of the legendary tale, how the children would clap their hands, with all that love of justice innate in children, and how the faces of worthy parents would beam with the approval of satisfied consciences!

And in the future, those who contemplate the royal arms with the pious admiration due to them, will see a blooming rose side by side with the lion of Belgium, typifying the immortal share of H. M. Queen Elizabeth in the glory of H. M. Albert I.

THE EUROPEAN WAR AS SEEN BY CARTOONISTS

[German Cartoon]

The American Protest

—From *Lustige Blätter*, Berlin.

JOHN BULL: "Now, what's he throwing at me for? A little bit of piracy is no reason for getting bad-tempered."

[French Cartoon]

The Peasant and the War

—From *Le Rire*, Paris

“Confound their infernal shells! If a feller didn’t have to work it would be better to stay home these days.”

[German Cartoon]

Victory!

—From *Lustige Blätter*, Berlin.

[This cartoon was published on the Kaiser's birthday, Jan. 27, 1915.]

[English Cartoon]

“The Outcast”

Bernard
Partridge.

—From *The Sketch*, London.

- A. Little Muddelcote, as known to its inhabitants.
- B. Little Muddelcote, the fortified town—according to Germany.

No Family Resemblance

—From *The Cape Times*, Cape Town, South Africa.

THE GERMAN EAGLE (tearfully): "As bird to bird — surely *you* won't desert me?"

THE AMERICAN EAGLE: "Desert you! I'm an eagle, not a vulture!"

The Chances of Peace and the Problem of Poland

By J. Ellis Barker

[From *The Nineteenth Century and After*, Leonard Scott Publishing Company.]

A CENTURY ago, at the Congress of Vienna, the question of Poland proved extremely difficult to solve. It produced dangerous friction among the assembled powers, and threatened to lead to the break-up of the congress. The position became so threatening that, on the 3d of January, 1815, Austria, Great Britain, and France felt compelled to conclude a secret separate alliance directed against Prussia and Russia, the allies of Austria and Great Britain in the war against Napoleon. Precautionary troop movements began, and war among the allies might have broken out had not, shortly afterward, Napoleon quitted Elba and landed in France. Fear of the great Corsican reunited the powers.

Because of the great and conflicting interests involved, the question of Poland may prove of similar importance and difficulty at the congress which will conclude the present war. Hence, it seems desirable to consider it carefully and in good time. It is true that the study of the Polish problem does not seem to be very urgent at the present moment. In view of the slow progress of the Allies in the east and west, it appears that the war will be long drawn out. Still, it is quite possible that it will come to an early and sudden end. Austria-Hungary is visibly tiring of the hopeless struggle into which she was plunged by Germany, and which hitherto has brought her nothing but loss, disgrace, and disaster. After all, the war is bound to end earlier or later in an Austro-German defeat, and if it should be fought to the bitter end Austria-Hungary will obviously suffer far more severely than will Germany. A protracted

war, which would lead merely to the lasting impoverishment of Germany, would bring about the economic annihilation of impecunious Austria. Besides, while a complete defeat would cause to Germany only the loss of territories in the east, west, and north which are largely inhabited by disaffected Poles, Frenchmen, and Danes, and would not very greatly reduce the purely German population of Germany, it would probably result in the dissolution of the Dual Monarchy, which lacks a homogeneous population, and it might lead to Austria's disappearance as a great State. If complete disaster should overwhelm the empire of Francis Joseph, Hungary would undoubtedly make herself independent. The Dual Monarchy would become a heap of wreckage, and in the end the German parts of Austria would probably become a German province, Vienna a provincial Prussian town, the proud Hapsburgs subordinate German princelings. If, on the other hand, Austria-Hungary should make quickly a separate peace with her opponents, she would presumably lose only the Polish parts of Galicia to the new kingdom of Poland, and Bosnia and Herzegovina to Serbia; and she might receive most satisfactory compensation for these losses by the acquisition of the German parts of Silesia and by the adherence of the largely Roman Catholic South German States, which have far more in common with Austria than with Protestant Prussia. As a result of the war, Austria-Hungary might be greatly strengthened at Germany's cost, provided the monarchy makes peace without delay. In any case, only by an early peace can the bulk of the lands of the Hapsburgs be preserved for the ruling house, and

can national bankruptcy be avoided. There is an excellent and most valuable precedent for such action on Austria's part. Bismarck laid down the essence of statesmanship in the maxim "*Salus Publica Suprema Lex*," and defined in his memoirs the binding power of treaties of alliance by the phrase "*Ultra posse nemo obligatur*." Referring particularly to the Austro-German alliance, he wrote that "no nation is obliged to sacrifice its existence on the altar of treaty fidelity." Before long the Dual Monarchy may take advantage of Bismarck's teaching. After all, it cannot be expected that she should go beyond her strength, and that she should ruin herself for the sake of Germany, especially as she cannot thereby save that country from inevitable defeat. Austria-Hungary should feel particularly strongly impelled to ask for peace without delay, as her recent and most disastrous defeat in Serbia has exasperated the people and threatens to lead to risings and revolts not only in the Slavonic parts of the monarchy but also in Hungary. Civil war may be said to be in sight.

The Dual Monarchy is threatened besides by the dubious and expectant attitude of Italy and Rumania. If Austria-Hungary should hesitate much longer to make peace, Italy and Rumania may find a sufficient pretext for war and may join the Entente powers. Italy naturally desires to acquire the valuable Italian portions of Austria-Hungary on her borders, and Rumania the very extensive Rumanian parts of the Dual Monarchy adjoining that kingdom. To both powers it would be disastrous if Austria-Hungary should make peace before they had staked out their claims by militarily occupying the territory which they covet. Both States may therefore be expected to abandon their neutrality and to invade Austria-Hungary without delay as soon as they hear that that country seriously contemplates entering upon peace negotiations; it follows that if Austria-Hungary wishes to withdraw from the stricken field she must open negotiations with the utmost secrecy and conclude them with the utmost speed. It is clear that if Italy and Rumania should be

given the much desired opportunity of joining the Entente powers, the Dual Monarchy would lose not only Polish Galicia and Serbian Bosnia and Herzegovina but Rumanian Transylvania and the Banat, with about 5,000,000 inhabitants, and the largely Italian Trentino, Istria, and Dalmatia, with at least 1,000,000 people, as well. These vast losses would probably lead to the total dismemberment of the State, for the remaining subject nationalities would also demand their freedom. Self-preservation is the first law and the first duty of individuals and of States. It is therefore conceivable, and is indeed only logical, that Austria-Hungary will conclude overnight a separate peace. If she should take that wise and necessary step, isolated Germany would either have to give up the unequal struggle or fight on single-handed. In the latter case, her defeat would no doubt be rapid. It seems, therefore, quite possible that the end of the war may be as sudden as was its beginning. Hence, the consideration of the Polish question seems not only useful but urgent. * * *

From the very beginning Prussia, Austria, and Russia treated Poland as a corpus vile, and cut it up like a cake, without any regard to the claims, the rights, and the protests of the Poles themselves. Although history only mentions three partitions, there were in reality seven. There were those of 1772, 1793, and 1795, already referred to; and these were followed by a redistribution of the Polish territories in 1807, 1809, and 1815. In none of these were the inhabitants consulted or even considered. The Congress of Vienna established the independence of Cracow, but Austria-Hungary, asserting that she considered herself "threatened" by the existence of that tiny State, seized it in 1846.

While Prussia, Austria, and Russia, considering that might was right, had divided Poland among themselves, regardless of the passionate protests of the inhabitants, England had remained a spectator, but not a passive one, of the tragedy. She viewed the action of the allies with strong disapproval, but although she gave frank expression to her

sentiments, she did not actively interfere. After all, no English interests were involved in the partition. It was not her business to intervene. Besides, she could not successfully have opposed single-handed the joint action of the three powerful partner States, especially as France, under the weak Louis XV., held aloof. However, English statesmen refused to consider as valid the five partitions which took place before and during the Napoleonic era.

The Treaty of Chaumont of 1814 created the Concert of Europe. At the Congress of Vienna of 1815 the frontiers of Europe were fixed by general consent. As Prussia, Austria, and Russia refused to recreate an independent Poland, England's opposition would have broken up the concert, and might have led to further wars. Unable to prevent the injustice done to Poland by her opposition, and anxious to maintain the unity of the powers and the peace of the world, England consented at last to consider the partition of Poland as a *fait accompli*, and formally recognized it, especially as the Treaty of Vienna assured the Poles of just and fair treatment under representative institutions. Article I. of the Treaty of Vienna stated expressly:

Les Polonais, sujets respectifs de la Russie, de l'Autriche et de la Prusse, obtiendront une représentation et des institutions nationales réglées d'après le mode d'existence politique que chacun des gouvernements auxquels ils appartiennent jugera utile et convenable de leur accorder.

By signing the Treaty of Vienna, England recognized not explicitly, but merely implicitly, the partition of Poland, and she did so unwillingly and under protest. Lord Castlereagh stated in a circular note addressed to Russia, Prussia, and Austria, that it had always been England's desire that an independent Poland, possessing a dynasty of its own, should be established, which, separating Austria, Russia, and Prussia, should act as a buffer State between them; that, failing its creation, the Poles should be reconciled to being dominated by foreigners, by just and liberal treatment which alone would make them satisfied. His note, which is

most remarkable for its far-sightedness, wisdom, force, and restraint, was worded as follows:

The undersigned, his Britannic Majesty's Principal Secretary of State for Foreign Affairs and Plenipotentiary to the Congress of Vienna, in desiring the present note concerning the affairs of Poland may be entered on the protocol, has no intention to revive controversy or to impede the progress of the arrangements now in contemplation. His only object is to avail himself of this occasion of temperately recording, by the express orders of his Court, the sentiments of the British Government upon a European question of the utmost magnitude and influence.

The undersigned has had occasion in the course of the discussions at Vienna, for reasons that need not be gone into, repeatedly and earnestly to oppose himself, on the part of his Court, to the erection of a Polish Kingdom in union with and making part of the Imperial Crown of Russia.

The desire of his Court to see an independent power, more or less considerable in extent, established in Poland under a distinct dynasty, and as an intermediate State between the three great monarchies, has uniformly been avowed, and if the undersigned has not been directed to press such a measure, it has only arisen from a disinclination to excite, under all the apparent obstacles to such an arrangement, expectations which might prove an unavailing source of discontent among the Poles.

The Emperor of Russia continuing, as it is declared, still to adhere to his purpose of erecting that part of the Duchy of Warsaw which is to fall under his Imperial majesty's dominion, together with his other Polish provinces, either in whole or in part, into a kingdom under the Russian sceptre; and their Austrian and Prussian Majesties, the sovereigns most immediately interested, having ceased to oppose themselves to such an arrangement—the undersigned adhering, nevertheless, to all his former representations on this subject has only sincerely to hope that none of those evils may result from this measure to the tranquillity of the North, and to the general equilibrium of Europe, which it has been his painful duty to anticipate. But in order to obviate as far as possible such consequences, it is of essential importance to establish the public tranquillity throughout the territories which formerly constituted the Kingdom of Poland, upon some solid and liberal basis of common interest, by applying to all, however various may be their political institutions, a congenial and conciliatory system of administration.

Experience has proved that it is not

by counteracting all their habits and usages as a people that either the happiness of the Poles, or the peace of that important portion of Europe, can be preserved. A fruitless attempt, too long persevered in, by institutions foreign to their manner and sentiments to make them forget their existence, and even language, as a people, has been sufficiently tried and failed. It has only tended to excite a sentiment of discontent and self-degradation, and can never operate otherwise than to provoke commotion and to awaken them to a recollection of past misfortunes.

The undersigned, for these reasons, and in cordial concurrence with the general

sentiments which he has had the satisfaction to observe the respective Cabinets entertained on this subject, ardently desires that the illustrious monarchs to whom the destinies of the Polish Nation are confided, may be induced, before they depart from Vienna, to take an engagement with each other to treat as Poles, under whatever form of political institution they may think fit to govern them, the portions of that nation that may be placed under their respective sovereignties. The knowledge of such a determination will best tend to conciliate the general sentiment to their rule, and to do honor to the several sovereigns in the eyes of their Polish

subjects. This course will consequently afford the surest prospect of their living peaceably and contentedly under their respective Governments. * * *

This dispatch was sent on the 12th of January, 1815, exactly a century ago. The warnings were not heeded and the past century has been filled with sorrow for the Poles and with risings and revolutions, as Lord Castlereagh clearly foretold. * * *

In Western Russia, in Eastern Prussia, and in Galicia there dwell about 20,000,000 Poles. If the war should end, as it is likely to end, in a Russian victory, a powerful kingdom of Poland will arise. According to the carefully worded manifesto of the Grand Duke the united Poles will receive full self-government under the protection of Russia. They will be enabled to develop their nationality, but it seems scarcely likely that they will receive entire and absolute independence. Their position will probably resemble that of Quebec in Canada, or of Bavaria in Germany, and if the Russians and Poles act wisely they will live as harmoniously together as do the French-speaking "habitants" of Quebec and the English-speaking men of the other provinces of Canada. Russia need not fear that Poland will make herself entirely independent, and only the most hot-headed and short-sighted Poles can wish for complete independence. Poland, having developed extremely important manufacturing industries, requires large free markets for their output. Her natural market is Russia, for Germany has industrial centres of her own. She can expect to have the free use of the precious Russian markets only as long as she forms part of that great State. At present, a spirit of the heartiest good-will prevails between Russians and Poles. The old quarrels and grievances have been forgotten in the common struggle. The moment is most auspicious for the resurrection of Poland.

While Prussia has been guilty of the partition of Poland, Russia is largely to blame for the repeated revolts and insurrection of her Polish citizens. * * *

When the peace conditions come up

for discussion at the congress which will bring the present war to an end—and that event may be nearer than most men think—the problem of Poland will be one of the greatest difficulty and importance. Austria-Hungary has comparatively little interest in retaining her Poles. The Austrian Poles dwell in Galicia outside the great rampart of the Carpathian Mountains, which form the natural frontier of the Dual Monarchy toward the northeast. The loss of Galicia, with its oilfields and mines, may be regrettable to Austria-Hungary, but it will not affect her very seriously. To Germany, on the other hand, the loss of the Polish districts will be a fearful blow. The supreme importance which Germany attaches to the Polish problem may be seen from this, that Bismarck thought it the only question which could lead to an open breach between Germany and Austria-Hungary. According to Crispien's Memoirs, Bismarck said to the Italian statesman on the 17th of September, 1877:

There could be but one cause for a breach in the friendship that unites Austria and Germany, and that would be a disagreement between the two Governments concerning Polish policy. * * * If a Polish rebellion should break out and Austria should lend it her support, we should be obliged to assert ourselves. We cannot permit the reconstruction of a Catholic kingdom so near at hand. It would be a Northern France. We have one France to look to already, and a second would become the natural ally of the first, and we should find ourselves entrapped between two enemies.

The resurrection of Poland would injure us in other ways as well. It could not come about without the loss of a part of our territory. We cannot possibly relinquish either Posen or Dantsic, because the German Empire would remain exposed on the Russian frontier, and we should lose an outlet on the Baltic.

In the event of Germany's defeat a large slice of Poland, including the wealthiest parts of Silesia, with gigantic coal mines, iron works, &c., would be taken away from her, and if the Poles should recover their ancient province of West Prussia, with Dantsic, Prussia's hold upon East Prussia, with Königsberg, would be threatened. The loss of

her Polish districts would obviously greatly reduce Germany's military strength and economic power. It may therefore be expected that Germany will move heaven and earth against the re-creation of the Kingdom of Poland, and

that she will strenuously endeavor to create differences between Russia and her allies. The statesmen of Europe should therefore, in good time, firmly make up their minds as to the future of Poland. J. ELLIS BARKER.

THE REDEMPTION OF EUROPE

By ALFRED NOYES.

[From King Albert's Book.]

* * * *donec templa refeceris.*

UNDER which banner? It was night
Beyond all nights that ever were.
The Cross was broken. Blood-stained
might
Moved like a tiger from its lair;
And all that heaven had died to quell
Awoke, and mingled earth with hell.

For Europe, if it held a creed,
Held it through custom, not through faith.
Chaos returned, in dream and deed.
Right was a legend; Love—a wraith;
And That from which the world began
Was less than even the best in man.

God in the image of a Snake
Dethroned that dream, too fond, too blind,
The man-shaped God whose heart could
break,
Live, die, and triumph with mankind.
A Super-snake, a Juggernaut,
Dethroned the highest of human thought.

The lists were set. The eternal foe
Within us as without grew strong,
By many a super-subtle blow
Blurring the lines of right and wrong
In Art and Thought, till nought seemed true
But that soul-slaughtering cry of New!

New wreckage of the shrines we made
Thro' centuries of forgotten tears * * *
We knew not where their scorn had laid
Our Master. Twice a thousand years
Had dulled the uncaptious Sun.
Manifold worlds obscured the One;

Obscured the reign of Law, our stay,
Our compass through this darkening sea,
The one sure light, the one sure way,
The one firm base of Liberty;
The one firm road that men have trod
Through Chaos to the Throne of God.

Earth has not been the same since then.
Europe from thee received a soul,
Whence nations moved in law, like men,
As members of a mightier whole,
Till wars were ended. * * * In that day,
So shall our children's children say.

Choose ye, a hundred legions cried,
Dishonor or the instant sword!
Ye chose. Ye met that blood-stained tide.
A little kingdom kept its word;
And, dying, cried across the night,
Hear us, O earth, we chose the Right!

Whose is the victory? Though ye stood
Alone against the unmeasured foe;
By all the tears, by all the blood
That flowed, and have not ceased to flow;
By all the legions that ye hurled
Back, thro' the thunder-shaken world;

By the old that have not where to rest,
By the lands laid waste and hearths
defiled;
By every lacerated breast,
And every mutilated child,
Whose is the victory? Answer ye,
Who, dying, smiled at tryanny?

Under the sky's triumphal arch
The glories of the dawn begin.
Our dead, our shadowy armies march
E'en now, in silence, through Berlin;
Dumb shadows, tattered, blood-stained ghosts
But cast by what swift following hosts?

And answer, England! At thy side,
Thro' seas of blood, thro' mists of tears,
Thou that for Liberty hast died
And livest, to the end of years!
And answer, Earth! Far off, I hear
The peans of a happier sphere:

The trumpet blown at Marathon
Resounded over earth and sea,
But burning angel lips have blown
The trumpets of thy Liberty;
For who, beside thy dead, could deem
The faith, for which they died, a dream?

Germany Will End the War

Only When a Peace Treaty Shall Assure Her Power

By Maximilian Harden

Maximilian Harden, who in the following article sets forth the ends which Germany is striving to accomplish in the war, is the George Bernard Shaw of Germany. He is considered the leading German editor and an expert in Germany on foreign politics. As editor and proprietor of *Die Zukunft*, his fiery, brooding spirit and keen insight and wit, coupled with powers of satire and caricature, made him a solitary and striking independent figure in the German press years before the other newspapers of Germany dared to criticise or attack the Government or the persons at the head of it.

After the dismissal of Prince Bismarck by the present Kaiser, Harden not only saw, but constantly and audaciously criticised, the weaknesses in the character of the Emperor. For this dangerous undertaking he was three times brought to trial for *lèse majesté*, and spent a year as a prisoner in a Prussian fortress. In 1907 he figured in a libel suit brought by General Kuno von Moltke, late Military Governor of Berlin, who, together with Count Zu Eulenburg and Count Wilhelm von Hohenau, one of the Emperor's Adjutants, had been mentioned by Harden in his paper as members of the so-called *Camarilla* or "Round Table" that sought to influence the Emperor's political actions by subtle manipulations. He was sentenced to four months' imprisonment, but appealed the case, and was let off two years later with a fine of \$150.

In recently publishing the German article which is herewith translated the German *New Yorker Revue* carefully disclaimed any agreement with the sentiments therein expressed by Harden, which, it pointed out, must be regarded only as typical of German public opinion as is George Bernard Shaw of public opinion in England.

THE scorners of war, the blonde, black, and gray children who have been defiling his name with syrupy tongues of lofty humanity and with slanderous scoldings, all have become silent. Or else they snort soldiers' songs; annihilate in confused little essays the allied powers arrayed against us; entreat a civilized world (*Kulturwelt*) juggling for mere turkey heads, to please grant us permission to do heavy and cruel deeds, to wage fierce and headlong war! Already they seem prepared to answer absolutely and unqualifiedly in the affirmative Luther's question whether "men of war also can be considered in a state of grace."

They write and talk much about the great scourge of war. That is all quite true. But we should also bear in mind how much greater is the scourge which is fended off by war. The sum and substance of the matter is this: In looking upon the office of war one must not consider how it strangles, burns, destroys. For that is what the simple eyes of children do which do not further watch the surgeon when he chops off a hand or

saws off a leg; which do not see or perceive that it is a matter of saving the entire body. So we must look upon the office of war and of the sword with the eyes of men, and understand why it strangles and why it wreaks cruel deeds. Then it will justify itself and prove of its own accord that it is an office divine in itself, and as necessary and useful to the world as is eating, drinking, or any other work. But that some there are who abuse the office of war, who strangle and destroy without need, out of sheer wantonness—that is not the fault of the office, but of the person. Is there any office, work, or thing so good that wicked and wanton persons will not abuse it?

The organ tone of such words as these at last rolls forth once more in their native land.

Therefore cease the pitiful attempts to excuse Germany's action. No longer wail to strangers, who do not care to hear you, telling them how dear to us were the smiles of peace we had smeared like rouge upon our lips, and how deeply we regret in our hearts that the treachery of conspirators dragged us, unwilling,

into a forced war. Cease, you publicists, your wordy war against hostile brothers in the profession, whose superiority you cannot scold away, and who merely smile while they pick up, out of your laboriously stirred porridge slowly warmed over a flame of borrowed alcohol, the crumbs on which their "selfishness" is to choke! That national selfishness does not seem a duty to you, but a sin, is something you must conceal from foreign eyes.

Cease, also, you popular writers, the degraded scolding of enemies that does not emanate from passion but out of greedy hankering for the applause of the masses, and which continually nauseates us amid the piety of this hour! Because our statemen failed to discover and foil shrewd plans of deception is no reason why we may hoist the flag of most pious morality. Not as weak-willed blunderers have we undertaken the fearful risk of this war. We wanted it. Because we had to wish it and could wish it. May the Teuton devil throttle those whiners whose pleas for excuses make us ludicrous in these hours of lofty experience. We do not stand, and shall not place ourselves, before the court of Europe. Our power shall create new law in Europe. Germany strikes. If it conquers new realms for its genius, the priesthood of all the gods will sing songs of praise to the good war.

Only he who is specially trained for a race of troops may go along into the field. Only the man versed in statecraft should be allowed to participate in the talk about the results of war. Not he who has out yonder proved an unworthy diplomat, nor the dilettante loafer sprayed with the perfume of volatile emotions. Manhood liability to military service requires manhood suffrage? That question may rest for the time being; likewise the desire for equality of that right shall not be argued today. But common sense should warn against the assumption of an office without the slightest special preliminary training. Politics is an art that can be mastered not in the leisure hours of the brain, but only by the passionate, self-sacrificing devotion of a whole lifetime. Now seek around you.

We are at the beginning of a war the development and duration of which are incalculable, and in which up to date no foe has been brought to his knees. To guide the sword to its goal, Tom, Dick, and Harry, Poet Arrogance and Professor Crumb advertise their prowess in the newspaper *Advice and Assistance*. Brave folk, whose knowledge concerning this new realm of their endeavor emanates solely from that same newspaper! Because they have for three months been busily reading their morning, noon, and evening editions, they think they have a special call to speak. Without knowledge of things that have transpired before, without knowledge of the persons concerned, without a suspicion of the needs of the situation and its possibilities, they judge the peoples of the earth and divide the world. Stupid talk, with which irreverent officiousness seeks to while away and shorten the period of anxious waiting for customers; but to prepare quietly and wisely and mightily in advance for terms of peace, that is the duty of the statesman.

We are waging this war not in order to punish those who have sinned, nor in order to free enslaved peoples and thereafter to comfort ourselves with the unselfish and useless consciousness of our own righteousness. We wage it from the lofty point of view and with the conviction that Germany, as a result of her achievements and in proportion to them, is justified in asking, and must obtain, wider room on earth for development and for working out the possibilities that are in her. The powers from whom she forced her ascendancy, in spite of themselves, still live, and some of them have recovered from the weakening she gave them. Spain and the Netherlands, Rome and Hapsburg, France and England, possessed and settled and ruled great stretches of the most fruitful soil. Now strikes the hour for Germany's rising power. The terms of a peace treaty that does not insure this would leave the great effort unrewarded. Even if it brought dozens of shining billions into the National Treasury, the fate of Eu-

rope would be dependent upon the United States of America.

We are waging war for ourselves alone; and still we are convinced that all who desire the good would soon be able to rejoice in the result. For with this war there must also end the politics that have frightened away all the upright from entering into intimate relations with the most powerful Continental empire. We need land, free roads into the ocean, and for the spirit and language and wares and trade of Germany we need the same values that are accorded such goods anywhere else.

Only four persons not residents of Essen knew about the new mortar which the firm of Friedrich Krupp manufactured at its own expense and which later, because its shell rapidly smashed the strongest fortifications of reinforced concrete, our military authorities promptly acquired. Must we be ashamed of this instrument of destruction and take from the lips of the "cultured world" the wry reproach that from "Faust" and the Ninth Symphony we have sunk our national pride to the 42-centimeter guns? No! Only firm will and determination to achieve, that is to say, German power, distinguishes the host of warriors now embattled on the five huge fields of blood from the race of the poets and thinkers. Their brains, too, yearn back, throbbing for the realm of the muses. Before the remains of the Netherland Gothic, before the wonders of Flemish painting, their eyes light up in pious adoration. From the lips of the troops that marched from three streets into the parade plaza in Brussels there burst, when the last man stood in the ranks—and burst spontaneously—a German song. Out of all the trenches joyous cheers of thanks rise for the fearless musicmaster who, amid the raging fire, through horns and trumpets, wrapped in earth-colored gray, leads his band in blowing marches and battle songs and songs of dancing into the ears of the Frenchmen, harkening with pleasure.

Not only for the territories that are to feed their children and grandchildren is this warrior host battling, but also for

the conquering triumph of the German genius, for the forces of sentiment that rise from Goethe and Beethoven and Bismarck and Schiller and Kant and Kleist, working on throughout time and eternity.

And never was there a war more just; never one the result of which could bring such happiness as must this, even for the conquered. In order that that spirit might conquer we were obliged to forge the mightiest weapons for it. Over the meadows of the Scheldt is wafted the word of the King:

How proud I feel my heart flame
When in every German land
I find such a warrior band!
For German land, the German sword!
Thus be the empire's strength preserved!

This strength was begotten by that spirit. The fashioning of such weapons was possible only because millions of industrious persons, with untiring and unremitting labors, transformed the poor Germany into the rich Germany, which was then able to prepare and conduct the war as a great industry. And what the spirit created once again serves the spirit. It shall not lay waste, nor banish us free men into slavery, but rather it shall call forth to the light of heaven a new, richer soul of life out of the ruins of a storm-tossed civilization. It shall, it must, it will conquer new provinces for the majesty of the noble German spirit (*Deutschheit*) that never will grow chill and numb, as the Roman did. Otherwise—and even though unnumbered billions flowed into the Rhine—the expense of this war would be shamefully wasted.

Our army did not set out to conquer Belgian territory.

In the war against four great powers, the west front of which alone stretched from the North Sea to the Alps, from Ghent almost to Geneva, it seemed impossible to achieve on Europe's soil a victory that would strengthen the roots of the conquering race. Gold cannot indemnify for the loss of the swarming young life which we were obliged to mourn even after ten weeks of war; and if, amid ten thousand of the fine fellows who died, there was even a single

creative mind, then thousands of millions could not pay for its destruction.

And what stretch of land necessary for the German people, or useful in the real sense of the word, could France or even Russia vacate for us in Europe? To be "unassailable"—to exchange the soul of a Viking for that of a New Yorker, that of the quick pike for that of the lazy carp whose fat back grows moss covered in a dangerless pond—that must never become the wish of a German. And for the securing of more comfortable frontier protection only a madman would risk the life that is flourishing in power and wealth. Now we know what the war is for—not for French, Polish, Ruthenian, Esthonian, Lettish territories, nor for billions of money; not in order to dive headlong after the war into the pool of emotions and then allow the chilled body to rust in the twilight dusk of the Deliverer of Races.

No! To hoist the storm flag of the empire on the narrow channel that opens and locks the road into the ocean. I could imagine Germany's war lord, if, after Ostend, Calais, too, is captured, sending the armies and fleets back home from the east and front the west, and quietly saying to our enemies:

"You now have felt what Germany's strength and determination can do, and hereafter you will probably weigh the matter well before you venture to attack us. Of you Germany demands nothing further. Not even reimbursement for its expenses in this war—for those it is reimbursed by the wholesale terror which it evoked all around in the Autumn battles. Do you want anything of us? We shall never refuse a challenge to a quarrel. We shall remain in the Belgian netherland, to which we shall add the thin strip of coast up to the rear of Calais, (you Frenchmen have enough better harbors, anyway;) we terminate, of our own accord, this war which, now that we have safeguarded our honor, can bring us no other gains; we now return to the joy of fruitful work, and will grasp the sword again only if you attempt to crowd

us out of that which we have won with our blood. Of a solemn peace conference, with haggling over terms, parchment, and seal, we have no need. The prisoners are to be freed. You can keep your fortresses if they do not seem to you to be worthless, if the rebuilding of them still seems worth while to you. Tomorrow is again a common day."

Do not lapse into dreams about United States of Europe, about mild-intentioned division of the Coburg heritage, (a bit of it to Holland, a bit to Luxemburg, perhaps even a bit to France. Any one with even the slightest nobility of feeling would reject the proffered dish of poison with a gesture of disgust,) nor be lulled into delusions of military and tax conventions that would deprive the country of its free right of determining its own destiny.

To the Belgians we are the Arch-imp and the Tenant of the Pool of Hell! We would remain so, even if every stone in Louvain and in Malines were replaced by its equivalent in gold. That rage can be overcome only after the race, praised by Schiller's fiery breath, sees its neighbors close at hand and draws advantage from intimate relations with them. Antwerp not pitted against, but working with, Hamburg and Bremen; Liège, side by side with Essen's, Berlin's, and Swabia's gun factories—Cockerill in combination with Krupp; iron, coal, woven stuff from old Germany and Belgium, introduced into the markets of the world by one and the same commercial spirit; our Kamerun and their Congo—such a warm blaze of advantage has burned away many a hatred. The wise man wins as his friend the deadly foe whose skull he cannot split, and he will rather rule and allow to feast on exceptional dainties this still cold and shy new friend than lose potential well-wishers of incalculable future good-will.

Only, never again a withered Reichsland! (imperial territory.) From Calais to Antwerp, Flanders, Limburg, Brabant, to behind the line of the Meuse forts, Prussian! (German Princes no longer haggle, German tribes no longer envy one another;) the Southern triangle

with Alsace and Lorraine—and Luxemburg, too, if it desires—is to be an independent federated State, intrusted to a Catholic noble house. Then Germany would know for what it shed its blood.

We need land for our industries, a road into the ocean, an undivided colony, the assurance of a supply of raw materials and the most fertile well-spring of prosperity—a people industrious and efficient in its work.

Here they are: Ore and copper, glass and sugar, flax and wool. But here, too, there once lived Jan and Hubert van Eyck, Rubens, the reveler Ruysbroeck, and Jordeans of the avid eyes. Here there always lived—to be sure, in twilight—Germania's little soul, fluttering imagination.

And is there not here, too, that which

—all too stormily and, as a rule, in all too harsh a tone of abuse—every German heart yearns for, a victory over England? On the seas such victory cannot be quickly won, indeed; can, indeed, never be won without great sacrifice. But with the German Empire, whose mortars loom threatening from one coast of the Channel, whose flag floats over the two greatest harbors of Europe and over the Congo basin—England would have to come into a friendly agreement as a power of equal strength, entitled to equal rights. If it is unwilling to do so? Lion, leap! On our young soil we await thee! The day of adventure wanes. But for the German who dares unafraid to desire things the harvest labor of heroic warriors has quickly filled the storehouse.

LOUVAIN'S NEW STREETS

[By The Associated Press.]

LONDON, March 9.—The decision of the municipal authorities of Louvain, Belgium, to give American names to certain streets of the city is set forth in a formal resolution of thanks which was adopted on Washington's Birthday by the Burgomaster and Aldermen of Louvain and sent to the American Commission for Relief in Belgium. The resolution concludes as follows:

"The cradle of a university of five centuries' standing, and today herself partly in ruins, the City of Louvain cannot fail to associate with the memory of Washington, one of the greatest Captains, the name of the learned professor whose admirable precepts and high political attainments, as also his firmness of character and dignity of life, all contributed to carry him successively to the Presidency of Princeton University, the Governorship of New Jersey, and finally the Presidency of the United States.

"In order to perpetuate to future generations remembrances of these sentiments and our ardent gratitude, the Burgomaster and Aldermen have decided this day that in the new parts of the city, as they rise out of the ruins, three streets or squares shall receive the illustrious names of President Wilson, Washington, and American Nation."

The State of Holland

An Answer to H. G. Wells by Hendrik Willem van Loon

To the Editor of The New York Times:

MY attention has been drawn to an article by H. G. Wells, published by THE NEW YORK TIMES and by CURRENT HISTORY in its March number which proposed that Holland give Germany the coup de grace, suddenly attack Aix and Cologne, cut off Germany's line of supplies, and thereby help win the war for the cause of justice. I am not writing this answer in any official capacity, but I have reason to believe that I write what most of my fellow-countrymen feel upon the subject.

Holland is neutral. The country is just as neutral as Belgium would have been had she not been invaded; as neutral as Denmark and Switzerland and the other small countries which are suffering so severely through this war. If any power should attack Holland, Holland would no longer be neutral, but would inundate the central part of the provinces of North and South Holland, would occupy the very strong position around Amsterdam, and would fight to the end. But unless attacked directly Holland will take no part in this war.

Mr. Wells hints at the idea of the righteousness of the cause of the Allies. All races and all colors have been brought together to beat Germany. Now Holland ought to do the same. She is in a position to exercise great power with her fresh troops. In the name of humanity, which has been so grievously maltreated in Belgium, let her join. I think that the answer of the greater part of our people would be somewhat as follows:

No quarrel was ever made by a single person. It takes two to start a fight. England and Germany are fighting for the supremacy of commerce. In the course of this quarrel Belgium has been sacrificed. We are extremely sorry. We have opened our frontiers to all of our

southern neighbors. They were welcome to flee to us with all their belongings. We shall take care of them so long as they wish to stay. Our position is not always easy. The Dutch and the Belgian characters are very different. We do not always understand each other. But in the main the Belgians know that we shall share our food with them until the last, that in every way we shall make them as comfortable as we can. We are not a very graceful people. We often lack a certain charm of manner. The little potentates who are the Mayors of our small frontier towns are not always very tactful. But these things are minor matters. Holland is the natural place of refuge for her southern neighbors, and as long as they suffer from the German domination they know that with us they are safe. But should we have gone with the Allies when the Belgians suffered through no fault of their own?

For France there is in Holland the greatest personal sympathy. But she is far away from Holland. The direct issue is between England and Germany. The Hollander likes England, fashions his life as much as possible after the English pattern, prefers to do business with English people. Yet is there any reason why Holland should make the possible sacrifice of her own existence for the benefit of England?

Will Mr. Wells kindly glance through his history and see what we as a nation have suffered at the hands of England?

During three centuries we fought with England about a principle laid down by Grotius of Delft. We claimed that the sea was an open highway, free to all navigators. England used her best legal talent to prove the contrary. In this struggle we exhausted ourselves and we finally lost. Incidentally we saw our richest colonies go into the possession of England. The very colony in which I am writing this letter was taken from us in

time of peace. Of course all this is past history and no Hollander is going to accuse an Englishman of acts committed by his great-grandfather. But the people will remember all those things, however vaguely, and they will distrust the nation that has constantly done them harm. We gave England her best King, (if one is to believe Mr. Macaulay.) William III. in order to destroy the power of Louis XIV., and greatly for the benefit of England incidentally, did the greatest harm to the country of his origin. After 1715, totally exhausted, we were obliged to see how England got ahead of us.

Then there are some other small items. I take one at random. While the Duke of Wellington danced the polka in Brussels the Prince of Orange with a small Dutch army stopped Napoleon's progress at Quatre Bras, and by disobeying the orders of the British commander saved the army of the allies and made the victory of Waterloo possible. Our thanks for this self-sacrifice was the mild abuse of Mr. Thackeray and other gentlemen who have ever since laughed at the clumsy Dutch troops who in truth so valiantly assisted the British and Prussians. In this matter a little more generosity on the part of British historians would have made us feel more cordial toward our English neighbors. It was ever thus. To read the story of the Armada one would believe that the English destroyed this dangerous Spanish fleet. As a matter of fact, competent historians know that certainly one-half of the glory for that feat goes to the Dutch sailors, who prevented the Spaniards from getting their supplies, their pilots, and their auxiliary army. These are merely examples. They are all small things. But there are so many of them, they return with such persistent regularity, that we would feel very little inclination to risk our national existence for a nation which, according to our feeling, (rightly or wrongly, I am not debating that question,) has never treated us with fairness, and which we had to fight for over three centuries before it would accept those general principles of international law which first of all were laid

down by Grotius in the beginning of the seventeenth century.

Remember, however, that this does not mean any hostility to England. Mr. Wells undoubtedly knows that our ships have invariably done noble work in rescuing the victims of submarine attacks. He will know that our Government (to the great anger of Germany) has construed the articles of several international treaties in the most liberal way and has immediately released all such British subjects as were thrown upon our coast through the accidents of war. He will also know, if he has read the papers, that our entire country has turned out to do homage to the bravery of those men. The danger to the sailor of a British man-of-war who lands in Holland is that he will be killed by a severe attack of nicotine poisoning caused by the cigars which the people, in their desire to show their feelings and unable to break the strict law of neutrality, shower upon the Englishman who is fished out of the North Sea by our trawlers or our steamers.

But away deep under this very strong personal sympathy for England, and with very sincere admiration for the British form of government, the people of Holland cannot easily overcome a feeling of vague distrust that the nation which in the past has so often abused them cannot entirely be counted upon to treat them justly this time. Incidentally, I may say that the bungling of Mr. Churchill in Antwerp, which we know much better than do the people of England, is another reason why we are a bit afraid of the island across the North Sea.

We are indeed in the position of a dog that has often been beaten innocently and that is now smiled upon and asked to be good and attack another person who has never done him any harm. The comparison may not be very flattering to us, but Mr. Wells will understand what I mean. We have had the Germans with us always. Personally, taking them by and large, we like them not. Their ways are not our ways. Our undisciplined race abhors their system. We have seen the misery which they caused in Belgium more closely than any one else. The end-

less letters and pamphlets with which the Germans have inundated our land to prove the justice of their cause have made no impression whatsoever. We have with our own eyes seen the victims of their very strict explanation of Section 58, Article I., of the German military penal code. We have seen the Belgians hanging by their own red handkerchiefs, and we have with our own hands fed the multitude that had been deprived of everything. On the other hand, Germany has up to date been most scrupulous in her behavior toward us. In the past she has never done us any harm. We may not like her, but she has in a very careful way avoided all friction and has treated us with great consideration.

In view of all this, in view of the very sober attitude of our people upon all matters of our daily life, in view of these historical reflections, which have a very decided influence, would it be quite fair without any provocation on the side of Germany to go forth and attack her in the back, now that she is in such very dangerous straits? I repeat that this may not be the exact sentiment of all of my countrymen, but I believe that very many of us feel things that way. Perhaps we disagree in minor details, but we agree about the main issue.

We love our country. For centuries

we have fought to maintain our individual civilization against the large neighbors who surround us. We try to live up to our good reputation as a home for all those who suffer. The people who are made homeless by Germany come to us and we try to feed them on such grain as the British Government allows to pass through the Channel. We try to continue in our duty toward all our neighbors, even when they declare the entire North Sea (in which we also have a certain interest) as a place of battle and blow up our ships with their mines. We patiently destroy the mines which swim away from our neighbors' territorial waters and land upon our shores. In short, we perform a very difficult act of balancing as well as we can. But it seems to us that under difficult circumstances we are following the only correct road which can lead to the ultimate goal which we wish to reach—the lasting respect of all those who will judge us without prejudice and malice.

It is very kind of Mr. Wells to offer us territorial compensation, but we respectfully decline such a reward for the sort of attack which was popular in the days of the old Machiavelli.

HENDRIK WILLEM VAN LOON.

New York, Feb. 26, 1915.

Hungary After the War

By a Correspondent of The London Times

[From The London Times, Jan. 20, 1915.]

THE allied powers are agreed that the European resettlement must be inspired by the principle of nationality. It will be but just if Hungary suffers severely from its application, for during the past forty years no European Government has sinned so deeply and persistently against that principle as has her Magyar Government. The old Hungary, whose name and history are surrounded by the glamour of romance, was not the modern "Magyarland." Its boasted constitutional liberties were, indeed, confined to the nobles, and the "Hungarian people" was composed, in the words of Verhőczy's Tripartitum Code, of "prelates, barons, and other magnates, also all nobles, but not commoners." But the nobles of all Hungarian races rallied to the Hungarian banner, proud of the title of *civis hungaricus*. John Hunyádi, the national hero, was a Ruman; Zrinyi was a Croat, and many another paladin of Hungarian liberty was a non-Magyar. Latin was the common language of the educated. But with the substitution of Magyar for Latin during the nineteenth century, and with the growth of what is called the "Magyar State Idea," with its accompaniment of Magyar Chauvinism, all positive recognition of the rights and individuality of non-Magyar races gradually vanished.

The Magyar language itself is incapable of expressing the difference between "Hungarian" and "Magyar." The difference is approximately the same as between "British" and "English." The "Magyar State" set itself to Magyarize education and every feature of public life. Any protest was treated as "incitement against the Magyar State Idea" and was made punishable by two years' imprisonment. It was as though a narrow-minded English Administration should set itself to obliterate all traces

of Scottish, Welsh, and Irish national feeling; or as though the Government of India should ignore the existence of all save one race and language in our great dependency.

In comparison with the Government of "Magyarland," the Government of Austria was a model of tolerance. In Austria, Poles and Ruthenes, Czechs, Germans, Italians, Serbo-Croatians, and Slovenes were entitled to the public use of their own languages and enjoyed various degrees of provincial self-government. The Austrian side of every Austro-Hungarian banknote bore an indication of its value in every language of the empire, whereas the Hungarian side was printed in Magyar alone. This was done in order to foster the belief that Hungary was entirely Magyar.

In reality, Hungary is as polyglot as Austria. Exact statistics are not obtainable, since the Magyar census returns have long been deliberately falsified for "Magyar State" reasons. Roughly speaking, it may, however, be said that, in Hungary proper, i. e., exclusive of Croatia-Slavonia, where the population is almost entirely Serbo-Croatian, there are perhaps 8,500,000 Magyars, including nearly 1,000,000 professing and a large number of baptized Jews. Against this total there are more than 2,000,000 Germans, including the numerous colonies on the Austrian border, the Swabians of the south, and the Saxons of Transylvania; more than 2,000,000 Slovaks, who inhabit chiefly the northwestern counties; between three and four million Rumanes, living between the Theiss and the Eastern Carpathians; some 500,000 Ruthenes, or Little Russians, who inhabit the north-eastern counties; some 600,000 Serbs and Croats in the central southern counties; 100,000 Slovenes along the borders of Styria and Carinthia; and some 200,000

other non-Magyars, including about 90,000 gypsies, who speak a language of their own. Taking the population of Hungary proper at 18,000,000, the Magyars are thus in a minority, which becomes more marked when Croatia-Slavonia with its population of 2,600,000 southern Slavs is added.

during the period of reaction after 1849 as ruthlessly as the Magyars themselves. Deák and Eötvös, who were the last prominent Magyar public men with a Hungarian, as distinguished from a narrowly Magyar, conception of the future of their country, pleaded indeed for fair treatment of the non-Magyars, and

Distribution of Nationalities in Hungary.

It would have been possible for the Magyars, after the restoration of the Hungarian Constitution under the Dual Settlement of 1867, to have built up a strong and elastic Transleithan polity based on the recognition of race individualities and equality of political rights for all. The non-Magyars would have accepted Magyar leadership the more readily in that they had been dragooned and oppressed by Austria

trusted to the attractive force of the strong Magyar nucleus to settle automatically the question of precedence in the State. But in 1875, when Koloman Tisza, the father of Count Stephen Tisza, took office, these wise counsels were finally and definitely rejected in favor of what Baron Bánffy afterward defined as "national Chauvinism." Magyarization became the watchword of the State and persecution its means of action. Kolo-

man Tisza concluded with the monarch a tacit pact under which the Magyar Government was to be left free to deal as it pleased with the non-Magyars as long as it supplied without wincing the recruits and the money required for the joint army. The Magyar Parliament became almost exclusively representative of the Magyar minority of the people. Out of the 413 constituencies of Hungary proper more than 400 were compelled, by pressure, bribery, and gerrymandering, to return Magyar or Jewish Deputies. The press and the banks fell entirely into Jewish hands, and the Magyarized Jews became the most vociferous of the "national Chauvinists."

Nothing like it has been seen before or since—save the Turkish revolution of 1908, when the Young Turks, under Jewish influence, broke away from the relatively tolerant methods of the old régime and adopted the system of forcible "Turkification" that led to the Albanian insurrections of 1910-12, to the formation of the Balkan League, and to the overthrow of Turkey in Europe.

The bitter fruits of the policy of Magyarization are now ripening. The oppressed Rumanes look not toward Aus-

tria, as in the old days when their great Bishop Siaguna made them a staunch prop of the Hapsburg dynasty, but across the Carpathians to Bucharest; the Serbo-Croatians of Hungary, Croatia-Slavonia, and Dalmatia, whose economic and political development the Magyars have deliberately hampered, turn their eyes no longer, as in the days of Jellatchich, toward Vienna, but await wistfully the coming of the Serbian liberators; the Ruthenes of the northeast hear the tramp of the Russian armies; the Slovaks of the northwest watch with dull expectancy for the moment when, united with their Slovak kinsmen of Moravia and their cousins, the Czechs of Bohemia, they shall form part of an autonomous Slav province stretching from the Elbe to the Danube. For the Magyars, who have thrown to the winds the wisdom of the wisest men, fate may reserve the possession of the fertile and well-watered Central Hungarian plain. There they may thrive in modesty and rue at their leisure the folly of having sacrificed their chance of national greatness to the vain pursuit of the "Magyar State Idea" under the demoralizing influence of Austro-German imperialism.

THE WATCHERS OF THE TROAD

By HARRY LYMAN KOOPMAN

WHERE Ilium's towers once rose and
 stretched her plain,
 What forms, beneath the late moon's
 doubtful beam,
 Half living, half of moonlit vapor, seem?
 Surely here stand apart the kingly twain,
 Here Ajax looms, and Hector grasps the
 rein,
 Here Helen's fatal beauty darts a gleam,
 Andromache's love here shines o'er death
 supreme.
 To them, while wave-borne thunders roll
 amain
 From Samos unto Ida, Calchas, seer
 Of all that shall be, speaks: "Not the
 world's end
 Is this, but end of our old world of strife,
 Which, lasting until now, shall perish here.
 Henceforth shall men strive but as friend
 and friend
 Out of this death to rear a new world's
 life."

The Union of Central Europe

An Argument in Favor of a Union of the States Now Allied With
Germany

By Franz von Liszt

Professor Franz von Liszt, author of the following article, is Director of the Criminal Law Seminar of the University of Berlin, and is regarded as one of the leading experts on criminal law in Germany. The article was published in the *Neus Badische Landes-Zeitung* of Mannheim, and evoked bitter criticism from many imperialistic quarters in the German press.

WHEN new directions of development are first taken in history, it usually requires the lapse of several decades before we understand them in their true importance, and it takes much longer before proper terms describing them are adopted generally. In the interim, misconceptions of all kinds are the necessary consequence of clouded perception and confused terminology, especially when, for purposes of party politics, there figures in a greater or less degree a certain unwillingness to understand.

Such misunderstandings are not devoid of danger in times of peace; they may become pregnant with fate when, as in our day, the leading nations of the earth stand at the threshold of a great change in their history. I am anxious, therefore, to defend against objections raised with more or less intentional misunderstanding the thoughts which I expressed in my recently published essay, "A Central European Union of States as the Next Goal of German Foreign Policy."

Let us for once put aside the word "Imperialism." Surely we are all agreed as one that it is an absolute essential of life for the German Empire to carry on world-politics, (*Weltpolitik*.) We have been engaged in that since the eighties of the nineteenth century. The first colonial possessions which the German Empire obtained were the fruits of a striving for world-politics that had not yet at that time come to full and clear consciousness.

But, conscious of our goal, we did not attempt the paths of world-politics until the end of the last century. At the celebration of the twenty-fifth anniversary of the German Empire, on Jan. 18, 1896, our Kaiser uttered the words: "The German Empire has become a world empire, (*Aus dem deutschen Reich ist ein Weltreich geworden.*)" And the German Empire's groping for its way in world-politics found its expression in the first naval proposal of Tirpitz in the year 1898.

At that time the Imperial Chancellor Prince Hohenlohe expressly designated the policy of the German Empire as "world politics." Thereby a goal was sketched for the development of the German Empire. We have not lost sight of it since then, keeping unconfused despite many an illusion and many a failure. And today we all live in the firm faith that the world war, which we are determined to bring to a victorious conclusion by the exertion of all our forces as a people, will bring us the safe guarantee for the attainment of our goal in world politics.

On that score, then, there is absolutely no difference of opinion. But there does appear to be considerable difference of opinion as to the conception of world politics. Under that name one may mean a policy directed toward world domination (*Weltherrschaft*.) For that kind of world politics the word "Imperialism," borrowed from the period of Roman world domination of the second century of the Christian era, fits precisely.

Imperialism aims, directly or indirectly, through peaceful or forceful annexa-

tion or economic exploitation, to make the whole inhabited earth subject to its sway. Imperialistic is the policy of Great Britain, which has subjected one-fifth of the inhabited area of the earth to its sway and knows no bounds to the expansion of English rule. Imperialistic, too, is the policy of Russia, which for centuries has been extending its huge tentacles toward the Atlantic and toward the Mediterranean, the Pacific, and the Indian Oceans, never sated.

Such world domination has never endured permanently; it can endure least of all in our days, in which an array of mighty armed powers stand prepared to guard their independence. World domination sooner or later leads inevitably to an alliance of the States whose independence is threatened; and thereby it leads to the overthrow of the disturber of the peace. That, as we all confidently hope, will be the fate of England as well as of Russia in the present war. * * *

World politics, however, may mean something else; policies based upon world value, (*Weltgeltung*.) The policy based on world domination differs from that based on world value, in that the former denies the equal rights of other States, while the latter makes that its premise. The State that asserts its rights to world values demands for itself what it concedes to the others: its right to expand and develop its political and economic influence, and to have a voice in the discussion whenever the political or economical relations of the various States at any point in the inhabited globe approach a state of change. * * *

In this sense has the German Empire heretofore engaged in world politics in contrast with Russia and England. That it cannot be carried on successfully without overseas colonies, a strong foreign fleet, naval bases, and telegraphic connections through cable or wireless telegraph apparatus, needs no further elucidation. For this sort of world politics also the name "Imperialism" may be used. But such use of the word is misleading; I shall therefore hereafter avoid it.

And herein I think I have uncovered the deeper reason for an early misunderstanding of great consequence. It seems

as though in a certain—to be sure, not a very great or very influential—circle of our German fellow-citizens the opinion prevails that the German Empire should substitute its claims for world domination for those of England. Such a view cannot be too soon or too sharply rebuked.

The claim for world domination would set the German Empire for many years face to face with a long series of bloody wars, the issue of which cannot be in doubt a moment to any one familiar with history. The enforcement of this claim, moreover, would of itself be the surrender of the German spirit to the spirit of our present opponent in the war. The idea of world domination, imperialism in the true sense of the word, is not a product grown on German soil; it is imported from abroad. To maintain that view in all seriousness is treachery to the inmost spirit of the German soul.

Perhaps I am mistaken in taking it for granted that such thoughts are today haunting many minds. Perhaps it is merely a matter of misapplied use of a large sounding word. In that case, however, it is absolutely necessary to create clear thinking. I take it for granted that I am voicing the sentiments of the souls of the vast overwhelming majority of Germans when I say: "We shall wage the war, if need be, to the very end, against the English and Russian lust for world domination, and for Germany's world value (*Weltgeltung*.)"

But forthwith there appears a further difference of opinion, to be taken not quite so seriously, which I shall endeavor to define as objectively as possible. The German conservative press seems to be of the opinion that the goal for the winning of which we are waging the great war, and concerning which we are all of one mind, will be definitely attained immediately upon the conclusion of the war.

I, on the other hand, am convinced that in order permanently to insure for ourselves the fruits of victory, even after a victorious conclusion of the war, we shall need long and well planned labors of peace. * * *

In my essay I used the statement:

"England's claim for the domination of the sea, and therein for the domination of the world, remains a great danger to the peace of the world." To this view I adhere firmly. Let us take it for granted that the most extravagant hopes of our most reckless dreamers are fulfilled, that England is crowded out of Egypt, Mesopotamia, Persia, and is involved in a long-lasting war with the native Indians. An impossibly large dose of political naïveté is needed in order to make us believe that England would take this loss quietly for all time.

We may differ on the question whether we should meet England's efforts for rehabilitation of her world dominion in warlike, or, as I take it, in peaceful ways; but it would be an unpardonable piece of stupidity for us to rock ourselves to sleep in the mad delusion that those efforts would not be exerted. Even were England forced to her knees, she would not immediately give up her claim for world domination. We must count upon that.

And, counting upon that, we must estimate our own forces very carefully; rather account them weaker than they really are, than the reverse. I did that in my essay, and that is why the conservative press was so wrought up over it. To be sure, it carefully avoided discussing my reasons.

I started from the conception of world power which is fairly well established in the present political literature. From a point of view taken also by conservative writers I demanded as a characteristic of world power, in addition to the size of territories and the number of population, above all, the economic independence that makes it possible for a State, in a case of need, to produce, without export or import, all foodstuffs, necessities, raw materials, and all the finished or half-finished products it needs for its consumers in normal times, as well as to insure the sale of its surplus.

It is patent that this economic independence is influenced by the geographical position of the fatherland and its colonies. Now, I defended the theory (and my opponents made no attempt to confute it) that even after a victorious war the

German Empire would not have fully attained this economic independence; that, accordingly, after the conclusion of peace, we must exert every effort to insure this economic independence in one way or another.

As to the course which we must follow to attain this goal, there may be various opinions. I proposed the establishment of a union of Central European States. The conservative press characterized that as "utterly pretentious." . . .

If the course I have proposed is considered inadvisable, let another be proposed. But on what colonies, forsooth, do those gentlemen count, that could furnish us with cotton and ore, petroleum and tobacco, wood and silk, and whatever else we need, in the quantity and quality we need? What colonies that could offer us—do not forget that—markets for the sale of our exporting industries? Even after the war we shall be dependent upon exports to and imports from abroad.

And so there is no other way of safeguarding our economic independence against England and Russia than by an economic alliance with the States that are our allies in this war, or at least that do not make common cause with our enemies. Aside from the fact, which I shall not discuss here, that only such an alliance can insure a firm position for us on the Atlantic Ocean, which in the next decades is bound to be the area of competition for the world powers.

Politics are not a matter of emotion, but of calm, intelligent deliberation. Let us leave emotional politics to our enemies. It is the German method to envisage the goal steadily, and with it the roads that lead to that goal. Our goal is not world domination. Whoever tries to talk that belief into the mind of the German people may confuse some heads that are already not very clear; but he cannot succeed in substituting Napoleon I. for Bismarck as our master teacher.

Our goal can only be the establishing of our value in the world among world powers, with equal rights to the same opportunities. And in order to attain this goal we must, even after the conclusion

of peace, exert all our forces. A people that thinks it can rest on its laurels after victory has been won runs the risk sooner or later of losing that for which its sons shed their blood on the field of battle. With the conclusion of peace there

begins for us anew the unceasing peaceful competition and the maintenance and strengthening of the world value which we have won through the war. German imperialism is and will remain the work of peace.

TWO POOR LITTLE BELGIAN FLEDGLINGS

By PIERRE LOTI.

Translation by Florence Simmonds.

[From King Albert's Book.]

AT evening, in one of our southern towns, a train full of Belgian refugees ran into the station, and the poor martyrs, exhausted and bewildered, got out slowly, one by one, on the unfamiliar platform, where French people were waiting to receive them. Carrying a few possessions caught up at random, they had got into the carriages without even asking whither they were bound, urged by their anxiety to flee, to flee desperately from horror and death, from unspeakable mutilation and Sadic outrage—from things that seemed no longer possible in the world, but which, it seems, were lying dormant in pietistic German brains, and had suddenly belched forth upon their land and ours, like a belated manifestation of original barbarism. They no longer possessed a village, nor a home, nor a family; they arrived like jetsam cast up by the waters, and the eyes of all were full of terrified anguish. Many children, little girls whose parents had disappeared in the stress of fire and battle; and aged women, now alone in the world, who had fled, hardly knowing why, no longer caring for life, but moved by some obscure instinct of self-preservation.

Two little creatures, lost in the pitiable throng, held each other tightly by the hand, two little boys obviously brothers, the elder, who may have been five years old, protecting the younger, of about three. No one claimed them, no one knew them. How had they been able to understand, finding themselves alone, that they, too, must get into this train to escape death? Their clothes were decent, and their little stockings were thick and warm; clearly they belonged to humble but careful parents; they were, doubtless, the sons of one of those sublime Belgian soldiers who had fallen heroically on the battlefield, and whose last thought had perhaps been one of supreme tenderness for them. They were not even crying, so overcome were they by fatigue and sleepiness; they could scarcely stand. They could not answer when they were questioned, but they seemed intent, above all, upon keeping a tight hold of each other. Finally the elder, clasping the little one's hand closely, as if fearing to lose him, seemed to awake to a sense of his duty as protector, and, half asleep already, found strength to say, in a suppliant tone, to the Red Cross lady bending over him: "Madame, are they going to put us to bed soon?" For the moment this was all they were capable of wishing, all that they hoped for from human pity—to be put to bed.

They were put to bed at once, together, of course, still holding each other tightly by the hand; and, nestling one against the other, they fell at the same moment into the tranquil unconsciousness of childish slumber.

Once, long ago, in the China Sea, during the war, two little frightened birds, smaller even than our wrens, arrived, I know not how, on board our ironclad, in our Admiral's cabin, and all day long, though no one attempted to disturb them, they fluttered from side to side, perching on cornices and plants.

At nightfall, when I had forgotten them, the Admiral sent for me. It was to show me, now without emotion, the two little visitors who had gone to roost in his room, perched upon a slender silken cord above his bed. They nestled closely together, two little balls of feathers, touching and almost merged one in the other, and slept without the slightest fear, sure of our pity. And those little Belgians sleeping side by side made me think of the two little birds lost in the China Sea. There was the same confidence and the same innocent slumber—but a greater tenderness was about to watch over them.

What the Germans Desire

Not Conquest, but a New Economical System of Europe

By Gustaf Sioesteen

The subjoined letter from Berlin, published originally in the Swedish Goteborgs Handels-Tidning of Oct. 26, 1914, was immediately translated by the British Legation in Stockholm—this is the official English translation—and sent by the legation to Sir Edward Grey. THE NEW YORK TIMES CURRENT HISTORY is informed from a trustworthy source that the article is interpreted in London as expressing the real aims of Germany at the end of the war, should that power be successful. The founding of a commercial United States of Europe by means of an economical organization with new "buffer" States to be created between the German Empire and Russia, and with the other smaller European States, would be, according to this interpretation, the purpose of Germany at the conclusion of a victorious war. The passage in the Berlin correspondent's letter declaring that only such an enormous central European customs union, in the opinion of leading German statesmen, "could hold the United States of North America at bay" in order that, after this present war, the "world would only have to take into account two first-class powers, viz., Germany and the United States of America," is of peculiar interest to Americans.

BERLIN, Oct. 21.

COUNTING one's chickens before they are hatched is a pardonable failing with nations carrying on war with the feeling that their all is at stake. When sorrow is a guest of every household, when monetary losses cause depression, and the cry arises time after time, "What will be the outcome of all this?" then only the fairest illusions and the wildest flights of fancy can sustain the courage of the masses.

These illusions are not only egotistical but, curiously enough, altruistic, since mankind, even when bayoneting their fellow-creatures, want to persuade themselves and others that this is done merely for the benefit of their adversary. In accordance with this idea, in the opinion of all parties, the war will be brought to an end with an increase of power for their native country, as also a new Eden prevail throughout the whole civilized world.

The enemies of Germany, though they have hitherto suffered an almost unbroken series of reverses in the war, have already thoroughly thrashed out the subject as to what the world will look like when Germany is conquered. In German quarters the press has likewise painted the future, but the follow-

ing lines are not intended to increase the row of fancy portraits, but merely to throw light on what is new in the demands conceived.

My representations are founded on special information, and I deem it best to make them now, when the most fantastic descriptions of the all-absorbing desire of conquest on the part of Germany have circulated in the press of the entire world.

Among other absurdities it has been declared that Germany intends to claim a fourth of France, making this dismembered country a vassal State, bound to the triumphal car of the conqueror by the very heaviest chains. It is incredible, but true, that such a statement has been made in the press by a Frenchman, formerly President of the Council.

In direct opposition to the fictitious demands of the Germans, I can advance a proposition which may sound paradoxical, viz., that the leading men in Germany, the Emperor and his advisers, after bringing the war to a victorious issue, will seriously seek expedients to avoid conquests, so far as this is compatible with the indispensable demands of order and stability for Europe.

First, as regards France. The entire world, as also the Germans, are moved to pity by her fate. Germany has never

entertained any other wish than to be at peace with her western frontier. A considerable portion of France is now laid waste, and in a few weeks millions of soldiers will have been poured into still wider portions of this beautiful country. On what are the inhabitants of these French provinces to exist when the German and French armies have requisitioned everything eatable? Germany cannot feed the inhabitants of the French provinces occupied, nor can the Belgians do so, I imagine, for the provisions of Germany are simply sufficient for their own needs, England preventing any new supply on any large scale.

This is a totally new state of things in comparison with 1870, when Germany was still an agrarian country and had, moreover, a free supply on all her frontiers.

Can the French Government allow a considerable portion of their own population actually to starve, or be obliged to emigrate to other parts of France, there to live the life of nomads at the expense of England, while the deserted provinces are given over to desolation?

The idea prevails here that the French will compel their Government to enter on and conclude a separate treaty of peace when the fatal consequences of the war begin to assume this awful guise. England does not appear to have considered that this would be the result of her system of blockade.

The German conditions of peace as regards France will be governed by two principal factors with respect to their chief issues.

The first is the complete unanimity of the Emperor and the Chancellor that *no population, not speaking German, will be incorporated in the German Empire, or obtain representation in the Diet.* Germany already has sufficient trouble with the foreign element now present in the Diet. Consequently there can be no question of any considerable acquisition of territory from France, but the demands of Germany simply extend to the *iron-ore fields of Lorraine*, which are certainly of considerable value. For France these mining fields

are of far less consideration than for Germany, whose immense iron trade is far more in need of the iron mines.

The second factor is that the Germans, owing to the strong public opinion, *will never consent to Belgium regaining her liberty.* The Chancellor of the Empire has, as long as it was possible, been opposed to the annexation of Belgium, having preferred, even during hostilities, to have re-established the Belgian Kingdom. It is significant that the military authorities have prohibited the German press from discussing the question of the future of Belgium. It is evident that there has prevailed a wish to leave the question open in order to insure a solution offering various possibilities. But subsequent to the discovery of the Anglo-Belgian plot, as previously stated, all idea of reinstating Belgium has been discarded.

The annexation of Belgium, however, makes it possible to grant France less stringent conditions. So long as Belgium—under some form of self-government—is under German sway there is no hope of revenge of France, and the conviction prevails here that after this war France will abstain from her dreams of aggrandizement and become pacific. Germany can then make reductions in the burdens laid on her people for military service by land.

To arrange the position of Belgium in relation to Germany will be a very interesting problem for German policy.

It is obvious that the annexation of Belgium cannot be defended from the point of view of the principle of nationality. The Belgians—half of them French, half of them Flemish—undoubtedly deem themselves but one nation. As a mitigating circumstance in favor of the annexation it is urged—above and beyond the intrigues carried on by Belgium with the English—that Belgium, in days of yore, for a long time formed a portion of the German Empire, and that the inhabitants of the little country, to a considerable degree, gain their livelihood by its being a land of transit for German products. Nationally, the annexation is not to be defended, but

geographically, economically, and from a military point of view it is comprehensible.

At the east front of the central powers very different conditions prevail. *Austria has no desire to make the conquest of any territory*; indeed, just the contrary, would probably be willing to cede a portion of Galicia in favor of new States. *Germany has not the slightest inclination to incorporate new portions of Slav or Lettish regions*. Both Germans and Austrians wish to establish free buffer States between themselves and the great Russian Empire.

Not even the Baltic provinces, where Germans hold almost the same position as the Swedes in Finland, form an object for the German desire of conquest, but her wish is to make them, as also *Finland*, an independent State. Furthermore, the Kingdom of *Poland* and a Kingdom of *Ukraine* would be the outcome of decisive victories for the central powers.

What Germany would demand of these new States, whose very existence was the outcome of her success at arms, would simply be an *economical organization in common with the German Empire*, an enormous central European "Zollverein" ("Customs Union") with Germany at its heart. It is only such a union, in the opinion of leading German statesmen, which could hold the United States of North America at bay, and after this present war, moreover, the world would only have to take into account two first-class powers, viz., Germany and the United States of America.

A commencement of this new economical connection is being made by the negotiations entered on by representatives of *Austria-Hungary* and *Germany* concerning the proposed formation of a *Customs Union*. Since this union would include 120,000,000 individuals, it must be evident what an immense attraction it must exert on the surrounding smaller nations. *Switzerland* and *Holland* can scarcely escape this attraction, and the *Scandinavian countries*, it is said, would probably find it to their advantage, to-

gether with a liberated *Finland*, to form a *Northern Customs Union*, which later, on an independent basis, could enter in close union with the vast "Zollverein" of *Central Europe*.

This "Zollverein" would then include about 175,000,000 individuals. The adhesion of *Italy* to the vast union would not be inconceivable, and then the combination of the United States of Europe, founded on a voluntary commercial union, would be approaching its realization.

Such a commercial union, embracing various peoples, could only lead to moderation in foreign politics, and would be the best guarantee for the peace of the universe. A brisk interchange of commodities, a fruitful interchange of cultural ideas would result from such a union, connecting the polar seas with the Mediterranean, and the Netherlands with the Steppes of Southern Russia.

All States participating in this union would gain thereby. But one European country would be the loser, *Great Britain*, the land of promise for the middleman; that, according to German comprehension, at present gains a living by skimming the cream from the trade industry of other nations by facilitating the exchange of goods, and making profits by being the banking centre of the world.

The Germans declare that there is no reason for such a middleman's existence in our day. The banking system is now so developed in all civilized lands that, for example Sweden can remit direct to Australia or the Argentine for goods obtained thence, instead of making payment via London and there rate, by raising the exchange for sovereigns to an unnatural height, so that, as matter of fact, England levies a tax on all international interchange of commodities.

In opposition to this glorious vision of the days to come, which the Germans wish to realize by their victories in war, there is the alluring prospect of the Allies that by their victory they will deal a deathblow to *German militarism*. While the English, with their 200,000 troops, are good enough to promise no

conquest of German territory—what says Russia to this?—at the close of the war, in the opinion of the Britons, there would still remain 65,000,000 Germans right in the centre of Europe, organized as a kingdom burdened with a war indemnity to a couple of tens of milliards in marks.

This nation, however, strengthened by 15,000,000 Germans in Austria, would be the greatest bearers of culture in the wide world—the nation with the best technical equipment of all others, glowing with ambition, with military training second to none, and gifted with an immense rate of increase as regards population. This nation would be forced to lay down her arms, lying as it does between the overbearing gigantic realm in the east and the warlike French to

the west. The idea is incomprehensible. The universe would behold a competition in armaments such as it had never seen.

A victorious Germany, on the other hand, would become less and less military, since she *would not need* to arm herself to such an extent as now. She is already chiefly an industrial country. Her desire is to be wealthy, and wealth invariably smothers military instincts. Germany has set up far greater ideals as regards social developments than other countries, and all she asks is to be left in peace calmly to carry out these plans in the future. *German militarism can only be conquered by the victory being on her side, since she has no thought of military supremacy, but simply of founding a new economical organization in Europe.* GUSTAF SIOESTEEN.

ADDRESS TO KING ALBERT OF BELGIUM

By EMIL VERHAEREN.

Translation by Florence Simmonds.

[From King Albert's Book.]

Sire: This request to pay my respectful homage to you has given me the first real pleasure I have been permitted to feel since the good days of Liège. At this moment you are the one King in the world whose subjects, without exception, unite in loving and admiring him with all the strength of their souls. This unique fate is yours, Sire. No leader of men on earth has had it in the same degree as you.

In spite of the immensity of the sorrow surrounding you, I think you have a right to rejoice, and the more so as your consort, her Majesty the Queen, shares this rare privilege with you.

Sire, your name will be great throughout the ages to come. You are in such perfect sympathy with your people that you will always be their symbol. Their courage, their tenacity, their stifled grief, their pride, their future greatness, their immortality all live in you. Our hearts are yours to their very depths. Being yourself, you are all of us. And this you will remain.

Later on, when you return to your recaptured and glorious Belgium, you will only have to say the word, Sire, and all disputes will lose their bitterness and all antagonisms fade away. After being our strength and defender, you will become our peacemaker and reconciler. With deepest respect,

EMIL VERHAEREN.

Foreshadowing a New Phase of War

Financing the Allies and Small Nations Preparing for War

By Lloyd George, British Chancellor of the Exchequer

That there are "also other States preparing for war," and that financial arrangements had been made for their participation against Germany by the allied Governments of Great Britain, France, and Russia; moreover, that Russia would be enabled within a few months to export considerable quantities of her grain and do her own financing—this statement preceded the bombardment of the forts in the Dardanelles, probably to clear the way for Russia's commerce—are the outstanding features of the speech by Lloyd George presented below, foreshadowing a new phase in the war. The speech was made in the House of Commons on Feb. 15, 1915, to explain the results of the financial conference between the allied powers to unite their monetary resources, held in Paris during the week of Feb. 1. It may be regarded as one of the most momentous utterances of the war.

PARLIAMENTARY REPORT.

The Chancellor of the Exchequer, (Mr. Lloyd George,) who was called upon by the Speaker, said: I shall do my best to conform to the announcement of the Prime Minister that the statement I have to make about the financial conference in Paris shall be a brief one, but I am afraid my right honorable friend assumed that we are all endowed with the extraordinary gift of compression which he himself possesses. [Laughter.] The arrangements that were made between the three Ministers for recommendation to their respective Governments commit us to heavy engagements, and it is, therefore, important I should report them in detail to the House, and find some reason why we should undertake such liabilities.

This is the most expensive war which has ever been waged in material, in men, and in money. The conference in Paris was mostly concerned with money. For the year ending Dec. 31 next the aggregate expenditure of the Allies will not be far short of £2,000,000,000. The British Empire will be spending considerably more than either of our two great allies—probably up to £100,000,000 to £150,000,000 more than the highest figure to be spent by the other two great allies. We have created a new army; we have to maintain a huge navy. We are

paying liberal separation allowances. We have to bring troops from the ends of the earth; we have to wage war not merely in Europe, but in Asia, in North, East, and South Africa. I must say just a few words as to the relative position of the three great countries which led us to make the arrangements on financial matters which we recommend to our respective Governments. Britain and France are two of the richest countries in the world. In fact, they are the great bankers of the world. We could pay for our huge expenditure on the war for five years, allowing a substantial sum for depreciation, out of the proceeds of our investments abroad. France could carry on the war for two or three years at least out of the proceeds of her investments abroad, and both countries would still have something to spare to advance to their allies. This is a most important consideration, for at the present moment the Allies are fighting the whole of the mobilized strength of Germany, with perhaps less than one-third of their own strength. The problem of the war to the Allies is to bring the remaining two-thirds of their resources and strength into the fighting line at the earliest possible moment. This is largely, though by no means entirely, a question of finance.

Russia is in a different position from

either Britain or France. She is a prodigiously rich country in natural resources—about the richest country in the world in natural resources. Food, raw material—she produces practically every commodity. She has a great and growing population, a virile and industrious people. Her resources are overflowing and she has labor to develop them in abundance. By a stroke of the pen Russia has since the war began enormously increased her resources by suppressing the sale of all alcoholic liquors. [Cheers.] It can hardly be realized that by that means alone she has increased the productivity of her labor by something between 30 and 50 per cent., just as if she had added millions of laborers to the labor reserves of Russia without even increasing the expense of maintaining them, and whatever the devastation of the country may be Russia has more than anticipated its wastage by that great act of national heroism and sacrifice. [Cheers.] The great difficulty with Russia is that, although she has great natural resources, she has not yet been able to command the capital within her own dominions to develop those resources even during the times of peace. In time of war she has additional difficulties. She cannot sell her commodities for several reasons. One is that a good deal of what she depends upon for raising capital abroad will be absorbed by the exigencies of the war in her own country. Beyond that the yield of her minerals will not be quite as great, because the labor will be absorbed in her armies.

There is not the same access to her markets. She has difficulty in exporting her goods, and in addition to that her purchases abroad are enormously increased in consequence of the war. Russia, therefore, has special difficulty in the matter of financing outside purchases for the war. Those are some of the difficulties with which we were confronted.

France has also special difficulties. I am not sure that we quite realize the strain put upon that gallant country [cheers] up to the present moment. For the moment she bears far and away the greatest strain of the war in proportion

to her resources. She has the largest proportion of her men under arms. The enemy are in occupation of parts of her richest territory. They are within fifty-five miles of her capital, exactly as if we had a huge German army at Oxford. It is only a few months since the bankers of Paris could hear the sound of the enemy's guns from their counting houses, and they can hear the same sound now, some of them, from their country houses. In those circumstances the money markets of a country are not at their very best. That has been one of the difficulties with which France has been confronted in raising vast sums of money to carry on the war and helping to finance the allied States.

There is a wonderful confidence, notwithstanding these facts, possessing the whole nation. [Cheers.] Nothing strikes the visitor to Paris more than that. There is a calm, a serene confidence, which is supposed to be incompatible with the temperament of the Celt by those who do not know it. [Laughter.] There is a general assurance that the Germans have lost their tide, and that now the German armies have as remote a chance of crushing France as they have of overrunning the planet Mars. [Cheers.] That is the feeling which pervades every class of the community, and that is reflected in the money market there. The difficulties of France in that respect are passing away, and the arrangement that has now been made in France for the purpose of raising sums of money to promote their military purposes will, I have not the faintest doubt, be crowned with the completest success. [Cheers.]

But we have a number of small States which are compelled to look to the greater countries in alliance for financial support. There is Belgium, which until recently was a very rich country, devastated, desolate, and almost entirely in the hands of the enemy, with an army and a civil government to maintain, but with no revenue. We have to see that she does not suffer [cheers] until the period of restoration comes to her, and compensation. [Cheers.] Then there is Serbia, with the population of Ireland—a

people of peasants maintaining an army of 500,000 and fighting her third great war within two years, and fighting that with great resource, great courage, and bravery. [Cheers.] But she had no reserve of wealth, and now no exports with which she can purchase munitions of war outside, and she has hardly any manufactures of her own. That is the position as far as the smaller States are concerned.

There are also other States preparing for war, and it is obviously our interest that they should be well equipped for that task. They can only borrow in the French and English markets.

But we had our own special difficulties, and I think I ought to mention those. Two-thirds of our food supplies are purchased abroad. The enormous quantities of raw materials for our manufactures and our industries are largely absorbed in war equipment, and our ships in war transport. We cannot pay as usual in exports, freights, and services; our savings for the moment are not what they would be in the case of peace. We cannot, therefore, pay for our imports in that way. We have to purchase abroad. We have to increase our purchases abroad for war purposes. In addition to that we have to create enormous credits to enable other countries to do the same thing. The balance is, therefore, heavily against us for the first time. There is no danger, but in a conference of the kind we had at Paris I could not overlook the fact that it was necessary for us to exercise great vigilance in regard to our gold.

These were the complex problems we had to discuss and adjust, and we had to determine how we could most effectually mobilize the financial resources of the Allies so as to be of the greatest help to the common cause. For the moment undoubtedly ours is still the best market in the world. An alliance in a great war to be effective needs that each country must bring all its resources, whatever they are, into the common stock. An alliance for war cannot be conducted on limited liability principles. If one country in the alliance has more trained and armed men ready with guns, rifles, and ammunition than another she must bring them all up

against the common enemy, without regard to the fact that the others cannot for the moment make a similar contribution. But it is equally true that the same principle applies to the country with the larger navy or the country with the greater resources in capital and credit. They must be made available to the utmost for the purpose of the alliance, whether the other countries make a similar contribution or not. That is the principle upon which the conference determined to recommend to their respective Governments a mobilization of our financial resources for the war.

The first practical suggestion we had to consider was the suggestion that has been debated very considerably in the press—the suggestion of a joint loan. We discussed that very fully and we came to the conclusion that it was the very worst way of utilizing our resources. It would have frightened every Bourse and attracted none. It would have made the worst of every national credit and the best of none. Would the interest paid have been the interest upon which we could raise money, the rate at which France could have raised money, or the rate at which Russia could raise money? If we paid a high rate of interest we could never raise more money at low rates. If instead of raising £350,000,000 a few weeks ago for our own purposes we had floated a great joint loan of £1,000,000,000, the House can very well imagine what the result would have been. We decided after a good deal of discussion and reflection that each country should raise money for its own needs within its own markets in so far as their conditions allowed, but that if help were needed by any country for outside purchases then those who could best afford to render assistance for the time being should do so.

There was only one exception which we decided to recommend, and that was in the case of borrowings by small States. We decided that each of the great allied countries should contribute a portion of every loan made to the small States who were either in with us now or prepared to come in later on, that the responsibility should be divided between the three coun-

tries, and that at an opportune moment a joint loan should be floated to cover the advances either already made, or to be made, to these countries outside the three great allied countries. That was the only exception we made in respect of joint loans. Up to the present very considerable advances have been made by Russia, by France, and by ourselves to other countries. It is proposed that, if there is an opportune moment on the market, these should be consolidated at some time or other into one loan, that they should be placed upon the markets of Russia, France, and Great Britain, but that the liability shall be divided into three equal parts.

With regard to Russia, we have already advanced £32,000,000 for purchases here and elsewhere outside the Russian Empire. Russia has also shipped £8,000,000 of gold to this country, so that we have established credits in this country for Russia to the extent of £40,000,000 already. France has also made advances in respect of purchases in that country. Russia estimates that she will still require to establish considerable credits for purchases made outside her own country between now and the end of the year. I am not sure for the moment that it would be desirable for me to give the exact figure; I think it would be better not, because it would give an idea of the extent to which purchases are to be made outside by Russia. But for that purpose she must borrow. *The amount of her borrowing depends upon what Russia can spare of her produce to sell in outside markets and also on the access to those markets.*

If Russia is able within the course of the next few weeks or few months to export a considerable quantity of her grain, as I hope she will be, as in fact we have made arrangements that she should, [cheers,] then there will not be the same need to borrow for purchases either in this country or outside, because she can do her own financing to that extent.

The two Governments decided to raise the first £50,000,000 in equal sums on the French and British markets respectively.

That will satisfy Russian requirements for a considerable time. As to further advances, the allied countries will consider when the time arrives how the money should be raised according to the position of the money markets at that time. I have said that we gave a guarantee to Russia that she need not hesitate a moment in giving her orders for any purchases which are necessary for the war on account of fear of experiencing any difficulty in the matter of raising money for payments. We confidently anticipate that by the time these first advances will have been exhausted the military position will have distinctly improved both in France and in Russia.

I may say that Treasury bills to the extent of £10,000,000 on the credit of Russia have been issued within the last few days. At 12 o'clock today the list closed, and the House will be very glad to hear that the amount was not merely subscribed but oversubscribed by the market, because this country is not quite as accustomed to Russian securities as France, and, therefore, it was an experiment. I think it is a very good omen for our relations, not merely during the war, but for our relations with Russia after the war, that the first great loan of that kind on Russian credit in the market has been such a complete success.

Now we have to consider the position of this country with regard to the possibility of our gold flitting in the event of very great credits being established in this country. The position of the three great allied countries as to gold is exceptionally strong. Russia and France have accumulated great reserves which have been barely touched so far during the war. I do not think the French reserve has been touched at all, or has been used in the slightest degree, and I think as far as the Russian reserve is concerned it has only been reduced by the transfer of £8,000,000 of gold from Russia to this country. Our accumulation of gold is larger than it has ever been in the history of this country. It has increased enormously since the commencement of the war. It is not nearly as large as that of Russia, France, or Germany, but

it must be borne in mind that there is this distinction in our favor; up to the present we have had no considerable paper currency, and this is the great free market for the gold of the world. The quantity imported every year of, what shall I call it, raw gold, comes to something like £50,000,000, and here I am excluding what comes here by exchanges. The collapse of the rebellion in South Africa assures us of a large and steady supply from that country, and, therefore, there is no real need for any apprehension.

But still it would not have been prudent for us to have overlooked certain possibilities. I have already pointed out some of them—the diminution of exports, the increase of our imports, the absorption of our transports for war purposes, large credits established for our own and other countries, and a diminution in our savings for investments abroad. There is just a possibility that this might have the effect of inducing the export of gold to other countries. We therefore have to husband our gold and take care lest it should take wings and swarm to any other hive. We therefore made arrangements at this conference whereby, if our stock of gold were to diminish beyond a certain point—that is a fairly high point—the Banks of France and Russia should come to our assistance.

We have also made arrangements whereby France should have access to our markets for Treasury bills issued in francs. We have also initiated arrangements which we hope will help to restore the exchanges in respect of bills held in this country against Russian merchants, who, owing to the present difficulties of exchange, cannot discharge their liabilities in this country. They are quite ready and eager to pay, they have the money to pay, but, owing to difficulties of exchange, they cannot pay bills owing in this country. We therefore propose to accept Russian Treasury bills against these bills of exchange due from Russian merchants, Russia collecting the debts in rubles in her own country and giving us the Treasury bills in exchange. We

hope that will assist very materially in the working of the exchanges. It will be very helpful to business between the two countries, and incidentally it will be very helpful to Russia herself in raising money in her own country for the purpose of financing the war.

We also received an undertaking from the Russian Government in return for the advances which we were prepared to make, that Russia would facilitate the export of Russian produce of every kind that may be required by the allied countries. This, I believe, will be one of the most fruitful parts of the arrangements entered into. An arrangement has also been made about the purchases by the allied countries in the neutral countries. There was a good deal of confusion. We were all buying in practically the same countries; we were buying against each other; we were putting up prices; it ended not merely in confusion, but I am afraid in a good deal of extravagance, because we were increasing prices against each other. It was very necessary that there should be some working arrangement that would eliminate this element of competition and enable us to co-ordinate, as it were, these orders. There will be less delay, there will be much more efficiency, and we shall avoid a good deal of the extravagance which was inevitable owing to the competition between the three countries.

I have done my best to summarize very briefly the arrangements which have been entered into, and I would only like to say this in conclusion. After six months of negotiation by the cable and three days of conferring face to face we realized that better results were achieved by means of a few hours of businesslike discussion by men anxious to come to a workable arrangement than by reams of correspondence. Misconceptions and misunderstandings were cleared away in a second which otherwise might take weeks to ferment into mischief, and it was our conclusion that these conferences might with profit to the cause of the Allies be extended to other spheres of co-operation. [Cheers.]

Britain's Unsheathed Sword

By H. H. Asquith, England's Prime Minister

Stating the estimated costs of the war to Great Britain, outlining the operations of the French and British allied fleets in the Dardanelles, declaring the Allies' position in retaliation for the German "war zone" decree against Great Britain, and reaffirming the chief terms of peace, stated in his Guildhall speech of last November, on which alone England would consent to sheathe the sword, the following speech, delivered in the House of Commons on March 1, 1915, by Prime Minister Asquith, is one of the most important of the war.

In Committee of Supply.

Mr. Asquith, who was loudly cheered on rising, moved the supplementary vote of credit of £37,000,000 to meet the expenditure on naval and military operations and other expenditure arising out of the war during the year 1914-1915. He said:

The first of the two votes which appear upon the paper, the one which has just been read out, provides only for the financial year now expiring, and is a supplementary vote of credit. The vote that follows is a vote of credit for the financial year 1915-1916. I think it will probably be convenient if in submitting the first vote to the committee I make a general statement covering the whole matter. I may remind the committee that on Aug. 6 last year the House voted £100,000,000 in the first vote of credit, and that on Nov. 15 the House passed a supplementary vote of credit for £225,000,000, thus sanctioning total votes of credit for the now expiring financial year of £325,000,000. It has been found that this amount will not suffice for the expenditure which will have been incurred up to March 31, and we are therefore asking for a further vote of £37,000,000 to carry on the public service to that date. If the committee assents to our proposals it will raise the total amount granted by votes of credit for the year 1914-1915 to £362,000,000. I need not say anything as to the purposes for which this vote is required. They are the same as upon the last occasion. But I ought to draw attention to one feature in which the supplementary vote, which comes first, differs from the vote to be subsequently proposed for the services of the year

1915-1916. At the outbreak of the war the ordinary supply on a peace basis had been voted by the House, and consequently the votes of credit for the now current financial year, like those on all previous occasions, were to be taken in order to provide the amounts necessary for naval and military operations in addition to the ordinary grants of Parliament. It consequently follows that the expenditure charged, or chargeable, to votes of credit for this financial year represent, broadly speaking, the difference between the expenditure of the country on a peace footing and that expenditure upon a war footing. The total on that basis, if this supplementary vote is assented to, will be £362,000,000.

For reasons the validity of which the committee has recognized on previous occasions, I do not think it desirable to give the precise details of the items which make up the total, but without entering into that I may roughly apportion the expenditure. For the army and the navy, according to best estimates which can at present be framed, out of the total given there will be required approximately £275,000,000. That is in addition, as I have already pointed out, to the sum voted before the war for the army and the navy, which amounted in the aggregate to a little over £80,000,000. That leaves unaccounted for a balance of £87,000,000, of which approximately £38,000,000 represents advances for war expenditure made, or being made, to the self-governing dominions, Crown colonies, and protectorates, as explained in the Treasury minute last November, under which his Majesty's Government have undertaken to raise the loans required by the dominions to

meet the heavy expenditure entailed upon them on the credit of the imperial exchequer. In addition to that sum of £38,000,000 there has been an advance to Belgium of £10,000,000, and to Serbia of £800,000. Further advances to these allies are under consideration, the details of which it is not possible yet to make public. The balance of, roughly, £28,000,000 is required for miscellaneous services covered by the vote of credit which have not yet been separately specified.

I think the committee will be interested to know what the actual cost of the war will have been to this country as far as we can estimate on March 31, the close of the financial year. The war will then have lasted for 240 days and the votes of credit up to that time, assuming this vote is carried, will amount to £362,000,000. It may be said, speaking generally, that the average expenditure from votes of credit will have been, roughly, £1,500,000 per day throughout the time. That, of course, is the excess due to the war over the expenditure on a peace footing. That represents the immediate charge to the taxpayers of this country for this year. But, as the committee knows, a portion of the expenditure consists of advances for the purpose of assisting or securing the food supplies of this country and will be recoverable in whole, or to a very large extent, in the near future. A further portion represents advances to the dominions and to other States which will be ultimately repaid. If these items are excluded from the account the average expenditure per day of the war is slightly lower, but after making full allowance for all the items which are in the nature of recoverable loans, the daily expenditure does not work out at less than £1,200,000.

These figures are averages taken over the whole period from the outbreak of the war, but at the outbreak of the war, after the initial expenditure on mobilization had been incurred, the daily expenditure was considerably below the average, as many charges had not yet matured. The expenditure has risen steadily and is now well over the daily

average that I have given. To that figure must be added, in order to give a complete account of the matter, something for war services other than naval or military. At the beginning of the year these charges are not likely to be very considerable, but it will probably be within the mark to say that from April 1 we shall be spending over £1,700,000 a day above the normal, in consequence of the war.

Perhaps now I may say something which is not strictly in order on this vote, but concerns the vote of credit for the ensuing year, which amounts, as appears on the paper, to £250,000,000. The committee will at once observe an obvious distinction between the votes of credit taken for the current financial year and that which we propose to take for the ensuing year. As I have already pointed out, at the outbreak of war the ordinary supply of the year had been granted by the House, and accordingly the votes of credit for 1914-1915 were for the amounts required beyond the ordinary grants of Parliament for the cost of military and naval operations. When we came to frame the estimates for the ensuing year, 1915-1916, the Treasury was confronted with the difficulty, which amounted to an impossibility, of presenting to Parliament estimates in the customary form for navy and army expenditure, apart from the cost of the war. All the material circumstances have been set out in the Treasury minute of Feb. 5, and in principle have been approved by the House. As the committee will remember, the total of the estimates which we have presented for the army and the navy amount to only £15,000 for the army and £17,000 for the navy, and the remainder of the cost of both these services will be provided for out of votes of credit, and the vote of credit now being proposed provides for general army and navy service in as far as specific provision is not made for them in the small estimates already presented. This vote of credit, therefore, has two features which I believe are quite unique, and without precedent. In the first place, it is the largest single

vote on record in the annals of this House, and, secondly, as I have said, it provides for the ordinary as well as for the emergency expenditure of the army and the navy. The House may ask on what principle or basis has this sum of £250,000,000 been arrived at. Of course it is difficult, and indeed impossible, to give any exact estimate, but as regards the period, so far as we can forecast it, for which this vote is being taken, it has been thought advisable to take a sum sufficient, so far as we can judge, to provide for all the expenditure which will come in course of payment up to approximately the second week in July—that is to say, a little over three months, or something like 100 days of war expenditure.

As regards the daily rate of expenditure—I have dealt hitherto with the expenditure up to March 31—the War Office calculates that from the beginning of April, 1915, the total expenditure on army services will be at the rate of £1,500,000 per day, with a tendency to increase. The total expenditure on the navy at the commencement of April will, it is calculated, amount to about £400,000 per day. The aggregate expenditure on the army and the navy services at the beginning of 1915-1916 is therefore £1,900,000 per day, with a tendency to increase, and for the purpose of our estimate the figure we have taken is a level £2,000,000 a day. On a peace footing the daily expenditure upon the army and the navy on the basis of the estimates approved last year was about £220,000 per day. So that the difference between £2,000,000 and £220,000 represents what we estimate to be the increased expenditure due to the war during the 100 days for which we are now providing.

There are other items belonging to the same category as those to which I have already referred in dealing with the supplementary vote with regard to advances to our own dominions and other States for which provision has also had to be made, and the balance of the total of £250,000,000 for which we are now asking, beyond the actual estimated expenditure for the army and the navy,

will be applied to those and kindred or emergency purposes. Before I pass from the purely monetary aspect of the matter, it may be interesting to the committee to be reminded of what has been our expenditure upon the great wars of the past. In the great war which lasted for over twenty years, from 1793 to 1815, the total cost as estimated by the best authorities was £831,000,000. The Crimean war may be put down, taking everything into account, at £70,000,000. The total cost of the war charges in South Africa from 1899 to March 31, 1903, was estimated in a return presented to Parliament at £211,000,000. In presenting these two votes of credit the Government are making a large pecuniary demand on the House, a demand which in itself and beyond comparison is larger than has ever been made in the House of Commons by any British Minister in the whole course of our history.

We make it with the full conviction that after seven months of war the country and the whole empire are every whit as determined as they were at the outset [cheers] if need be at the cost of all we can command both in men and in money to bring a righteous cause to a triumphant issue. [Cheers.] There is much to encourage and to stimulate us in what we see. Nothing has shaken and nothing can shake our faith in the unbroken spirit of Belgium, [cheers,] in the undefeated heroism of indomitable Serbia, in the tenacity and resource with which our two great allies, one in the west and the other in the east, hold their far-flung lines and will continue to hold them till the hour comes for an irresistible advance. [Cheers.] Our own dominions and our great dependency of India have sent us splendid contributions of men, a large number of whom already are at the front, and before very long, in one or another of the actual theatres of war, the whole of them will be in the fighting line. [Cheers.] We hear today with great gratification that the Princess Patricia's Canadian regiment has been doing, during these last few days, most gallant and efficient service. [Cheers.]

We have no reason to be otherwise

than satisfied with the progress of recruiting here at home. [Cheers.] The territorial divisions now fully-trained are capable—I say it advisedly—of confronting any troops in the world, [cheers,] and the new armies, which have lately been under the critical scrutiny of skilled observers, are fast realizing all our most sanguine hopes. A war carried on upon this gigantic scale and under conditions for which there is no example in history is not always or every day a picturesque or spectacular affair. Its operations are of necessity in appearance slow and dragging. Without entering into strategic details, I can assure the committee that with all the knowledge and experience which we have now gained, his Majesty's Government have never been more confident than they are today in the power as well as the will of the Allies to achieve ultimate and durable victory. [Cheers.] I will not enter in further detail to what I may call the general military situation, but I should like to call the attention of the committee for a few moments to one or two aspects of the war which of late have come prominently into view.

I will refer first to the operations which are now in progress in the Dardanelles. [Cheers.] It is a good rule in war to concentrate your forces on the main theatre and not to dissipate them in disconnected and sporadic adventures, however promising they may appear to be. That consideration, I need hardly say, has not been lost sight of in the councils of the Allies. There has been and there will be no denudation or impairment of the forces which are at work in Flanders, and both the French and ourselves will continue to give them the fullest, and we believe the most effective, support. Nor, what is equally important, has there for the purpose of these operations been any weakening of the grand fleet. [Cheers.] The enterprise which is now going on, and so far has gone on in a manner which reflects, as I think the House will agree, the highest credit on all concerned, was carefully considered and conceived with very distinct and definite objects—political, strategic, and economical. Some

of these objects are so obvious as not to need statement and others are of such a character that it is perhaps better for the moment not to state them. [Laughter and cheers.] But I should like to advert for a moment, without any attempt to forecast the future, to two features in this matter. The first is, that it once more indicates and illustrates the close co-operation of the Allies—in this case the French and ourselves—in the new theatre and under somewhat dissimilar conditions to those which have hitherto prevailed, and to acknowledge what I am sure the House of Commons will be most ready to acknowledge, that the splendid contingent from the French Navy that our allies have supplied [cheers] is sharing to the full both the hazards and the glory of the enterprise. [Cheers.] The other point on which I think it is worth while to dwell for a moment is that this operation shows in a very significant way the copiousness and the variety of our naval resources. [Cheers.] In order to illustrate that remark, take the names of the ships which have actually been mentioned in the published dispatches. The Queen Elizabeth, [cheers,] the first ship to be commissioned of the newest type of what are called superdreadnoughts, with guns of power and range never hitherto known in naval warfare. [Cheers.] Side by side with her is the Agamemnon, the immediate predecessor of the dreadnought, and in association with them the Triumph, the Cornwallis, the Irresistible, the Vengeance, and the Albion—representing, I think I am right in saying, three or four different types of the older predreadnought battleship which have been so foolishly and so prematurely regarded in some quarters as obsolete or negligible—all bringing to bear the power of their formidable twelve-inch guns on the fortifications, with magnificent accuracy and with deadly effects. [Cheers.] When, as I have said, these proceedings are being conducted, so far as the navy is concerned, without subtraction of any sort or kind from the strength and effectiveness of the grand fleet, I think a word of congratulation is due to the Admi-

rality for the way in which it has utilized all its resources. [Cheers.]

I pass from that to another new factor in these military and naval operations—the so-called German “blockade” of our coasts. [Cheers.] I shall have to use some very plain language. [Cheers.] I may, perhaps, preface what I have to say by the observation that it does not come upon us as a surprise. [Cheers.] This war began on the part of Germany with the cynical repudiation [cheers] of a solemn treaty on the avowed grounds that when a nation’s interests required it, right and good faith must give way to force. [“Hear, hear!”] The war has been carried on, therefore, with a systematic—not an impulsive or a casual—but a systematic violation of all the conventions and practices by which international agreements had sought to mitigate and to regularize the clash of arms. [Cheers.] She has now, I will not say reached a climax, for we do not know what may yet be to come, but she has taken a further step without any precedent in history by mobilizing and organizing not upon the surface but under the surface of the sea a campaign of piracy and pillage. [Prolonged cheers.]

Are we—can we—here I address myself to the neutral countries of the world—are we to or can we sit quiet as though we were still under the protection of the restraining rules and the humanizing usages of civilized warfare? [Cheers.] We think we cannot. [Cheers.] The enemy, borrowing what I may, perhaps, for this purpose call a neutral flag from the vocabulary of diplomacy, describe these newly adopted measures by a grotesque and puerile perversion of language as a “blockade.” [Laughter.] What is a blockade? A blockade consists in sealing up the war ports of a belligerent against sea-borne traffic by encircling their coasts with an impenetrable ring of ships of war. [Cheers.]

Where are these ships of war? [Cheers.] Where is the German Navy? [Cheers.] What has become of those gigantic battleships and cruisers on which so many millions of money have been spent and in which such vast hopes and ambitions

have been invested? I think, if my memory serves me, they have only twice during the course of these seven months been seen upon the open sea. Their object in both cases was the same—murder, [cheers,] civilian outrage, and wholesale destruction of property in undefended seaside towns, and on each occasion when they caught sight of the approach of a British force they showed a clean pair of heels, and they hurried back at the top of their speed to the safe seclusion of their mine fields and their closely guarded forts.

Lord R. CECIL—Not all. [Laughter.]

Mr. ASQUITH—No; some had misadventures on the way. [“Hear, hear!” and laughter.] The plain truth is—the German fleet is not blockading, cannot blockade, and never will blockade our coasts.

I propose now to read to the committee the statement which has been prepared by his Majesty’s Government and which will be public property to-morrow. It declares, I hope in sufficiently plain and unmistakable terms, the view which we take, not only of our rights, but of our duty. [Cheers.]

Germany has declared that the English Channel, the north and west coasts of France, and the waters around the British Isles are a “war area,” and has officially notified that all enemy ships found in that area will be destroyed and that neutral vessels may be exposed to danger. This is, in effect, a claim to torpedo at sight, without regard to the safety of crew or passengers, any merchant vessel under any flag. As it is not in the power of the German Admiralty to maintain any surface craft in these waters, the attack can only be delivered by submarine agency. The law and custom of nations in regard to attacks on commerce have always presumed that the first duty of the captor of a merchant vessel is to bring it before a prize court, where it may be tried, and where the regularity of the capture may be challenged, and where neutrals may recover their cargoes. The sinking of prizes is in itself a questionable act, to be resorted to only in extraordinary circumstances and after provision has been made for the safety of all the crew or passengers—if there are passengers on board. The responsibility for discriminating between neutral and enemy vessels, and between neutral and enemy cargo, obviously rests

with the attacking ship, whose duty it is to verify the status and character of the vessel and cargo and to preserve all papers before sinking or even capturing the ship. So, also, is the humane duty to provide for the safety of the crews of merchant vessels, whether neutral or enemy, an obligation on every belligerent. It is on this basis that all previous discussions of the law for regulating warfare at sea have proceeded.

The German submarine fulfills none of these obligations. She enjoys no local command of the waters in which she operates. She does not take her captures within the jurisdiction of a prize court; she carries no prize crew which she can put on board the prize she seizes. She uses no effective means of discriminating between a neutral and an enemy vessel; she does not receive on board, for safety, the crew of the vessel she sinks. Her methods of warfare are, therefore, entirely outside the scope of any of the international instruments regulating operations against commerce in time of war. The German declaration substitutes indiscriminate destruction for regulated capture. [Cheers.] Germany is adopting these methods against peaceful traders and non-combatant crews with the avowed object of preventing commodities of all kinds, including food for the civil population, from reaching or leaving the British Isles and Northern France.

Her opponents are therefore driven to frame retaliatory measures [loud cheers] in order, in their turn, to prevent commodities of any kind [loud cheers] from reaching or leaving the German Empire. [Renewed cheers.] These measures will, however, be enforced by the British and French Governments, without risk to neutral ships or to neutral or non-combatant lives, and with strict observance of the dictates of humanity. The British and French Governments will therefore hold themselves free to detain and take into port ships carrying goods of presumed enemy destination, ownership, or origin. It is not intended to confiscate such vessels or cargoes unless they would be otherwise liable to confiscation. Vessels with cargoes which have sailed before this date will not be affected. [Loud cheers.]

That, Sir, is our reply. [Cheers.] I may say, before I comment upon it, that the suggestion which I see is put forward from a German quarter that we have rejected some proposal or suggestion made to the two powers by the United States Government—I will not say anything more than that it is quite untrue. On the contrary, all we have said to the United States Government is

that we are taking it into careful consideration in consultation with our allies.

Now the committee will have observed that in the statement which I have just read of the retaliatory measures we propose to adopt, the words "blockade" and "contraband" and other technical terms of international law do not occur. And advisedly so. In dealing with an opponent who has openly repudiated all the principles both of law and of humanity we are not going to allow our efforts to be strangled in a network of juridical niceties. [Cheers.] We do not intend to put into operation any measures which we do not think to be effective, [cheers,] and I need not say we shall carefully avoid any measure which would violate the rules either of humanity or of honesty. But, subject to those two conditions, I say not only to our enemy, but I say it on behalf of the Government, and I hope on behalf of the House of Commons, that under existing conditions there is no form of economic pressure to which we do not consider ourselves entitled to resort. [Loud cheers.] If, as a consequence, neutrals suffer inconvenience and loss of trade, we regret it, but we beg them to remember that this phase of the war was not initiated by us. [Cheers.] We do not propose either to assassinate their seamen or to destroy their goods. What we are doing we do solely in self-defense.

If, again, as is possible, hardship is caused to the civil and non-combatant population of the enemy by the cutting off of supplies, we are not doing more in this respect than was done in the days when Germany still acknowledged the authority of the law of nations sanctioned by the first and the greatest of her Chancellors, and as practiced by the expressed declaration of his successor. We are quite prepared to submit to the arbitrament of neutral opinion in this war in the circumstances in which we have been placed. We have been moderate and restrained, and we have abstained from things which we were provoked and tempted to do, and we have adopted the policy which recommends itself to reason, common sense, and to justice.

This new aspect of the war only serves to illustrate and to emphasize the truth that the gravity and the magnitude of the task which we have undertaken does not diminish, but increases, as the months roll by. The call for men to join our fighting forces, which is our primary need, has been and is being nobly responded to here at home and throughout the empire. That call, we say with all plainness and directness, was never more urgent or more imperious than today. For this is a war not only of men but of material. To take only one illustration, the expenditure upon ammunition on both sides has been on a scale and at a rate which is not only without all precedent but is far in excess of any expert forecast. At such a time patriotism has cast a heavy burden on the shoulders of all who are engaged in trades or manufactures which directly or indirectly minister to the equipment of our forces. It is a burden, let me add, which falls, or ought to fall, with even weight on both employers and employed. [Cheers.] Differences as to remuneration or as to profit, as to hours and conditions of labor, which in ordinary times might well justify a temporary cessation of work should no longer be allowed to do so. The first duty of all concerned is to go on producing with might and main what the safety of the State requires, [cheers,] and if this is done I can say with perfect confidence the Government on its part will insure a prompt and equitable settlement of disputed points, and in cases of proved necessity will give on behalf of the State such help as is in their power. [Cheers.] Sailors and soldiers, employers and workmen in the industrial world are all at this moment partners and co-operators in one great enterprise. The men in the shipyards and the engineering shops, the workers in the textile factories, the miner who sends the coal to the surface, the dockyard laborer who helps to load and unload the ships, and those who employ and organize and supervise their labors are one and all rendering to their country a service as vital and as indispensable as the gallant

men who line the trenches in Flanders or in France or who are bombarding fortresses in the Dardanelles. [Cheers.]

I hear sometimes whispers, hardly more than whispers, of possible terms of peace. Peace is the greatest human good, but this is not the time to talk of peace. Those who talk of peace, however excellent their intentions, are in my judgment victims, I will not say of wanton, but of grievous self-delusion. Just now we are in the stress and tumult of a tempest which is shaking the foundations of the earth. The time to talk of peace is when the great tasks in which we and our allies embarked on the long and stormy voyage are within sight of accomplishment. Speaking at the Guildhall at the Lord Mayor's banquet last November I used this language, which has since been repeated almost in the same terms by the Prime Minister of France, and which I believe represents the settled sentiment and purpose of the country. I said:

We shall never sheathe the sword which we have not lightly drawn until Belgium recovers in full measure all and more than she has sacrificed, until France is adequately secured against the menace of aggression, until the rights of the smaller nationalities of Europe are placed upon an unassailable foundation, and until the military domination of Prussia is wholly and finally destroyed. [Cheers.]

What I said early in November, now, after four months, I repeat today. We have not relaxed nor shall we relax in the pursuit of every one and all of the aims which I have described. These are great purposes, and to achieve them we must draw upon all our resources, both material and spiritual. On the one side, the material side, the demands presented in these votes is for men, for money, for the fullest equipment of the purposes of war. On the other side, what I have called the spiritual side, the appeal is to those ancient inbred qualities of our race which have never failed us in times of stress—qualities of self-mastery, self-sacrifice, patience, tenacity, willingness to bear one another's burdens, a unity which springs from the dominating sense of a common duty, unfailing faith, inflexible resolve. [Loud cheers.]

Sweden's Scandinavian Leadership

By a Swedish Political Expert

[From THE NEW YORK TIMES, Feb. 4, 1915.]

IN common with a majority of the other countries of Europe, Sweden has had a full measure of experience in the difficulties confronting neutral powers while a world struggle like the present European conflict is in progress, and has learned that, even if it may prove effective in averting bloodshed, neutrality does not by any means insure a nation against the other vicissitudes of war. Aside from operations of a purely military character, the groups of belligerent powers are carrying on a commercial warfare of constantly increasing intensity. It is characteristic, perhaps, that both parties to the struggle, as time goes on, appear to become more and more indifferent to the injury incidentally inflicted on neutral countries.

Geographically situated so that it might provide easy transit for shipments both to Russia and to the German Empire, Sweden, as a matter of course, has become the object of lively interest to both groups of warring nations in their dual concern of securing advantages to themselves and placing obstacles in the way of the enemy. From the very beginning, however, Sweden has maintained an attitude of strictest neutrality and of loyal impartiality toward both sides in the struggle. It is the object of this article to set forth as briefly as possible the manner in which the neutrality of Sweden has been made manifest.

Immediately after the war broke out in August last year the Swedish Government proclaimed its intention to remain neutral throughout the conflict.

Simultaneous action was taken by the Government for the strengthening of the country's defenses, in the firm conviction that only if there was behind it the armed strength with which to enforce it would the neutrality of Sweden be respected. A move of the most profound significance—the first in our endeavors to create in Scandinavia a neutral "centre" and to gird ourselves with a greater strength to make our peaceful intentions effective—was made on Aug. 8 of last year, when the Foreign Ministers of Sweden and Norway appeared in the representative assemblies of both peoples and delivered identically worded explanatory communications in which was embodied a statement to the effect that the Swedish and Norwegian Governments had agreed to maintain their neutrality throughout the war at any cost, and that the two Governments had exchanged mutually binding and satisfactory assurances with a view to preventing any situation growing out of the state of war in Europe from precipitating either country into acts of hostility directed against the other.

In the meantime, neutral commerce and shipping during the months that followed were exposed to most serious infringements by the warring powers, such as the closing of ports by mines; limitations in the rights of neutral shipping to the use of the sea (*mare libre*) and of other established routes of maritime trade; arbitrary broadening in the definition of what shall constitute contraband of war, &c. As an instance it may be stated that England for a time treated magnetic iron ore as contraband of war and that

Germany still persists in so regarding certain classes of manufactured wood. In both these instances Swedish exports have suffered severely. On initiative taken by the Swedish Government in the middle of last November the Governments of Sweden, Denmark, and Norway lodged identically worded protests with the envoys of certain of the powers engaged in the war against measures taken by them which threatened serious disturbance to neutral traffic.

One further step—of the utmost importance through what it accomplished toward establishing firmly the position of the neutral States in the north—was the meeting between the Kings of Sweden, Norway, and Denmark at Malmö on Dec. 19 last. This meeting was especially designed to provide an opportunity for taking counsel together regarding means which may be resorted to for the purpose of limiting and counteracting the economical difficulties imposed on the three countries through the war. The meeting at Malmö served not only to give most powerful expression to the common determination of the northern kingdoms to remain neutral, but it became the means also of agreeing upon and adopting a *modus vivendi* for continued co-operation between the three countries during the war for the protection of interests they have in common.

In this manner Sweden has led in a movement to establish for the northern countries a potential policy of neutrality with the practical aim of limiting and reducing to a minimum the economical difficulties consequent upon the existing state of war.

From what already has been said it appears clearly, too, how completely without justification have been the accusations which have been voiced from time to time in the press of countries that enter into either of the belligerent groups—that Sweden, now in one respect and now in another, had shown partiality to the adversary. Thus, suspicion has been cast, with no justification whatever, on the circumstance that during the last month Sweden has

imported large quantities of necessities which would have been both valuable and helpful to the belligerents. And yet, this increase in the Swedish imports is very readily explained on the ground that it was necessary, partly, in order to make up for an existing shortage in supplies due to stopped traffic during the first months of the war, and, partly, to insure ability to fill Swedish demands for some time to come. A country which desires to remain neutral is not in a position to submit to dictation from any of the belligerent nations, but this very thing is frequently interpreted by one party to a struggle as involving an understanding with the other.

But Sweden's peaceful resolve and her fixed determination to maintain her life as a nation against all attempts at encroachment would count for little if behind her word there did not exist the strength to make it good and material resources to fall back on when the demand comes. That these exist in Sweden will be shown in the following with some data of Sweden's economics.

With a population of 5,700,000, distributed over an area of 448,000 square kilometers, (170,977 square miles,) as compared with 9,415,000 square kilometers (3,025,600 square miles) in the United States, Sweden, in comparison with European countries in general, is very sparsely inhabited. The possibilities for growth and development, however, are great owing to natural resources, which are both rich and varied. Of Sweden's area, 40,000 square kilometers (15,266 square miles) is cultivated land. The value of the annual production of grain is estimated at about 340,000,000 kroner, (about \$91,900,000,) offset by an import of grain which exceeds the export by about 70,000,000 kroner, (about \$18,900,000.) From this it appears that agriculture as yet retains its place as the principal industry of the country. With the bigger half of the country's area timber and the rivers well adapted to logging, Sweden quite naturally has become one of the foremost countries in the world in the export of naturally has become one of the foremost countries in the world in the export of

lumber, wood pulp, and manufactured wood. Another natural product of Sweden, and one of the utmost importance, is iron ore, of which there was exported in 1913 to the value of about 69,000,000 kroner, (about \$18,500,000,) chiefly from the large mineral fields in the northernmost part of the country. Besides this production of raw material, Sweden has important manufacturing industries which thrive as a result of the abundant supply of water power, an extensive network of railroads, and a shipping industry which is in a state of flourishing development.

The total output of our Swedish industries (mining not included) in 1912 was appraised at a net (manufacturing) value of 1,778,000,000 kroner, (about \$481,600,000.) Of this total, 476,000,000 kroner (about \$128,600,000) represents foodstuffs and luxuries, 353,000,000 kroner (about \$95,400,000) wood products, &c.; 222,000,000 kroner (\$60,000,000) textile products, and so on.

A few figures will illustrate Sweden's exchange of products with foreign countries. In 1912 the foreign trade of Sweden reached a total of 1,554,000,000 kroner, (about \$420,000,000.) The imports aggregated 794,000,000 kroner (about \$214,600,000) and the exports 760,000,000 kroner, (about \$205,400,000,) thus showing a relatively advantageous trade balance. Of the imported values, 28 per cent. was foodstuffs and luxuries, 45 per cent. raw materials, and 26 per cent. articles manufactured either wholly or in part. Of the exports, 14 per cent. was foodstuffs and luxuries, 23 per cent. raw materials, and not less than 63 per cent. articles of manufacture, finished completely or in part.

The principal industrial products represented among these exports are enumerated here:

	Kroner.	
Wood products	1,912,000,000	*\$516,700,000
Pulp and paper	134,000,000	36,000,000
Metal products..	105,000,000	28,400,000
Machinery	56,000,000	15,400,000
Matches	16,000,000	4,300,000
Pottery products	15,000,000	4,000,000

*The amounts in this column are close approximates.

With regard to our exports, there have been especially large increases in those of pulp and machinery. The principal types of machinery which figure among the exports of Sweden are milk separators, oil motors, telephone apparatus, electric engines, and ball bearings. In these exports are plainly indicated the inventive genius of the Swedes and their aptitude for technical and industrial pursuits.

With reference to the Swedish railroads, this fact is deserving of mention: Sweden leads all Europe with 2.5 kilometers to each 1,000 inhabitants, (United States has 4.14 kilometers.) The mercantile marine of Sweden has experienced powerful growth in recent years. In 1912, with a net tonnage of 805,000, it held the sixth place among the merchant fleets of Europe, being ahead of, among other countries, Spain, Russia, and the Netherlands. Especially has the growth in Sweden's merchant marine been pronounced since 1904, when the first regular ocean lines with Swedish vessels were established. Today Swedish steamship lines are maintaining regular traffic with all parts of the world. Thus, among other things, Sweden has established freight lines, with steamers plying to both the east and west coasts of North America. Quite recently, despite the financial crisis brought on by the war, a company has been formed with the object of establishing passenger traffic with Swedish steamships of high speed between Gothenburg and either New York or Boston.

After scrutinizing these figures the reader ought not to be surprised at the assertion that Sweden is exceptionally well situated from an economical point of view, and, perhaps, is among the countries which have been least affected by the economical crisis consequent upon the war. The national debt of Sweden, which was created very largely with a view to financing the construction of the Government railroads and for other productive purposes, is at present only 720,000,000 kroner, (about \$194,500,000.) This is only 126 kroner (a small fraction above \$34) for each inhabitant, while the corresponding figure for France in 1913 was

591 kroner, (nearly \$160;) the Netherlands, 282 kroner, (\$70.62;) Great Britain, 280 kroner, (\$70.57;) Germany, 276 kroner, (\$70.40;) Italy, 270 kroner, (\$70.30,) &c. Against the national debt of 720,000,000 kroner (about \$194,500,000) Sweden has Crown assets at this time appraised at 1,761,000,000 kroner net, (nearly \$476,000,000.)

Another evidence of the splendid financial condition of Sweden is afforded in the fact that, since the war broke out and countries which under normal conditions might be looked to for loans had closed their markets to foreign nations, the domestic market has been able to supply fully all, both public and private, demands for funds. Thus, when the

Swedish Government, early last October, sought a loan of 30,000,000 kroner at home, this was fully subscribed in three days. Nor have municipalities or private banks encountered any difficulty in placing bonds for amounts of considerable size in the domestic market. The only loan for which the Swedish Government has contracted abroad during the crisis was for \$5,000,000, and this was placed in New York for the purpose of facilitating payments for large purchases of American grain.

At least a few words with particular reference to the commercial intercourse between Sweden and the United States. According to statistics from the year 1912, the imports of Sweden from the United States were of the aggregate value of 60,000,000 kroner, (about \$16,200,000,) while the exports aggregated 32,000,000 kroner, (about \$8,600,000.) The principal imports were: Cotton, 17,000,000 kroner, (about \$4,600,000;) oils, 12,000,000 kroner, (about \$3,240,000;) copper, 6,200,000 kroner, (about \$1,675,000;) machinery, 5,000,000 kroner, (about \$1,350,000;) grain and flour, 2,300,000 kroner, (about \$621,000;) bacon, 1,700,000 kroner, (about \$460,000.) The principal articles of export in the same year were:

Pulp, 12,400,000 kroner, (about \$3,350,000;) manufactured iron and steel, 8,100,000 kroner, (about \$2,200,000;) iron ore, 3,600,000 kroner, (about \$973,000;) paper, 2,100,000 kroner, (about \$568,000;) elastic gum refuse, 1,900,000 kroner, (about \$514,000;) matches, 1,300,000 kroner, (about \$350,000.)

Since the outbreak of hostilities in August last year there has been a tremendous increase in trade between Sweden and the United States. The tonnage employed in this trade has been multiplied many times in order adequately to care for the traffic. Sweden has sought to secure in the United States a multiplicity of necessities which under normal conditions have been obtained from the belligerent countries. From the United States, too, there has come an increased demand for many Swedish products.

It is to be hoped that a large portion of this commerce, which has been the artificial outgrowth of unusual conditions, will continue, even after the present world crisis shall happily have become a thing of the past. Surely, it would be to the mutual advantage of both countries to develop and strengthen their direct trade relations.

FROM ENGLAND

By MAURICE HEWLETT.

[From King Albert's Book.]

O MEN of mickle heart and little speech,
Slow, stubborn countrymen of heath
and plain,

Now have ye shown these insolent again
That which to Caesar's legions ye could
teach,

That slow-provok'd is long-provok'd. May
each

Crass Caesar learn this of the Keltic grain,
Until at last they reckon it in vain
To browbeat us who hold the Western reach.

For even as you are, we are, ill to rouse,
Rooted in Custom, Order, Church, and King;
And as you fight for their sake, so shall we,
Doggedly inch by inch, and house by house;
Seeing for us, too, there's a dearer thing
Than land or blood—and that thing Liberty.

War Correspondence

The Beloved Hindenburg

A Pen Portrait of the German Commander in Chief in the East

[By a Staff Correspondent of THE NEW YORK TIMES.]

GERMAN GREAT HEADQUARTERS, EAST, Feb. 10.—But for the “field gray” coat and the militant mustache, I should have taken him for a self-made American, a big business man or captain of industry, as he sat at his work desk, the telephone at his elbow, the electric push-buttons and reams of neat reports adding to the illusion. Quiet, unassuming, and democratic, he yet makes the same impression of virility and colossal energy that Colonel Roosevelt does, but with an iron restraint of discipline which the American never possessed, and an earnestness of face and eye that I had only seen matched in his Commander in Chief, the Kaiser. Here was a man whom the most neutral American could instantly admire and honor, regardless of the merits of the controversy. It was Hindenburg, the well beloved, the hope of Germany. He has already been “done” by journalists and Senator Beveridge, but 70,000,000 are pinning their faith to him, which makes him worth “doing” again—and again.

For a moment I nearly forgot that I was an American with “nerve,” bent on making him say something, preferably indiscreet; it seemed almost a shame to bother this man whose brain was big with the fate of empire. But, although I hadn’t been specially invited, but had just “dropped in” in informal American fashion, the Commander in Chief of all his Kaiser’s forces in the east stopped making history long enough to favor me with a short but thought-provoking interview.

As to his past performances, the Field Marshal genially referred to the de-

tailed official summary; as to the future, he protested.

“I am not a prophet. But this I can say. Tell our friends in America—and also those who do not love us—that I am looking forward with unshakable confidence to the final victory—and a well-earned vacation,” he added whimsically. “I should like nothing better than to visit your Panama Exposition and meet your wonderful General Goethals, the master builder, for I imagine our jobs are spiritually much akin; that his slogan, too, has been ‘durchhalten’ (‘hold out’) until endurance and organization win out against heavy odds.”

Then with sudden, paradoxical, terrific quiet earnest: “Great is the task that still confronts us, but greater my faith in my brave troops.” One got indelibly the impression that he loved them all, suffered under their hardships and sorrowed for their losses.

“For you, this war is only a titanic drama; we Germans feel it with our hearts,” he said thoughtfully.

The Field Marshal spoke warmly of the Austro-Hungarian troops, and cited the results of the close co-operation between his forces and the Austrian armies as striking proof of the proverb, “In union is strength.” Like all other German Generals whom I had “done,” he, too, had words of unqualified praise for the bravery of his enemies. “The Russians fight well; but neither mere physical bravery nor numbers, nor both together, win battles nowadays.”

“How about the steam roller?”

“It hasn’t improved the roads a bit,

either going forward or backward," he said with a grim smile.

"Are you worrying over Grand Duke Nicholas's open secret?" I asked, citing the report via Petrograd and London of a new projected Russian offensive that was to take the form, not of a steam roller, but of a "tidal wave of cavalry."

"It will dash against a wall of loyal flesh and blood, barbed with steel—if it comes," he said simply.

My impression, growing increasingly stronger the more I have seen, that German military success had been to no small extent made possible by American inventive genius and high-speed American methods, received interesting partial confirmation from the Field Marshal, whose keen, restless mind, working over quite ordinary material, produced the new suggestive combination of ideas that, while "America might possibly be materially assisting Germany's enemies with arms, ammunition, and other war material, certain it was that America, in the last analysis, had helped Germany far more."

"But for America, my armies would possibly not be standing in Russia today—without the American railroading genius that developed and made possible for me this wonderful weapon, thanks largely to which we have been able with comparatively small numbers to stop and beat back the Russian millions again and again—steam engine versus steam roller. Were it for nothing else, America has proved one of our best friends, if not an ally.

"We are also awaiting with genuine interest the receipt of our first American guns," the Field Marshal added. How was Germany expecting to get guns from America? He was asked to explain the mystery.

"I read somewhere in the papers that a large shipment of heavy cannon had left America for Russia," he said with dry humor, "in transit for us—for if they're consigned to the Russians, we'll have them sooner or later, I hope;" adding, with his habitual tense earnestness, "the Americans are something more than shrewd, hard-headed business

men. Have they ever vividly pictured to themselves a German soldier smashed by an American shell, or bored through the heart by an American bullet? The grim realism of the battlefield—that should make also the business man thoughtful."

"Shall you go west when you have cleaned up here in the east?" I suggested.

"I can't betray military secrets which I don't know myself, even to interest the newspaper readers," he said. He gave me the impression, however, that, east or west, he would be found fighting for the Fatherland so long as the Fatherland needed him.

"Now it means work again. You must excuse me," he concluded, courteously. "You want to go to the front. Where should you like to go?"

"To Warsaw," I suggested, modestly.

"I, too," he laughed, "but today—*ausgeschlossen*, ('nothing doing,' in *Americanese*.) Still—that may be yet."

"May I come along, your Excellency?"

"Certainly, then you can see for yourself what sort of 'barbarians' we Germans are."

"Dropping in on Hindenburg" yields some unimportant but interesting by-products. The railroad Napoleon, as all the world knows, lives and works in a palace, but this palace doesn't overawe one who has beaten professionally at the closed portals of Fifth Avenue. It would be considered a modest country residence in Westchester County or on Long Island. Light in color and four stories high, including garret, it looks very much like those memorials which soap kings and sundry millionaires put up to themselves in their lifetime—the American college dormitory, the modern kind that is built around three sides of a small court. The palace is as simple as the man.

The main entrance, a big iron gateway, is flanked by two guardhouses painted with white and black stripes, the Prussian "colors," and two unbluffable Landsturm men mount guard, who will tell you to go around to the back door.

The orderly who opens the front door is a Sergeant in field gray uniform. You mount a flight of marble steps, and saunter down a marble hall, half a block long. It is the reception hall. It is furnished with magnificent hand-carved, high-backed chairs without upholstery, lounging not being apparently encouraged here. They are Gothic structures backed up against the walls. There is no Brussels or Axminster carpet on the cold marble floor—not even Turkish

rugs. Through this palace hall, up by the ceiling, runs a thick cable containing the all-important telephone wires. The offices open off the hall, the doors labeled with neatly printed signs telling who and what is within. If you should come walking down the street outside at 3 A. M. you would probably see the lights in Hindenburg's office still burning, as I did. At 3:30 they went out, indicating that a Field Marshal's job is not a sinecure.

Feeling of the German People

Complete Confidence in Victory and Resentment Toward England

[By a Staff Correspondent of THE NEW YORK TIMES.]

BERLIN, Feb. 12.—To the neutral American, intent only on finding out the truth, the most thought-provoking feature here (overlooked by foreign correspondents because of its very featureless obviousness) is the fact that Germany today is more confident of winning than at any time in the three months I have been here. This confidence must not be confused with cocksureness; it is rather the "looking forward with quiet confidence to ultimate victory," as General von Heeringen phrased it. Even more important is the corollary that, while the Germans have apparently never had any doubt that they would win out in the end, this "ultimate victory" does not seem so far off to them today as it did three months ago.

To one who has had an opportunity of personally sounding the undercurrents of German public opinion, this quiet optimism that has become noticeable only in the past few weeks (totally different in character from the enthusiasm that followed the declaration of war) has seemed particularly significant. Three months ago I was incessantly asked by Germans "how the situation looked to an American," and "how long I thought the war would last." When

left to answer their own question, they almost invariably remarked: "It may last a long while yet." Today neutral opinion is no longer anxiously or even eagerly sought. The temporary need for this sort of moral support seems to have passed, and there are many indications that the well-informed layman expects 1915 to see the wind-up of the war, while I have talked with not a few professional men who have expressed the opinion that the war will be over by Summer—except against England.

This unanimous exception is significant because it indicates that to the German mind the war with Russia and France is, in prize-ring parlance, a twenty-round affair, which can and will be won on points, whereas with England it is a championship fight to a finish, to be settled only by a knockout. The idea is that Russia will be eliminated as a serious factor by late Spring at the latest, and then, Westward Ho! when France will not prolong the agony unduly, but will seize the first psychological moment that offers peace with honor, leaving Germany free to fight it out with the real enemy, England, though as to how, when, and where the end will come, there is less certainty and agreement. Some think that the

knockout will be delivered in the shadow of the Pyramids; others, and probably the majority, believe that the winning blow must and will be delivered on English soil itself.

Time here is no factor, for the war against England is taking on increasingly an almost religious character; from the German point of view, it will soon be, not a war, but a crusade. I get one clue to this in the new phrase of leave-taking that has gained an astounding currency in the past few weeks. Instead of saying "Good-bye" or "Auf Wiedersehen," the German now says: "God punish England!" to which the equally fervent rejoinder is, "May He do so!" This new, polite formula for leave-taking originated among the officers and men in the field, but you hear it on all sides now, uttered with a sincerity and earnestness that is peculiarly impressive. The new style of saying "good-bye" has at least the merit of being no longer a perfunctory piece of rhetoric.

This optimism is no nation-wide attack of insanity, for the German, thorough even in forming his opinions, is the last person in the world to harbor delusions, and there is a perfect realization of the titanic task that still confronts Germany. Nor is this confidence in ultimate victory due to lack of information or to being kept in the dark by the "iron censorship," for the "iron censorship" is itself a myth. It is liberal, even judged by democratic standards, and surprisingly free from red tape. There is no embargo on the importation of foreign newspapers; even the anti-German journals of neutral countries have free entry and circulation, while at a number of well-known cosmopolitan cafés you can always read *The London Times* and *The Daily Chronicle*, only three days old, and for a small cash consideration the waiter will generally be able to produce from his pocket a *Figaro*, not much older. Not only English and French, but, even more, the Italian, Dutch, and Scandinavian papers are widely read and digested by Germans, while the German

papers not only print prominently the French official communiqués, the Russian communiqués when available, and interesting chunks from the British "eyewitness" official reports, but most of their feature stories—the vivid, detailed war news—come from allied sources via correspondents in neutral countries. The German censor's task is here a relatively simple one, for German war correspondents never allow professional enthusiasm to run away with practical patriotism, and you note the—to an American—amusing and yet suggestive spectacle of war correspondents specializing in descriptions of sunsets and scenery.

The German was never much of a newspaper reader before the war, but now he can challenge the American commuter as an absorbent of the printed word. And not only has the German been suddenly educated into an avid newspaper reader, but he has developed a tendency to think for himself, to read between the lines, and interpret sentences. Thus, no German has any illusions about the military prowess of Austria; but her failure has caused no hard feelings. "The spirit is willing, but the leadership is weak," is the kindly verdict, with the hopeful assumption that the addition of a little German yeast will raise the standard of Austrian efficiency and improve the quality of leadership.

The Germans, being neither mad nor misinformed, why they face a world of foes with this new confidence becomes a question of importance to any one who wants to understand the real situation here. The answer is Hindenburg—not only the man himself, but all that he stands for, the personification of the German war spirit, the greatest moral asset of the empire today. He is idolized not only by the soldiers, but by the populace as well; not only by the Prussians, but by the Bavarians and even the Austrians. You cannot realize what a tremendous factor he has become until you discover personally the Carlylean hero worship of which he is the object.

Hindenburg woke up one morning to

find himself famous; but his subsequent speedy apotheosis was probably not entirely spontaneous. In fact, there is reason to believe that he was carefully groomed for the rôle of a national hero at a critical time, the process being like the launching by American politicians of a Presidential or Gubernatorial boom at a time when a name to conjure with is badly needed. He is a striking answer to the Shakespearean question. His name alone is worth many army corps for its psychological effect on the people; it has a peculiarly heroic ring to the German ear, and part of the explanation of its magic lies probably in the fact that the last syllable, "burg," means fortress or castle. He inspires the most unbounded confidence in the German people; the Field Marshal looms larger than his Kaiser.

The cigarmakers were the first to recognize his claims to immortality and to confer it on him; but now almost every conceivable sort of merchandise except corsets is being trade marked Hindenburg. Babies, fishing boats, race horses, cafés, avenues and squares, a city of 60,000, a whole county, are being named after him, and minor poets are taking his name in vain daily, "Hindenburg Marches" are being composed in endless procession, a younger brother is about to publish his biography, and legends are already thickly clustering about his name. He laid the Russian bugaboo before it had a chance to make its début; there is not today the slightest nervousness about the possible coming of the Cossacks, and there will not be, so long as the Commander in Chief of all the armies in the east continues to find time to give sittings to portrait painters, pose for the moving-picture artists, autograph photographs, appear on balconies while school children sing patriotic airs, answer the Kaiser's telegrams of congratulation, acknowledge decorations, receive interminable delegations, personages, and journalists, and perform all the other time-consuming duties incident to having greatness thrust upon you; for things obviously cannot be in a very bad way when the

master strategist can thus take "time out" from strategizing. But the influence of "our Hindenburg," as he is often affectionately called, is wider than the east; the magic of his name stiffens the deadline in the west, and the man in the street, whose faith is great, feels sure that when he has fought his last great battle in the east the turn of the French and English will come.

While the German in the street, thanks largely to Hindenburg, regards the military situation with optimism, he sees no grounds for pessimism in the present political situation. Italy and Bulgaria are regarded as "safe."

How the Germans regard the economic, industrial, and financial situation is rather hard to estimate, because their practical patriotism keeps them from making any public parade of their business troubles and worries, if they have any. The oft-repeated platitude that you would never suspect here that a war was going on if you didn't read the papers is quite just. Conditions—on the surface—are so normal that there is even a lively operatic fight on in Munich, where the personal friction between Musical Director Walters and the star conductor, Otto Hess, has caused a crisis in the affairs of the Royal Munich Opera, rivaling in interest the fighting at the front.

There are certainly fewer "calamity howlers" here than on Broadway during boom times, and you see no outward evidence of hard times, no acute poverty, no misery, no derelicts, for the war-time social organization seems as perfect as the military. In the last three months only one beggar has stopped me on the streets and tried to touch my heart and pocketbook—a record that seems remarkable to an American who has run the nocturnal gauntlet of peace-time panhandlers on the Strand or the Embankment.

Business is most certainly not going on as usual. You note many shops and stores with few or no customers in them. About the only people who are making any money are army contractors

and the shopkeepers who sell things available for "Liebesgaben" ("love gifts") for the troops in the field. Those businesses hardest hit by the war are in a state of suspended animation, embalmed by the credit of the State.

But, again, the influence of Hindenburg is wider than the east—and the west; it permeates the business world

and stiffens the economic backbone of the nation. It is no exaggeration to say that the whole German people, barring the inevitable though small percentage of weaklings, is trying with terrific earnestness to live up to the homely Hindenburgian motto, "Durchhalten!" ("Hold out,") or, in more idiomatic American, "See the thing through."

Bombardment of the Dardanelles

First Allied Attack Described by an Onlooker

[From THE NEW YORK TIMES, March 8, 1915.]

ATHENS, Saturday, March 6, (Dispatch to The London Daily Chronicle).—The bombardment of the Dardanelles forts, according to the latest news, proceeds with success and cautious thoroughness. It is now anticipated that before another two weeks are over the allied fleet will be in the Sea of Marmora, and Constantinople will quickly fall to the victorious Allies.

Two features of the operations make extreme caution necessary for the attacking battleships. In the first place, the number of mines laid in the strait has been found to be enormous. They must all be picked up, and the work takes considerable time, seeing that it must be done thoroughly.

In the second place, the larger batteries, against whom the allied fleet is contending, are very skillfully hidden.

I have had an interesting talk with a gentleman who has just arrived from Tenedos, where, from the height of Mount Ilios, he witnessed the bombardment. He tells me:

"The sight was most magnificent. At first the fleet was ranged in a semi-circle some miles out to sea from the entrance to the strait. It afforded an inspiring spectacle as the ships came along and took up position, and the picture became most awe-inspiring when the guns began to boom.

"The bombardment at first was slow, shells from the various ships screaming

through the air at the rate of about one every two minutes. Their practice was excellent, and with strong glasses I could see huge masses of earth and stonework thrown high up into the air. The din, even at the distance, was terrific, and when the largest ship, with the biggest guns in the world, joined in the martial chorus, the air was rent with ear-splitting noise.

"The Turkish batteries, however, were not to be drawn, and, seeing this, the British Admiral sent one British ship and one French ship close inshore toward the Sedd-el-Bahr forts.

"It was a pretty sight to see the two battleships swing rapidly away toward the northern cape, spitting fire and smoke as they rode. They obscured the pure atmosphere with clouds of smoke from their funnels and guns; yet through it all I could see they were getting home with the shots they fired.

"As they went in they sped right under the guns of the shore batteries, which could no longer resist the temptation to see what they could do. Puffs of white smoke dotted the landscape on the far shore, and dull booms echoed over the placid water. Around the ships fountains of water sprang up into the air. The enemy had been drawn, but his marksmanship was obviously very bad. I think I am right in saying that not a single shot directed against the ships came within a hundred yards of either.

The French Battlefront

Account of First Extended View of the Intrenchments Defending France

[By a Special Correspondent of THE NEW YORK TIMES.]

PARIS, March 7.—I have just been permitted a sight of the French Army—the first accorded to any correspondent in so comprehensive a measure since the outbreak of the war. Under the escort of an officer of General Joffre's staff, I was allowed along a great section of the fighting line, into the trenches under fire, and also received scientific detailed information regarding this least known of European forces.

France has been so silent about her army and her Generals and so indifferent to the use of journalism in the war it is scarcely realized even in France that 450 of the 500 miles of fighting front are held by the French and only the remaining fifty by the British and Belgians. At the outbreak of the war no newspaper men were allowed with the army, and those who managed to get to the front, including myself, all returned to Paris under escort. Although we saw what a powerful machine it was and knew it was getting stronger every day, we were permitted to say very little about it—Germany, meanwhile, granting interviews, taking war correspondents to trenches and up in balloons in the campaign for neutral sympathy.

France, or, rather, General Joffre, for his is the first and last word on the subject of war correspondents, gradually decided to combat the German advertising.

Only he decided to go them one better, as I hope to show. There have been several trips, all tryouts. I was informed at the Foreign Office a month ago that when the representative of so important a paper as THE NEW YORK TIMES was to be taken to the front it would be for a more important trip than any up to that date—that I was to be saved up for such an occasion as I am now privileged to describe.

I propose to give as few names of places and Generals as possible, first, to meet the wishes of the personal censor, who is the same officer who escorted me throughout the trip, and, second, because I believe general facts relating to the morale of the French Army and their prospects in the Spring campaign will be of more interest than specific details concerning places where the lines have been established for the past six months.

From scores of letters received from America the first question which seems to arise in the minds of neutrals outside the war zone is, What are the prospects of the Germans taking Paris when the second great phase of the war is really under way? First, let me admit that a lurking fear that the Germans might penetrate the lines had caused me to make certain arrangements for the hasty exit of my family from Paris as soon as the Spring fighting began. I am now willing to cancel these arrangements, for I am convinced there is no danger to Paris.

The German Army, in my opinion, will never for a second time dictate terms of peace in Paris. I feel that I am in a position to make the statement, founded on an unusual knowledge of the facts, that should German ambition again fly that high they would need at least 3,000,000 men concentrated before the fortifications of Paris—these in addition to the enormous force to oppose the French and allied field armies.

The defenses of Paris since the city had its narrow escape before the battle of the Marne present one of the wonders of the world. Not only has Gallieni's army intrenched the surrounding country and barbed-wired it until the idea of any forward advance seems preposterous, but every foot of ground is measured and the ex-

act artillery ranges taken to every other foot of ground.

For instance, from every single trench which also contains an artillery observatory the exact distance is recorded to every other trench, to every house, hill-lock, tree, and shrub behind which the enemy might advance. In fact, the German organization which threatened to rule the world seems overtaken by French organization which became effective since the war began.

All through the trip it was this new spirit of organization that impressed me most. I have sent you many cables on the new spirit of the French, but never before dared to picture them in the rôle which to my mind they never before occupied—that of organizers. I started the trip to see the real French Army in the most open but unexpectant frame of mind. For weeks I had read only laconic official communiqués that told me nothing. I saw well-fed officers in beautiful limousines rolling about Paris with an air that the war was a million miles away. The best way now to explain my enthusiasm is to give the words of a famous English correspondent, also just returned from a similar trip, (he is Frederic Villiers, who began war corresponding with Archibald Forbes at the battle of Plevna, and this is his seventeenth war,) who said:

"In all my life this trip is the biggest show I have ever had."

The first point on the trip where the French intelligence proved superior to the German was that I was allowed to pay my own expenses. With the exception of motor cars and a hundred courtesies extended by the scores of French officers, I paid my own railroad fare, hotel and food bills.

"This army has nothing to hide," said one of the greatest Generals to me. "You see what you like, go where you desire, and if you cannot get there, ask."

This General was de Maud'Huy, the man who with a handful of territorials stopped the Prussian Guard before Arras shortly after the battle of the Marne and who since then has never lost a sin-

gle trench. His name is now scarcely known, even in France, but I venture the prophecy that when the French Army marches down the Champs Elysées after the war is over, when the vanguard passes under the Arch de Triomphe, de Maud'Huy—a nervous little firebrand—will be right up in the front rank with Joffre.

While our party did all the spectacular stunts the Germans have offered the correspondents in such profusion, such as visiting the trenches, where in our case a German shell burst thirty feet from us, splattering us with mud, also where snipers sent rifle balls hissing only a few feet away, almost our greatest treats were the scientific daily discourses given by our Captain concerning the entire history of the first campaign, explaining each event leading up to the present position of the two armies. He gave the exact location of every French and allied army corps on the entire front.

On the opposite side of the line he demonstrated the efficiency of the French secret service by detailing the position and name of every German regiment, also the date and the position it now holds. Thus, we were able to know during the journey that it was the crack Prussian Guard that was stopped by de Maud'Huy's Territorials and that the English section under General French was opposed by Saxons.

Our Captain by these lectures gave us an insight into the second great German blunder after the failure to occupy Paris, which was the failure immediately to swing a line across Northern France, thus cutting off Calais and Boulogne, where they could really have leveled a pistol at England's head. He explained that it was the superiority of the French cavalry that dictated that the line should instead run straight north through the edge of Belgium to the sea. His explanations went further than this, for he refuted many military arguments to the effect that cavalry became obsolete with the advent of aeroplanes.

Cavalry formerly was used to screen the infantry advance and also for shock purposes in the charges. Now that the

lines are established, it is mostly used with the infantry in the trenches; but in the great race after the Marne to turn the western flanks it was the cavalry's ability to outstrip the infantry that kept the Germans from practically all of Northern France. In other words, the French chausseurs, more brilliant than the Uhlans, kept that northern line straight until the infantry corps had time to take up position.

My introduction to the real French Army was made at the point of junction with the English troops, so I was thus able to make some comparison between the types of the Allies. I did not see the Germans except as prisoners, although on this trip I was sometimes within a few yards of their lines. With all consideration for the statement that they are the greatest fighting machine the world has ever seen, all I can say is that the greatest fighting machine I have even seen is the French Army.

To me they seem invincible from the standpoints of power, intelligence, and humanity. This latter quality specially impressed me. I do not believe any army with such high ideals can easily be beaten, and I judge not only from Generals in command, but the men in the trenches. One morning I was going through the trenches near the most important point where the line was continually under fire.

Passing from the second line to a point less than a hundred yards from the German rifles I came face to face with a General of division. He was sauntering along for the morning's stroll he chose to take in the trenches with his men rather than on the safer roads at the rear. He smoked a cigarette and seemed careless of danger. He continually patted his soldiers on the back as he passed and called them "his little braves."

I could not help wondering whether the German General opposite was setting his men the same splendid example. I inquired the French General's name; he was General Fayolle, conceded by all the armies to be the greatest artillery expert in the world. Comradeship between officers and men always is well known in the

French Army, but I never before realized how the officers were so willing to accept quite the same fate.

In Paris the popular appellation for a German is "boche." Not once at the front did I hear this word used by officers or men. They deplore it, just as they deplore many things that happen in Paris. Every officer I talked to declared the Germans were a brave, strong enemy; they waste no time calling them names.

"They are wonderful, but we will beat them," was the way one officer summed up the general feeling.

Another illustration of the French officer at the front: The City of Vermelles of 10,000 inhabitants was captured from the Germans after fifty-four days' fighting. It was taken literally from house to house, the French engineers sapping and mining the Germans out of every stronghold, destroying every single house, incidentally forever upsetting my own one-time idea that the French are a frivolous people. So determined were they to retake this town that they fought in the streets with artillery at a distance of twenty-one feet, probably the shortest range artillery duel in the history of the world.

The Germans before the final evacuation buried hundreds of their own dead. Every yard in the city was filled with little crosses—the ground was so trampled that the mounds of graves were crushed down level with the ground—and on the crosses are printed the names with the number of the German regiments. At the base of every cross there rests either a crucifix or a statue of the Virgin or a wreath of artificial flowers, all looted from the French graveyard.

With the German graves are French graves made afterward. I walked through this ruined city where, aside from the soldiery, the only sign of life I saw was a gaunt, prowling cat. With me past these hundreds of graves walked half a dozen French officers. They did not pause to read inscriptions; they did not comment on the loot and pillage of the graveyard; they scarcely looked even at the graves, but they kept constantly raising their hands to their caps in salute

regardless of whether the cross numbered a French or a German life destroyed.

We were driving along back of the advance lines. On the road before us was a company of territorial infantry who had been eight days in the trenches and were now to have two days of repose at the rear. Plodding along the same road was a refugee mother and several little children in a donkey cart; behind the cart, attached by a rope, trundled a baby buggy with the youngest child inside. The buggy suddenly struck a rut in the road and overturned, spilling the baby into the mud. Terrible wails arose, and the soldiers stiffened to attention. Then, seeing the accident, the entire company broke ranks and rescued the infant. They wiped the dirt from its face and restored it to its mother in the cart.

So engrossing was the spectacle our motor halted, and our Captain from Great General Headquarters in his gorgeous blue uniform climbed from the car, discussing with the mother the safety of a baby buggy riding behind a donkey cart, at the same time congratulating the soldier who rescued the child.

Our trip throughout moved with that clockwork precision usually associated only with the Germans. The schedule throughout the week never varied from the arrangements made before we left Paris. When we arrived at certain towns we were handed slips of paper bearing our names and the hotel number of our room.

Amazing meals appeared at most amazing places, all the menus carefully thought out days before. Imagine fresh trout served you with other famous French delicacies in a little house in the battle zone, where only a few hundred yards of barbed wire and a few feet more of air separated you from the German trenches. During the German advance, also after the battle of the Marne, there were many towns in the districts where it was impossible to obtain tobacco, spirits, or food staples. This condition has entirely abated, and the commissariat is now so well supplied that soldiers have sufficient tobacco even in the trenches.

It was my privilege to take a brief ride

at the front in an antebellum motor bus of glorious memory—there being nothing left in Paris but the subway. Buses are now used to carry fresh meat, although they have been used in transporting troops and also ammunition. We trundled quite merrily along a little country road in Northern France, the snow-white fields on either side in strange contrast to the scenery when last I rode in that bus. I am sure I rode in the same bus before the war in my daily trips to the Paris office of THE NEW YORK TIMES. Its sides are bullet riddled now, but the soldier conductor still jingles the bell to the motorman, although he carries a revolver where he used to wear the register for fares.

Trench life was one of the most interesting surprises of the trip. Every night since the war began I have heard pitying remarks about "the boys in the trenches," especially if the nights were cold. I was, therefore, prepared to find the men standing in water to the knees, shivering, wretched, sick, and unhappy. I found just the contrary—the trenches were clean, large, and sanitary, although, of course, mud is mud. I found the bottoms of the trenches in every instance corduroy-lined with modern drains, which allowed the feet to keep perfectly dry, and also the large dugouts where the men, except those doing sentry duty, sleep comfortably on dry straw. There are special dugouts for officers and artillery observers.

I also visited a large, perfectly equipped Red Cross First Aid camp, all built underground, extending from one line of trenches to another. All trenches, communication traverses, and observatory dugouts have received names which are printed on shingles affixed to the trenches on little upright posts. For instance, we entered one section of the trenches through Boyau d'Espagne, we traversed Avenue de Bois, Avenues Wagram and Friedland, and others commemorating Napoleonic victories. The dugouts of officers and observers were all called villas—Villa Chambéry, Villa Montmorency being examples. It all seemed like cozy camp life underground except

that three times the morning of our visit it was necessary to flatten ourselves against the mud sidewalls while dead men on crossed rifles were carried out, every head in that particular bit of trench being bared as the sad procession disappeared.

Although the maps show the lines of fighting to be rather wavy, one must go to the front really to appreciate the irregular zigzag, snakelike line that it really is. The particular bit of trenches we visited cover a front of twelve miles, but so irregular is the line, so intricate and vast the system of intrenchments, that they measure 200 miles on that particular twelve-mile fighting front.

When one leaves the trenches at the rear of the communication boyaux, it is astonishing how little of the war can be seen. Ten feet after we left our trenches we could not see even the entrance. We stood in a beautiful open field having our pictures taken, and a few hundred yards away our motor waited behind some trees. Suddenly we heard a "zip zip" over our heads. German snipers were taking shots at us.

In addition to the enormous force of men constantly in the trenches along the entire line there is an equal size reserve line directly behind them in case of sudden attack. The artillery is posted considerably further to the rear along with revictualing stations, aeroplane hangars, and headquarters of the Generals, but through all this enormous mass of men which we passed daily going to and from our front observation posts never once did we get the impression of parade. Three were just troops, troops, troops everywhere, every hamlet, every village filled with them, every crossroads with their sentries. All of them, hardened by Winter and turns in the trenches, are in splendid condition, and as opposed to the Germans, at least to the German pris-

oners I have seen, each French soldier has a clear and definite knowledge of what the war is all about. The greatest event of his day is when the Paris newspapers arrive.

What impressed me greatly was that in all the officers' quarters were copies of the French "Yellow Book," the English "White Paper" and German documents attempting to prove their innocence in causing the conflict. It is not sufficient for French Generals or officers just to go to war; they must know why they go to war, down to the last papers in the case. In six months the French privates have acquired one habit from the British Tommies—that is drinking tea. Back of every section of trenches I found huge tea canteens, where thousands of cups are served daily to the soldiers who have decided for the first time in their life they really like such stuff. There one sees more soldiers at the same time than at any other place in the fighting zone; there they sit and discuss the future calmly and confidently, there being a distinct feeling that the war is likely to be over next Summer.

No one knows what the Spring tactics of General Joffre will be. Along the section of the front I visited the officers are all satisfied that the Commander in Chief's "nibbling tactics" have forced the Germans to retire on the average of two to three miles all along the line. The very name of that great man is spoken with reverence, almost with awe, by his "children at the front."

I, therefore, from the facilities given me, can only make one assertion in summing up my opinion of the French grand army of 1915, that it is strong, courageous, scientifically intelligent, and well trained as a champion pugilist after months of preparation for the greatest struggle of his career. The French Army waits eager and ready for the gong.

Dodging Shells

[From The London Morning Post, Feb. 1, 1915.]

THE Echo de Paris has published today a letter that throws a considerable amount of light upon the psychology of the French soldier, and that shows how he behaves himself when subjected to very trying fire and compelled to act on his own initiative. It is written by the man to his wife, and is as follows:

I am acting as guard to a convoy, and am comfortably installed, with no work to do, in the house of an old woman who has lent me a candle and writing materials. I shan't be suffering from the cold in the way I have done on previous nights, as I have a roof over me and a fire. What luxury! It's been freezing for several nights, and you feel the frost when you are sleeping in the open. But that is nothing to the three days we passed in the village of —. We were stationed in the mairie. In front of us in the clock tower an artillery Captain was taking observations. On the road between the church and the mairie a Sergeant and four artillerymen were sending orders to the battery behind us. Suddenly a shell struck. We saw the artillerymen on the ground and the Sergeant alone left standing.

The fire was so thick that no one could think of going out. But suddenly one of the men moved, so I got up to find out about it, taking care to put on my knapsack. When I was among them I found that one had been hit right in the heart; two others were dying, one with his head in a pulp and the other with his thigh broken and the calf of his leg torn to a jelly. I helped the Sergeant to mend the telephone wire that had been broken by the shell, and all the time we were having shells and bits of brick breaking around us.

Then I went back to the mairie, and asked for some one who would not be frightened to come with me. Two of us went off to the village for a stretcher. I found one at the old ambulance, and

was just leaving it when I heard the scream of a shell, and took cover in the chimney—just in time. A big black brute smashed half the house in. My comrade and I hurried off after the wounded man. Our pals were watching us from the mairie, wondering if we should ever get back. Old Gérome, (that's me,) they said, will get back all right, and when back at the mairie I began to give the wounded man first aid. Another shell came along, and the place shook, window panes rained upon us, and dust blinded us, but at last it cleared.

Left alone with my wounded man I went on dressing him, and when the others got back I got them to help me take him to the schoolhouse near by. I got congratulated by my comrades and the senior Sergeant, but the Colonel and Lieutenant said nothing, though later I heard they were pleased with me, but suddenly the Colonel said: "We can't stop here. Go and see if there's room in the cellars of the castle for four officers and thirty men. If there is don't come back, as we will follow you."

We got there at last, two of us, but the owner took a long time opening. Meanwhile scraps of roofs and walls were raining on us, but with our knapsacks on our heads we were a bit protected. At last our knocks were answered, and we learned that there was room for four officers, but not for thirty men! The Colonel and the men had to be warned, so my comrade started running back and I followed about fifteen yards behind.

We passed a gap in the houses, with no cover, nothing but gardens. A shell came along. I dropped, while the other man hid in a doorway. The bits of it sang about our ears. I then sang out: "As you are nearly there, go on, and I'll see if there is room in the farm near by." I reached the houses and waited to see that he got through, because if he'd fallen I should have had to go back to warn the rest. As he was going two

COUNT VON REVENTLOW

The German Naval Critic Who Has Intimated That the United States Might Be a Divided Nation in Case of War

shells burst in the courtyard of the mairie, and I thought of the Colonel and the rest, but at last my comrade reached the place and went in, and I was free to try for the farm.

On my way I met a friend and asked him to join me. At the time I was thinking of you all, and it was not till later that I got frightened. There were five horses at the gate of the farm. I shifted them and showed my friend the entrance to the cellar. It was narrow, and he lost time through his knapsack, and these are the occasions when your life depends on seconds. I heard the scream that I know only too well, and guessed where the beast would lodge, and called out to him "That's for us." I shrank back with my knapsack over my head and tried to bury myself in the corner among the coal.

I had no time, though. The shell reached, smashed down part of the house, and burst in the basement a couple of yards from me. I heard no more, but stone, plaster, and bricks fell all around me on the coal heap. I was gasping, but found myself untouched. I got up and saw the poultry struggling and the horses struck down. I ran to the cellar, with the same luck as my friend.

My knapsack caught me. A shell screamed a second time again for us, and it struck, wallop, on the gable, while the ruins fell around my head. I pulled at my knapsack so vigorously that I fell into the cellar, and some of our men who were there called "Here's a poor brute done in." Not a bit of it. I was not touched then either. * * * At last the bombardment stopped, and we all got out. I noticed about forty hens. Some were pulped. Others had had their heads and legs cut off. In the middle three horses lay dead. Their saddles were in ribbons. Equipment, revolvers, swords, all that had been left above the cellar had vanished, but there were bits of them to be seen on the roof. My rifle, which had been torn from my hands, was in fragments, and I was stupefied at not having been hit. I noticed, however, that my wrappings that were rolled around my knapsack had been pierced by a splinter of shell that had stuck in it. Later in the

evening when I started cutting at my bread the knife stuck. I broke the bread open and found another bit of shell in it. I don't yet know why I was not made mincemeat of that day. There were fifty chances to one against me.

The two following days I stopped in the cellar, hearing nothing but their big shells, while the farm and the buildings near it were smashed in. Now it is all over. I am all right and bored to death mounting guard over wagons ten miles from the firing line, with a crowd of countrymen who have been commandeered with their wagons.

I ought to tell you that the two shells I saw fall on the mairie when my comrade was going there unfortunately killed one and wounded five. It was a bit of luck for me, as I always used to be hanging about the courtyard. That's the sad side of it, but we have an amusing time all the same. [The writer goes on to explain how he and his friends dressed up some men of straw in uniform and induced the Germans to shoot at them, and finally to charge them, while they fired at the Germans and brought several of them down. He continues.]

But that's nothing to what they'll get, and their villages will get, and their mairies, chateaux, and farms, and cellars, when we get there. I will respect old men, women, and children, but let their fighting men look out. I don't mind sacrificing my life to do my duty, and to defend those I love and who love me, but if I've got to lose my skin I want to lose it in Boche-land. I want the joy of getting into their dirty Prussia to avenge our beautiful land. Bandits! Let them and their choucroute factories look out! If you saw the countryside we are recovering—there's nothing left but ruins. Everything burned and smashed to bits. Cattle, more dead than alive, are bolting in all directions, and as for our poor women, when I see them I would destroy everything.

Our officers say: "We'll never be able to hold our men when we get into their country." But I say that I want to go there all the same, and yet when I say that I had a German prisoner to guard at the mairie. I gave him half my bread

and knocked walnuts off the trees for him. All the time I saw five or more villages in flames around. Well, it all proves that a soldier should never say

what he will do tomorrow. My job is to protect the flag, and the Boches can come on. Before they get it they'll have to get me. * * * Vive la France!

Somali Volunteers

[From The London Times, Nov. 10, 1914.]

We have received from a correspondent a copy of a petition signed by the principal Somali chiefs in Jubaland, praying that they may be allowed to fight for England. The terms of this interesting document are as follows:

TO His Highness the Governor, Through the Hakim of Jubaland: Salaams, yea, many salaams, with God's mercy, blessing, and peace. After salaams,

We, the Somali of Jubaland, both Herti and Ogaden, comprising all the tribes and including the Maghavbul, but not including the Tulamuya Ogaden, who live in Biskaya and Tanaland and the Marehan, desire humbly to address you.

In former days the Somali have fought against the Government. Even lately the Marehan have fought against the Government. Now we have heard that the German Government have declared war on the English Government. Behold, our "fitna" against the English Government is finished. As the monsoon wind drives the sandhills of our coast into new forms, so does this news of German evil-doing drive our hearts and spears into the service of the English Government. The Jubaland Somali are with the English Government. Daily in our mosques we pray for the success of the English armies. Day is as night and night is as day with us until we hear that the English are victorious. God knows the right. He will help the right. We have heard that Indian askaris have been sent

to fight for us in Europe. Humbly we ask why should not the Somali fight for England also? We beg the Government to allow our warriors to show their loyalty. In former days the Somali tribes made fitna against each other. Even now it is so; it is our custom; yet, with the Government against the Germans, we are as one, ourselves, our warriors, our women, and our children. By God it is so. By God it is so. By God it is so.

A few days ago many troops of the military left this country to eat up the Germans who have invaded our country in Africa. May God prosper them. Yet, O Hakim, with all humbleness we desire to beg of the Government to allow our sons and warriors to take part in this great war against the German evil-doers. They are ready. They are eager. Grant them the boon. God and Mohammed are with us all.

If Government wish to take away all the troops and police from Jubaland, it is good. We pledge ourselves to act as true Government askaris until they return.

We humbly beg that this our letter may be placed at the feet of our King and Emperor, who lives in England, in token of our loyalty and our prayers.

[Here follow the signatures of all the principal Somali chiefs and elders living in Jubaland.]

When King Peter Re-Entered Belgrade

[From The New York Evening Post, Feb. 15, 1915.]

PARIS, Jan. 29.

SO King Peter himself became priest; and the great cathedral was filled with the sobbing of his people.

Everybody knows the story of the deliverance of Belgrade; how the little Serbian Army fell back for strategic reasons as the Austrians entered the city, but finally, after seventeen days of fighting without rest, (for the Serbian Army has had no reserves since the Turkish war,) knit its forces together, marched 100 miles in three days, and drove the Austrians headlong out of the capital.

King Peter rode at the head of his army. Shrapnel from the Austrian guns was still bursting over the city. But the people were too much overjoyed to mind. They lined the sidewalks and threw flowers as the troops passed. The soldiers marched in close formation; the sprays clung to them, and they became a moving flower garden. The scream of an occasional shell was drowned in the cheers.

They are emotional people, these Serbians. And something told them that, even with death and desolation all about them, they had reason to be elated. A few hours before, the Austrians had been established in Belgrade, confident that they were there to stay for months, if not for years. Now they were fleeing headlong over the River Save, their commissariat jammed at the bridge, their fighting men in a rout.

So King Peter rode through the streets of the capital with his army, and came to the cathedral. The great church was locked, because the priests had left the city on errands of mercy. But a soldier went through a window and undid the portals. The King and his officers and some of the soldiers and as many of the people as could get in crowded into the cathedral. And, lacking some one to say mass, the King became a priest—which is an ancient function of Kings—and, as he knelt, the officers and soldiers and people knelt. There was a vast silence

for a moment; and then, in every part of the church, a sobbing.

This account is a free translation of a woman's letter, in Serbian, received in this city a few days ago by Miss Helen Losanich, who is here with Mme. Slavko Grouitch to interest Americans in helping her countrymen back to their devastated farms. Mme. Grouitch is an American by birth; but Miss Losanich is a Serbian, with the black hair and burning black eyes of the Slavs, and boasting twenty years perhaps. Her sister, Mme. Marincovich, is wife of the Serbian Minister of Commerce and Agriculture. It was Mme. Marincovich who had written the letter.

"I've just had this letter from my sister in Serbia," cried Miss Losanich, when a friend called, and she waved in one hand a dozen sheets closely written in a script that resembled Russian. "I've hardly had time to read it myself. But we will sit down and translate it into English, if you say.

"She says here that, when the Austrians had to leave Belgrade, they took 1,200 people as hostages—non-combatants, you know. When they came into the city first they gave assurances that all non-combatants would be safe; but for the last few days before they left, no non-combatant could walk on the street without being taken up as a hostage.

"Just imagine, it says here that they even took a little boy. He can fight when he is older, they say. You know, the Turks used to do that. They came and took our boys of nine and ten years, and trained them as soldiers in their janisseries; and when they had forgotten their own country they sent them back to fight against it. It is terrible, isn't it!

"The Austrians took the furniture from our people's houses and carried it across the River Save to the Semlin. They behaved frightfully, my sister says; brought all kinds of people with them, including women from the very lowest class; broke into the houses and stole the

ladies' toilettes. One lady with many beautiful dresses found them all cut to ribbons when she got back to Belgrade.

"The Austrians brought lots of tea and crackers and conserves with them. Some soldiers had taken a lady's evening gown and pinned strawberries from strawberry jam all over it, in appropriate places, and laid the gown out for the lady to see."

A merry smile illuminated Miss Losanich's face as she read this part of the letter.

"Our brother," she went on, "entered Belgrade with the army. He came back to Nish on leave about Christmas, the Serbian Christmas, which is about thirteen days later than yours. Nish is the temporary capital; and my sister is there. He told them all about Belgrade. He had been to his house; the whole house was upset, drawers forced, old letters opened and thrown on the floor, papers strewn about, King Peter's picture (autographed by the King) thrown on the floor, and King Ferdinand's picture stamped on.

"Brother went to a private sanitarium that our uncle has in Belgrade. The Austrians had seized this, and had begun making it over for a hospital. They wanted the Bulgarian Red Cross installed. They had brought quantities of biscuits and tea and conserves. But they had to leave in such a hurry they couldn't take the things with them. 'And now,' my sister says, 'we are eating them!'

"Across the street four of our cousins live—young men. They are all at the front now"—Miss Losanich laughed outright as she read this part—"their house was entered and all their clothes taken; dress suits, smoking jackets, linen, and all those things. It makes me laugh; it's naughty, I know. But they used to go out a good deal. I have seen them in those clothes so often. One of them wanted to marry me. He used to go out a great deal"—this with another merry peal of laughter.

"Mme. Grouitch's house was undisturbed; and ours. We used to know the Austrian attaché before the war. He was rather a nice fellow. Played tennis with us a good deal, and so on. He came into Belgrade with his army, and he came

around to our house. The servants recognized him, because, you see, they knew him. The servants had stayed behind. He seemed to think he would like to make my sister's house his quarters, but after he had thought about it a while he went away.

"She says that she would like to go back to Belgrade, but the railroad has been destroyed—a big viaduct of stone at Ralya, about 17 kilometers from Belgrade; and they have to go from Ralya to Belgrade by carriage. There are so many wagons of the commissariat on the road—so many carriages have been seized by the Government—it is impossible for private citizens to get through.

"A gibbet was put up in the square after the Austrians came into the city and a man was hanged the first morning, in spite of the fact that the Austrians had promised safety to the non-combatants. Dr. Edward Ryan, the head of the American Red Cross in Belgrade, protested, and the gibbet was taken down. But my sister says that eighteen more people were hanged in the fortress down by the Save—she hears—where they wouldn't be seen.

"Mr. Bisserce, a Belgian, is director of the electric lighting plant in Belgrade. He is a nice man, and, being a Belgian, he does not like the Austrians. He wouldn't light the town until they made him, and he wouldn't give them a map of the system at all. He was bound in ropes and taken away as a hostage, and they haven't heard from him since.

"The most touching thing was the entrance of King Peter—" whereupon Miss Losanich told the story related above.

"Rubbish, straw, and dead horses were strewn through all the streets when the King and the army came in. The shooting was still going on. There was a jam of commissariat wagons at the bridge—you know there is a bridge across the Save. The Austrians couldn't get across fast enough, there was so much confusion—too many wanting to get over at one time. The Serbian artillery was shooting at them all the time. Presently the middle of the bridge went down. The

men and the horses and the carriages and the wagons all went down together. They were pinned down by the masses of stone, but there were so many of them that they filled up the river and stuck up above the water. It was so bad that our people couldn't clear it up—so there is an awful odor all over the town.

"She says that the Austrians brought 17,000 wounded, thinking that they were going to stay for months—and perhaps for ever. They turned over quantities of them to Dr. Ryan at the American Red Cross Hospital.

"General Franck, the Austrian commander, made a remark—and he must have made it to Dr. Ryan, although my sister doesn't say so. General Franck said: 'If the Russians had fought the way the Serbians have, there wouldn't be an Austrian soldier left!'

"That's a good deal for the head of the Austrians to say, isn't it? We al-

ways expected victory; but even the most optimistic of us were surprised at what our peasant soldiers did.

"In the flight, the Austrians could not take care of their wounded, she says, and sent them back to Belgrade, many of them, as prisoners. Many must have died during the flight, too, for they got a jolting that wounded men can't stand.

"Our brother, who was a professor of chemistry, is a Sergeant now in charge of two German Krupp guns, which were captured from Turkey in the other war. He is at Banovo Brdo, a residence section outside Belgrade, on a hill. All the villas have been destroyed by the Austrian artillery fire.

"And," continued Miss Losanich, "she says that the toys sent by the Americans were received in Nish and distributed to the poor children for Christmas, and that the feeling of cordiality toward the Americans is growing fast."

THE DRAGON'S TEETH

BY CAROLINE DUER

O H, sunny, quiet, fruitful fields of France,
Golden and green a month ago,
Through you the great red tides of
war's advance
Sweep raging to and fro.
For patient toil of years,
Blood, fire and tears
Reward you now!

The dragon's teeth are sown, and in a night
There springs to life the armed host!
And men leap forth bewildered to the fight,
Legion for legion lost!
"Toll for my tale of sons,"
Roar out the guns,
"Cost what it cost!"

This is a "holy war"! A holy war?
With thousand millions maimed and dead!
To show one Power dares more than others
dare—
That higher rears one Head!
How will you count your gain,
Lord of the slain,
When all is said?

The dragon's teeth are sown, and in a night
There springs to life the armed host!
And men leap forth bewildered to the fight,
Legion for legion lost!
"Toll for my tale of sons,"
Roar out the guns,
"Cost what it cost!"

Oh, tragedy of Nations! Who may see
The outcome, or foretell the end?
Hark men and weeping women, misery
That none may mend.
Ruin in peaceful marts,
Dazed commerce, stricken arts.
God, to the ravaged hearts
Some mercy send!

The dragon's teeth are sown, and in a night
There springs to life the armed host!
And men leap forth bewildered to the fight,
Legion for legion lost!
"Toll for my tale of sons,"
Roar out the guns,
"Cost what it cost!"

The Greatest of Campaigns

The French Official Account

The Associated Press received in London on March 5, 1915, an official French historical review of the operations in the western theatre of war from its beginning up to the end of January, the first six months, which in terseness and dramatic power will rank among the world's most important military documents. The first chapter of the review was released for publication by The Associated Press on March 16 and appears below. It is one of those documents, rare in military annals, that frankly confesses a succession of initial reverses and official incompetence, only retrieved by exercise of the utmost skill in retreat.

CHAPTER I.

THE FRENCH SETBACKS IN AUGUST.

THE first month of the campaign began with successes and finished with defeats for the French troops. Under what circumstances did these come about?

Our plan of concentration had foreseen the possibility of two principal actions, one on the right between the Vosges and the Moselle, the other on the left to the north of Verdun-Toul line, this double possibility involving the eventual variation of our transport. On Aug. 2, owing to the Germans passing through Belgium, our concentration was substantially modified by General Joffre in order that our principal effort might be directed to the north.

From the first week in August it was apparent that the length of time required for the British Army to begin to move would delay our action in connection with it. This delay is one of the reasons which explain our failures at the end of August.

Awaiting the moment when the operations in the north could begin, and to prepare for it by retaining in Alsace the greatest possible number of German forces, the General in Chief ordered our troops to occupy Mulhouse, (Mülhausen,) to cut the bridges of the Rhine at Huningue and below, and then to flank the attack of our troops, operating in Lorraine.

This operation was badly carried out by a leader who was at once relieved of

his command. Our troops, after having carried Mulhouse, lost it and were thrown back on Belfort. The work had, therefore, to be recommenced afresh, and this was done from Aug. 14 under a new command.

Mulhouse was taken on the 19th, after a brilliant fight at Dornach. Twenty-four guns were captured from the enemy. On the 20th we held the approaches to Colmar, both by the plain and by the Vosges. The enemy had undergone enormous losses and abandoned great stores of shells and forage, but from this moment what was happening in Lorraine and on our left prevented us from carrying our successes further, for our troops in Alsace were needed elsewhere. On Aug. 28 the Alsace army was broken up, only a small part remaining to hold the region of Thann and the Vosges.

THE OPERATIONS IN LORRAINE.

The purpose of the operations in Alsace was, namely, to retain a large part of the enemy's forces far from the northern theatre of operations. It was for our offensive in Lorraine to pursue still more directly by holding before it the German army corps operating to the south of Metz.

This offensive began brilliantly on Aug. 14. On the 19th we had reached the region of Saarburg and that of the Etangs, (lakes,) and we held Dieuze, Morhange, Delme, and Château Salins.

On the 20th our success was stopped. The cause is to be found in the strong organization of the region, in the power

of the enemy's artillery, operating over ground which had been minutely surveyed, and, finally, in the default of certain units.

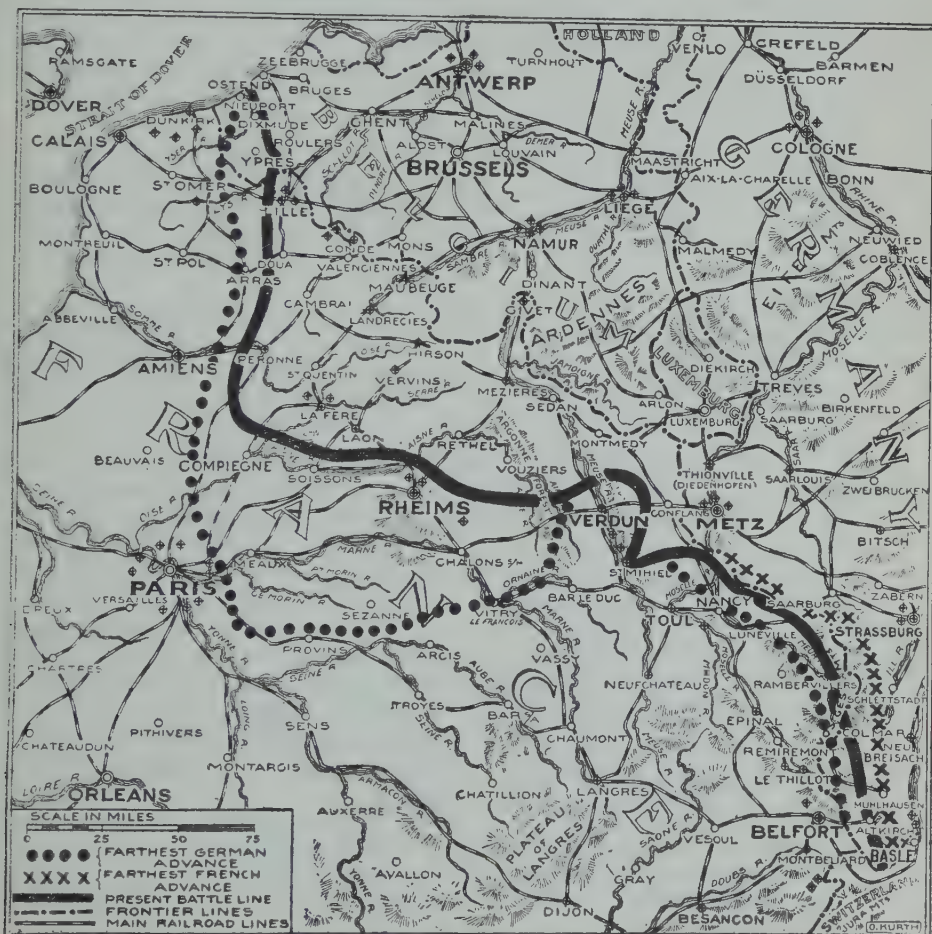

On the 22d, in spite of the splendid behavior of several of our army corps, notably that of Nancy, our troops were brought back on to the Grand Couronne, while on the 23d and 24th the Germans concentrated reinforcements—three army corps, at least—in the region of Lunéville and forced us to retire to the south.

This retreat, however, was only momentary. On the 25th, after two vigorous counter-attacks, one from south to north and the other from west to east, the enemy had to fall back. From that time a sort of balance was established on this terrain between the Germans and ourselves. Maintained for fif-

teen days, it was afterward, as will be seen, modified to our advantage.

OPERATIONS IN BELGIAN LUXEMBOURG.

There remained the principal business, the battle of the north—postponed owing to the necessity of waiting for the British Army. On Aug. 20 the concentration of our lines was finished and the General in Chief gave orders for our centre and our left to take the offensive. Our centre comprised two armies. Our left consisted of a third army, reinforced to the extent of two army corps, a corps of cavalry, the reserve divisions, the British Army, and the Belgian Army, which had already been engaged for the previous three weeks at Liège, Namur, and Louvain.

The German plan on that date was as follows: From seven to eight army corps and four cavalry divisions were endeavoring to pass between Givet and Brussels, and even to prolong their movements more to the west. Our object was, therefore, in the first place, to hold and dispose of the enemy's centre and afterward to throw ourselves with all available forces on the left flank of the German grouping of troops in the north.

On Aug. 21 our offensive in the centre began with ten army corps. On Aug. 22 it failed, and this reverse appeared serious.

The reasons for it are complex. There were in this affair individual and collective failures, imprudences committed under the fire of the enemy, divisions ill-engaged, rash deployments, precipitate retreats, a premature waste of men, and, finally, the inadequacy of certain of our troops and their leaders, both as regards the use of infantry and artillery.

In consequence of these lapses the enemy, turning to account the difficult terrain, was able to secure the maximum of profit from the advantages which the superiority of his subaltern complements gave him.

OPERATIONS SOUTH OF SAMBRE.

In spite of this defeat our manoeuvre had still a chance of success, if our left and the British Army obtained a decisive result. This was unfortunately not the case. On Aug. 22, at the cost of great losses, the enemy succeeded in crossing the Sambre and our left army fell back on the 24th upon Beaumont-Givet, being perturbed by the belief that the enemy was threatening its right.

On the same day, (the 24th,) the British Army fell back after a German attack upon the Maubeuge-Valenciennes line. On the 25th and 26th its retreat became more hurried. After Landrecies and Le Cateau it fell back southward by forced marches. It could not from this time keep its hold until after crossing the Marne.

The rapid retreat of the English, coinciding with the defeat sustained in Belgian Luxembourg, allowed the enemy to cross the Meuse and to accelerate, by

fortifying it, the action of his right.

The situation at this moment may be thus summed up: Either our frontier had to be defended on the spot under conditions which the British retreat rendered extremely perilous, or we had to execute a strategic retirement which, while delivering up to the enemy a part of the national soil, would permit us, on the other hand, to resume the offensive at our own time with a favorable disposition of troops, still intact, which we had at our command. The General in Chief determined on the second alternative.

PREPARATION OF THE OFFENSIVE.

Henceforward the French command devoted its efforts to preparing the offensive. To this end three conditions had to be fulfilled:

1. The retreat had to be carried out in order under a succession of counter-attacks which would keep the enemy busy.

2. The extreme point of this retreat must be fixed in such a way that the different armies should reach it simultaneously, ready at the moment of occupying it to resume the offensive all together.

3. Every circumstance permitting of a resumption of the offensive before this point should be reached must be utilized by the whole of our forces and the British forces.

THE FRENCH COUNTER-ATTACK.

The counter-attacks, executed during the retreat, were brilliant and often fruitful. On Aug. 20 we successfully attacked St. Quentin to disengage the British Army. Two other corps and a reserve division engaged the Prussian Guard and the Tenth German Army Corps, which was debouching from Guise. By the end of the day, after various fluctuations, the enemy was thrown back on the Oise and the British front was freed.

On Aug. 27 we had also succeeded in throwing back upon the Meuse the enemy, who was endeavoring to gain a foothold on the left bank. Our successes continued on the 28th in the woods of

Marfée and of Jaulnay. Thanks to them we were able, in accordance with the orders of the General in Chief, to fall back on the Buzancy-Le Chesne-Bouvellemont line.

Further to the right another army took part in the same movement and carried out successful attacks on Aug. 25 on the Othain and in the region of Spincourt.

On the 26th these different units recrossed the Meuse without being disturbed and were able to join in the action of our centre. Our armies were, therefore, again intact and available for the offensive.

On Aug. 26 a new army composed of two army corps, five reserve divisions, and a Moorish brigade was constituted. This army was to assemble in the region of Amiens between Aug. 27 and Sept. 1 and take the offensive against the German right, uniting its action with that of the British Army, operating on the line of Ham-Bray-sur-Somme.

CONTINUATION OF THE RETREAT.

The hope of resuming the offensive was from this moment rendered vain by the rapidity of the march of the German right wing. This rapidity had two consequences, which we had to parry before thinking of advancing. On the one hand, our new army had not time to complete its detraining, and, on the other hand, the British Army, forced back further by the enemy, uncovered on Aug. 31 our left flank. Our line, thus modified, contained waves which had to be redressed before we could pass to the offensive.

To understand this it is sufficient to consider the situation created by the quick advance of the enemy on the evening of Sept. 2.

A corps of cavalry had crossed the Oise and advanced as far as Château Thierry. The First Army, (General von Kluck,) comprising four active army corps and a reserve corps, had passed Compiègne.

The Second Army, (General von Bülow,) with three active army corps and two reserve corps, was reaching the Laon region.

The Third Army, (General von Hau-

sen,) with two active army corps and a reserve corps, had crossed the Aisne between the Château Porcien and Attigny.

More to the east the Fourth, Fifth, Sixth, and Seventh Armies, namely, twelve army corps, four reserve corps, and numerous Ersatz formations, were in contact with our troops, the Fourth and Fifth Armies between Vouziers and Verdun and the others in the positions which have been indicated above, from Verdun to the Vosges.

It will, therefore, be seen that our left, if we accepted battle, might be in great peril through the British forces and the new French Army, operating more to the westward, having given way.

A defeat in these conditions would have cut off our armies from Paris and from the British forces and at the same time from the new army which had been constituted to the left of the English. We should thus be running the risk of losing by a single stroke the advantage of the assistance which Russia later on was to furnish.

General Joffre chose resolutely for the solution which disposed of these risks, that is to say, for postponing the offensive and the continuance of the retreat. In this way he remained on ground which he had chosen. He waited only until he could engage in better conditions.

In consequence, on Sept. 1, he fixed as an extreme limit for the movement of retreat, which was still going on, the line of Bray-sur-Seine, Nogent-sur-Seine, Arcis-sur-Aube, Vitry-le-François, and the region to the north of Bar-le-Duc. This line might be reached if the troops were compelled to go back so far. They would attack before reaching it, as soon as there was a possibility of bringing about an offensive disposition, permitting the co-operation of the whole of our forces.

THE EVE OF THE OFFENSIVE.

On Sept. 5 it appeared that this desired situation existed.

The First German Army, carrying audacity to temerity, had continued its endeavor to envelop our left, had

crossed the Grand Morin, and reached the region of Chauffry, to the south of Rebaix and of Esternay. It aimed then at cutting our armies off from Paris, in order to begin the investment of the capital.

The Second Army had its head on the line Champaubert, Etoges, Bergeres, and Vertus.

The Third and Fourth Armies reached to Chalons-sur-Marne and Bussy-le-Repos. The Fifth Army was advancing on one side and the other from the Argonne as far as Triacourt-les-Islettes and Juivecourt. The Sixth and Seventh Armies were attacking more to the east.

But—and here is a capital difference between the situation of Sept. 5 and that of Sept. 2—the envelopment of our left was no longer possible.

In the first place, our left army had been able to occupy the line of Sézanne,

Villers-St. Georges and Courchamps. Furthermore, the British forces, gathered between the Seine and the Marne, flanked on their left by the newly created army, were closely connected with the rest of our forces.

This was precisely the disposition which the General in Chief had wished to see achieved. On the 4th he decided to take advantage of it, and ordered all the armies to hold themselves ready. He had taken from his right two new army corps, two divisions of infantry, and two divisions of cavalry, which were distributed between his left and his centre.

On the evening of the 5th he addressed to all the commanders of armies a message ordering them to attack.

"The hour has come," he wrote, "to advance at all costs, and to die where you stand rather than give way."

(To be continued in the next issue.)

BY THE NORTH SEA.

By W. L. COURTNEY.

[From King Albert's Book.]

DEATH and Sorrow and Sleep:
Here where the slow waves creep,
This is the chant I hear,
The chant of the measureless deep.

What was sorrow to me
Then, when the young life free
Thirsted for joys of earth
Far from the desolate sea?

What was Sleep but a rest,
Giving to youth the best
Dreams from the ivory gate,
Visions of God manifest?

What was Death but a tale
Told to faces grown pale,
Worn and wasted with years—
A meaningless thing to the hale?

Death and Sorrow and Sleep:
Now their sad message I keep,
Tossed on the wet wind's breath,
The chant of the measureless deep.

When Marthe Chenal Sang the "Marseillaise"

By Wythe Williams

[FROM THE NEW YORK TIMES, Feb. 14, 1915.]

I WENT to the Opéra Comique the other day to hear Marthe Chenal sing the "Marseillaise." For several weeks previous I had heard a story going the rounds of what is left of Paris life to the effect that if one wanted a regular old-fashioned thrill he really should go to the Opéra Comique on a day when Mlle. Chenal closed the performance by singing the French national hymn. I was told there would be difficulty in securing a seat.

I was rather skeptical. I also considered that I had had sufficient thrill: since the beginning of the war, both old fashioned and new. I believed also that I had already heard the "Marseillaise" sung under the best possible circumstances to produce thrills. One of the first nights after mobilization 10,000 Frenchmen filled the street beneath the windows of THE NEW YORK TIMES office, where I was at work. They sang the "Marseillaise" for two hours, with a solemn hatred of their national enemy sounding in every note. The solemnity changed to a wild passion as the night wore on. Finally, cuirassiers of the guard rode through the street to disperse the mob. It was a terrific scene.

So I was willing to admit that the "Marseillaise" is probably the most thrilling and most martial national song ever written, but I was just not keen on the subject of thrills.

Then one day a sedate friend went to the Opéra Comique and came away in a raving condition. It was a week before his ardor subsided. He declared that this rendition of a song was something that will be referred to in future years. "Why," he said, "when the war is over

the French will talk about it in the way Americans still talk concerning Jenny Lind at Castle Garden, or De Wolf Hopper reciting 'Casey at the Bat.'

This induced me to go. I was convinced that whether I got a thrill or not the singing of the "Marseillaise" by Chenal had become a distinct feature of Paris life during the war.

I never want to go again. To go again might deepen my impression—might better register the thrill. But then it might not be just the same. I would be keyed to such expectancy that I might be disappointed. Persons in the seats behind me might whisper. And just as Chenal got to the "Amour sacré de la patrie" some one might cough. I am confident that something of the sort would surely happen. I want always to remember that ten minutes while Chenal was on the stage just as I remember it now. So I will not go again.

The first part of the performance was Donizetti's "Daughter of the Regiment," beautifully sung by members of the regular company. But somehow the spectacle of a fat soprano nearing forty in the rôle of the twelve-year-old vivandière, although impressive, was not sublime. A third of the audience were soldiers. In the front row of the top balcony were a number of wounded. Their bandaged heads rested against the rail. Several of them yawned.

After the operetta came a "Ballet of the Nations." The "nations," of course, represented the Allies. We had the delectable vision of the Russian ballerina dancing with arms entwined about several maids of Japan. The Scotch lassies wore violent blue jackets. The Belgian girls carried large pitchers and rather

wept and watered their way about the stage. There were no thrills.

After the intermission there was not even available standing space. The majority of the women were in black—the prevailing color in these days. The only touches of brightness and light were in the uniforms of the officers liberally sprinkled through the orchestra and boxes.

Then came "Le Chant du Depart," the famous song of the revolution. The scene was a little country village. The principals were the officer, the soldier, the wife, the mother, the daughter, and the drummer boy. There was a magnificent soldier chorus and the fanfare of drums and trumpets. The audience then became honestly enthusiastic. I concluded that the best Chenal could do with the "Marseillaise," which was next on the programme, would be an anticlimax.

The orchestra played the opening bars of the martial music. With the first notes the vast audience rose. I looked up at the row of wounded leaning heavily against the rail, their eyes fixed and staring on the curtain. I noticed the officers in the boxes, their eyes glistening. I heard a convulsive catch in the throats of persons about me. Then the curtain lifted.

I do not remember what was the stage setting. I do not believe I saw it. All I remember was Chenal standing at the top of a short flight of steps, in the centre near the back drop. I indistinctly remember that the rest of the stage was filled with the soldier chorus and that near the footlights on either side were clusters of little children.

"Up, sons of France, the call of glory"—

Chenal swept down to the footlights. The words of the song swept over the audience like a bugle call. The singer wore a white silk gown draped in perfect Grecian folds. She wore the large black Alsatian head dress, in one corner of which was pinned a small tri-colored cockade. She has often been called the most beautiful woman in Paris. The

description was too limited. With the next lines she threw her arms apart, drawing out the folds of the gown into the tricolor of France—heavy folds of red silk draped over one arm and blue over the other. Her head was thrown back. Her tall, slender figure simply vibrated with the feeling of the words that poured forth from her lips. She was noble. She was glorious. She was sublime. With the "March on, March on" of the chorus, her voice arose high and fine over the full orchestra, and even above her voice could be sensed the surging emotions of the audience that seemed to sweep over the house in waves.

I looked up at the row of wounded. One man held his bandaged head between his hands and was crying. An officer in a box, wearing the gorgeous uniform of the headquarters staff, held a handkerchief over his eyes.

Through the second verse the audience alternately cheered and stamped their feet and wept. Then came the wonderful "Amour sacré de la patrie"—sacred love of home and country—verse. The crashing of the orchestra ceased, dying away almost to a whisper. Chenal drew the folds of the tricolor cloak about her. Then she bent her head and, drawing the flag to her lips, kissed it reverently. The first words came like a sob from her soul. From then until the end of the verse, when her voice again rang out over the renewed efforts of the orchestra, one seemed to live through all the glorious history of France. At the very end, when Chenal drew a short jeweled sword from the folds of her gown and stood, silent and superb, with the folds of the flag draped about her, while the curtain rang slowly down, she seemed to typify both Empire and Republic throughout all time. All the best of the past seemed concentrated there as that glorious woman, with head raised high, looked into the future.

And as I came out of the theatre with the silent audience I said to myself that a nation with a song and a patriotism such as I had just witnessed could not vanish from the earth—nor again be vanquished.

A War of Commerce to Follow

By Sir William Ramsay

That commerce in Germany is regarded as war, that the "powerful mass of the German State" is projected into methods meant to kill off the trade of other nations, and that after the war between the nations the German war with British trade will be resumed, is the burden of this address. Sir William Ramsay delivered it in Manchester on Jan. 22, 1915, before representatives of British associations of employers and of leading industrial concerns in many parts of the United Kingdom, making up the Employers' Parliamentary Association. Sir William is one of the world's great chemists.

I SUPPOSE that among my audience some are convinced free traders, while some believe that our commercial interests would be better served by a measure of protection. This is neither the time nor the place, nor have I the knowledge and ability for a discussion of this much-debated question. Nor will I reveal my own private views, except in so far as to say that I agree with the majority. But, as the question cannot be ignored, I should like to say that I hold firmly the conviction that all trade should be carried on for the mutual advantage of the parties engaged. The old fable of Æsop may be quoted, which relates to a quarrel between the different members of the body. Every one of us can be, and should be, helpful to every other, independent of nation, country, and creed. That is, I am sure, what lies on the conscience of each one of us, as an ultimate end to be struggled for, although perhaps by many considered unattainable.

For the same kind of reason, it appears to me that we all think that peace is a blessing, and war a curse. For under peace commerce and industry prosper; science and the arts flourish; friendships are made and adorn the amenities of life. Moreover, our religious traditions in all Christian countries, and in some non-Christian ones like China, influence us to believe that war is wrong, indefensible, and, in the present year of our Lord, an anachronism.

We imagined, perhaps not most, but many of us, that no important European nation thought differently. Your leading Liberal paper, The Manchester Guar-

dian, on July 22, 1908, wrote, "Germany, though the most military of nations, is probably the least warlike"; and this doubtless represented the views of the majority of Englishmen. Some of us knew better. I have, or had, many German friends; we have lived for many years on a footing of mutual kindness; but it was impossible to disregard the signs of the times. The reason of this war is at bottom, as we have now discovered, the existence of a wholly different ideal in the Germanic mind from that which lies at the base of the Latin, Anglo-Saxon, Dutch, or Scandinavian nations. Such a statement as this is sweeping; it can be illustrated by a trivial tale. In 1912 an international scientific congress met at Berlin; I was a member. Although the conventional language was German, in compliment to our hosts, it turned out that in the long run all discussions were conducted in French. After such a sitting, the members separated, the German committee remaining behind for business purposes. The question of language was raised, I think by a Dutchman, in the corridor. Of the representatives of the fourteen or fifteen nations present, all were agreed on this—that they were not going to be compelled to publish in German; some chose English; some French; Spanish was suggested as a simple and easily understood language; but there was no love lost between the "foreign" and the German representatives, and this not the least on personal, but purely on national grounds. Acknowledging to the full the existence of high-minded German gentlemen, it is a sad fact that the character of the individuals of the nation

is not acceptable to individuals of other nations. Listen to a quotation from a letter I have received from a very distinguished Swiss: "Une chose me frappait aussi, dans les tendances allemandes, une incroyable inconscience. Accaparer le bien d'autrui leur paraissait si naturel qu'ils ne comprenaient même pas que l'on eût quelque désir de se défendre. Le monde entier était fait pour constituer le champ d'exploitation de l'Allemagne, et celui qui s'opposait à l'accomplissement de cette destinée était, pour tout allemand, l'objet d'une surprise." [Translation: "One thing has also struck me in German tendencies; that is an unbelievable want of conscience. To grab the belongings of others appeared to them so natural, that they did not understand that one had some wish to defend himself. The whole world was made for the field of German operations, and whoever placed himself in opposition to the accomplishment of this destiny was for every German the object of surprise."] The view is not new; the feeling of surprise at opposition was expressed wittily by a French poet in the words:

Cet animal est très méchant;
Lorsqu'on l'attaque, il se défend.
This animal is full of spite;
If you attack him, he will bite.

Well, gentlemen, this war has opened the eyes of some of us, and has confirmed the fears of others. Not one of us wanted to fight. Our hand was forced, so that we could not have abstained without national and personal dishonor.

Now, I do not think it is even yet realized that Germany's methods in trade have been, and are, as far as possible identical with her methods in war. Let me rub this in. As long ago as 1903, at a meeting of the Society of Chemical Industry, under the Presidency of your fellow-citizen, Mr. Levinstein, I pointed out that under the German State there was a trade council, the object of which was to secure and keep trade for Germany. This council had practical control of duties, bounties, and freights; its members were representative of the different commercial interests of the empire; and they acted, as a rule, without control from the Reichstag. You can

read what I said for yourselves, if you think it worth while, in *The Journal of the Society of Chemical Industry* for 1903.

Let me give you a simple case of the operations of that trade council. *Ex uno disce omnes*. A certain firm had a fairly profitable monopoly in a chemical product which it had maintained for many years. It was not a patented article, but one for which the firm had discovered a good process of manufacture. About six years ago this firm found that its Liverpool custom was being transferred to German makers. On inquiry, it transpired that the freight on this particular article from Hamburg to Liverpool had been lowered. The firm considered its position, and by introducing economies it found that it could still compete at a profit. A year later German manufacturers lowered the price substantially, so that the English firm could not sell without making a dead loss. It transpired that the lowering of price was due to a heavy export bounty being paid to the German manufacturers by the German State.

It is the bringing of the heavy machinery of State to bear on the minutiae of commerce which makes it impossible to compete with such methods. One article after another is attacked, as opportunity offers; British manufacture is killed; and Germany acquires a monopoly. No trade is safe; its turn may not have come.

Much has been said about British manufacture of dyestuffs, and much nonsense has been written about the lack of young British chemists to help in their manufacture. There is no lack of able inventive young British chemists. Owing to the unfairness of German competition by methods just exemplified, a manufacturer, as a rule, does not care to risk capital in the payment of a number of chemists for making "fine chemicals." He finds "heavy chemicals" simpler. I do not wonder at his decision, though I lament it. There are also other reasons. The duty on methyl alcohol (for which no rebate is given) makes it impossible to introduce economically methyl groups into dyes; the

restrictions incident on the use of duty-free alcohol do not commend themselves to manufacturers; these constitute other obstacles in the way of the British color maker. Lastly, our patent regulations are even yet not what they might be, although an attempt has recently been made to improve them. The British manufacturer is thus trebly handicapped.

Besides, the English competitor is at a disadvantage owing to what may be termed systematic and fraudulent attacks, for which no redress has been obtainable. Thus the manufacturers of Sheffield still complain, I suppose justly, that German articles for foreign consumption bear the words "Sheffield steel" stamped upon them. I myself have been approached by a German swindler with the proposition that I should assist his firm in infringing patents; he was surprised and pained to learn that I did not consider his proposal an honorable one.

Nor are methods like these confined to business or manufacture; they have greatly affected British shipping. Our shipping companies, in good faith, have associated themselves with others in "conferences," apparently for the mutual advantage of all, forgetting that behind the German companies lay the powerful mass of the German State. Tramp steamers, and with them cheap freights to the East, have been eliminated. The Royal Commission on Shipping Rings, which met some years ago, referring to the system obtaining in Germany, and fostered by the German Government, on charging through rates on goods from towns in the interior to the port of destination, observed in its report; "Such rates constitute a direct subsidy to the export trade of German manufacturers, and an indirect subsidy to those German lines by whom alone they are available. And as they are only rendered possible by the action of the German Government, it appears to us that the British lines can in no way be held responsible for the preferences which these rates afford to German goods." Now, our Government pays large mail subsidies to many of our shipping companies. Could these not

be so utilized that it would become impossible for Germans to capture our trade by indirect state bounties?

These are a few examples (and your greater knowledge will enable you to supplement them with many others) of the methods which have been employed against us by Germans with the co-operation—nay, the active support—of their State.

Of late a new factor has appeared. The German Imperial Chancellor made his noteworthy (or notorious) remark about a "scrap of paper." And Dr. von Bethmann-Hollweg, speaking in the Reichstag, acknowledged openly that the German Nation had been guilty of a "wrong" to Belgium. This breach of faith has the approval of the whole German people. Do they realize what it means? Are they not aware that no treaty, political or otherwise, with the German people is worth the paper it is written on? That the country and its inhabitants have forfeited all claims to trust? That no one, in future, should make a bargain with a German, knowing that he is a dishonorable and dishonored man? * * * Germany has made many blunders—an almost inconceivable number of blunders; but this blundering crime is surely the culminating point of blunder. Did any nation ever before deliberately throw away its political, commercial, financial, and social credit to no purpose? To gain what? England as an adversary, and the contempt of the whole civilized world. Her treatment of the poor Belgian civilians has added to contempt, loathing and scorn.

Now, gentlemen, you see our problem. At the end of this war we shall have Germans again as trade rivals; if there is a German State our German rivals will be backed by their State. They will, as they have done before, steal our inventions, use trickery and fraud to oust us from world markets, and we know now that we need not expect any bargain to be binding. I am not a commercial man; science is supposed to be above such trickery. Yet I read a few days ago, not as a single example, but only as the last

I happen to remember, an article by a distinguished American professor, protesting with great moderation that an important scientific generalization which he published in 1902 had been annexed, without acknowledgment, by a versatile and adroit professor in the University of Berlin—an acquaintance of my own—in the year 1906; and it was not until 1910 that the latter was made to confess his guilt, with much subterfuge and blustering.

Commerce, indeed, is in Germany regarded as war; we now know it, and we must meet war by war. How is that war to be waged?

I can see only two methods. One is recommended by a writer in *The Observer* of the 10th inst., who acknowledges himself to have been a lifelong free trader. His remedy is a 25 per cent. duty on all German goods, and on German goods only, imported (or rather offered for import) into Great Britain and her colonies, and also that German passenger liners and freight boats should not be allowed to call at any one of the ports of the empire. His reasons are fully stated in his letter; it is signed "A City Merchant."

The other method is perhaps less apt to offend free trade susceptibilities; it is to impose on what remains of our opponents at the conclusion of this war free trade for a term of years. It remains to be seen whether we shall be powerful enough to insist on this

measure, or to persuade our allies that it is one likely to fulfill the proposed end. It is, so far as I see, the only other alternative.

Those who are thoroughly convinced of the benefits of free trade should welcome this suggestion, unless, indeed, they think that such a blessing is not deserved by Germany. On the other hand, they may comfort themselves with the certain knowledge that no possible punishment inflicted on the Germans could possibly be more galling and repulsive to them. Doubtless, too, it would suit the books of our allies very well, who could impose on German goods any duty they thought fit, and deposit their surplus and inferior goods in Germany at a price which would defy competition. But these are questions which I must leave to those more conversant with the merits and demerits of free trade and protection than I am.

Whatever view you take, you cannot but acknowledge that the situation calls for early and anxious deliberation, and well-thought-out and firm action; and it must be action taken as a nation—through our Government—whatever the political complexion of the Government may be at the close of the war. It is for you, as members of the Employers' Parliamentary Association, to make up your minds what you wish to do; above all, to agree, and to take steps to force the Government in power to carry out your wishes.

BELGIUM.

By EDITH WHARTON.

[From King Albert's Book.]

La Belgique regrette rien.

NOT with her ruined silver spires,
Not with her cities shamed and rent,
Perish the imperishable fires
That shape the homestead from the tent.

Wherever men are stanch and free,
There shall she keep her fearless state,
And, homeless, to great nations be
The home of all that makes them great.

Desired Peace Terms for Europe

Outlined by Proponents for the Allies and for Germany

The following forecast of the terms of peace which the Allies could enforce upon Germany and Austria is made for The New York Times Current History by a former Minister of France, one of the leading publicists of the French Republic:

THE Allies will decline to treat with any member of the Hohenzollern or Hapsburg family or any delegates representing them and will insist on dealing with delegations representing the German and Austro-Hungarian people elected by their respective Parliaments or by direct vote of the people, if they so desire.

The Allies will facilitate in every possible way negotiations between Austria-Hungary and Italy with a view to the latter obtaining the southern part of the Tyrol, known as Trentino, and the Peninsula of Istria, known as Trieste.

The 200 miles "strait" channel (Dardanelles, Sea of Marmora, and Bosphorus,) between Turkey in Europe and Turkey in Asia, is to be declared free to the ships of all nations, and under the direction of an international commission, which will also administer Turkey in Europe and form a permanent court of arbitration for all questions which may arise among Rumania, Bulgaria, Serbia, Montenegro, and Greece. In settling the status of Albania respect will be paid to the wishes of the inhabitants.

Alsace and Lorraine, after rectifications of the French boundary line in accordance with the wishes of the inhabitants, are to be annexed to Belgium, whose permanent neutrality will be guaranteed by the powers. Schleswig-Holstein is to be returned to Denmark and the Kiel Canal made an international waterway, under either an international commission or a company which will operate it as the Suez Canal is operated.

Poland is to be declared an autonomous State under the protection of Rus-

sia, and its boundaries are to be restored as they were in 1715.

The Allies will also entertain a proposition for the restoration of the independence of Hungary and the geographical integrity of the country as it was in 1715.

The delegates representing the German people must pledge themselves that military conscription shall be abolished among them for a period of twenty-five years.

The status of all German colonies and protectorates is to be settled by a joint commission appointed by the Governments of England, Japan, and France.

The ownership of Italy and Greece to the Aegean Islands, now in their respective possessions, is to be confirmed by the powers and guarantees shall be given that the said islands shall not be fortified.

The ownership of England to the Island of Cyprus is to be confirmed by the powers and her protectorate over Egypt acknowledged.

The Mediterranean Sea is to be declared a "maritime area" to be policed by England, France, and Italy.

Here is the declaration of peace terms by the Central Committee for National Patriotic Organization of England:

Great Britain can never willingly make peace with Germany until the power of Prussian militarism is completely destroyed and there is no possibility of our children or our children's children being forced again to fight for the national existence. As far as we are concerned, this is a fight to a definite finish. We must either win all along the line or we must be completely defeated and our empire destroyed. Our allies fully share the same conviction. The thousands of lives already lost, and, alas! still to be lost, will have been tragically wasted if the German menace remains to terrorize

Europe and to stunt the progress of civilization. In order to convince public opinion that the only peace worth having is a peace absolutely on our own terms, a Central Committee for National Patriotic Organization has been formed from the members of all the four political parties. The committee will, in addition, take steps to lay a clear statement of the British case before neutral countries. Both the tasks it has undertaken are of the first importance, and it should have the support of every patriot.

GERMANY'S PROGRAM.

Professor Ernst Haeckel, the militant German zoologist, supplies, in an interview in the Berliner Tagesblatt, the following summary:

Freedom from the tyranny of England to be secured as follows:

1. The invasion of the British piratical State by the German Army and Navy and the occupation of London.

2. The partition of Belgium, the western portion as far as Ostend and Antwerp to become a German Federal State; the northern portion to fall to Holland, and the southeastern portion to be added to Luxemburg, which also should become a German Federal State.

3. Germany to obtain the greater part of the British colonies and of the Congo State.

4. France to give up a portion of her northeastern provinces.

5. Russia to be reduced to impotency by the re-establishment of the Kingdom of Poland, which should be united with Austria-Hungary.

6. The Baltic Provinces of Russia to be restored to Germany.

7. Finland to become an independent kingdom and be united with Sweden.

An article by Georges Clemenceau, in L'Homme Enchaîné, reports the following view of the German terms accredited to Count Bernstorff, German Ambassador at Washington:

One of my friends in America informs me of a curious conversation between an influential banker and the German Ambassador, Count Bernstorff. The banker, who had just handed over a substantial check for the German Red Cross, asked Count Bernstorff what the Kaiser would take from France after the victory.

The Ambassador did not seem the least

surprised at this somewhat premature question. He answered it quite calmly, ticking off the various points on his fingers as follows:

1. All the French colonies, including the whole of Morocco, Algeria, and Tunis.

2. All the country northeast of a straight line from Saint-Valéry to Lyons, that is to say, more than one quarter of French territory, including 15,000,000 inhabitants.

3. An indemnity of 10,000,000,000 francs, (\$2,000,000,000.)

4. A tariff allowing all German goods to enter France free during twenty-five years, without reciprocity for French goods entering Germany. After this period the Treaty of Frankfurt will again be applied.

5. The suppression of recruiting in France during twenty-five years.

6. The destruction of all French fortresses.

7. France to hand over 3,000,000 rifles, 2,000 cannon, and 40,000 horses.

8. The protection of all German patents without reciprocity.

9. France must abandon Russia and Great Britain.

10. A treaty of alliance with Germany for twenty-five years.

Dr. Bernhard Dernburg, late German Colonial Secretary of State, has published an article in The Independent, in which this forecast appears:

1. Germany will not consider it wise to take any European territory, but will make minor corrections of frontiers for military purposes by occupying such frontier territory as has proved a weak spot in the German armor.

2. Belgium belongs geographically to the German Empire. She commands the mouth of the biggest German stream; Antwerp is essentially a German port. That Antwerp should not belong to Germany is as much an anomaly as if New Orleans and the Mississippi delta had been excluded from Louisiana, or as if New York had remained English after the War of Independence. Moreover, Belgium's present plight was her own fault. She had become the vassal of England and France. Therefore, while "probably" no attempt would be made to place Belgium within the German Empire alongside Bavaria, Württemberg, and Saxony, because of her non-German population, she will be incorporated in

the German Customs Union after the Luxemburg pattern.

3. Belgian neutrality, having been proved an impossibility, must be abolished. Therefore the harbors of Belgium must be secured for all time against British or French invasion.

4. Great Britain having bottled up the North Sea, a *mare liberum* must be established. England's theory that the sea is her boundary, and all the sea her territory down to the three-mile limit of other powers, cannot be tolerated. Consequently the Channel coasts of England, Holland, Belgium, and France must be neutralized even in times of war, and the American and German doctrine that private property on the high seas should enjoy the same freedom of seizure as private property does on land must be guaranteed by all nations. This condition Herr Dernburg accompanies by an appeal to the United States duly to note, and Britain is making commercial war upon Germany.

5. All cables must be neutralized.

6. All Germany's colonies are to be returned. Germany, in view of her growing population, must get extra ter-

ritory capable of population by whites. The Monroe Doctrine bars her from America, therefore she must take Morocco, "if it is really fit for the purpose."

7. A free hand must be given to Germany in the development of her commercial and industrial relations with Turkey "without interference." This would mean a recognized sphere of German influence from the Persian Gulf to the Dardanelles.

8. There must be no further development of Japanese influence in Manchuria.

9. All small nations, such as Finland, Poland, and the Boers in South Africa, if they support Germany, must have the right to frame their own destinies, while Egypt is to be returned, if she desires it, to Turkey.

These conditions, Herr Dernburg concludes, would "fulfill the peaceful aims which Germany has had for the last forty-four years." They show, in his opinion, that Germany has no wish for world dominion or for any predominance in Europe incommensurate with the rights of the 122,000,000 Germans and Austrians.

THE BRITISH VOLUNTEERS.

By KATHERINE DRAYTON MAYRANT SIMONS, Jr.

WE are coming, Mother, coming
O'er the seas—your Younger Sons!
From the mighty-mouthed Saint
Lawrence

Or where sacred Ganges runs,
We are coming for your blessing
By a ritual of guns!

We are coming, Mother, coming
On the way our fathers came!
For their spirits rise to beckon
At the whisper of your name;
And we come that you may knight us
By your accolade of flame!

We are coming, Mother, coming!
For the death is less to feel
Than to hear you call unanswered?
'Tis the Saxon's old appeal,
And we come to prove us worthy
By its ordeal of steel!

Chronology of the War

Showing Progress of Campaigns on All Fronts and Collateral Events
from Jan. 31, 1915, up to and Including Feb. 28, 1915.
Continued from the last Number.

CAMPAIGN IN EASTERN EUROPE

- Feb. 1—Russians retake Borjimow trenches and capture men of Landsturm; severe cold hampers operations in Galicia.
- Feb. 2—Germans advance, with heavy losses, southward toward the Vistula and eastward between Bejoun and Orezelewo.
- Feb. 3—Russians again pour into Hungary as Austrians yield important positions; German position north of the Vistula is insecure.
- Feb. 4—Von Hindenburg hurls 50,000 men at Russian lines near Warsaw.
- Feb. 5—Russians reported to have killed 30,000 Germans under Gen. Mackensen; Russians recapture Gumine.
- Feb. 6—General German offensive is looked for; Russians shift troops in East Galicia and Bukowina.
- Feb. 7—Germans rush reinforcements to East Prussia; second line of trenches pierced by Russians near Borjimow; Austrians resume attacks on Montenegrin positions on the Drina.
- Feb. 8—Russian cavalry sweeps northward toward East Prussia; Russians move their right wing forward in the Carpathians but retire in Bukowina; Germans shift 600,000 troops from Poland to East Prussia, using motor cars; Italians say that 15,000 Germans died in attempting to take Warsaw.
- Feb. 9—Austro-German forces attack Russians at three points in the Carpathians; Russians begin the evacuation of Bukowina, where Austrians have had successes; Russians make a wedge in East Prussia across Angorapp River.
- Feb. 10—Fierce fighting in the Carpathian passes; Russians are retreating from Bukowina.
- Feb. 11—Russians fall back in Mazurian Lake district; they still hold Czernowitz.
- Feb. 12—Von Hindenburg, as a result of a several days' battle, wins a great victory over the Tenth Russian Army in the Mazurian Lake region, part of the operations taking place under the eyes of the Kaiser; more than 50,000 prisoners are taken, with fifty cannon and sixty machine guns; the Russians retreat in disorder across the frontier, their loss in killed and wounded being estimated at 30,000; a second line of defense is being strengthened by the Russians; Paris announces the complete failure of German offensive in Poland.
- Feb. 14—Russians check Germans in Lyck region; battle raging in Bukowina; Albanians invade Serbia and force Servians to retreat from the frontier.
- Feb. 15—Russian lines hold in the north; Austrians state that Bukowina has been entirely evacuated by the Russians; Germans retake Czernowitz.
- Feb. 16—Germans occupy Plock and Bielsk; Russians fall back in North Poland; Austrians win in Dukla Pass; Servians drive back Albanian invaders.
- Feb. 17—Germans prepare for attack along whole Russian front; cholera and typhus gain headway in Poland.
- Feb. 18—Belgrade bombarded; Germans try to cut off Warsaw.
- Feb. 19—Germans abandon march to Niemen; they march toward Plonsk from two directions; they occupy Taurögen.
- Feb. 20—Germans repulsed at Ossowetz; Russians bombard Przemyśl; Germans capture French Hospital Corps in East Prussia.
- Feb. 21—Russians force fighting from East Prussia to Bukowina.
- Feb. 22—Russians make progress in Galicia and the Carpathians; it is said that German and Austrian armies are being merged.
- Feb. 23—Russians force Germans back along the Bobr; Germans assemble greater forces at Przanysz; Russians destroy two Austrian brigades between Stanislaw and Wyzkow; Austrians repulsed near Krasne.
- Feb. 24—Russians have successes in the Carpathians near Uzrok Pass.
- Feb. 25—Germans besiege Ossowetz; Russians gain in the Carpathians and again invade Bukowina; Russian wedge splits Austrian Army in the Carpathians; fighting on Stanislaw Heights.
- Feb. 26—Fighting in progress on a 260-mile front; battle in north sways to East Prussian frontier; Germans retire in Przanysz region; Germans claim capture of eleven Russian Generals in Mazurian Lake battle; snow and intense cold hinder operations in Bukowina.

Feb. 27—Germans retire in the north; Russians recapture Przanysz; German battalion annihilated on the Bobr; Russians advance in Galicia and claim recapture of Stanislaw and Kolomea; stubborn fighting north of Warsaw.

Feb. 28—Russians are attacking along whole front; Germans checked in North Poland and many taken prisoners; General Brusiloff's army is claimed by the Russians to have thus far captured 188,000 Austrians.

CAMPAIGN IN WESTERN EUROPE.

Feb. 1—Germans evacuate Cernay and burn Alsatian towns as French advance.

Feb. 3—Germans try to retake Great Dune; Allies make gains in Belgium; fighting at Westende.

Feb. 5—Allies are making a strong offensive movement in Belgium.

Feb. 7—British take German trenches at Guinchy.

Feb. 9—Germans again bombard Rheims, Soissons, and other places; fighting on skis is occurring in Alsace.

Feb. 14—Germans are making preparations for an offensive movement in Alsace.

Feb. 16—French forces gain in Champagne and advance on a two-mile front; fighting in La Bassée.

Feb. 18—Allies make offensive movements; Germans give up Norroy.

Feb. 23—Germans use Austrian twelve-inch howitzers for bombardment of Rheims.

Feb. 26—French gain on the Meuse.

Feb. 28—Germans advance west of the Vosges, forcing French back four miles on a thirteen-mile front; French gain in Champagne, taking many trenches.

CAMPAIGN IN AFRICA.

Feb. 3—Portugal is sending reinforcements to Angola, much of which is in German hands, although there has been no declaration of war between Portugal and Germany; some of the anti-British rebels in South Africa surrender.

Feb. 4—Germans have evacuated Angola; some South African rebel leaders, including "Prophet" Vankenbsburg, surrender.

Feb. 6—Germans are repulsed at Kakamas, a Cape Colony village.

Feb. 13—Germans have won a success against the British on the Orange River; German East Africa is reported now clear of the enemy; Germans have invaded Uganda and British East Africa.

Feb. 16—Trial of General De Wet and other South African rebel leaders is begun.

Feb. 21—German newspaper report charges that German missionaries are tortured by pro-British Africans.

Feb. 26—Botha heads British troops that plan invasion of German Southwest Africa.

TURKISH AND EGYPTIAN CAMPAIGN.

Feb. 1—Turks withdraw forces from Adrianople to defend Tchatalja; Russian victories over Turks in the Caucasus and at Tabriz prove to be of a sweeping character; Turks have been massacring Persians.

Feb. 2—American Consul, Gordon Paddock, prevented much destruction by Turks at Tabriz.

Feb. 3—Turks, while trying to cross Suez Canal, are attacked by British, many of them being drowned; Turks are driven back at Kurna by British gunboats.

Feb. 4—Turks routed, with heavy loss, in two engagements on the Suez Canal, New Zealand forces being engaged; Turks are near Armageddon.

Feb. 5—British take more Turkish prisoners.

Feb. 7—British expect Turks again to attack Suez Canal, and make plans accordingly.

Feb. 8—Turks in Egypt are in full retreat; their losses in dead have been heavy.

Feb. 13—British wipe out Turkish force at Tor.

Feb. 17—Work of Consul Paddock in saving British property at Tabriz is praised in British House of Commons.

Feb. 22—Turks are massacring Armenians in Caucasus towns; Turks make general retirement on Damascus.

Feb. 28—Turks have evacuated the Sinai Peninsula.

NAVAL RECORD—GENERAL.

Feb. 1—German submarine seen near Liverpool; there is a new theory that infernal machines in coal caused blowing up of the Formidable and the Bulwark.

Feb. 2—English shipping paper offers reward of \$2,500 to first British merchant vessel that sinks a German submarine; German submarine tries to torpedo British hospital ship Asturias; men from a Swedish warship are killed by a mine.

Feb. 3—German auxiliary is sunk by British cruiser Australia off Patagonia; German destroyer reported sunk by Russians in the Baltic.

Feb. 4—British ships shell Germans at Westende.

Feb. 5—Germans deny that Russians sank a destroyer in the Baltic.

Feb. 7—Allied fleets menace the Dardanelles.

Feb. 9—Turkish cruiser bombards Yalta; Russians shell Trebizond.

Feb. 10—Germans are said to have sunk casks of petrol off the English coast for use by their submarines; French Government, in report to neutrals, denounces sinking of refugee ship Admiral Gantheaume.

Feb. 11—Cargo of American steamship *Wilhelmina*, bound for Hamburg, is seized by British at Falmouth, and a prize court will pass upon question whether food destined only for German civilians can go through in neutral bottoms; it is generally understood that the *Wilhelmina* shipment was made as a test case; German submarines, driven into Norwegian ports by storm, are forced to put to sea again.

Feb. 13—Two British steamers long overdue are believed to have been sunk by the Germans.

Feb. 14—Canada is guarding her ports more vigilantly; the Captain of British steamer *Laertes* is decorated for saving his ship from a German submarine by fast manoeuvring.

Feb. 15—British steamer *Wavelet* hits mine in English Channel and is badly damaged; British submarines are in the Baltic; Austrian fleet bombards Antivari.

Feb. 16—Captain of the German battle-cruiser *Blücher* dies from pneumonia contracted when his ship went down in the North Sea fight; British merchant collier *Dulwich* is torpedoed and sunk off French coast.

Feb. 17—French steamer *Ville de Lille* is sunk by German submarine.

Feb. 18—German auxiliary cruiser *Kronprinz Wilhelm* has sunk six British ships off the coast of Brazil.

Feb. 20—Allied fleets are pounding the Dardanelles forts with great effect; German steamer *Holger* interned at Buenos Aires.

Feb. 21—Berlin papers report that a British transport, loaded with troops, has been sunk.

Feb. 22—Two German submarines are missing; Germans are building submarines near Antwerp.

Feb. 23—Australian mail boat *Maloja* fired on by armed merchantman in English Channel; operations at the Dardanelles interrupted by unfavorable weather.

Feb. 24—British capture German steamer *Gotha*; British armed merchantman *Clan Macnaughton* reported missing.

Feb. 25—The four principal forts at the entrance of the Dardanelles are reduced by the allied British and French fleet; three German submarines are sent to Austria for use in the Adriatic and Mediterranean.

Feb. 26—Inner forts of Dardanelles are being shelled; mine sweeping begun; wreckage indicates disaster to German submarine U-9 off Norwegian coast; French destroyer *Dague* hits Austrian mine off Antivari; Allies blockade coast of German East Africa.

Feb. 27—Forty British and French warships penetrate the Dardanelles for fourteen miles; French cruiser seizes, in the English Channel, the American steamer *Dacia*, which was formerly under German registry and belonged to the Hamburg-American Line, and takes her to Brest; a French prize court will determine the validity of her transfer to American registry; British skipper reports that the German converted cruiser *Prinz Eitel Friedrich* sank a British ship and a French ship in December.

Feb. 28—Allied fleet prepares to engage the strongest and last of the Dardanelles defenses; land attack in conjunction with the fleet is being considered; English and French flags now fly over wrecked forts; London welcomes seizure of *Dacia* by French.

NAVAL RECORD—WAR ZONE.

Feb. 4—Germany proclaims the waters around Great Britain and Ireland, except a passage north of Scotland, a war zone from and after Feb. 18, and states that neutral ships entering the zone will be in danger, in consequence of the misuse of neutral flags said to have been ordered by the British Government.

Feb. 6—Decree is discussed by President Wilson and the Cabinet; dangers of complications for the United States are foreseen; indignation is expressed in Italy, Holland, and Denmark; text of the decree is submitted to the United States State Department by Ambassador Gerard.

Feb. 9—Some European neutrals intend to have the names of their ships printed in huge letters on ships' sides and the national colors painted on.

Feb. 11—The State Department makes public the text of the American note, dated Feb. 10, sent to Ambassador Gerard for delivery to the German Government; the note is firm but friendly, and tells Germany that the United States will hold her "to a strict accountability" should commanders of German vessels of war "destroy on the high seas an American vessel or the lives of American citizens."

Feb. 12—Ambassador Gerard delivers the American note to the German Foreign Secretary and has a long conference with him.

Feb. 13—The German Legation at The Hague warns neutral vessels against entering the war zone; German Foreign Office comments on the friendly tone of the American note; Germany has requested the United States to advise ship owners to man vessels sailing to German ports with subjects of neutral States.

Feb. 15—Germany communicates to the United States through Ambassador von Bernstorff a preliminary answer to the American note; Germany would be willing to recede from her decree if England would permit foodstuffs to enter Germany for use by the civilian population; the preliminary answer is cabled to Ambassador Page for presentation to the British Foreign Office as a matter of information; Italy and Holland protest to Germany against war zone decree; Winston Churchill, in Parliament, hints at retaliation.

Feb. 18—Germany replies to American note; reply is friendly in tone, but its substance causes concern in Washington; Germany still disclaims responsibility for fate of neutral vessels in war zone; war zone decree now in effect; ships are moving in and out of British ports as usual; Norwegian steamer Nordcap is blown up by a mine.

Feb. 19—German submarines torpedo Norwegian tanker Belridge near Folkestone and French steamer Denorah off Dieppe; British Government suspends passenger travel between England and the Continent; Irish Channel services are continued, and it is said that the ships may fly the Irish flag.

Feb. 20—British steamer Cambank sunk by submarine in Irish Sea; Norwegian steamer Bjarka sunk by mine off Denmark; it is reported that hundreds of armed merchant ships are hunting for German submarines.

Feb. 21—American steamer Evelyn sunk by mine off coast of Holland, eight men being lost; German submarine U-12 sinks British steamer Downshire; Dutch vessels sail from Amsterdam painted with the national colors; traffic between England and Sweden is suspended.

Feb. 22—The United States, through Ambassadors Page and Gerard, presents notes to England and Germany proposing modifications of war zone decree by Germany and an arrangement by which England would allow food to enter Germany for the use of civilians only; ships leave Savannah with the American flag painted on their sides.

Feb. 23—American steamer Carib sunk by a mine off German coast, three men being lost; Norwegian steamer Regin destroyed off Dover; British collier Brankshome Chine attacked in English Channel; Swedish steamer Specia sunk by mine in North Sea; British limit traffic in Irish Channel; twelve ships, of which two were American, have been sunk or damaged since the war zone decree went into effect; Germany includes Orkney and Shetland Islands in war zone.

Feb. 24—Germany, replying to Italian protest, promises to respect Italian flag; British steamer Harpalion torpedoed off Beachy Head; Minister van Dyke reports that the Carib was sunk outside route prescribed by the German instructions.

Feb. 25—British steamer Western Coast lost in English Channel; British steamer Deptford hits a mine off Scarborough; Scandinavian conference decides against convoying ships; sailings between Sweden and England resumed.

Feb. 26—It is reported from London that the Allies favor reprisals against Germany by which shipment of all commodities to and from Germany will be stopped; formal announcement from Premier Asquith expected in a few days; German submarines allow Dutch steamer to pass; Swedish steamship Svartön hits mine; passenger service between England and Flushing to be resumed.

NAVAL RECORD—NEUTRAL FLAGS

Feb. 6—Lusitania, warned of submarines, flies American flag in Irish Sea on voyage to Liverpool.

Feb. 7—British Foreign Office issues statement upholding use of American flag by Lusitania and declares that the practice of thus protecting merchant ships is well established; passengers uphold Capt. Dow's act.

Feb. 8—British Government says that Capt. Dow was not ordered by Government officials to use neutral flag.

Feb. 11—The State Department makes public the text of the American note, dated Feb. 10, sent to Ambassador Page for delivery to the British Government; the note asks the British authorities to do all in their power to prevent the deceptive use of the American flag by British ships and suggests that responsibility might rest upon Great Britain in case of destruction of American ships by Germans; according to passengers arriving in New York, the Cunarder Orduna flew American flag as precaution against submarine attack before Lusitania did.

Feb. 15—Holland sends protest to England against use by British ships of neutral flags.

Feb. 19—England, replying to American note, says that the United States and other neutrals should not grudge the use of their flags to avoid danger, and that the use of neutral flags has hitherto been generally permitted.

AERIAL RECORD.

Feb. 1—Germans drop bombs on Dunkirk; Russia threatens to treat air raiders of unfortified towns as pirates.

Feb. 2—French airmen burn castle in Alsace where German staff officers are housed.

Feb. 3—Swiss troops fire on German airmen; indications are that England will not uphold Russia's threat to treat hostile aviators as pirates.

Feb. 4—Body of German aviator engaged in Christmas Day raid found in the Thames.

Feb. 5—Allies' airmen force German General to abandon Altkirch headquarters; Germany protests against Russian threat against aviators.

Feb. 6—British aviator sinks German submarine.

Feb. 10—Allies' aviators damaged Dusseldorf arsenal in recent raid; bombs dropped in Adrianople; French bring down aviator who had dropped bombs on Paris.

Feb. 11—Bomb dropped by British airmen kills thirty-five Germans in Antwerp fort; Dunkirk repulses raid by German aviator.

Feb. 12—Thirty-four British airships raid Belgian coast seaports; Ostend station set on fire; Grahame-White narrowly escapes drowning; attack intended as a check for German blockade plans; French aviators raid German aerodrome in Alsace.

Feb. 13—Germany states that the British raid of yesterday caused "regrettable damage to the civilian population"; two British airmen killed at Brussels.

Feb. 14—Excitement in Ottawa over report of German raid; French aeroplanes rout Zeppelin near Mülhausen.

Feb. 15—Austrian aviators fire on Montenegrin royal family at Rieka.

Feb. 16—British aviators make another raid in Belgium; French attack aerodrome at Ghistelle and attack Eichwald in Alsace.

Feb. 17—Copenhagen reports explosion of a Zeppelin off the coast of Jutland; Allies' airmen attack network of Belgian canals, which may be used as submarine base.

Feb. 18—Another Zeppelin wrecked off the coast of Jutland.

Feb. 19—French aviator drops bombs on Ostend; Germany apologizes to Switzerland for aviator's flight over Swiss territory.

Feb. 20—Austrian aviator drops bombs on Cetinje; England distributes illustrated posters showing differences between English and German aircraft.

Feb. 21—German aeroplane drops bombs on Braintree, Colchester, and Marks Tey, little damage being done.

Feb. 22—Zeppelin bombards Calais, killing five; Buckingham Palace and other places in London are guarded against aeroplane attack.

Feb. 23—German aeroplane seen off the English coast.

Feb. 24—Three British aviators lost in raid on Belgium.

Feb. 27—French aviators bombard Metz; Germans drop bombs on Nieuport.

AUSTRALIA.

Feb. 2—Second contingent of troops reaches Egypt; Minister of Defense says that Government has placed no limit on number of men to be sent.

AUSTRIA.

Feb. 2—Government issues warning that Rumanian volunteers caught serving with Russians will be shot.

Feb. 6—Two Czech newspapers suspended for comments on the war unacceptable to the authorities; editors of papers in Styria threaten to stop publication unless censorship is relaxed.

Feb. 9—Commercial and political organizations protest against muzzling of the press.

Feb. 12—Czechs clamor for independence; Hungarian Deputies have been conferring with Rumanian Deputies to try to reach an agreement about Transylvania which would keep Rumania out of the war; the negotiations have now been abandoned, as Rumanians wanted complete autonomy for Transylvania.

Feb. 13—Entire Austro-Hungarian Landsturm is called out.

Feb. 15—Church bells may be melted to supply copper.

Feb. 21—Foreign Minister Burian and German Imperial Chancellor Bethmann-Hollweg have three long conferences in Vienna.

Feb. 22—Austrian and German troops have been concentrating for several days along the Swiss-Italian border; miles of trenches have been dug.

Feb. 24—Germany is reported to be bringing strong pressure on Austria to induce the latter to cede to Italy her Italian province of Trent and a portion of the Istrian Peninsula for the purpose of keeping Italy neutral.

Feb. 28—Full text of Austro-Hungarian "Red Book" is published in THE NEW YORK TIMES; it is estimated that the total Austrian loss, killed, wounded and prisoners, is now 1,600,000.

BELGIUM.

Feb. 5—Government protests against annulment by Germany of exequaturs of Consuls of neutral powers.

Feb. 8—Letter from Cardinal Mercier to the higher clergy of his diocese protests against violation of his rights as a Belgian and as a Cardinal; legation in Washington denounces tax imposed by Germans on refugees who fail to return to Belgium.

Feb. 18—Germany withdraws interdiction against correspondence by Cardinal Mercier with Belgian Bishops.

Feb. 24—Belgian women in Brussels are ordered by Germans to stop wearing hats made after style of Belgian soldiers' caps.

Feb. 27—Committee appointed by Germans to investigate condition of Belgian art treasures reports that the actual destruction has been insignificant, while objects which have been damaged can be repaired.

BULGARIA.

Feb. 2—Forces have been sent to organize the naval defense of Dedegatch.

Feb. 3—Premier Radoslavoff says that the Government is neutral, but that the Macedonian question causes apprehension.

Feb. 10—Government plans to remain neutral despite German loan.

CANADA.

Feb. 3—Unusual measures taken to guard the Duke of Connaught, Governor General, at the opening of Parliament.

Feb. 8—The first working day of Parliament; party leaders declare there will be a political truce during the war; Government to have ample funds; Colonial Secretary sends dispatch reviewing military operations from British viewpoint and stating that no Canadian troops are yet on the firing line except the Princess Patricia Light Infantry.

Feb. 10—Sixty-five Canadians have died in the encampment at Salisbury Plain, England.

Feb. 14—Excitement in Ottawa over report of intended German air raid from American soil.

Feb. 15—Parliament buildings, Royal Mint, and Rideau Hall, the Governor General's residence, are darkened in fear of German air raid.

Feb. 16—Government asks United States to guard American end of international bridges; the whole of the first contingent is now in France.

Feb. 19—Guards at international bridges are doubled.

ENGLAND.

Feb. 3—It is planned to devote the present session of Parliament entirely to war measures.

Feb. 5—Official estimates place the number of effective men in the army, exclusive of those serving in India, at 3,000,000.

Feb. 8—Premier Asquith tells Parliament that British losses to Feb. 4 are about 104,000 in killed, wounded, and missing.

Feb. 9—Admiral Lord Charles Beresford suggests public hanging of captured German sea and air raiders.

Feb. 10—At a cost of \$100,000 the Government has converted Donington Hall, Leicestershire, one of the most beautiful old places in England, into a rest home for captured German officers.

Feb. 11—Government plans to publish bi-weekly communications from Field Marshal French.

Feb. 12—First exchanges of disabled prisoners between England and Germany are arranged through the Papal Nuncio at Berlin.

Feb. 13—Pamphlet issued to the public gives instructions as to how to act in case of German invasion.

Feb. 15—First troops of new armies are pouring into France; enemy subjects denied admittance at ports.

Feb. 17—Board of Trade plans to compensate all merchant seamen who may be injured during hostilities.

Feb. 18—Victoria Cross is conferred on twelve men, one of whom, Corporal Leary of the Irish Guards, killed eight Germans in hand-to-hand combat and took two Germans prisoners.

Feb. 23—Captain who was formerly in command of the super-dreadnought Audacious, generally stated to have been sunk by a mine on Oct. 27, is made a Rear Admiral; promotion revives rumors that the Audacious was saved and is being repaired; British merchant shipping loss thus far is \$26,750,000, including both ships and cargoes, the Liverpool and London War risks Association citing figures as showing the efficacy of British Navy's protection.

Feb. 25—Sir Edward Grey, Foreign Secretary, announces in the House of Commons that Great Britain is in "entire accord with Russia's desire for access to the sea."

Feb. 27—Six newspaper correspondents, including one American, are to be permitted to go to the front under auspices of the War Office, according to present plans.

GERMANY.

Feb. 1—Official order has been issued that all stocks of copper and other metals used for war purposes are to be reserved for the army.

Feb. 4—German refugees from Kiao-Chau reach New York.

Feb. 5—It is reported that a sham railroad station has been built outside of Cologne to deceive French aviators; the Second Secretary of the British Legation is arrested in Brussels.

Feb. 6—An Alsatian is condemned to death for fighting in French Army.

Feb. 7—French prisoner condemned to two years' imprisonment for defacing portrait of the Kaiser.

Feb. 8—Government orders neutrals expelled from Alsace; Archbishop of Cologne writes pastoral letter predicting victory.

Feb. 9—Cardinal von Hartman says that the motto of the day is "Trust in God and hold out"; there is a scene in Prussian Diet when two Socialists protest against the war.

Feb. 10—Socialists indorse the war at a meeting in Mainz.

Feb. 11—Berlin communes suggest that all members of the Emden's crew be authorized to add the word Emden to their names.

Feb. 12—Government warns against offering insults to Americans.

Feb. 14—Many French civilians are freed; the Kaiser is said to be fifth in popularity among contemporary German heroes, von Hindenburg being first and the Crown Prince second.

Feb. 15—Substitute for petrol is stated to have been found.

Feb. 16—Spaniards are expelled from Baden; Iron Crosses given to Emden's men; German nurses and surgeons are acquitted by the French of charges of pillage at Peronne.

Feb. 19—Passport rules are made stricter; all men of last reserve are stated to have been called out.

Feb. 20—New submarines, airships, and two more dreadnoughts are under construction.

Feb. 21—Afternoon entertainments are suppressed in Berlin.

Feb. 22—Boys from seventeen to twenty are, it is reported, to be called out for Landsturm; charges of cruelty to British prisoners of war are denied.

Feb. 24—Frankfurter Zeitung estimates that prisoners of war now held in Germany and Austria are 1,035,000, 75 per cent. being held by the Germans.

Feb. 27—Admiral von Pohl, Chief of the Admiralty Staff, has been selected as successor to Admiral von Ingenohl, who has been removed from command of the battle fleet; manufacturing and agriculture enterprises in the occupied parts of France and Belgium are being kept alive under the management of Germans to contribute to support of the armies; high school teachers and pupils are in the army.

Feb. 28—It is reported that Ambassador von Bernstorff is to be recalled to Berlin and that Baron Treutler, a friend of the Kaiser, will be his successor; the total Prussian losses are now 1,102,212, in killed, wounded, and prisoners.

GREECE.

Feb. 1—Nation at large is declared to be ready to join war on behalf of Serbia.

Feb. 9—The Government believes that Germany must respect Greek rights in the naval war zone.

Feb. 14—There is danger of Greece's becoming involved in hostilities because of the Albanian invasion of Serbia.

ITALY.

Feb. 2—Reservists in England warned to be ready to respond to call.

Feb. 7—Russia plans to send to Italy many Austrian prisoners of Italian nationality.

Feb. 8—Soldiers of Second Category are to remain under colors until May; meeting in Padua is held in favor of joining the war and of dissolving the Triple Alliance.

Feb. 9—Federation of the Italian Press condemns pro-German propaganda; Garibaldi visits Joffe.

Feb. 10—Garibaldi, in London, says that popular feeling in Italy is against Germans and Austrians.

Feb. 20—One million men are under arms; Premier Salandra avoids war debate in Parliament; volunteers await arrival of Garibaldi to head expedition to aid Allies.

Feb. 23—It is planned to call more men to the colors.

Feb. 27—Premier Salandra, addressing Chamber of Deputies, says the nation does not desire war but is ready to make any sacrifice to realize her aspirations.

RUMANIA.

Feb. 19—There is much uneasiness throughout the nation as Parliament reopens after a recess.

Feb. 20—Russian Minister to Rumania reports to the Russian Foreign Minister that, as far as he can gather, Rumania intends to continue her policy of armed neutrality and that Russia should not rely upon Rumanian co-operation.

Feb. 23—The nation is alarmed by the revival of the traditional Russian policy of obtaining command of Constantinople and the straits; Rumania stands for the internationalization of Constantinople, the Bosphorus, and the Dardanelles, free passage of the Dardanelles being held vital for her existence.

RUSSIA.

Feb. 2—Six German subjects and two Russians are sentenced to prison for collecting funds for German Navy; Government issues statement giving instances of alleged German cruelties to Russians in Germany after declaration of war.

Feb. 3—Girl who fought in nineteen battles is awarded the St. George's Cross.

Feb. 4—It is stated that regimental chaplains sometimes lead men in charges after the officers are killed or wounded.

Feb. 9—Lvov (Lemberg) to be recognized as Russian; Sir Edward Grey may send British commercial attaché there; Duma opens; Foreign Minister Sazonov assails Germany and declares that her intrigues caused the war.

Feb. 10—Resolution is unanimously adopted by the Duma declaring that the Russian Nation is determined to carry on the war until such conditions have been imposed on the enemy as will insure the peace of Europe; Prof. Paul N. Milukoff, speaking in the Duma in behalf of the Constitutional Democrats, says that the principal task is the acquisition of Constantinople and the straits.

Feb. 13—Duma adopts resolutions asking war relief for provinces suffering from the war and an inquiry by commission into enemies' alleged violations of international law; the session is suspended until not later than the middle of December.

Feb. 20—It is planned to put war prisoners to work.

Feb. 24—Russian Ambassador at Washington presents to United States Government a "mémoire" dealing with atrocities and violations of the laws and usages of war alleged to have been committed by German and Austro-Hungarian armies along the Polish and East Prussian frontiers; the communication is also delivered to other neutral Governments, and it is planned to bring it before all the Red Cross societies of the world.

Feb. 26—Consul in London says men living abroad will be held liable for military service.

SERBIA.

Feb. 15—Prince Alexine Karageorgevitch of Serbia arrives in London with photographs in support of charges of atrocities alleged to have been committed against Serbian women and children by Austrians during the Austrian occupation.

TURKEY.

Feb. 1—There is widespread suffering in Palestine and Syria.

Feb. 3—Abdul Hamid advises peace.

Feb. 6—Archives of the Porte are moved to Asia Minor; Field Marshal von der Goltz's rule is stated to be absolute; it is reported that able-bodied men are exempted from service on payment of money.

Feb. 13—The Russians hold a total of 49,000 Turkish prisoners of war, according to estimates from Petrograd; a strict mail censorship prevails in Syria.

Feb. 15—Officers who conspired to stop the war are court-martialed.

Feb. 16—French Vice Consul at Sana is freed from detention.

Feb. 20—Jerusalem authorities are ordered to guard non-Moslems as a result of intervention of United States Ambassador Morgenthau.

Feb. 21—More reserves are called out; bitterness toward Germans is being expressed in Syria.

Feb. 27—At a Cabinet Council in Constantinople it was decided to transfer the seat of Government to Broussa in Asia Minor.

UNITED STATES.

Feb. 2—Werner Horn, a German, tries to blow up the Canadian Pacific Railroad bridge over the St. Croix River between Vanceboro, Me., and New Brunswick; attempt is a failure, bridge being only slightly damaged; he is arrested in Maine; Canada asks for his extradition.

Feb. 5—Horn sentenced to jail for thirty days on the technical charge of injuring property, several windows in Vanceboro having been broken by the explosion.

Feb. 24—R. P. Stegler, a German naval reservist, confesses to Federal authorities in New York, when arrested, details of alleged passport frauds by which German spies travel as American citizens, and charges that Capt. Boy-Ed, German Naval Attaché at Washington, is involved; Federal Grand Jury in Boston begins inquiry to determine whether Horn violated law regulating interstate transportation of explosives.

Feb. 25—Capt. Boy-Ed denies the truth of statements made by Stegler involving him; Stegler is held for alleged obtaining of a United States passport by fraud; two other men under arrest.

Feb. 28—German Embassy at Washington issues a statement characterizing Stegler's allegations about Capt. Boy-Ed as "false and fantastic," and "of a pathological character," and hinting at attempted blackmail.

RELIEF WORK.

Feb. 2—It is planned to send a Belgian relief ship with supplies donated wholly by the people of New York State; France facilitates entry of tobacco sent by Americans as gift to French soldiers; organization is formed in New York called the War Relief Clearing House for France and Her Allies to systematize shipment of supplies.

Feb. 3—Russia permits supplies to be sent to captives, but Russian military authorities will do the distributing.

Feb. 4—Steamer Aymeric sails with cargo of food from twelve States for Belgium.

Feb. 5—Russia refuses to permit relief expeditions to minister to German and Austrian prisoners in Siberia; the United States asks that an American doctor be permitted to accompany Red Cross supplies to observe their distribution; American Commission for Relief in Belgium is sending food to some towns and villages of Northern France in hands of the Germans, where the commission's representatives have found distressing conditions.

Feb. 7—New York women plan to equip a lying-in hospital for destitute mothers of Belgium.

Feb. 10—Steamer Great City sails with supplies for the Belgians estimated to be worth \$530,000, this being the most valuable cargo yet shipped; the shipment represents gifts from every State, 50,000 persons having contributed; Rockefeller Foundation is negotiating in Rumania for grain for people of Poland.

Feb. 12—American Girls' Aid Society sends apparel to France sufficient to clothe 20,000 persons.

Feb. 13—Otto H. Kahn lends his London residence for the use of soldiers and sailors who have been made blind during the war.

Feb. 14—Rockefeller Foundation reports that the situation in Belgium is without a parallel in history; Commission for Relief announces that it is possible to send money direct from United States to persons in Belgium.

Feb. 16—Queen Mary sends letter of thanks for gifts to the British-American War Relief Committee; American Red Cross sends a large consignment of supplies to Russia and Poland.

Feb. 19—London Times Fund for the sick and wounded passes the \$5,000,000 mark, thought in London to be a record for a popular fund; steamer Batiscau sails with donations from thirty States; Red Cross ships seventeen automobile ambulances for various belligerents donated by students of Yale and Harvard.

Feb. 22—Sienkiewicz and Paderewski appeal through Paris newspapers for help for Poland.

Feb. 23—Rockefeller Foundation's report to Industrial Commission shows an expenditure of \$1,000,000 on war relief up to Jan. 1; food, not clothes, is Belgium's need, so the Commission for Relief in Belgium announces from London office.

Feb. 24—Plans are made for American children to send a ship to be known as the "Easter Argosy—a Ship of Life and Love" with a cargo for the children of Belgium.

Feb. 25—Queen Alexandra thanks British-American War Relief Committee.

Feb. 26—The American Belgian Relief Fund is now \$946,000.

Feb. 27—Doctors and nurses sail to open the French Hospital of New York in France.

THE GREAT SEA FIGHT.

By J. ROBERT FOSTER.

IN my watch on deck at the turn of the night

I saw the spindrift rise,
And I saw by the thin moon's waning light
The shine of dead men's eyes.

They rose from the wave in armor bright,
The men who never knew fear;
They rose with their swords to their hips
strapped tight,

And stripped to their fighting gear.

I hauled below, but to and fro

I saw the dead men glide,
With never a plank their bones to tow,
As the slippery seas they ride.
While the bale-star burned where the mists
swayed low

They clasped each hand to hand,
And swore an oath by the winds that blow—
They swore by the sea and land.

They swore to fight till the Judgment Day,

Each night ere the cock should crow,
Where the thunders boom and the lightnings
play

In the wrack of the battle-glow.
They swore by Drake and Plymouth Bay,

The men of the Good Hope's crew,
By the bones that lay in fierce Biscay,
And they swore by Cradock, too—

That every night, ere the dawn flamed red,

For each man there should be twain
Upon the ships that make their bed
Where England rules the Main.
They pledged—and the ghost of Nelson led—
When the last ship's gunner fell,
They would man the guns—these men long
dead—

And ram the charges well.

So we'll choose the night for the Great Sea
Fight

Nor ever give chase by day,
Our compeers rise in the white moonlight,
In the wash of the flying spray;
And if we fall in the battle-blight,
The shade of a man long dead
Fights on till dawn on the sea burns bright
And Victory, overhead!

COMMANDER THIERICHENS

The New York Times

CURRENT HISTORY

A MONTHLY MAGAZINE

THE EUROPEAN WAR

MAY, 1915

General Sir John French's Own Story

The Costly Victory of Neuve Chapelle

LONDON, April 14.—Field Marshal Sir John French, commander of the British expeditionary forces on the Continent, reports the British losses in the three days' fighting at Neuve Chapelle last month, as follows: Killed, 190 officers, 2,337 men; wounded, 359 officers, 8,174 other ranks; missing, 23 officers, 1,728 men; total casualties, 12,811. The report continues:

The enemy left several thousand dead on the field, and we have positive information that upward of 12,000 wounded were removed by trains. Thirty officers and 1,657 of other ranks were captured.

The British commander's dispatch concerning the battle is long, and says, among other things:

Considerable delay occurred after the capture of Neuve Chapelle, and the infantry was greatly disorganized. I am of the opinion that this delay would not have occurred had the clearly expressed order of the general officer commanding the First Army been more carefully observed.

Field Marshal Sir John French's report, which covers the battles of Neuve Chapelle and St. Eloi under date of

April 5, was published in the official Gazette today. The Commander in Chief writes:

The event of chief interest and importance which has taken place is the victory achieved over the enemy in the battle of Neuve Chapelle, which was fought on March 10, 11, and 12.

The main attack was delivered by the troops of the First Army under command of General Sir Douglas Haig, supported by a large force of heavy artillery, a division of cavalry, and some infantry of the General Reserve. Secondary and holding attacks and demonstrations were made along the front of the Second Army, under direction of its commander, Sir Horace Smith-Dorrien.

While the success attained was due to the magnificent bearing and indomitable courage displayed by the troops of the Fourth and Indian Corps, I consider that the able and skillful dispositions which were made by the general officer commanding the First Army contributed largely to the defeat of the enemy and to the capture of his position. The energy and vigor with which General Sir Douglas Haig handled his command show him

to be a leader of great ability and power.

Another action of considerable importance was brought about by a surprise attack made by the Germans on March 14 against the Twenty-seventh Division holding the trenches east of St. Eloi. A large force of artillery was concentrated in this area under the cover of a mist and a heavy volume of fire was suddenly brought to bear on the trenches.

At 5 o'clock in the afternoon this artillery attack was accompanied by two mine explosions, and in the confusion caused by these and by the suddenness of the attack the position of St. Eloi was captured and held for some hours by the enemy.

Well-directed and vigorous counter-attacks, in which the troops of the Fifth Army Corps showed great bravery and determination, restored the situation by the evening of the 15th.

The dispatch describes further operations, saying:

On Feb. 6 a brilliant action by the troops of the First Corps materially improved our position in the area south of La Bassée Canal. During the previous night parties of the Irish Guards and the Third Battalion of the Coldstream Guards had succeeded in gaining ground from which a converging fire could be directed on the flanks and rear of certain brick stacks occupied by the Germans, which had been for some time a source of considerable annoyance. At 2 P. M. the affair commenced with a severe bombardment of the brick stacks and the enemy's trenches.

A brisk attack by the Third Battalion of the Coldstream Guards and Irish Guards from our trenches west of the brick stacks followed and was supported by the fire from the flanking position which had been seized the previous night by the same regiments.

The attack succeeded, the brick stacks were occupied without difficulty, and a line was established north and south through a point about forty yards east of the brick stacks.

The casualties suffered by the Fifth Corps throughout the period under re-

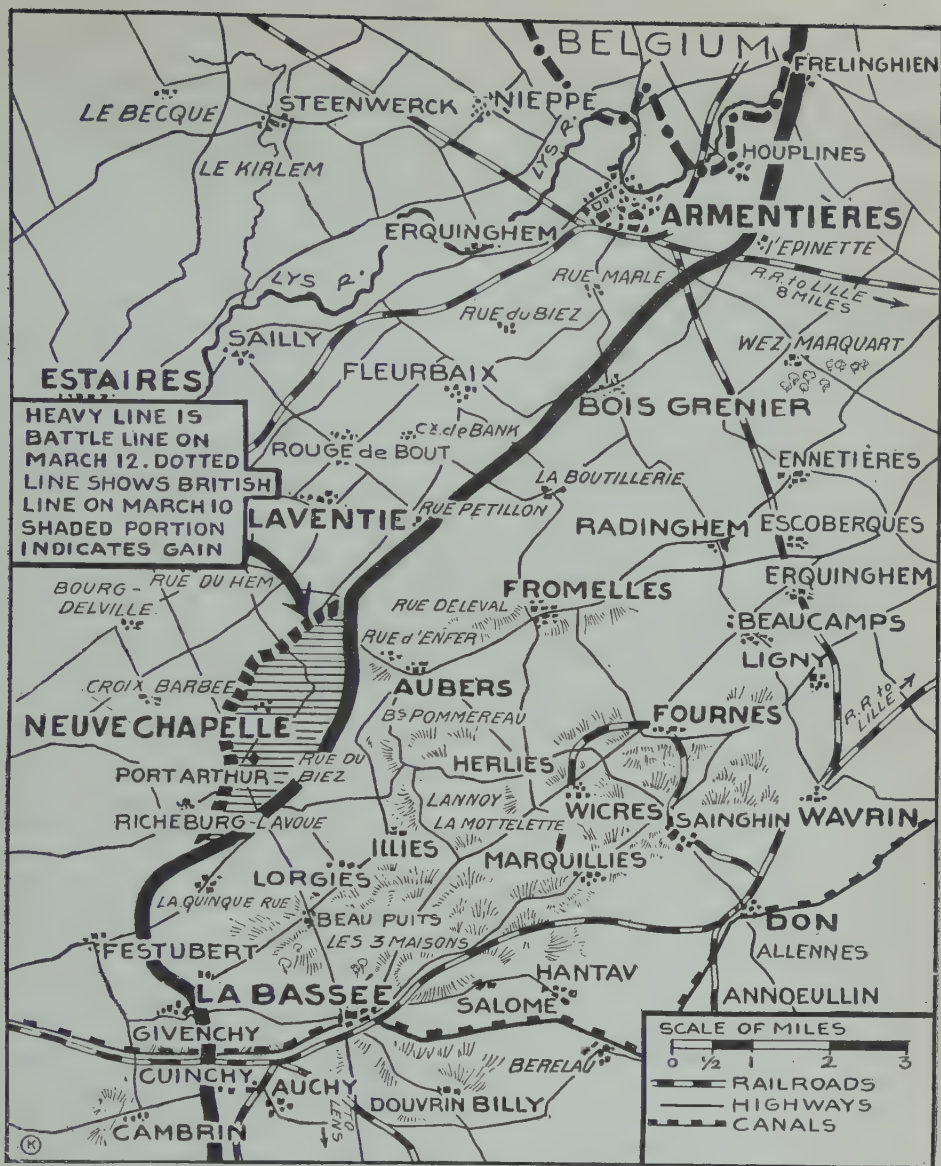

view, and particularly during the month of February, have been heavier than those on other parts of the line. I regret this, but do not think, taking all circumstances into consideration, that they were unduly numerous. The position then occupied by the Fifth Corps had always been a very vulnerable part of our line. The ground was marshy, and trenches were most difficult to construct and maintain. The Twenty-seventh and Twenty-eighth Divisions of the Fifth Corps had no previous experience in European warfare, and a number of the units composing the corps had only recently returned from service in tropical climates. In consequence, the hardships of a rigorous Winter campaign fell with greater weight upon these divisions than upon any other in the command.

Chiefly owing to these causes the Fifth Corps, up to the beginning of March, was constantly engaged in counter-attacks to retake trenches and ground which had been lost. In their difficult and arduous task, however, the troops displayed the utmost gallantry and devotion, and it is most creditable to the skill and energy of their leaders that I am able to report how well they have surmounted all their difficulties and that the ground first taken over by them is still intact and held with little greater loss than is incurred by the troops in all other parts of the line.

Describing an attack on the German trenches near St. Eloi on Feb. 28 by Princess Patricia's Regiment, of the Canadian contingent, under command of Lieut. C. E. Crabbe, the Commander in Chief says:

The services performed by this distinguished corps have continued to be very valuable since I had occasion to refer to them in my last dispatch. They have been most ably organized and trained and were commanded by Lieut. Colonel F. D. Farquhar, D. S. O., who I deeply regret to say was killed while superintending some trench work on March 20. His loss will be deeply felt.

Emphasizing the co-operation of the British and French forces and the new

Map showing the field of the Battle of Neuve Chapelle and its position in the Allied line.

rôle in warfare assumed by the cavalry, the Commander in Chief writes:

During the month of February I arranged with General Foch to render the Ninth French Corps, holding the trenches to my left, some much-needed rest by sending the three divisions of the British Cavalry Corps to hold a portion of the French trenches, each division for a period of ten days alternately.

It was very gratifying to me to note once again in this campaign the eager readiness which the cavalry displayed to undertake a rôle which does not properly belong to them in order to support and assist their French comrades. In carrying out this work the leader, officers, and men displayed the same skill and energy which I have had reason to comment upon in former dispatches.

Referring to Neuve Chapelle and the considerations leading up to this, the Field Marshal says:

About the end of February many vital considerations induced me to believe that a vigorous offensive movement by the troops under my command should be planned and carried out at the earliest possible moment. Among the more important reasons which convinced me of this necessity were the general aspect of the allied situation throughout Europe, and particularly the marked success of the Russian Army in repelling the violent onslaughts of Marshal von Hindenburg; the apparent weakening of the enemy on my front, and the necessity for assisting our Russian allies to the utmost by holding as many hostile troops as possible in the western theatre; the efforts to this end which were being made by the French forces at Arras and in Champagne, and—perhaps the most weighty consideration of all—the need of fostering the offensive spirit in the troops under my command after the trying and possibly enervating experiences which they had gone through of a severe Winter in the trenches.

In a former dispatch I commented upon the difficulties and drawbacks which the Winter weather in this climate imposes upon a vigorous offensive. Early in March these difficulties became greatly lessened by the drying up of the country and by spells of brighter weather.

I do not propose in this dispatch to enter at length into the considerations which actuated me in deciding upon the plan, time, and place of my attack. As mentioned above, the main attack was carried out by units of the First Army, supported by troops of the Second Army and the general reserve. The object of the main attack was to be the capture of the village of Neuve Chapelle and the enemy's position at that point, and the establishment of our line as far forward as possible to the east of that place.

The object, nature, and scope of the attack and the instructions for the conduct of the operations were communi-

cated by me to Sir Douglas Haig in a secret memorandum, dated Feb. 19.

After describing the main topographical features of the battlefield and showing how the Germans had established a strong post with numerous machine guns among the big houses, behind walls and in orchards which flanked the approaches to the village, Sir John proceeds:

The battle opened at 7:30 o'clock the morning of the 10th of March by a powerful bombardment of the enemy's position in Neuve Chapelle. The artillery bombardment had been well prepared and was most effective, except on the extreme northern portion of the front of attack.

At 8:05 o'clock the Twenty-third and Twenty-fifth Brigades of the Eighth Division assaulted the German trenches on the northwest of the village. At the same hour the Garhwal Brigade of the Meerut (British India) Division, which occupied a position to the south of Neuve Chapelle, assaulted the German trenches in its front. The Garhwal Brigade and the Twenty-fifth Brigade carried the enemy's lines of intrenchment, where the wire entanglements had been almost entirely swept away by our shrapnel fire.

The Twenty-third Brigade, however, on the northeast, was held up by wire entanglements which were not sufficiently cut. At 8:05 o'clock the artillery was turned on Neuve Chapelle, and at 8:35 o'clock the advance of the infantry was continued. The Twenty-fifth and the Garhwal Brigades pushed on eastward and northeastward, respectively, and succeeded in getting a foothold in the village. The Twenty-third Brigade was still held up in front of the enemy's wire entanglements, and could not progress. Heavy losses were suffered, especially in the Middlesex Regiment and the Scottish Rifles.

The progress, however, of the Twenty-fifth Brigade into Neuve Chapelle immediately to the south of the Twenty-third Brigade had the effect of turning the southern flank of the enemy's defenses in front of the Twenty-third Brigade. This fact, combined with powerful artillery support, enabled the Twenty-third

Brigade to get forward between 10 and 11 A. M., and by 11 o'clock the whole of the village of Neuve Chapelle and the roads leading northward and southwestward from the eastern end of that village were in our hands.

During this time our artillery completely cut off the village and surrounding country from any German reinforcements which could be thrown into the fight to restore the situation, by means of a curtain of shrapnel fire. Prisoners subsequently reported that all attempts at reinforcing the front line were checked. Steps were at once taken to consolidate the positions won.

Considerable delay occurred after the capture of the Neuve Chapelle position. The infantry was greatly disorganized by the violent nature of the attack and by its passage through the enemy's trenches and the buildings of the village. It was necessary to get the units to some extent together before pushing on. The telephonic communication being cut by the enemy's fire rendered communication between the front and the rear most difficult. The fact of the left of the Twenty-third Brigade having been held up had kept back the Eighth Division and had involved a portion of the Twenty-fifth Brigade in fighting to the north, out of its proper direction of advance. All this required adjustment. An orchard held by the enemy north of Neuve Chapelle also threatened the flank of an advance toward the Aubers Bridge.

I am of the opinion that this delay would not have occurred had the clearly expressed order of the general officer commanding the First Army been carefully observed.

The difficulties above enumerated might have been overcome earlier in the day if the general officer commanding the Fourth Corps had been able to bring his reserve brigades more speedily into action. As it was, a further advance did not commence before 3:30 o'clock. The Twenty-first Brigade was able to form up in the open on the left without a shot being fired at it, thus showing that, at the time, the enemy's resistance had been paralyzed.

The brigade pushed forward in the direction of Moulin-du-Pietre. At first it made good progress, but was subsequently held up by machine gun fire from houses and from a defended work in the line of the German intrenchments opposite the right of the Twenty-second Brigade.

Further to the south the Twenty-fourth Brigade, which had been directed on Pietre, was similarly held up by machine guns in houses and trenches. At the road junction, 600 yards to the northwest of Pietre, the Twenty-fifth Brigade, on the right of the Twenty-fourth, was also held up by machine guns from a bridge held by the Germans over the River Les Layes, which is situated to the northwest of the Bois du Biez.

While two brigades of the Meerut Division were establishing themselves on a new line the Dehra Dun Brigade, supported by the Jullunder Brigade of the Lahore Division, moved to the attack of the Bois du Biez, but were held up on the line of the River Les Layes by a German post at the bridge, which enfiladed them and brought them to a standstill.

The defended bridge over the Les Layes and its neighborhood immediately assumed considerable importance. While the artillery fire was brought to bear, as far as circumstances would permit, on this point, General Sir Douglas Haig directed the First Corps to dispatch one or more battalions of the First Brigade in support of the troops attacking the bridge. Three battalions were thus sent to Richebourg St. Vaast.

Darkness coming on and the enemy having brought up reinforcements, no further progress could be made, and the Indian Corps and the Fourth Corps proceeded to consolidate the position they had gained.

While the operations, which I have thus briefly reported, were going on, the First Corps, in accordance with orders, delivered an attack in the morning from Givenchy simultaneously with that against Neuve Chapelle, but as the enemy's wire was insufficiently cut very little progress could be made, and the

troops at this point did little more than hold fast to the Germans in front of them.

On the following day, March 11, the attack was renewed by the Fourth and Indian Corps, but it was soon seen that further advance would be impossible until the artillery had dealt effectively with the various houses and defended localities which had held the troops up along the entire front.

Efforts were made to direct the artillery fire accordingly, but, owing to the weather conditions, which did not permit of aerial observations, and the fact that nearly all the telephone communications between the artillery observers and their batteries had been cut, it was impossible to do so with sufficient accuracy. When our troops, who were pressing forward, occupied a house there, it was not possible to stop our artillery fire, and the infantry had to be withdrawn.

As most of the objects for which the operations had been undertaken had been attained, and as there were reasons why I considered it inadvisable to continue the attack at that time, I directed General Sir Douglas Haig on the night of the 12th to hold and consolidate the ground which had been gained by the Fourth and Indian Corps, and suspend further offensive operations for the present.

The losses during these three days' fighting were, I regret to say, very severe, numbering 190 officers and 2,337

of other ranks killed, 359 officers and 8,174 of other ranks wounded, and 23 officers and 1,720 of other ranks missing. But the results attained were, in my opinion, wide and far-reaching.

Referring to the severity of the casualties in action, the Commander in Chief writes:

I can well understand how deeply these casualties are felt by the nation at large, but each daily report shows clearly that they are endured on at least an equal scale by all the combatants engaged throughout Europe, friends and foe alike.

In war as it is today, between civilized nations armed to the teeth with the present deadly rifle and machine gun, heavy casualties are absolutely unavoidable. For the slightest undue exposure the heaviest toll is exacted. The power of defense conferred by modern weapons is the main cause for the long duration of the battles of the present day, and it is this fact which mainly accounts for such loss and waste of life. Both one and the other can, however, be shortened and lessened if attacks can be supported by a most efficient and powerful force of artillery available; but an almost unlimited supply of ammunition is necessary, and a most liberal discretionary power as to its use must be given to artillery commanders. I am confident that this is the only means by which great results can be obtained with a minimum of loss.

ROBERTS OF KANDAHAR.

SIDNEY LOW, in The London Times.

THROUGH the long years of peril and of
strife,
He faced Death oft, and Death forbore
to slay,
Reserving for its sacrificial Day,
The garnered treasure of his full-crowned life;
So saved him till the furrowed soil was rife,
With the rich tillage of our noblest dead;
Then reaped the offering of his honored head,
In that red field of harvest, where he died,
With the embattled legions at his side.

The Surrender of Przemyśl

How Galicia's Strong Fortress Yielded to the Russian Siege

The Austrian fortress of Przemyśl fell on March 22, 1915, after an investment and siege which lasted, with one short interruption, for nearly four months. This important event was celebrated by a Te Deum of thanksgiving in the presence of the Czar and the General Staff. The importance to the Russians of the capitulation of Przemyśl is suggested by the fact that about 120,000 prisoners were reported taken when the Austrians yielded. Until this was effected the Russians could not venture upon a serious invasion of Hungary, and the investing troops who were then freed were more numerous than the defenders.

[By the Correspondent of The London Times.]

PETROGRAD, March 22.

THE Minister of War has informed me that he has just received a telegram from the Grand Duke Nicholas announcing the fall of Przemyśl.

The fall of Przemyśl marks the most important event of the Russian campaign this year. It finally and irrevocably consolidates the position of the Russians in Galicia. The Austro-German armies are deprived of the incentive hitherto held out to them of relieving the isolated remnant of their former dominion. The besieging army will be freed for other purposes. From information previously published the garrison aggregated about 25,000 men, hence the investing forces, which must always be at least four times as great as the garrison, represent not less than 100,000 men. From all the information lately received from both Russian and neutral sources, the position of the Austro-German armies in the Carpathians has become distinctly critical. The reinforcements for the gallant troops of General Brusiloff, General Radko Dmitrieff, and other commanders are bound to exercise an enormous influence on the future course of the campaign in the Carpathians.

All honor and credit are given by the Russians to the garrison of Przemyśl and General Kusmanek. Russian officers ever had the highest opinion of the personality of the commandant. I heard from those who fought under General Radko Dmitrieff in the early stages of the Galician campaign that when our troops,

after sweeping away the resistance at Lwow and Jaroslau, loudly knocked at the doors of the fortress of Przemyśl, they met with a stern rebuff. In reply to the summons of the Russians to surrender the keys the commandant wrote a curt and dignified note remarking that he considered it beyond his own dignity or the dignity of the Russian General to discuss the surrender of the fortress before it had exhausted all its powers of resistance. During the second invasion of Poland by the Austro-German armies the enemy's lines swept up to and just beyond Przemyśl, interrupting the investment of the fortress. The wave of the Austrian invasion began to subside at the end of the first week in November. Only then could we begin the siege of the mighty fortress, which proved successful after the lapse of four months.

The first Russian attempt to storm Przemyśl without previous bombardment, which followed immediately upon the commandant's refusal to surrender, resulted in very great loss of life to no purpose. Thereafter it was decided to abstain from further attempts to take the fortress until our siege guns could be placed and a preliminary bombardment could sufficiently facilitate the task of the besiegers. Meanwhile, although the fortress and town were duly invested, our lines were somewhat remote from the outlying forts, and the peasants of adjacent villages were, it is said, able to pass freely to and from the town of Przemyśl—a fact which would enable the inhabitants to obtain supplies. From all ac-

counts neither the garrison nor the inhabitants were reduced to very great straits for food. The announcement made at the time of the first investment of the fortress that provisions and supplies would easily last till May was, however, obviously exaggerated.

I understand that heavy siege guns were ready to be conveyed to Przemyśl at the end of January, but that the Russian military authorities decided to postpone their departure in view of the determined attempts made by the Austro-German forces to pierce the Russian lines in the Carpathians in order to relieve the fortress, which, if successful, might have endangered the safety of the siege material. Owing to this fact the bombardment of Przemyśl began only about a fortnight ago, when the Austro-German offensive had so far weakened as to satisfy the Russian authorities that there was no further danger from this quarter.

The concluding stages of the siege have been related in the dispatches from the Field Headquarters during the past week. The capture of the dominating heights in the eastern sector followed close upon the first bombardment. The final desperate sortie led by General Kusmanek at the head of the Twenty-third Division of the Honved precipitated the end. The demnants of the garrison were unable to man the works extending to a thirty-mile periphery.

The loss of the western approaches left General Kusmanek no alternative but to surrender. He had exhausted his ammunition and used up his effectives. His messages for help were either intercepted or unanswered. The assailants broke down the last resistance. The most important strategical point in the whole of Galicia is now in Russian hands.

TE DEUM AT HEADQUARTERS. PETROGRAD, March 22.

The following official communiqué was issued from the Main Headquarters this morning:

The fortress of Przemyśl has surrendered to our troops.

At the Headquarters of the Com-

mander in Chief a Te Deum of thanksgiving was celebrated in the presence of the Czar, the Grand Duke Nicholas, Commander in Chief, and all the staff.

The following communiqué from the Great Headquarters is issued here to-day:

Northern Front.—From the Niemen to the Vistula and on the left bank of the latter river there has been no important change. Our troops advancing from Taugoggen captured, after a struggle, Laugszargen, (near the frontier of East Prussia,) where they took prisoners and seized an ammunition depot and engineers' stores.

The Carpathians.—There has been furious fighting on the roads to Bartfeld (in Hungary) in the valleys of the Ondawa and Laborcz.

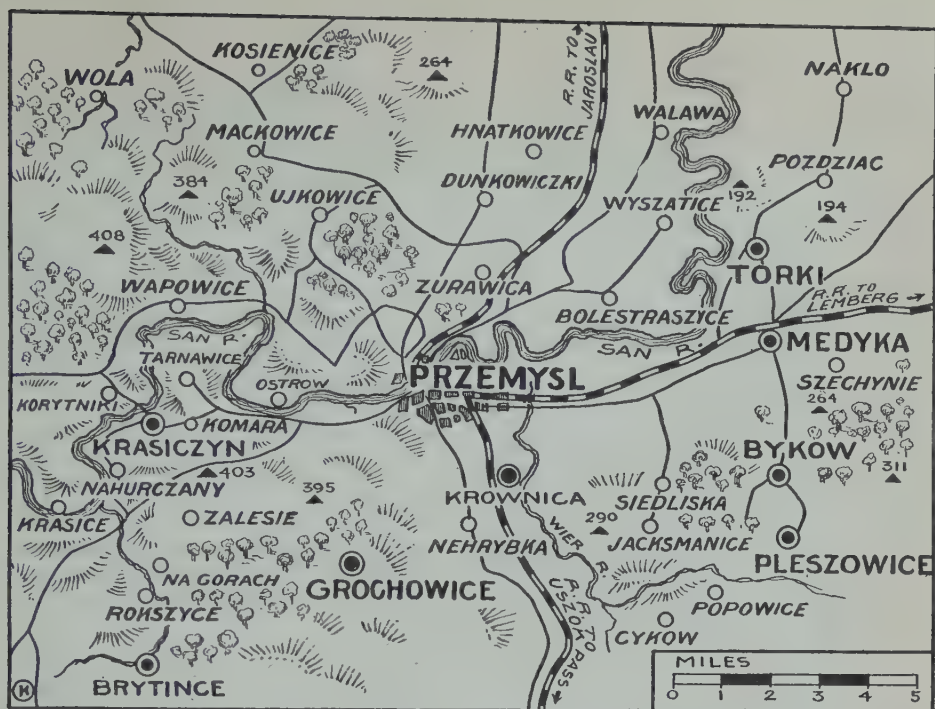

Near the Lupkow Pass and on the left bank of the Upper San our troops have advanced successfully, forcing the way with rifle fire and with the bayonet. In the course of the day we took 2,500 prisoners, including fifty officers and four machine guns.

In the direction of Munkacz the Germans, in close formation, attacked our positions at Rossokhatch, Oravtchik, and Kosziowa, but were everywhere driven back by our fire and by our counterattacks with severe losses. In Galicia there has been a snowstorm.

Przemyśl.—On the night of the 21st there was a fierce artillery fire round Przemyśl. Portions of the garrison who once more tried to effect a sortie toward the northeast toward Oikowic were driven back within the circle of forts with heavy losses.

Note.—This portion of the communiqué was evidently drafted before the fall of Przemyśl took place, and the communiqué proceeds:

In recognition of the joyous event of the fall of Przemyśl the Czar has conferred upon the Grand Duke Nicholas the Second Class of the Order of St. George and the Third Class of the same order on General Ivanoff, the commander of the besieging army.

COLLECTING THE ARMS.

By Hamilton Fyfe, Correspondent of The London Daily Mail.

PETROGRAD, March 23.

Advance detachments of Russian troops entered Przemysl last night. The business of collecting the arms in proceeding. I believe the officers will be allowed to keep their swords.

Great surprise has been caused here by a statement that the number of troops captured exceeds three army corps. Possibly on account of the snow-storm no further telegram has been received from the Grand Duke Nicholas, and no details of the fall of the garrison have yet been officially announced. I have, however, received the definite assurance of a very high authority that the force which has surrendered includes nine Generals, over 2,000 officers, and 130,000 men. In spite of the authority of my informant, I am still inclined to await confirmation of these figures.

The leading military organ, the Russki Invalid, says that the garrison was known

to number 60,000 men and that it had been swelled to some extent by the additional forces drafted in before the investment began. The Retch estimates the total at 80,000, and a semi-official announcement also places the strength of the garrison at that figure, excluding artillery and also the men belonging to the auxiliary and technical services.

There is an equal difference of opinion regarding the number of guns taken. The estimates vary from 1,000 to 2,000. What is known for certain is that the fortress contained 600 big guns of the newest type and a number of small, older pieces.

The characteristic spirit in which Russia is waging war is shown by the service of thanksgiving to God which was held immediately the news of the fall of the fortress reached the Grand Duke's headquarters. The Czar was there to join with the staff in offering humble gratitude to the Almighty for the great victory accorded to the Russian arms.

The first crowds which gathered here yesterday to rejoice over the great news

moved with one consent to the Kazan Cathedral, where they sang the national hymn and crossed themselves reverently before the holy, wonder-working picture of Kazan, the Mother of God. In spite of the heaviest snowstorm of the Winter, which made the streets impassable and stopped the tramway cars, the Nevski Prospekt rang all the afternoon and evening with the sound of voices raised in patriotic song.

Przemysl is admitted to be the first spectacular success of the war on the side of the Allies. It is not surprising that the nation is proud and delighted, yet so generous is the Russian mind that there mingle with its triumph admiration and sympathy for the garrison which was compelled to surrender after a long, brave resistance. Popular imagination has been thrilled by the story of the last desperate sortie, which will take a high place in the history of modern war.

When toward the end of the week the hope of relief, which had so long buoyed up the defenders, was with heavy, resolved hearts abandoned, General Kousmanek resolved to try to save at all events some portion of his best troops by sending them to fight a way out. From the ranks, thinned terribly by casualties and also by typhus and other diseases caused through hunger and the unhealthy state of the town, he selected 20,000 men and served out to them five days' reduced rations, which were all he had left. He also supplied them with new boots in order to give them as good a chance as possible to join their comrades in the Carpathians, whose summits could be seen from Przemysl in the shining, warm Spring sunshine.

It was a hopeless enterprise, pitifully futile. It is true that the Austrian armies sent to relieve the city were only a few days' march distant, but even if the 20,000 had cut a way through the investing force they would have found another Russian army between them and their fellow-countrymen. General Kousmanek, before they started, addressed them. In a rousing speech he said:

Soldiers, for nearly half a year, in spite of cold and hunger, you have defended

the fortress intrusted to you. The eyes of the world are fixed on you. Millions at home are waiting with painful eagerness to hear the news of your success. The honor of the army and our fatherland requires us to make a superhuman effort. Around us lies the iron ring of the enemy. Burst a way through it and join your comrades who have been fighting so bravely for you and are now so near.

I have given you the last of our supplies of food. I charge you to go forward and sweep the foe aside. After our many gallant and glorious fights we must not fall into the hands of the Russians like sheep; we must and will break through.

In case this appeal to the men's fighting spirit were ineffective threats were also used to the troops, who were warned by their officers that any who returned to the fortress would be treated as cowards and traitors. After the General's speech the men were told to rest for a few hours. At 4 in the morning they paraded and at 5 the battle began. For nine hours the Austrians hurled themselves against the iron ring, until early in the afternoon, when, broken and battered, the remains of the twenty thousand began to straggle back to the town. Exhausted and disheartened, the garrison was incapable of further effort.

In order to prevent useless slaughter General Kousmanek sent officers with a flag of truce to inquire about the terms of surrender. These were arranged very quickly.

In spite of the local value of the victory, and the vastness of the captures of material as well as of men, it must not be thought, as many are inclined to think here, that the *Novoe Vremya* exaggerates dangerously when it compares the effect likely to be produced with that of the fall of Metz and Port Arthur.

It certainly brings the end of the Austrians' participation in the war more clearly in sight. But the Austrians will fight for some time yet. What it actually does is to free a large Russian force for the operations against Cracow or to assist in the invasion of Hungary.

What is the strength of this force it would be imprudent to divulge, but I can say that it certainly amounts to not less

than an "army," (anything from 80,000 to 200,000 men.) Those who are anxious to arrive at a closer figure can calculate by the fact that the Russians had a forty-mile front around Przemyśl which was strong enough to repulse attacks at all points. Another very useful consequence is that all the Galician railway system is now in Russian hands. It makes the transport of troops much easier.

One further reflection was suggested to me last night by a very distinguished and influential Russian soldier, holding office under the Government. "The method which prevailed at Przemyśl was as follows: Instead of rushing against the place and losing heavily, we waited and husbanded our forces until the garrison was unable to hold out any longer. That is the method adopted by the Allies. It must in the course of time force Germany to surrender also.

"Up to now we have held our own against her furious sorties. Soon we shall begin to draw more closely our investing lines. Only one end was possible to Przemyśl. The fate of Germany is equally sure."

Now all eyes are fixed on the Dardanelles. The phrase on every lip is: "When the fall of Constantinople follows, then Prussia must begin to see that the case is hopeless." But we must not deceive ourselves, for even when her allies are defeated Prussia will still be hard to beat. Przemyśl must not cause us to slacken our effort in any direction or in the slightest degree.

WHAT THE RUSSIANS FOUND

Special Cable to THE NEW YORK TIMES.

LONDON, April 3.—*The London Times* under date Przemyśl, March 30, publishes a dispatch from Stanley Washburn, its special correspondent with the Russian armies, who, by courtesy of the Russian high command, is the first foreigner to visit the great Galician fortress since its fall. He says:

Przemyśl is a story of an impregnable fortress two or three times over-garrisoned with patient, haggard soldiers starving in trenches, and sleek, faultlessly dressed officers living off the fat

of the land in fashionable hotels and restaurants.

The siege started with a total population within the lines of investment of approximately 200,000. Experts estimate that the fortress could have been held with 50,000 or 60,000 men against any forces the Russians could bring against it. It is probable that such supplies as there were were uneconomically expended, with the result that when the push came the situation was at once acute, and the suffering of all classes save the officers became general. First the cavalry and transport horses were consumed. Then everything available. Cats were sold at 8 shillings, and fair-sized dogs at a sovereign.

While the garrison became thin and half starved, the mode of life of the officers in the town remained unchanged. The Café Sieber was constantly well filled with dilettante officers who gossiped and played cards and billiards and led the life to which they were accustomed in Vienna. Apparently very few shared any of the hardships of their men or made any effort to relieve their condition. At the Hotel Royal until the last, the officers had their three meals a day, with fresh meat, cigars, cigarettes, wines, and every luxury, while, as a witness has informed me, their own orderlies and servants begged for a slice of bread.

There can be no question that ultimate surrender was due to the fact that the garrison was on the verge of starvation, while the officers' diet was merely threatened with curtailment. Witnesses state that private soldiers were seen actually to fall in the streets from lack of nourishment. The officers are reported to have retained their private thoroughbred riding horses until the day before the surrender, when 2,000 of them were killed to prevent them from falling into the hands of the Russians. A Russian officer of high rank informed me that when he entered the town hundreds of these bodies of beautiful thoroughbred horses were to be seen with half-crazed Austrian and Hungarian soldiers tearing into the bodies with their faces and hands

Map showing the scene of action between Przemysl and Cracow and the Carpathian Passes.

smear'd with red blood as they devoured the raw flesh.

The Russians were utterly amazed at the casual reception which they received. The Austrian officers showed not the slightest sign of being disconcerted or humiliated at the collapse of their fortress.

The first Russian effort was at once to relieve the condition of the garrison and civilians. Owing to the destruction of the bridge this was delayed, but soon with remarkable efficiency distribution depots were opened everywhere and the most pressing needs were somewhat relieved.

The entire conduct of the siege on the part of the garrison seems wholly without explanation. The Austrians had throughout plenty of ammunition, and they certainly grossly outnumbered the Russians; yet they made but one recent effort to break out, which occurred three days before the surrender.

Civilians inform me that they gladly welcome the Russians and that the first troops who entered were greeted with cheers, while the garrison was frankly pleased that the siege was over and their troubles at an end.

As an example of overofficering it may be stated that General Kusmanek had seventy-five officers on his staff, while General Artamonov, the acting Russian Governor, had but four on his immediate staff.

The removal of the prisoners is proceeding with great efficiency. They are going out at the rate of about 10,000 a day. The docility of the captives is indicated by the fact that the Russian guards attached to the prisoners' columns number about one for every hundred prisoners. They are all strung out for miles between the fortress and Lemberg. The prisoners are so eager to get out and to see the last of the war that they follow the instructions of their captors like children.

All the civilians as well as prisoners I have talked with are unanimous in their praise of the Russian officers and soldiers, who have shown nothing but kindness and delicacy of feeling since their entrance into the fortress. This consideration strikes me as being utterly wasted on the captured officers, who treat the situation superciliously and are quite complacent in their relations with the Russians.

THE JESTERS.

By MARION COUTHOUY SMITH.

EV'N he, the master of the songs of life,
May speak at times with less than
certain sound—

"He jests at scars who never felt a wound."
So runs his word! Yet on the verge of strife,
They jest not who have never known the
knife;

They tremble who in the waiting ranks are
found,

While those scarred deep on many a battle-
ground

Sing to the throbbing of the drum and fife.
They laugh who know the open, fearless
breast,

The thrust, the steel-point, and the spread-
ing stain;

Whose flesh is hardened to the searing test,
Whose souls are tempered to a high disdain.

Theirs is the lifted brow, the gallant jest,
The long last breath, that holds a victor-
strain.

Lord Kitchener Advertises for Recruits

This map shows the comparative distances from London of Ostend and of some English towns. London is in the exact center of the map.

If the German Army were in Manchester.

IF the German Army were in Manchester, every fit man in the country would enlist without a moment's delay.

Do you realise that the German Army is now at Ostend, only 125 miles away—or 40 miles nearer to London than is Manchester?

How much nearer must the Germans come before you do something to stop them?

The German Army must be beaten in Belgium. The time to do it is now.

Will you help? Yes? Then enlist TO-DAY.

God Save the King.

[Facsimile of an advertisement that appeared in The London Times, March 17, 1915.]

Battle of the Dardanelles

The Disaster That Befell the Allies' Fleet

AS THE TURKS SAW IT.

BERLIN, March 22, (via London, 11:33 A. M.)—The correspondent at Constantinople of the Wolff Bureau telegraphed today a description of the fighting at the Dardanelles on Thursday, March 18, in which the French battleship Bouvet and two British battleships were sent to the bottom. An abridgment of the correspondent's story follows:

The efforts of the Allies to force the Strait of the Dardanelles reached their climax in an artillery duel on Thursday, March 18, which lasted seven hours. The entire atmosphere around the Turkish forts was darkened by clouds of smoke from exploding shells and quantities of earth thrown into the air by the projectiles of the French and British warships. The earth trembled for miles around.

The Allies entered the strait at 11:30 in the morning, and shelled the town of Chank Kale. Four French and five British warships took part in the beginning. This engagement reached its climax at 1:30, when the fire of the Allies was concentrated upon Fort Hamidieh and the adjacent fortified positions.

The attack of modern marine artillery upon strong land forts presented an interesting as well as a terrifying spectacle. At times the forts were completely enveloped in smoke. At 2 o'clock the Allies changed their tactics and concentrated their fire upon individual batteries, but it was evident that they found difficulty in getting the range. Many of the shells fell short, casting up pillars of water, or went over the forts to explode in the town.

At 3:15, when the bombardment was at its hottest, the French battleship Bouvet was seen to be sinking at the stern. A moment later her bows swung clear of the water, and she was seen going down. Cheers from the Turkish garrisons and forts greeted this sight. Torpedo boats and other craft of the Allies hurried to

the rescue, but they were successful in saving only a few men. Besides having been struck by a mine, the Bouvet was severely damaged above the water line by shell fire. One projectile struck her forward deck. A mast also was shot away and hung overboard. It could be seen that the Bouvet when she sank was endeavoring to gain the mouth of the strait. This, however, was difficult, owing, apparently, to the fact that her machinery had been damaged.

Shortly after the sinking of the Bouvet a British ship was struck on the deck squarely amidship and compelled to withdraw from the fight. Then another British vessel was badly damaged, and at 3:45 was seen to retire under a terrific fire from the Turkish battery. This vessel ran in toward the shore. For a full hour the Allies tried to protect her with their guns, but it was apparent that she was destined for destruction. Eight effective hits showed the hopelessness of the situation for this vessel. She then withdrew toward the mouth of the Dardanelles, which she reached in a few minutes under a hail of shells. The forts continued firing until the Allies were out of range.

This was the first day when the warships attacking the Dardanelles kept within range of the Turkish guns for any considerable length of time. The result for them was terrible, owing to the excellent marksmanship from the Turkish batteries. The Allies fired on this day 2,000 shells without silencing one shore battery. The result has inspired the Turks with confidence, and they are looking forward to further engagements with calm assurance.

ELIMINATION OF MINES.

The London Times naval correspondent writes, in its issue of March 20:

The further attack upon the inner forts at the Dardanelles, which was resumed

by the allied squadrons on Thursday, has resulted, unfortunately, but not altogether unexpectedly, in some loss of ships and gallant lives.

The clear and candid dispatch in which the operations are described attributes the loss of the ships to floating mines, which were probably released to drift down with the current in such large numbers that the usual method of evading these machines was unavailable. This danger, it is said, will require special treatment. Presumably the area having been swept clear of anchored mines, it was not considered necessary to take other precautions than such as were concerned with the movement of the battleships themselves.

The satisfactory feature of the operations is that the ships maintained their superiority over the forts, and succeeded in silencing them after a few hours' bombardment. The sinking of the battleships occurred later in the afternoon, and it would seem at a time when a portion of the naval force was making a further advance to cover the mine-sweeping operations. There is nothing in the dispatch which indicates anything but the eventual success of the work, nor that the defenses have proved more formidable than was anticipated. The danger from floating mines may have been somewhat underestimated, but it is one that can be met and is most unlikely to form a decisive factor.

Manifestly the Turks, with their German advisers, have done their utmost to repair, by means of howitzers and field guns, the destruction of the fixed defenses; but it is not likely that any temporary expedients will prove more than troublesome to the passage of the fleet. The determination of the Allies to make a satisfactory ending of the operations is shown by the immediate dispatch of reinforcing ships, and by the fact that ample naval and military forces are available on the spot.

Every one will regret that illness has obliged Vice Admiral Carden to relinquish the chief command, but this is now in the very capable hands of Vice Admiral Roberk.

BRITISH OFFICIAL REPORT.

[From The London Times, March 20, 1915.]

After ten days of mine-sweeping inside the Dardanelles the British and French fleets made a general attack on the fortresses at the Narrows on Thursday. After about three hours' bombardment all the forts ceased firing.

Three battleships were lost in these operations by striking mines—the French Bouvet, and the Irresistible and the Ocean. The British crews were practically all saved, but nearly the whole of the men on the Bouvet perished.

The Secretary of the Admiralty issued the following statement last night:

Mine-sweeping having been in progress during the last ten days inside the strait, a general attack was delivered by the British and French fleets yesterday morning upon the fortresses at the Narrows of the Dardanelles.

At 10:45 A. M. Queen Elizabeth, Inflexible, Agamemnon, and Lord Nelson bombarded Forts J, L, T, U, and V; while Triumph and Prince George fired at Batteries F, E, and H. A heavy fire was opened on the ships from howitzers and field guns.

At 12:22 the French squadron, consisting of the Suffren, Gaulois, Charlemagne, and Bouvet, advanced up the Dardanelles to engage the forts at closer range. Forts J, U, F, and E replied strongly. Their fire was silenced by the ten battleships inside the strait, all the ships being hit several times during this part of the action.

By 1:25 P. M. all forts had ceased firing.

Vengeance, Irresistible, Albion, Ocean, Swiftsure, and Majestic then advanced to relieve the six old battleships inside the strait.

As the French squadron, which had engaged the forts in the most brilliant fashion was passing out, Bouvet was blown up by a drifting mine and sank in thirty-six fathoms north Erenkeui Village in less than three minutes.

At 2:36 P. M., the relief battleships renewed the attack on the forts, which again opened fire. The attack on the forts was maintained while the opera-

tions of the mine-sweepers continued. At 4:09 Irresistible quitted the line, listing heavily; and at 5:50 she sank, having probably struck a drifting mine. At 6:05, Ocean, also having struck a mine, both vessels sank in deep water, practically the whole of the crews having been removed safely under a hot fire.

The Gaulois was damaged by gun fire.

Inflexible had her forward control position hit by a heavy shell, and requires repair.

The bombardment of the forts and the mine-sweeping operations terminated when darkness fell. The damage to the forts effected by the prolonged direct fire of the very powerful forces employed cannot yet be estimated, and a further report will follow.

The losses of ships were caused by mines drifting with the current which were encountered in areas hitherto swept clear, and this danger will require special treatment.

The British casualties in personnel are not heavy, considering the scale of the operations; but practically the whole of the crew of the Bouvet were lost with the ship, an internal explosion having apparently supervened on the explosion of the mine.

The Queen and Implacable, which were dispatched from England to replace ships' casualties in anticipation of this operation, are due to arrive immediately, thus bringing the British fleet up to its original strength.

The operations are continuing, ample naval and military forces being available on the spot.

On the 16th inst., Vice Admiral Carden, who has been incapacitated by illness, was succeeded in the chief command by Rear Admiral John Michael de Robeck, with acting rank of Vice Admiral.

THE SCENE IN THE STRAIT.

The London Times publishes this story of an eyewitness:

TENEDOS, (Aegina,) March 18.

This is not so much an account of the five hours' heavy engagement between the Turkish forts and the allied ships which has been fought actually within the Dardenelles today as an impression

of the bombardment as seen at a distance of fifteen miles or so from the top of a high, steep hill called Mount St. Elias, at the northern end of Tenedos.

Over the ridge of Kum Kale you plainly see, like a great blue lake, the first reach of the Dardanelles up to the narrow neck between Chanak and Kilid Bahr. It was up and down in this stretch of water that the largest vessels of the allied fleet steamed today for over four hours, hurling, with sheets of orange flame from their heavy guns, a constant succession of shells on the forts that guard the Narrows at Chanak, while the Turkish batteries, with a frequency that lessened as the day went on, flashed back at them in reply, with the difference that, while the effects of the Allies' shells were continually manifest in the columns of smoke and dust that were signs of the damage they had wrought, a great number of the enemy's shots fell in the sea hundreds of yards from the bombarding ships, sending torrents of water towering harmlessly into the air.

Not that the successes of the day have been won without cost. I saw several ships, French and British, struck by shells that raised volumes of white smoke, and one of the French squadron is toiling slowly home at this moment down by the head and with a list to port, while, so far as one could make out with a glass, several boatloads of men were being taken off her.

The ships left their stations between the Turkish and Asiatic coasts and Tenedos early this morning and by 11 they were steaming in line up the Dardanelles.

It was 11:45 when the first notable hit was made by an English ship. I could see eight vessels, apparently all battle-ships, lying in line from the entrance up the strait. The ship furthest up appeared to be the Queen Elizabeth, and I think it was she that fired the shot which exploded the powder magazine at Chanak. A great balloon of white smoke sprang up in the midst of the magazine which leaped out from a fierce, red flame, and reached a great height. When the flame had disappeared the dense smoke continued to grow till it must have been a column hundreds of feet high.

In the five minutes that followed this shot three more shells from the Queen Elizabeth fell practically on the same spot, and two minutes later yet another by the side of the smoking ruins.

There were now eight battleships, all pre-dreadnoughts, left at Tenedos, and at noon six of them started off in line a-head toward the strait. The English ships already within were passing further up and went out of sight.

The bombarding ships were steaming constantly up and down, turning at each end of the stretch, which is about a couple of miles long.

A long thin veil of black smoke was drifting slowly westward from the fighting. At about 1:30 Erenkeui Village, standing high on the Asiatic side, received a couple of shells. At 1:45 a division of eight destroyers in line steamed into the entrance of the strait, and a little later the last two battleships from

Tenedos joined, the Dublin patrolling outside. An hour later the most striking effect was produced by a shell falling on a fort at Kilid Bahr, which evidently exploded another magazine. A huge mass of heavy jet-black smoke gradually rose till it towered high above the cliffs on the European and Asiatic sides. It ballooned slowly out like a gigantic genie rising from a fisherman's bottle.

By now the action was slackening, and at 3:45 five ships were slowly steaming homeward from the entrance. At 4:30 there were still eight vessels in the strait, but the forts had practically ceased to fire. The action was over for the day.

The result had been the apparent silencing of several Turkish batteries, and those terrific explosions at the forts at Chanak and Kilid Bahr, the ultimate effect of which remains to be seen when the attack is renewed tonight. For Chanak is burning.

Official Story of Two Sea Fights

[From The London Times, March 3, 1915.]

ADMIRALTY, March 3, 1915.

The following dispatch has been received from Vice Admiral Sir David Beatty, K. C. B., M. V. O., D. S. O., commanding the First Battle Cruiser Squadron, reporting the action in the North Sea on Sunday, the 24th of January, 1915:

H M. S. Princess Royal,
Feb. 2, 1915.

Sir: I have the honor to report that at daybreak on Jan. 24, 1915, the following vessels were patrolling in company:

The battle cruisers Lion, Capt. Alfred E. M. Chatfield, C. V. O., flying my flag; Princess Royal, Capt. Osmond de B. Brock, Aide de Camp; Tiger, Capt. Henry B. Pelly, M. V. O.; New Zealand, Capt. Lionel Halsey, C. M. G., Aide de Camp, flying the flag of Rear Admiral Sir Archibald Moore, K. C. B., C. V. O., and Indomitable, Capt. Francis W. Kennedy.

The light cruisers Southampton, flying the broad pennant of Commodore William E. Goodenough, M. V. O.; Nottingham, Capt. Charles B. Miller; Birmingham, Capt. Arthur A. M. Duff, and Lowestoft, Capt. Theobald W. B. Kennedy, were disposed on my port beam.

Commodore (T) Reginald Y. Tyrwhitt, C. B., in Arethusa, Aurora, Capt. Wilmot S. Nicholson; Undaunted, Capt. Francis G. St. John, M. V. O.; Arethusa and the destroyer flotillas were ahead.

At 7:25 A. M. the flash of guns was observed south-southeast. Shortly afterward a report reached me from Aurora that she was engaged with enemy's ships. I immediately altered course to south-southeast, increased to 22 knots, and ordered the light cruisers and flotillas to chase south-southeast to get in touch and report movements of enemy.

This order was acted upon with great promptitude, indeed my wishes had already been forestalled by the respective senior officers, and reports almost immediately followed from Southampton, Arethusa, and Aurora as to the position

and composition of the enemy, which consisted of three battle cruisers and Blücher, six light cruisers, and a number of destroyers, steering northwest. The enemy had altered course to southeast. From now onward the light cruisers maintained touch with the enemy, and kept me fully informed as to their movements.

The battle cruisers worked up to full speed, steering to the southward. The wind at the time was northeast, light, with extreme visibility. At 7:30 A. M. the enemy were sighted on the port bow steaming fast, steering approximately southeast, distant 14 miles.

Owing to the prompt reports received we had attained our position on the quarter of the enemy, and so altered course to southeast parallel to them, and settled down to a long stern chase, gradually increasing our speed until we reached 28.5 knots. Great credit is due to the engineer staffs of New Zealand and Indomitable—these ships greatly exceeded their normal speed.

At 8:52 A. M., as we had closed to within 20,000 yards of the rear ship, the battle cruisers manoeuvred to keep on a line of bearing so that guns would bear, and Lion fired a single shot, which fell short. The enemy at this time were in single line ahead, with light cruisers ahead and a large number of destroyers on their starboard beam.

Single shots were fired at intervals to test the range, and at 9:09 A. M. Lion made her first hit on the Blücher, No. 4 in the line. The Tiger opened fire at 9:20 A. M. on the rear ship, the Lion shifted to No. 3 in the line, at 18,000 yards, this ship being hit by several salvos. The enemy returned our fire at 9:14 A. M. Princess Royal, on coming into range, opened fire on Blücher, the range of the leading ship being 17,500 yards, at 9:35 A. M. New Zealand was within range of Blücher, which had dropped somewhat astern, and opened fire on her. Princess

Royal shifted to the third ship in the line, inflicting considerable damage on her.

Our flotilla cruisers and destroyers had gradually dropped from a position broad on our beam to our port quarter, so as not to foul our range with their smoke; but the enemy's destroyers threatening attack, the Meteor and M Division passed ahead of us, Capt. the Hon. H. Meade, D. S. O., handling this division with conspicuous ability.

About 9:45 A. M. the situation was as follows: Blücher, the fourth in their line, already showed signs of having suffered severely from gun fire; their leading ship and No. 3 were also on fire. Lion was engaging No. 1, Princess Royal No. 3, New Zealand No. 4, while the Tiger, which was second in our line, fired first at their No. 1, and when interfered with by smoke, at their No. 4.

The enemy's destroyers emitted vast columns of smoke to screen their battle cruisers, and under cover of this the latter now appeared to have altered course to the northward to increase their distance, and certainly the rear ships hauled out on the port quarter of their leader, thereby increasing their distance from our line. The battle cruisers, therefore, were ordered to form a line of bearing north-northwest, and proceed at their utmost speed.

Their destroyers then showed evident signs of an attempt to attack. Lion and Tiger opened fire on them, and caused them to retire and resume their original course.

The light cruisers maintained an excellent position on the port quarter of the enemy's line, enabling them to observe and keep touch, or attack any vessel that might fall out of the line.

At 10:48 A. M. the Blücher, which had dropped considerably astern of enemy's line, hauled out to port, steering north with a heavy list, on fire, and apparently in a defeated condition. I consequently ordered Indomitable to attack enemy breaking northward.

At 10:54 A. M. submarines were reported on the starboard bow, and I personally observed the wash of a periscope two points on our starboard bow. I immediately turned to port.

At 11:03 A. M. an injury to the Lion being reported as incapable of immediate repair, I directed Lion to shape course northwest. At 11:20 A. M. I called the Attack alongside, shifting my flag to her at about 11:35 A. M. I proceeded at utmost speed to rejoin the squadron, and met them at noon retiring north-northwest.

I boarded and hoisted my flag on Princess Royal at about 12:20 P. M., when Capt. Brock acquainted me of what had occurred since the Lion fell out of the line, namely, that Blücher had been sunk and that the enemy battle cruisers had continued their course to the eastward in a considerably damaged condition. He also informed me that a Zeppelin and a seaplane had endeavored to drop bombs on the vessels which went to the rescue of the survivors of Blücher.

The good seamanship of Lieut. Commander Cyril Callaghan, H. M. S. Attack, in placing his vessel alongside the Lion and subsequently the Princess Royal, enabled the transfer of flag to be made in the shortest possible time.

At 2 P. M. I closed Lion and received a report that the starboard engine was giving trouble owing to priming, and at 3:38 P. M. I ordered Indomitable to take her in tow, which was accomplished by 5 P. M.

The greatest credit is due to the Captains of Indomitable and Lion for the seamanlike manner in which the Lion was taken in tow under difficult circumstances.

The excellent steaming of the ships engaged in the operation was a conspicuous feature.

I attach an appendix giving the names of various officers and men who specially distinguished themselves.

Where all did well it is difficult to single out officers and men for special mention, and as Lion and Tiger were the only ships hit by the enemy, the majority of these I mention belong to those ships.

I have the honor to be, Sir,

Your obedient servant,

(Signed) DAVID BEATTY,
Vice Admiral.

OFFICERS.

Commander Charles A. Fountaine, H. M. S. Lion.

Lieut. Commander Evan C. Bunbury, H. M. S. Lion.

Lieut. Frederick T. Peters, H. M. S. Meteor.

Lieut. Charles M. R. Schwerdt, H. M. S. Lion.

Engineer Commander Donald P. Green, H. M. S. Lion.

Engineer Commander James L. Sands, H. M. S. Southampton.

Engineer Commander Thomas H. Turner, H. M. S. New Zealand.

Engineer Lieut. Commander George Preece, H. M. S. Lion.

Engineer Lieut. Albert Knothe, H. M. S. Indomitable.

Surgeon Probationer James A. Stirling, R. N. V. R., H. M. S. Meteor.

HONORS AWARDED.

Lord Chamberlain's Office,

St. James's Palace,

March 3, 1915.

The King has been graciously pleased to give orders for the following appointment to the Most Honorable Order of the Bath, in recognition of the services of the undermentioned officer mentioned in the foregoing dispatch:

To be an Additional Member of the Military Division of the Third Class or Companion.

Capt. Osmond de Beauvoir Brock, A. D. C., Royal Navy.

Admiralty, S. W.,

March 3, 1915.

The King has been graciously pleased to give orders for the following appointment to the Distinguished Service Order, and for the award of the Distinguished Service Cross, to the undermentioned of-

ficers in recognition of their services mentioned in the foregoing dispatch:

To be Companion of the Distinguished Service Order.

Lieut. Frederic Thornton Peters, Royal Navy.

To receive the Distinguished Service Cross.

Surg. Probationer James Alexander Stirling, R. N. V. R.

Gunner (T) Joseph H. Burton.

Chief Carpenter Frederick E. Dailey.

The following promotion has been made:

Commander Charles Andrew Fountaine to be a Captain in his Majesty's fleet, to date March 3, 1915.

The following awards have also been made:

To receive the Distinguished Service Medal.

P. O. J. W. Kemmett, O. N. 186,788.

A. B. H. Davis, O. N. 184,526.

BATTLE OF THE FALKLANDS

Admiralty, March 3, 1915.

The following dispatch has been received from Vice Admiral Sir F. C. Doveton-Sturdee, K. C. B., C. V. O., C. M. G., reporting the action off the Falkland Islands on Tuesday, the 8th of December, 1914:

INVINCIBLE, at Sea,

Dec. 19, 1914.

Sir: I have the honor to forward a report on the action which took place on Dec. 8, 1914, against a German squadron off the Falkland Islands.

I have the honor to be, Sir,

Your obedient servant,

F. C. D. STURDEE,

Vice Admiral, Commander in Chief.

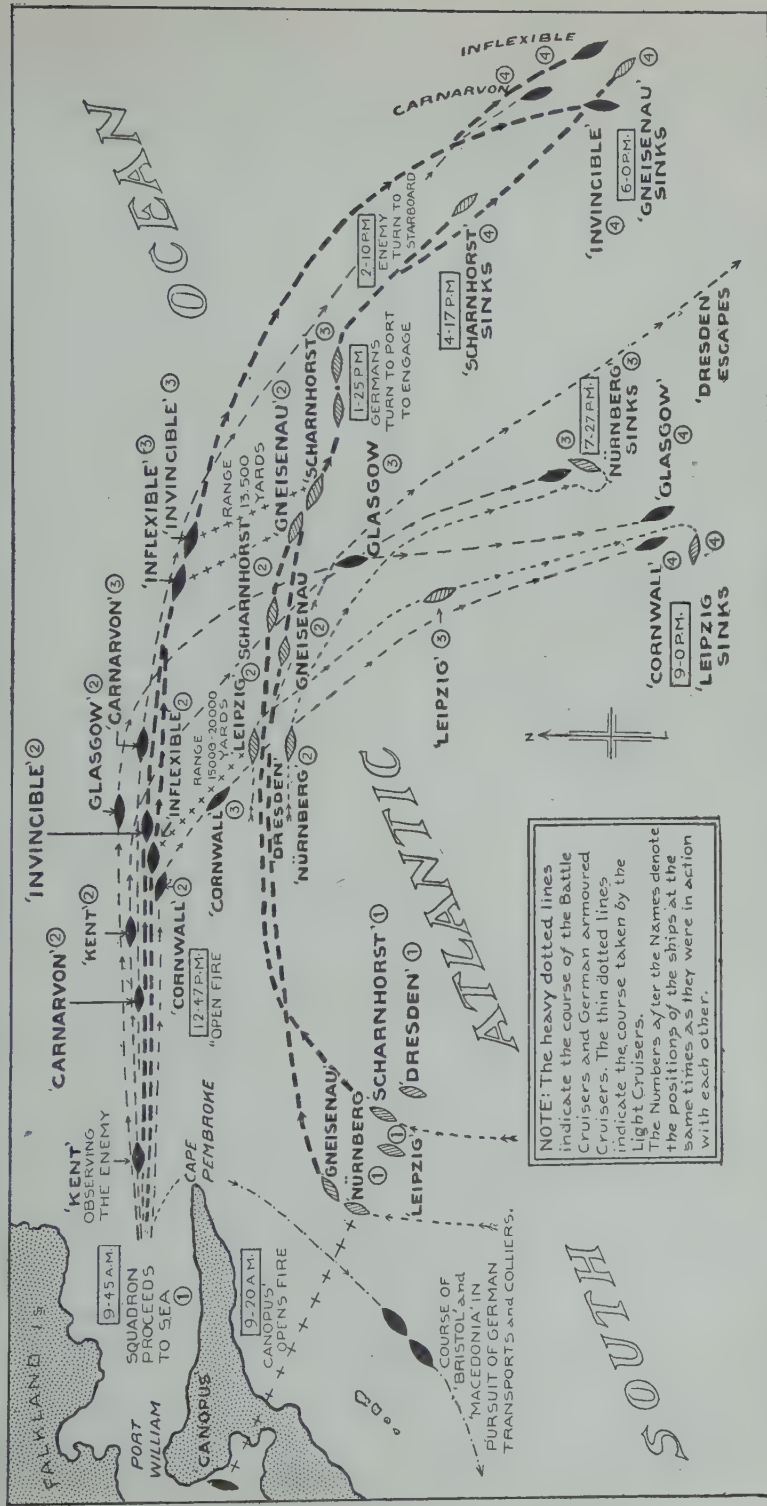

The Secretary, Admiralty.

(A)—PRELIMINARY MOVEMENTS.

The squadron, consisting of H. M. ships Invincible, flying my flag, Flag Capt. Percy T. M. Beamish; Inflexible, Capt. Richard F. Phillimore; Carnarvon, flying the flag of Rear Admiral Archibald P. Soddart, Flag Capt. Harry L. d'E. Skipwith; Cornwall, Capt. Walter M. Ellerton; Kent, Capt. John D. Allen; Glasgow, Capt. John Loce; Bristol, Capt. Basil H. Fanshawe, and Macedonia, Capt. Bertram S. Evans, arrived at Port Stanley, Falkland Islands, at 10:30 A. M. on Monday, Dec. 7, 1914. Coaling was commenced at once, in order that the ships should be ready to resume the search for the enemy's squadron the next evening, Dec. 8.

At 8 A. M. on Tuesday, Dec. 8, a signal was received from the signal station on shore:

THE BATTLE OF THE FALKLAND ISLANDS FROM THE OFFICIAL REPORT OF ADMIRAL STURDEE.

The numbers given on the plan show the corresponding positions of vessels at various times. All ships bearing the same number were simultaneously in the positions charted.

"A four-funnel and two-funnel man-of-war in sight from Sapper Hill, steering northward."

At this time the positions of the various ships of the squadron were as follows:

Macedonia: At anchor as lookout ship.

Kent (guard ship): At anchor in Port William.

Invincible and Inflexible: In Port William.

Carnarvon: In Port William.

Cornwall: In Port William.

Glasgow: In Port Stanley.

Bristol: In Port Stanley.

The Kent was at once ordered to weigh, and a general signal was made to raise steam for full speed.

At 8:20 A. M. the signal station reported another column of smoke in sight to the southward, and at 8:45 A. M. the Kent passed down the harbor and took up a station at the entrance.

The Canopus, Capt. Heathcoat S. Grant, reported at 8:47 A. M. that the first two ships were eight miles off, and that the smoke reported at 8:20 A. M. appeared to be the smoke of two ships about twenty miles off.

At 8:50 A. M. the signal station reported a further column of smoke in sight to the southward.

The Macedonia was ordered to weigh anchor on the inner side of the other ships, and await orders.

At 9:20 A. M. the two leading ships of the enemy, (Gneisenau and Nürnberg,) with guns trained on the wireless station, came within range of the Canopus, which opened fire at them across the low land at a range of 11,000 yards. The enemy at once hoisted their colors and turned away. At this time the masts and smoke of the enemy were visible from the upper bridge of the Invincible at a range of approximately 17,000 yards across the low land to the south of Port William.

A few minutes later the two cruisers altered course to port, as though to close the Kent at the entrance to the harbor, but about this time it seems that the Invincible and Inflexible were seen over the land, as the enemy at once altered

course and increased speed to join their consorts.

The Glasgow weighed and proceeded at 9:40 A. M. with orders to join the Kent and observe the enemy's movements.

At 9:45 A. M. the squadron—less the Bristol—weighed, and proceeded out of harbor in the following order: Carnarvon, Inflexible, Invincible, and Cornwall. On passing Cape Pembroke Light the five ships of the enemy appeared clearly in sight to the southeast, hull down. The visibility was at its maximum, the sea was calm, with a bright sun, a clear sky, and a light breeze from the northwest.

At 10:20 A. M. the signal for a general chase was made. The battle cruisers quickly passed ahead of the Carnarvon and overtook the Kent. The Glasgow was ordered to keep two miles from the Invincible, and the Inflexible was stationed on the starboard quarter of the flagship. Speed was eased to twenty knots at 11:15 A. M., to enable the other cruisers to get into station.

At this time the enemy's funnels and bridges showed just above the horizon.

Information was received from the Bristol at 11:27 A. M. that three enemy ships had appeared off Port Pleasant, probably colliers or transports. The Bristol was therefore directed to take the Macedonia under orders and destroy transports.

The enemy were still maintaining their distance, and I decided, at 12:20 P. M., to attack with the two battle cruisers and the Glasgow.

At 12:47 P. M. the signal to "Open fire and engage the enemy" was made.

The Inflexible opened fire at 12:55 P. M. from her fore turret at the right-hand ship of the enemy, a light cruiser; a few minutes later the Invincible opened fire at the same ship.

The deliberate fire from a range of 16,500 to 15,000 yards at the right-hand light cruiser, which was dropping astern, became too threatening, and when a shell fell close alongside her at 1:20 P. M. she (the Leipzig) turned away, with the Nürnberg and Dresden, to the southwest.

These light cruisers were at once followed by the Kent, Glasgow, and Cornwall, in accordance with my instructions.

The action finally developed into three separate encounters, besides the subsidiary one dealing with the threatened landing.

(B.)—ACTION WITH THE ARMORED CRUISERS.

The fire of the battle cruisers was directed on the Scharnhorst and Gneisenau. The effect of this was quickly seen when, at 1:25 P. M., with the Scharnhorst leading, they turned about seven points to port in succession into line ahead and opened fire at 1:30 P. M. Shortly afterward speed was eased to twenty-four knots and the battle cruisers were ordered to turn together, bringing them into line ahead, with the Invincible leading.

The range was about 13,500 yards at the final turn, and increased until at 2 P. M. it had reached 16,450 yards.

The enemy then (2:10 P. M.) turned away about ten points to starboard, and a second chase ensued until at 2:45 P. M. the battle cruisers again opened fire; this caused the enemy, at 2:53 P. M., to turn into line ahead to port and open fire at 2:55 P. M.

The Scharnhorst caught fire forward, but not seriously, and her fire slackened perceptibly; the Gneisenau was badly hit by the Inflexible.

At 3:30 P. M. the Scharnhorst led around about ten points to starboard; just previously her fire had slackened perceptibly, and one shell had shot away her third funnel; some guns were not firing, and it would appear that the turn was dictated by a desire to bring her starboard guns into action. The effect of the fire on the Scharnhorst became more and more apparent in consequence of smoke from fires, and also escaping steam. At times a shell would cause a large hole to appear in her side, through which could be seen a dull red glow of flame. At 4:04 P. M. the Scharnhorst, whose flag remained flying to the last, suddenly listed heavily to port, and within a minute it became clear that she was a doomed ship, for the list increased very

rapidly until she lay on her beam ends, and at 4:17 P. M. she disappeared.

The Gneisenau passed on the far side of her late flagship, and continued a determined but ineffectual effort to fight the two battle cruisers.

At 5:08 P. M. the forward funnel was knocked over and remained resting against the second funnel. She was evidently in serious straits, and her fire slackened very much.

At 5:15 P. M. one of the Gneisenau's shells struck the Invincible; this was her last effective effort.

At 5:30 P. M. she turned toward the flagship with a heavy list to starboard, and appeared stopped, with steam pouring from her escape pipes and smoke from shell and fires rising everywhere. About this time I ordered the signal "Cease fire!" but before it was hoisted the Gneisenau opened fire again, and continued to fire from time to time with a single gun.

At 5:40 P. M. the three ships closed in on the Gneisenau, and at this time the flag flying at her fore truck was apparently hauled down, but the flag at the peak continued flying.

At 5:50 P. M. "Cease fire!" was made.

At 6 P. M. the Gneisenau heeled over very suddenly, showing the men gathered on her decks and then walking on her side as she lay for a minute on her beam ends before sinking.

The prisoners of war from the Gneisenau report that by the time the ammunition was expended some 600 men had been killed and wounded. The surviving officers and men were all ordered on deck and told to provide themselves with hammocks and any articles that could support them in the water.

When the ship capsized and sank there were probably some 200 unwounded survivors in the water, but, owing to the shock of the cold water, many were drowned within sight of the boats and ship.

Every effort was made to save life as quickly as possible, both by boats and from the ships; lifebuoys were thrown and ropes lowered, but only a portion

could be rescued. The *Invincible* alone rescued 108 men, fourteen of whom were found to be dead after being brought on board. These men were buried at sea the following day with full military honors.

(C)—ACTION WITH THE LIGHT CRUISERS.

At about 1 P. M., when the *Scharnhorst* and *Gneisenau* turned to port to engage the *Invincible* and *Inflexible*, the enemy's light cruisers turned to starboard to escape; the *Dresden* was leading and the *Nürnberg* and *Leipzig* followed on each quarter.

In accordance with my instructions, the *Glasgow*, *Kent*, and *Cornwall* at once went in chase of these ships; the *Carнарvon*, whose speed was insufficient to overtake them, closed the battle cruisers.

The *Glasgow* drew well ahead of the *Cornwall* and *Kent*, and at 3 P. M. shots were exchanged with the *Leipzig* at 12,000 yards. The *Glasgow's* object was to endeavor to outrange the *Leipzig* with her 6-inch guns and thus cause her to alter course and give the *Cornwall* and *Kent* a chance of coming into action.

At 4:17 P. M. the *Cornwall* opened fire, also on the *Leipzig*.

At 7:17 P. M. the *Leipzig* was on fire fore and aft, and the *Cornwall* and *Glasgow* ceased fire.

The *Leipzig* turned over on her port side and disappeared at 9 P. M. Seven officers and eleven men were saved.

At 3:36 P. M. the *Cornwall* ordered the *Kent* to engage the *Nürnberg*, the nearest cruiser to her.

Owing to the excellent and strenuous efforts of the engine room department, the *Kent* was able to get within range of the *Nürnberg* at 5 P. M. At 6:35 P. M. the *Nürnberg* was on fire forward and ceased firing. The *Kent* also ceased firing and closed to 3,300 yards; as the colors were still observed to be flying on the *Nürnberg*, the *Kent* opened fire again. Fire was finally stopped five minutes later on the colors being hauled down, and every preparation was made to save life. The *Nürnberg* sank at 7:27 P. M., and, as she sank, a group of men were waving a German ensign attached

to a staff. Twelve men were rescued, but only seven survived.

The *Kent* had four killed and twelve wounded, mostly caused by one shell.

During the time the three cruisers were engaged with the *Nürnberg* and *Leipzig*, the *Dresden*, which was beyond her consorts, effected her escape owing to her superior speed. The *Glasgow* was the only cruiser with sufficient speed to have had any chance of success. However, she was fully employed in engaging the *Leipzig* for over an hour before either the *Cornwall* or *Kent* could come up and get within range. During this time the *Dresden* was able to increase her distance and get out of sight.

The weather changed after 4 P. M., and the visibility was much reduced; further, the sky was overcast and cloudy, thus assisting the *Dresden* to get away unobserved.

(D)—ACTION WITH THE ENEMY'S TRANSPORTS.

A report was received at 11:27 A. M. from H. M. S. *Bristol* that three ships of the enemy, probably transports or colliers, had appeared off Port Pleasant. The *Bristol* was ordered to take the *Macedonia* under his orders and destroy the transports.

H. M. S. *Macedonia* reports that only two ships, steamships *Baden* and *Santa Isabel*, were present; both ships were sunk after the removal of the crews.

I have pleasure in reporting that the officers and men under my orders carried out their duties with admirable efficiency and coolness, and great credit is due to the engineer officers of all the ships, several of which exceeded their normal full speed.

The names of the following are specially mentioned:

OFFICERS.

Commander Richard Herbert Denny Townsend, H. M. S. *Invincible*.

Commander Arthur Edward Frederick Bedford, H. M. S. *Kent*.

Lieut. Commander Wilfred Arthur Thompson, H. M. S. *Glasgow*.

Lieut. Commander Hubert Edward Danreuther, First and Gunnery Lieutenant, H. M. S. *Invincible*.

Engineer Commander George Edward Andrew, H. M. S. Kent.

Engineer Commander Edward John Weeks, H. M. S. Invincible.

Paymaster Cyril Sheldon Johnson, H. M. S. Invincible.

Carpenter Thomas Andrew Walls, H. M. S. Invincible.

Carpenter William Henry Venning, H. M. S. Kent.

Carpenter George Henry Egford, H. M. S. Cornwall.

PETTY OFFICERS AND MEN.

BETWEEN MIDNIGHT AND MORNING.

By SIR OWEN SEAMAN.

[From King Albert's Book.]

YOU that have faith to look with fearless
eyes
Beyond the tragedy of a world at
strife,
And trust that out of night and death shall
rise

The dawn of ampler life;

Rejoice, whatever anguish rend your heart,
That God has given you, for a priceless
dower,
To live in these great times and have your
part

In Freedom's crowning hour.

That you may tell your sons who see the
light
High in the heavens, their heritage to
take—

"I saw the powers of darkness put to flight!
I saw the morning break!"

The Greatest of Campaigns

The French Official Account Concluded

The second and succeeding installments—the first installment appeared in *CURRENT HISTORY* for April—of the official French historical review of the operations in the western theatre of war from the beginning until the end of January, 1915—the first six months—are described in the subjoined correspondence of The Associated Press.

LONDON, March 18, (*Correspondence of The Associated Press.*)—*The Associated Press has received the second installment of the historical review emanating from French official sources of the operations in the Western theatre of war, from its beginning up to the end of January. It should be understood that the narrative is made purely from the French standpoint. The additional installment of the document, dealing with the victory of the Marne, Sept. 6th to 15th, is as follows:*

IF one examines on the map the respective positions of the German and French armies on Sept. 6 as previously described, it will be seen that by his inflection toward Meaux and Coulommiers General von Kluck was exposing his right to the offensive action of our left. This is the starting point of the victory of the Marne.

On the evening of Sept. 5 our left army had reached the front Penchard-Saint-Souflet-Ver. On the 6th and 7th it continued its attacks vigorously with the Ourcq as objective. On the evening of the 7th it was some kilometers from the Ourcq, on the front Chambry-Marcilly-Lisieux-Acy-en-Multien. On the 8th, the Germans, who had in great haste reinforced their right by bringing their Second and Fourth Army Corps back to the north, obtained some successes by attacks of extreme violence. They occupied Betz, Thury-en-Valois, and Nanteuil-le-Haudouin. But in spite of this pressure our troops held their ground well. In a brilliant action they took three standards, and, being reinforced, prepared a new attack for the 10th. At the moment that this attack was about to begin the enemy was already in re-

treat toward the north. The attack became a pursuit, and on the 12th we established ourselves on the Aisne.

LEFT OF KLUCK'S ARMY THREATENED.

Why did the German forces which were confronting us and on the evening before attacking so furiously retreat on the morning of the 10th? Because in bringing back on the 6th several army corps from the south to the north to face our left the enemy had exposed his left to the attacks of the British Army, which had immediately faced around toward the north, and to those of our armies which were prolonging the English lines to the right. This is what the French command had sought to bring about. This is what happened on Sept. 8 and allowed the development and rehabilitation which it was to effect.

On the 6th the British Army had set out from the line Rozcy-Lagny and had that evening reached the southward bank of the Grand Morin. On the 7th and 8th it continued its march, and on the 9th had debouched to the north of the Marne below Chateau-Thierry, taking in flank the German forces which on that day were opposing, on the Ourcq, our left army. Then it was that these forces began to retreat, while the British Army, going in pursuit and capturing seven guns and many prisoners, reached the Aisne between Soissons and Longueval.

The rôle of the French Army, which was operating to the right of the British Army, was threefold. It had to support the British attacking on its left. It had on its right to support our centre, which from Sept. 7 had been subjected to a German attack of great violence. Fi-

nally, its mission was to throw back the three active army corps and the reserve corps which faced it.

On the 7th it made a leap forward, and on the following days reached and crossed the Marne, seizing, after desperate fighting, guns, howitzers, mitrailleuses, and 1,800,000 cartridges. On the 12th it established itself on the north edge of the Montagne-de-Reime in contact with our centre, which for its part had just forced the enemy to retreat in haste.

THE ACTION OF FERE-CHAMPENOISE.

Our centre consisted of a new army created on Aug. 29 and of one of those which at the beginning of the campaign had been engaged in Belgian Luxemburg. The first had retreated on Aug. 29 to Sept. 5 from the Aisne to the north of the Marne and occupied the general front Sézanne-Mailly.

The second, more to the east, had drawn back to the south of the line Humblauville-Chateau-Beauchamp-Bignicourt-Blesmes-Maurupt-le-Montoy.

The enemy, in view of his right being arrested and the defeat of his enveloping movement, made a desperate effort from the 7th to the 10th to pierce our centre to the west and to the east of Fère-Champenoise. On the 8th he succeeded in forcing back the right of our new army, which retired as far as Gouragançon. On the 9th, at 6 o'clock in the morning, there was a further retreat to the south of that village, while on the left the other army corps also had to go back to the line Allemant-Connantre.

Despite this retreat the General commanding the army ordered a general offensive for the same day. With the Morrocco Division, whose behavior was heroic, he met a furious assault of the Germans on his left toward the marshes of Saint Gond. Then with the division which had just victoriously overcome the attacks of the enemy to the north of Sézanne, and with the whole of his left army corps, he made a flanking attack in the evening of the 9th upon the German forces, and notably the guard, which had thrown back his right army corps.

The enemy, taken by surprise by this bold manoeuvre, did not resist, and beat a hasty retreat.

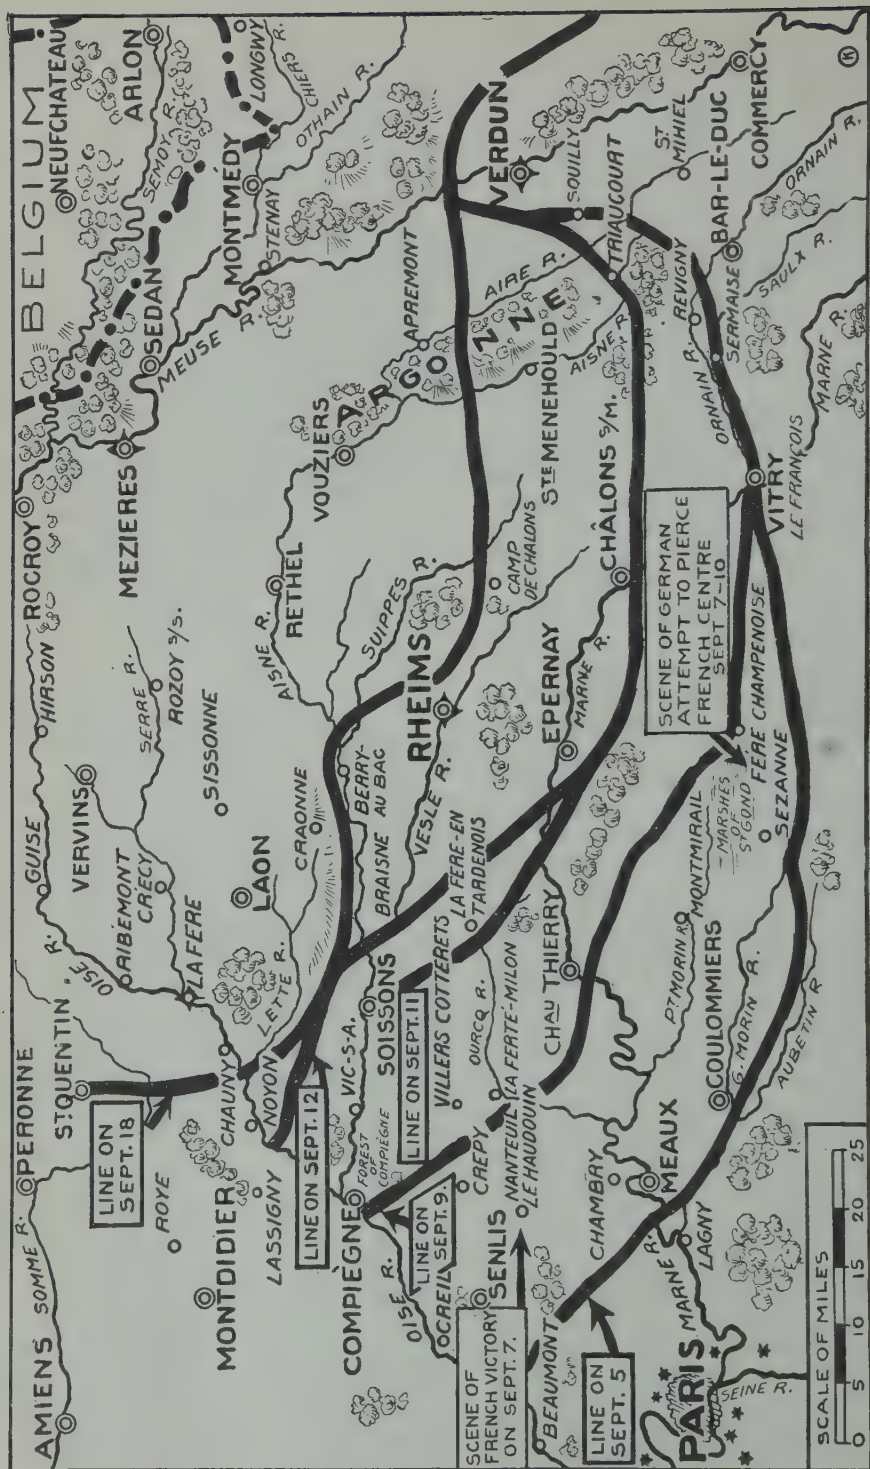

On the 11th we crossed the Marne between Tours-sur-Marne and Sarry, driving the Germans in front of us in disorder. On the 12th we were in contact with the enemy to the north of the Camp de Chalons. Our other army of the centre, acting on the right of the one just referred to, had been intrusted with the mission during the 7th, 8th, and 9th of disengaging its neighbor, and it was only on the 10th that, being reinforced by an army corps from the east, it was able to make its action effectively felt. On the 11th the Germans retired. But, perceiving their danger, they fought desperately, with enormous expenditure of projectiles, behind strong intrenchments. On the 12th the result had none the less been attained, and our two centre armies were solidly established on the ground gained.

THE OPERATIONS OF THE RIGHT.

To the right of these two armies were three others. They had orders to cover themselves to the north and to debouch toward the west on the flank of the enemy, which was operating to the west of the Argonne. But a wide interval in which the Germans were in force separated them from our centre. The attack took place, nevertheless, with very brilliant success for our artillery, which destroyed eleven batteries of the Sixteenth German Army Corps.

On the 10th inst. the Eighth and Fifteenth German Army Corps counter-attacked, but were repulsed. On the 11th our progress continued with new successes; and on the 12th we were able to face round toward the north in expectation of the near and inevitable retreat of the enemy, which, in fact, took place from the 13th.

The withdrawal of the mass of the German force involved also that of the left. From the 12th onward the forces of the enemy operating between Nancy and the Vosges retreated in a hurry before our two armies of the East, which immediately occupied the positions that the enemy had evacuated. The offen-

Map showing the successive stages of the Battle of the Marne.

sive of our right had thus prepared and consolidated in the most useful way the result secured by our left and our centre.

Such was this seven days' battle, in which more than two millions of men were engaged. Each army gained ground step by step, opening the road to its neighbor, supported at once by it, taking in flank the adversary which the day before it had attacked in front, the efforts of one articulating closely with those of the other, a perfect unity of intention and method animating the supreme command.

To give this victory all its meaning it is necessary to add that it was gained by troops which for two weeks had been retreating, and which, when the order for the offensive was given, were found to be as ardent as on the first day. It has also to be said that these troops had to meet the whole German army, and that from the time they marched forward they never again fell back. Under their pressure the German retreat at certain times had the appearance of a rout.

In spite of the fatigue of our men, in spite of the power of the German heavy artillery, we took colors, guns, mitrailleuses, shells, more than a million cartridges, and thousands of prisoners. A German corps lost almost the whole of its artillery, which, from information brought by our airmen, was destroyed by our guns.

"THE RUSH TO THE SEA."

LONDON, March 18.—The third installment of the historical review of the war, emanating from French official sources and purely from the French viewpoint, has been received by The Associated Press. The French narrative contains a long chapter on the siege war from the Oise to the Vosges, which lasted from Sept. 13 to Nov. 30. Most of the incidents in this prolonged and severe warfare have been recorded in the daily bulletins. The operations were of secondary importance, and were conducted on both sides with the same idea of wearing down the troops and the artillery of the opposing forces with the view of in-

fluencing the decisive result in the great theatre of war in the north. The next chapter deals with "the rush to the sea," Sept. 13 to Oct. 23, and is as follows:

GENERAL CHARACTER OF THE ACTION.

As early as Sept. 11 the Commander in Chief had directed our left army to have as important forces as possible on the right bank of the Oise. On Sept. 17 he made that instruction more precise by ordering "a mass to be constituted on the left wing of our disposition, capable of coping with the outflanking movement of the enemy." Everything led us to expect that flanking movement, for the Germans are lacking in invention. Indeed, their effort at that time tended to a renewal of their manoeuvre of August. In the parallel race the opponents were bound in the end to be stopped only by the sea; that is what happened about Oct. 20.

The Germans had an advantage over us, which is obvious from a glance at the map—the concentric form of their front, which shortened the length of their transports. In spite of this initial inferiority we arrived in time. From the middle of September to the last week in October fighting went on continually to the north of the Oise, but all the time we were fighting we were slipping northward. On the German side this movement brought into line more than eighteen new army corps, (twelve active army corps, six reserve corps, four cavalry corps.) On our side it ended in the constitution of three fresh armies on our left and in the transport into the same district of the British Army and the Belgian Army from Antwerp.

For the conception and realization of this fresh and extended disposition the French command, in the first place, had to reduce to a minimum the needs for effectives of our armies to the east of the Oise, and afterwards to utilize to the utmost our means of transport. It succeeded in this, and when, at the end of October, the battle of Flanders opened, when the Germans, having completed the concentration of their forces, attempted with fierce energy to turn or to pierce

our left, they flung themselves upon a resistance which inflicted upon them a complete defeat.

DEPLOYMENT OF A FIRST ARMY.

The movement began on our side only with the resources of the army which had held the left of our front during the battle of the Marne, reinforced on Sept. 15 by one army corps.

This reinforcement, not being sufficient to hold the enemy's offensive, (district of Vaudelincourt-Mouchy-Uaagy,) a fresh army was transported more to the left, with the task "of acting against the German right wing in order to disengage its neighbor, * * * while preserving a flanking direction in its march in relation to the fresh units that the enemy might be able to put into line."

To cover the detrainments of this fresh army in the district Clermont-Beauvais-Boix a cavalry corps and four territorial divisions were ordered to establish themselves on both banks of the Somme. In the wooded hills, however, which extend between the Oise and Lassigny the enemy displayed increasing activity. Nevertheless, the order still further to broaden the movement toward the left was maintained, while the territorial divisions were to move toward Bethune and Aubigny. The march to the sea went on.

From the 21st to the 26th all our forces were engaged in the district Lassigny-Roye-Peronne, with alternations of reverse and success. It was the first act of the great struggle which was to spread as it went on. On the 26th the whole of the Sixth German Army was deployed against us. We retained all our positions, but we could do no more; consequently there was still the risk that the enemy, by means of a fresh afflux of forces, might succeed in turning us.

Once more reinforcements, two army corps, were directed no longer on Beauvais, but toward Amiens. The front was then again to extend. A fresh army was constituted more to the north.

DEPLOYMENT OF THE SECOND ARMY.

From Sept. 30 onward we could not but observe that the enemy, already strongly posted on the plateau of Thiep-

val, was continually slipping his forces from south to north, and everywhere confronting us with remarkable energy.

Accordingly, on Oct. 1 two cavalry corps were directed to make a leap forward and, operating on both banks of the Scarpe, to put themselves in touch with the garrison of Dunkirk, which, on its side, had pushed forward as far as Douai. But on Oct. 2 and 3 the bulk of our fresh army was very strongly attacked in the district of Arras and Lens. Confronting it were two corps of cavalry, the guards, four active army corps, and two reserve corps. A fresh French army corps was immediately transported and detrained in the Lille district.

But once more the attacks became more pressing, and on Oct. 4 it was a question whether, in view of the enemy's activity both west of the Oise and south of the Somme, and also further to the north, a retreat would not have to be made. General Joffre resolutely put this hypothesis aside and ordered the offensive to be resumed with the reinforcements that had arrived. It was, however, clear that, despite the efforts of all, our front, extended to the sea as it was by a mere ribbon of troops, did not possess the solidity to enable it to resist with complete safety a German attack, the violence of which could well be foreseen.

In the Arras district the position was fairly good. But between the Oise and Arras we were holding our own only with difficulty. Finally, to the north, on the Lille-Estaires-Merville - Hazebrouck-Cassel front, our cavalry and our territorials had their work cut out against eight divisions of German cavalry, with very strong infantry supports. It was at this moment that the transport of the British Army to the northern theatre of operations began.

THE TRANSPORT OF THE BRITISH ARMY.

Field Marshal French had, as early as the end of September, expressed the wish to see his army resume its initial place on the left of the allied armies. He explained this wish on the ground of the greater facility of which his communica-

tions would have the advantage in this new position, and also of the impending arrival of two divisions of infantry from home and of two infantry divisions and a cavalry division from India, which would be able to deploy more easily on that terrain. In spite of the difficulties which such a removal involved, owing to the intensive use of the railways by our own units, General Joffre decided at the beginning of October to meet the Field Marshal's wishes and to have the British Army removed from the Aisne.

It was clearly specified that on the northern terrain the British Army should co-operate to the same end as ourselves, the stopping of the German right. In other terms, the British Army was to prolong the front of the general disposition without a break, attacking as soon as possible, and at the same time seeking touch with the Belgian Army.

But the detraining took longer than had been expected, and it was not possible to attack the Germans during the time when they had only cavalry in the Lille district and further to the north.

THE ARRIVAL OF THE BELGIAN ARMY.

There remained the Belgian Army. On leaving Antwerp on Oct. 9 the Belgian Army, which was covered by 8,000 British bluejackets and 6,000 French bluejackets, at first intended to retire as far as to the north of Calais, but afterwards determined to make a stand in Belgian territory. Unfortunately, the condition of the Belgian troops, exhausted by a struggle of more than three months, did not allow any immediate hopes to be based upon them. This situation weighed on our plans and delayed their execution.

On the 16th we made progress to the east of Ypres. On the 18th our cavalry even reached Roulers and Cortemark. But it was now evident that, in view of the continual reinforcing of the German right, our left was not capable of maintaining the advantages obtained during the previous few days. To attain our end and make our front inviolable a fresh effort was necessary. That effort was immediately made by the dispatch to the

north of the Lys of considerable French forces, which formed the French Army of Belgium.

THE FRENCH ARMY OF BELGIUM.

The French Army of Belgium consisted, to begin with, of two territorial divisions, four divisions of cavalry, and a naval brigade. Directly after its constitution it was strengthened by elements from other points on the front whose arrival extended from Oct. 27 to Nov. 11. These reinforcements were equivalent altogether in value to five army corps, a division of cavalry, a territorial division, and sixteen regiments of cavalry, plus sixty pieces of heavy artillery.

Thus was completed the strategic manoeuvre defined by the instructions of the General in Chief on Sept. 11 and developed during the five following weeks with the amplex we have just seen. The movements of troops carried out during this period were methodically combined with the pursuit of operations, both defensive and offensive, from the Oise to the North Sea.

On Oct. 22 our left, bounded six weeks earlier by the Noyon district, rested on Nieuport, thanks to the successive deployment of five fresh armies—three French armies, the British Army, and the Belgian Army.

Thus the co-ordination decided upon by the General in Chief attained its end. The barrier was established. It remained to maintain it against the enemy's offensive. That was the object and the result of the battle of Flanders, Oct. 22 to Nov. 15.

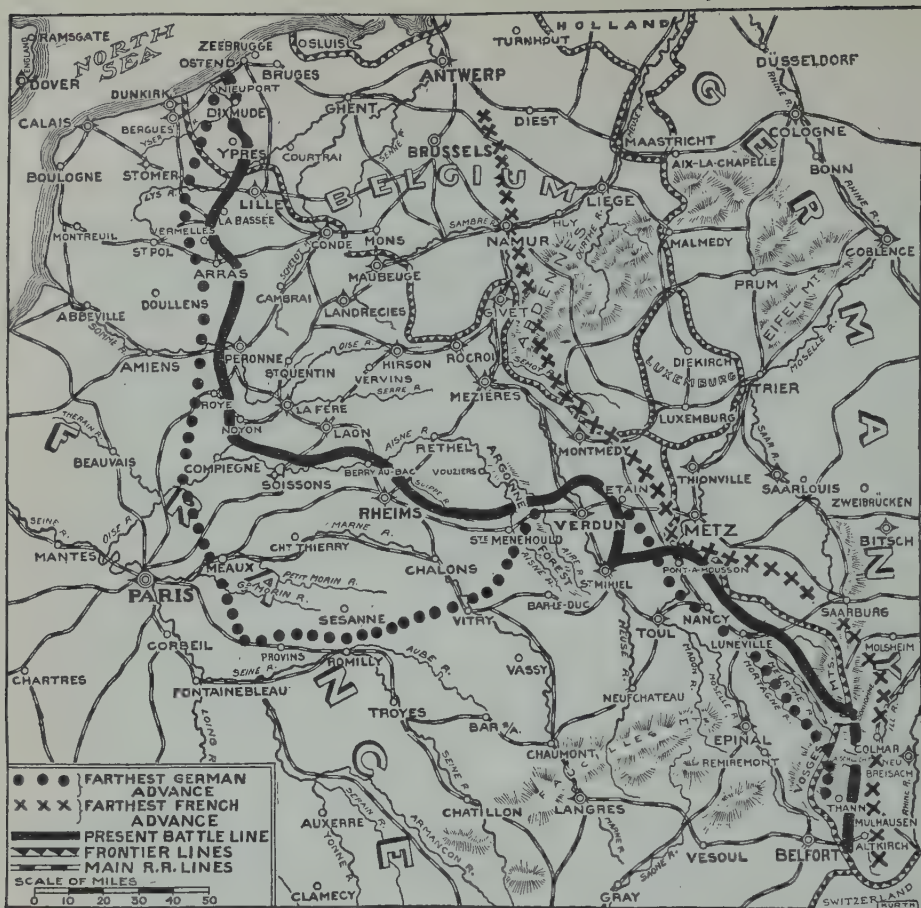

OPERATIONS IN FLANDERS.

The fourth installment of the French review takes up the operations in Flanders, as follows:

The German attack in Flanders was conducted strategically and tactically with remarkable energy. The complete and indisputable defeat in which it resulted is therefore significant.

The forces of which the enemy disposed for this operation between the sea and the Lys comprised:

(1) The entire Fourth Army commanded by the Duke of Württemberg,

Map showing the swaying battle line from Belfort to the North Sea and the intrenched line on April 15, 1915.

consisting of one naval division, one division of Ersatz Reserve, (men who had received no training before the war,) which was liberated by the fall of Antwerp; the Twenty-second, Twenty-third, Twenty-sixth and Twenty-seventh Reserve Corps, and the Forty-eighth Division belonging to the Twenty-fourth Reserve Corps.

(2) A portion of another army under General von Fabeck, consisting of the Fifteenth Corps, two Bavarian corps and three (unspecified) divisions.

(3) Part of the Sixth Army under the command of the Crown Prince of Bavaria. This army, more than a third of which took part in the battle of Flan- ders, comprised the Nineteenth Army

Corps, portions of the Thirteenth Corps and the Eighteenth Reserve Corps, the Seventh and Fourteenth Corps, the First Bavarian Reserve Corps, the Guards, and the Fourth Army Corps.

(4) Four highly mobile cavalry corps prepared and supported the action of the troops enumerated above. Everything possible had been done to fortify the "morale" of the troops. At the beginning of October the Crown Prince of Bavaria in a proclamation had exhorted his soldiers "to make the decisive effort against the French left wing," and "to settle thus the fate of the great battle which has lasted for weeks."

On Oct. 28, Prince Rupprecht of Bavaria declared in an army order that his

troops "had just been fighting under very difficult conditions," and he added: "It is our business now not to let the struggle with our most detested enemy drag on longer * * * The decisive blow is still to be struck." On Oct. 30, General von Deimling, commanding the Fifteenth Army Corps (belonging to General von Fabeck's command,) issued an order declaring that "the thrust against Ypres will be of decisive importance." It should be noted also that the Emperor proceeded in person to Thielt and Courtrai to exalt by his presence the ardor of his troops. Finally, at the close of October, the entire German press incessantly proclaimed the importance of the "Battle of Calais." It is superfluous to add that events in Poland explain in a large measure the passionate resolve of the German General Staff to obtain a decision in the Western theatre of operations at all costs. This decision would be obtained if our left were pierced or driven in. To reach Calais, that is, to break our left; to carry Ypres, that is, to cut it in half; through both points to menace the communications and supplies of the British expeditionary corps, perhaps even to threaten Britain in her island—such was the German plan in the Battle of Flanders. It was a plan that could not be executed.

CHECK OF GERMAN ATTACK.

The enemy, who had at his disposal a considerable quantity of heavy artillery, directed his efforts at first upon the coast and the country to the north of Dixmude. His objective was manifestly the capture of Dunkirk, then of Calais and Boulogne, and this objective he pursued until Nov. 1.

On Oct. 23 the Belgians along the railway line from Nieuport to Dixmude were strengthened by a French division. Dixmude was occupied by our marines (fusiliers marins). During the subsequent day our forces along the railway developed a significant resistance against an enemy superior in number and backed by heavy artillery. On the 29th the inundations effected between the canal and the railway line spread along our front.

On the 30th we recaptured Ramscapelle, the only point on the railway which Belgians had lost. On the 1st and 2d of November the enemy bombarded Furnes, but began to show signs of weariness. On the 2d he evacuated the ground between the Yser and the railway, abandoning cannon, dead and wounded. On the 3d our troops were able to re-enter the Dixmude district. The success achieved by the enemy at Dixmude at this juncture was without fruit. They succeeded in taking the town. They could not debouch from it. The coastal attack had thus proved a total failure. Since then it has never been renewed. The Battle of Calais, so noisily announced by the German press, amounted to a decided reverse for the Germans.

GERMAN DEFEAT AT YPRES.

The enemy had now begun an attack more important than its predecessor, in view of the numbers engaged in it. This attack was intended as a renewal to the south of the effort which had just been shattered in the north. Instead of turning our flank on the coast, it was now sought to drive in the right of our northern army under the shock of powerful masses. This was the Battle of Ypres.

In order to understand this long, desperate, and furious battle, we must hark back a few days in point of time. At the moment when our cavalry reached Roulers and Cortemark (Oct. 28) our territorial divisions from Dunkirk, under General Biden, had occupied and organized a defensive position at Ypres. It was a point d'appui, enabling us to prepare and maintain our connections with the Belgian Army. From Oct. 23 two British and French army corps were in occupation of this position, which was to be the base of their forward march in the direction of Roulers-Menin. The delays already explained and the strength of the forces brought up by the enemy soon brought to a standstill our progress along the line Poelcapelle, Paschendaele, Zandvorde, and Gheluvelt. But in spite of the stoppage here, Ypres was solidly covered, and the connections of all the allied forces

were established. Against the line thus formed the German attack was hurled from Oct. 25 to Nov. 13, to the north, the east, and the south of Ypres. From Oct. 26 on the attacks were renewed daily with extraordinary violence, obliging us to employ our reinforcements at the most threatened points as soon as they came up. Thus, on Oct. 31, we were obliged to send supports to the British cavalry, then to the two British corps between which the cavalry formed the connecting link, and finally to intercalate between these two corps a force equivalent to two army corps. Between Oct. 30 and Nov. 6 Ypres was several times in danger. The British lost Zandvorde, Gheluvelt, Messines, and Wytschaete. The front of the Allies, thus contracted, was all the more difficult to defend; but defensed it was without a recoil.

REINFORCEMENTS ARRIVE.

The arrival of three French divisions in our line enabled us to resume from the 4th to the 8th a vigorous offensive. On the 10th and 11th this offensive, brought up against fresh and sharper German attacks, was checked. Before it could be renewed the arrival of fresh reinforcements had to be awaited, which were dispatched to the north on Nov. 12. By the 14th our troops had again begun to progress, barring the road to Ypres against the German attacks, and inflicting on the enemy, who advanced in massed formation, losses which were especially terrible in consequence of the fact that the French and British artillery had crowded nearly 300 guns on to these few kilometers of front.

Thus the main mass of the Germans sustained the same defeat as the detachments operating further to the north along the coast. The support which, according to the idea of the German General Staff, the attack on Ypres was to render to the coastal attack, was as futile as that attack itself had been.

During the second half of November the enemy, exhausted and having lost in the Battle of Ypres alone more than 150,000 men, did not attempt to renew his effort, but confined himself to an inter-

mittent cannonade. We, on the contrary, achieved appreciable progress to the north and south of Ypres, and insured definitely by a powerful defensive organization of the position the inviolability of our front.

[The compiler of the report here adds a footnote saying that the bodies of more than 40,000 Germans were found on the battlefield during these three weeks of battle. The report next proceeds to summarize the character and results of the operations since the Battle of Flanders—that is, during the period Nov. 30-Feb. 1.]

Since the former date the French supreme command had not thought it advisable to embark upon important offensive operations. It has confined itself to local attacks, the main object of which was to hold in front of us as large a number of German corps as possible, and thus to hinder the withdrawal of the troops which to our knowledge the German General Staff was anxious to dispatch to Russia.

FEW SENT TO THE EAST.

As a matter of fact, the numbers transported to the eastern front have been very moderate. Of the fifty-two army corps which faced us on the western front, Germany has only been able to take four and one-half corps for the eastern front. On the other hand, climatic conditions—the rain, mud, and mist—were such as to diminish the effectiveness of offensive operations and to add to the costliness of any undertaken, which was another reason for postponing them. Still another reason lies in the fact that from now on the allied forces can count upon a steadily expanding growth, equally in point of numbers and units as of material, while the German forces have attained the maximum of their power, and can only diminish now both in numbers and in value. These conditions explain the character of the siege warfare which the operations have assumed during the period under review.

Meanwhile, it is by no means the case that the siege warfare has had the same

results for the Germans as for us. From Nov. 15 to Feb. 1, our opponents, in spite of very numerous attacks, did not succeed in taking anything from us, except a few hundred metres of ground to the north of Soissons. We, on the contrary, have obtained numerous and appreciable results.

[The French writer here proceeds to strike a balance of gains and losses between the allied and the German forces in France during the Winter campaign. The result he sums up as follows:]

1. A general progress of our troops; very marked at certain points.

2. A general falling back of the enemy, except to the northeast of Soissons.

To complete the balance it must be added that:

1. The German offensive in Poland was checked a month ago.

2. The Russian offensive continues in Galicia and the Carpathians.

3. A large part of the Turkish Caucasian army has been annihilated.

4. Germany has exhausted her resources of officers, (there are now on an average twelve officers to a regiment,) and henceforth will only be able to develop her resources in men to the detriment of the existing units.

5. The allied armies, on the contrary, possess the power of reinforcing themselves in a very considerable degree.

It may, therefore, be declared that in order to obtain complete success it is sufficient for France and her allies to know how to wait and to prepare victory with indefatigable patience.

The German offensive is broken.

The German defensive will be broken in its turn.

[It is evident from the report that the numbered German army corps are Prussian corps unless otherwise specified.]

THE FRENCH ARMY AS IT IS.

LONDON, March 18, (*Correspondence of The Associated Press.*)—All of Part II., of the historical review of the war, emanating from French official sources, and purely from the French viewpoint, has been received by The Associated Press. Part II. deals with the

conditions in the French Army, furnishing a most interesting chapter on this subject under the title, "The French Army as it Is."

The compiler of the report, beginning this part of his review on Feb. 1, says that the condition of the French Army is excellent and appreciably superior to what it was at the beginning of the war from the three points of view of numbers, quality, and equipment. Continuing, he says:

In the higher command important changes have been made. It has, in fact, been rejuvenated by the promotion of young commanders of proved quality to high rank. All the old Generals, who at the beginning of August were at the head of large commands, have been gradually eliminated, some as the result of the physical strain of war and others by appointment to territorial commands. This rejuvenation of the higher ranks of the army has been carried out in a far-reaching manner, and it may be said that it has embraced all the grades of the military hierarchy from commanders of brigades to commanders of armies. The result has been to lower the average age of general officers by ten years. Today more than three-fourths of the officers commanding armies and army corps are less than 60 years of age. Some are considerably younger. A number of the army corps commanders are from 46 to 54 years of age, and the brigade commanders are usually under 50. There are, in fact, at the front extremely few general officers over 60, and these are men who are in full possession of their physical and intellectual powers.

MANY COLONELS PROMOTED.

This rejuvenation of the high command was facilitated by a number of circumstances, notable among which were the strengthening of the higher regimental ranks carried out during the three years preceding the war, as a result of which at the outset of the campaign each infantry regiment had two Lieutenant Colonels, and each cavalry and artillery regiment a Colonel and Lieutenant Colonel, and also the system of promotion for the duration of the war. Many officers

who began the war as Colonels now command brigades. Some are even at the head of divisions or army corps. Ability proved on the field of battle is now immediately recognized and utilized, and in this way it has been possible to provide in the most favorable manner for the vacancies created by the changes in command which were considered necessary in the first weeks of the war.

The higher grades of the French Army are inspired by a remarkable unity in the matter of military theory, and by a solidarity of spirit which has found striking expression in the course of the numerous moves of army corps from one part of the theatre of operations to another, which have been carried out since the beginning of the war.

The cavalry after six months of war still possesses an excess of officers. There are on an average thirty-six officers to a regiment instead of the thirty-one considered to be the necessary minimum. The artillery, which has suffered relatively little, has also an excess of officers, and is further able to count upon a large number of Captains and other officers, who before the war were employed in the arsenals or in technical research. Finally the reserve artillery officers have nearly all proved to be excellent battery commanders.

The losses in the junior commissioned ranks have naturally been highest in the infantry. There is, however, nothing like a want of officers in this arm. Many Captains and Lieutenants who have been wounded by machine-gun fire (such wounds are usually slight and quickly healed,) have been able to return speedily to the front. The reserve officers have in general done remarkably well, and in many cases have shown quite exceptional aptitude for the rank of company commanders. The non-commissioned officers promoted to sub-Lieutenancies make excellent section leaders, and even show themselves very clever and energetic company commanders in the field.

It must be remembered also that thanks to the intellectual and physical development of the generation now serving with the colors; and thanks, above

all, to the warlike qualities of the race, and the democratic spirit of our army, we have been able to draw upon the lower grades and even upon the rank and file for officers. Many men who began the war on Aug. 2 as privates, now wear the officers' epaulettes. The elasticity of our regulations regarding promotion in war time, the absence of the spirit of caste, and the friendly welcome extended by all officers to those of their military inferiors who have shown under fire their fitness to command, have enabled us to meet all requirements.

The state of our infantry on Jan. 15 was very satisfactory and much superior to that of the German infantry. On an average each of our regiments has forty-eight officers, including eighteen regular officers, fifteen reserve officers, and fifteen non-commissioned officers. In each regiment six of the twelve companies are commanded by Captains who are regular officers, three by Captains of the reserve and three by Lieutenants. Each company has at least three officers. The state of the army as regards the commissioned ranks from the highest to the lowest is declared to be exceptionally brilliant. The army is led by young, well-trained, and daring chiefs, and the lower commissioned ranks have acquired the art of war by experience.

2,500,000 FRENCH AT FRONT.

Including all ranks, France now has more than 2,500,000 men at the front, and every unit is, or was on Jan. 15, at war strength. The infantry companies are at least 200 strong. In many regiments the companies have a strength of 250 or more.

In other arms, which have suffered less than the infantry, the units are all up to, or above, regulation strength.

This fact constitutes one of the most important advantages of the French Army over the Germans. While Germany has created a great number of new units, army corps or divisions, which absorbed at a blow all of her available resources in officers and men, the French supreme command has avoided the formation of new units, except in limited number, and has only admitted exceptions to this rule when it was able to

count with certainty on being able to provide amply for both the present and future requirements of the new units, as regards all ranks, without encroaching upon the reserves needed for the existing units.

At the same time, thanks to the depots in the interior of the country, the effectives at the front have been maintained at full strength. The sources of supply for this purpose were the remainder of the eleven classes of the reserves, the younger classes of the territorial army, and the new class of 1914. A large number of the men wounded in the earlier engagements of the war have been able to return to the front. They have been incorporated in the new drafts, providing these with a useful stiffening of war-tried men.

With regard to the supplies of men upon which the army can draw to repair the wastage at the front, we learn that there are practically half as many men in the depots as at the front, in other words about 1,250,000. Further supplies of men are provided by the class of 1915 and the revision of the various categories of men of military age previously exempted on grounds of health or for other reasons from the duty of bearing arms. As a result of this measure nearly half a million men have been claimed for the army, almost all of whom, after rigorous physical tests, have been declared fit for military service.

DRILLED BY CONVALESCENTS.

In the depots in which the new soldiers are being trained the services of many officers and non-commissioned officers discharged as convalescents after being wounded are utilized in order to give a practical turn to the instruction. There are still many voluntary enlistments, and with all these resources of men the army can count upon reinforcements soon to be available which will considerably augment its offensive power.

The quality of the troops has improved perceptibly since the beginning of the war. The men have become hardened and used to war, and their health—largely owing to the excellence of the commissariat—is extremely satisfactory.

In spite of the severity of the Winter hardly any cases of disease of the respiratory organs have occurred, and the sanitary returns of the army show an appreciable improvement on those of the preceding Winter.

With regard to the reserves, experience has verified the dictum of the Serbian and Bulgarian Generals in the war of 1913, namely, that "two months in the field are necessary in order to get at the full value of reserves." Our infantry is now accustomed to the rapid and thorough "organization" of the defensive. In August it neither liked nor had the habit of using the spade. Today those who see our trenches are astounded. They are veritable improvised fortresses, proof against the 77-millimeter gun and often against artillery of higher calibre. During the last five months not a single encounter can be cited in which our infantry did not have the advantage over the German infantry. All the enemy's attacks have been repulsed, except to the north of Soissons, where their success was due to the flooded state of the Aisne and the carrying away of our bridges. Our attacks, on the other hand, have yielded important results, and have been carried out with plenty of spirit, although without the imprudence which cost us such heavy losses in August.

The cavalry has made remarkable progress. Throughout October this branch was called on to eke out the inadequate numbers of the infantry, and showed itself perfectly adapted to the necessities of fighting on foot. Several regiments of cavalry have been used as infantry, and, armed with rifles, have rendered the most valuable services.

The artillery has displayed a superiority in the use of its admirable material, which is recognized by the Germans themselves.

LONDON, March 27, (*Correspondence of The Associated Press.*)—Further installments of the French official review of the condition of the French Army after six months of war have been obtained by The Associated Press. The sixth installment deals with material, artillery, transport, and supplies, and

the seventh takes up the situation of the German Army and makes an analysis of the German forces in the field and available for service.

The first chapter of the seventh installment, headed "*The German Effort*," opens with a statement as to the German forces at the beginning of the campaign. The writer says:

The military effort of Germany at the outset of the campaign exceeded all anticipations. Her design was to crush the French Army in a few weeks under a tremendous mass of troops. Nothing was neglected to bring that mass together.

The number of German army corps in time of peace is twenty-five. When war began the German General Staff put in the field on the two theatres of operations: 1, as fighting troops, (active, reserve, Ersatz or Landwehr,) sixty-one army corps; 2, as troops to guard communications and territory, formations of the Landsturm.

In October six and a half new army corps made their appearance, plus a division of sailors—in all seven corps. From the end of November to the end of December there was only an insignificant increase, consisting of the division of sailors. In January, 1915, the number of fighting formations put into line by the German Army was therefore sixty-nine army corps, divided as follows:

Active corps, twenty-five and a half; reserve corps, twenty-one and a half; Ersatz brigades, six and a half; reserve corps of new formation, seven and a half, and corps of Landwehr, eight and a half.

GERMANY'S GREAT INITIAL EFFORT.

The immense effort thus made by Germany explains itself very well, if, having regard to the position of Germany at the opening of the war, one considers that of the Allies. Germany desired to take advantage of the circumstances which enabled her to make a simultaneous mobilization of all her forces—a mobilization which the three allied armies could not carry out so rapidly. Germany

wished with the mass of troops to crush first of all the adversary who appeared to her the most dangerous. This effort, broken for the first time on the Marne, attained its maximum at the moment of the battle of Flanders, in which more than fifty army corps out of sixty-nine were pitted against the French, British, and Belgian Armies.

Here also the method followed by Germany is easily comprehensible. At the end of October the Russian danger was beginning to become pressing, and it was necessary to win a decisive victory in the western theatre of the war. It was imperative to give international opinion the impression that Germany remained in that quarter mistress of operations. Finally, it behooved her by this victory to gain the freedom to transport a large number of army corps to Poland. We have seen that the battle of Flanders, instead of being a success for Germany, was a marked defeat. This defeat was fraught with results, and it dominates the present position of the German Army. The plans above described of the German mobilization, which had their justification in view of a prompt victory, were calculated to become extremely perilous from the moment that that victory failed to be gained.

INITIATIVE LOST BY GERMANY.

From that moment, in fact, Germany lost the initiative and the direction of the war. And, furthermore, she was condemned to suffer the counter-effects of the enormous and precipitate effort which she had made in vain. From the point of view of her effectiveness and her regimental cadres, (basic organization,) she had undergone a wastage which her adversaries, on the other hand, had been able to save themselves. She had, in the words of the proverb, put all her eggs in one basket, and in spite of her large population she could no longer, owing to the immediate and sterile abuse which she had made of her resources, pretend to regain the superiority of numbers.

She was reduced to facing as best she could on both war fronts the unceasingly increasing forces of the Allies. She

had attained the maximum of tension and had secured a minimum of results. She had thus landed herself in a difficulty which will henceforward go on increasing and which is made clear when the wastage which her army has suffered is closely studied.

WASTAGE OF GERMAN EFFECTIVES.

Chapter II. of this section of the review bears the headline "Wastage of German Effectives."

The wastage of effectives is easy to establish, it says. We have for the purpose two sources—the official lists of losses published by the German General Staff and the notebooks, letters, and archives of soldiers and officers killed and taken prisoners. These different documents show that by the middle of January the German losses on the two fronts were 1,800,000 men.

These figures are certainly less than the reality, because, for one thing, the sick are not comprised, and, for another, the losses in the last battle in Poland are not included. Let us accept them, however; let us accept also that out of these 1,800,000 men 500,000—this is the normal proportion—have been able to rejoin after being cured. Thus the final loss for five months of the campaign has been 1,300,000 men, or 260,000 men per month. These figures agree exactly with what can be ascertained when the variations of effectives in certain regiments are examined.

It is certain that the majority of the German regiments have had to be completely renewed. What, then, is the situation created by these enormous losses?

This question is answered by a statement headed "German troops available for 1915."

The total of German formations known at the beginning of January, says the review, represented in round numbers 4,000,000 men. According to the official reports on German recruiting, the entire resources of Germany in men amount to 9,000,000. But from these 9,000,000 have to be deducted men employed on railways, in the police, and in certain admin-

istrations and industries—altogether 500,000 men. The total resources available for the war were therefore 8,500,000. Out of these about one-half, say 4,000,000, are now at the front. The definitive losses represent at least 1,300,000 men. The available resources amounted, then, at the beginning of January, to 3,200,000 men.

GERMANY'S RESERVES UNTRAINED.

Of what are these resources composed? Chiefly of men who were untrained in time of peace, the trained reservists having almost all left the depots for the front. It has, moreover, to be noted that out of these 3,200,000 men there are, according to the statistics, 800,000 who are more than 39 years of age, and therefore of only mediocre military value. Thus there remain 2,400,000. Finally, the category of the untrained in peace comprises, according to the estimates of German military authorities themselves, one-quarter of inefficients.

The really valuable resources capable of campaigning are therefore just 2,000,000. These men, comprising the 1915, 1916, and 1917 classes, called out in anticipation, constitute—and this point cannot be too strongly insisted upon—the total of available resources for the operations during the twelve months of 1915. As to what the military value of these troops will be, considering the haste with which they have been trained, the formidable losses sustained in the battle of Flanders by the newly formed corps show very clearly. Their military value will be limited.

GERMAN LOSSES 260,000 A MONTH.

When it is remembered that, according to the German documents themselves, the definite loss each month is 260,000 men, it is manifest that the available resources for the year 1915 will not suffice to fill the gaps of a war of ten months.

It is then superabundantly established that in the matter of effectives Germany has reached the maximum of possible effort. If with the men at present available she creates, as it is certain that she is preparing to do at this moment, fresh

formations, she will be preventing herself, if the war lasts another ten months, as is admissible, from being able to complete afresh her old formations. If she creates no new formations, she will have in 1915 exactly what is necessary and no more to complete the existing units afresh.

Bearing in mind the ways of the German General Staff, one may suppose that, disregarding the eventual impossibility of recompleting, it is still addressing itself to creating new formations. The weakness to which Germany will expose herself in the matter of effectives has just been set forth, and it is easy to show that this weakness will be still further aggravated by the wastage in the regimental orders.

PRAISES FRENCH "SEVENTY-FIVES."

In the sixth installment, beginning with the field gun, the famous "seventy-fives," the compiler of the report, after rehearsing the splendid qualities of this weapon—its power, its rapidity of action, and its precision—points out that it possesses a degree of strength and endurance which makes it an implement of war of the first order.

It may be stated without hesitation [says the review] that our "seventy-five" guns are in as perfect condition today as they were on the first day of the war, although the use made of them has exceeded all calculations. The consumption of projectiles was, in fact, so enormous as to cause for a moment an ammunition crisis, which, however, was completely overcome several weeks ago.

The methodical and complete exploitation of all the resources of the country, organized since the beginning of the war, has enabled us to accumulate a considerable stock of fresh munitions, and an increasing rate of production is henceforth assured. We are thus sure of being able to provide without particular effort for all the needs of the campaign, present and future, however long the war may last, and it is this certainty which has enabled us to supply projectiles to several of the allied armies, among others, to the Serbian and Bel-

gian armies. From the statements of German prisoners we have learned that the effectiveness of our new projectiles is superior to that of the old ones.

FRENCH HEAVY GUNS SUPERIOR.

Our heavy artillery was in process of reorganization when the war broke out, with the result that we were indisputably in a position of inferiority in respect of this arm during the first battles. But today the rôles have been changed and our adversaries themselves acknowledge the superiority of our heavy artillery.

The change has been brought about in various ways, partly by the intense activity of the cannon foundries in new production, partly by the employment at the front of the enormous reserves of artillery preserved in the fortresses. The very large number of heavy guns at the front represents only a part of the total number available for use. There is an abundant stock of projectiles for the heavy artillery, which, as in the case of the field gun ammunition, is daily growing in importance. The same is true of the reserves of powder and other explosives and of all materials needed for the manufacture of shells.

With regard to small arms, hand grenades, bombs, and all the devices for lifetaking which the trench warfare at short distance has brought into use, the position of the French troops is in every way favorable.

There follows a passage on the development of the machine gun in this kind of warfare.

Owing to the extended use of this weapon, the number supplied to the various units has been appreciably increased, says the review. Not only is each unit in possession of its full regulation complement of machine guns, but the number of these guns attached to each unit has been increased since Feb. 1 by one-third.

The report next passes to the transport service, which, it says, has worked with remarkable precision since the beginning of the war. This section of the review closes by referring to food supplies for the army, which are described as abundant.

LONDON, March 27, (*Correspondence of The Associated Press.*)—*The eighth installment of the French official review of the war, previous chapters of which have been published, takes up the German losses of officers, the wastage of guns and projectiles, and "the moral wastage of the German Army."*

The chapter on losses of officers begins with the statement that the condition of the cadres, or basic organizations, in the German Army is bad. The proportion of officers, and notably of officers by profession, has been enormously reduced, it says; and a report made in December showed that in a total of 124 companies, active or reserve, there were only 49 officers of the active army. The active regiments have at the present time, according to the review, an average of 12 professional officers; the reserve regiments, 9 to 10; the reserve regiments of new formation, 6 to 7; and it is to be remembered that these officers have to be drawn upon afresh for the creation of new units.

"If Germany creates new army corps, and if the war lasts ten months," it continues, "she will reduce almost to nothing the number of professional officers in each regiment, a number which already is very insufficient."

FRENCH CONDITIONS IN CONTRAST.

The French report points out that on the other hand all the French regiments have been constantly kept at a minimum figure of eighteen professional officers per regiment. At the same time it admits that the commanders of German corps, commanders of active battalions, and the officers attached to the commanders of army corps are officers by profession.

The French report then addresses itself to the wastage of material. Discussing the wastage of guns, it says:

It is easy to ascertain the German losses in artillery. On Dec. 28 the Sixty-sixth Regiment of Artillery entrained at Courtrai for Germany twenty-two guns, of which eighteen were used up. This figure is extremely high for a single regiment.

The same facts have been ascertained

as regards heavy artillery. On Dec. 21 and 22 seventy-seven guns of heavy artillery, which were no longer serviceable, were sent to Cologne. These movements, which are not isolated facts, show how ill the German artillery has resisted the ordeal of the campaign.

Other proofs, moreover, are decisive. For some weeks we have noted the very peculiar aspect of the marking on the bands of a great number of shells of the 77 gun. When these markings are compared with those of shells fired three months ago it is plain beyond all question that the tubes are worn and that many of them require to be replaced. This loss in guns is aggravated by the necessity which has arisen of drawing upon the original army corps for the guns assigned to the recently formed corps or those in course of formation. Several regiments of field artillery have, in fact, had to give up two batteries.

WEARING OUT OF MATERIAL.

These two phenomena—wearing out of material and drafts upon batteries—will inevitably result either in the reduction of batteries from six to four guns, a reduction of the number of batteries in the army corps, or the partial substitution for 77 guns of 9-centimeter cannon of the old pattern, the presence of which has been many times perceived at the front.

Furthermore, the German artillery lacks and has lacked for a very long time munitions. It has been obliged to reduce its consumption of shells in a notable degree. No doubt is possible in this respect. The statements of prisoners since the battle of the Marne, and still more since the battle of the Yser, make it clear that the number of shots allowed to the batteries for each action is strictly limited. We have found on officers killed or taken prisoner the actual orders prescribing positively a strict economy of munitions.

For the last three months, too, we notice that the quality of the projectiles is mediocre. Many of them do not burst. On Jan. 7, in the course of a bombardment of Laventie, scarcely any of the German shells burst. The proportion of non-bursts was estimated at two-fifths

by the British on Dec. 14, two-thirds by ourselves in the same month. On Jan. 3 at Bourg-et-Comin, and at other places since then, shrapnel fell the explosion of which scarcely broke the envelope and the bullets were projected without any force. About the same time our Fourteenth Army Corps was fired at with shrapnel loaded with fragments of glass, and on several points of our front shell casings of very bad quality have been found, denoting hasty manufacture and the use of materials taken at hazard.

From numerous indications it appears that the Germans are beginning to run short of their 1898 pattern rifle. A certain number of the last reinforcements (January) are armed with carbines or rifles of a poor sort without bayonets. Others have not even rifles. Prisoners taken at Woevre had old-pattern weapons.

The upshot of these observations is that Germany, despite her large stores at the beginning, and the great resources of her industrial production, presents manifest signs of wear, and that the official optimism which she displays does not correspond with the reality of the facts.

MORAL WASTAGE.

Under the caption "Moral Wastage of the German Army," the review continues:

The material losses of the German Army have corresponded with a moral wastage which it is interesting and possible to follow, both from the interrogation of prisoners and the pocketbooks and letters seized upon them or on the killed.

At the beginning of the war the entire German Army, as was natural, was animated by an unshakable faith in the military superiority of the empire. It lived on the recollections of 1870, and on those of the long years of peace, during which all the powers which had to do with Germany displayed toward her a spirit of conciliation and patience which might pass for weakness.

The first prisoners we took in August showed themselves wholly indifferent to the reverses of the German Army. They were sincerely and profoundly convinced

that, if the German Army retired, it was in virtue of a preconceived plan, and that our successes would lead to nothing. The events at the end of August were calculated to strengthen this contention in the minds of the German soldiers.

The strategic retreat of the French Army, the facility with which the German armies were able to advance from Aug. 25 to Sept. 5, gave our adversaries a feeling of absolute and final superiority, which manifested itself at that time by all the statements gleaned and all the documents seized.

At the moment of the battle of the Marne the first impression was one of failure of comprehension and of stupor. A great number of German soldiers, notably those who fell into our hands during the first days of that battle, believed fully, as at the end of August, that the retreat they were ordered to make was only a means of luring us into a trap. German military opinion was suddenly converted when the soldiers saw that this retreat continued, and that it was being carried out in disorder, under conditions which left no doubt as to its cause and its extent.

This time it was really a defeat, and a defeat aggravated by the absence of regular supplies and by the physical and moral depression which was the result. The severity of the losses sustained, the overpowering effects of the French artillery, began from this moment to be noted in the German pocketbooks with veritable terror. Hope revived, however, at the end of some weeks, and there is to be found in the letters of soldiers and officers the announcement of "a great movement" which is being prepared, and which is to lead the German armies anew as far as Paris.

LOSSES IN "BATTLE OF CALAIS."

This is the great "battle of Calais," which, contrary to the anticipations of the enemy, was in reality fought to the east of the Yser. The losses of the Germans, which during those ten days exceeded 150,000 men, and may perhaps have reached 200,000, produced a terrifying impression on the troops. From that moment prisoners no longer declared them-

selves sure of success. For a certain time they had been consoled by the announcement of the capture of Warsaw. This pretended success having proved to be fictitious, incredulity became general.

During the last two months the most intelligent of the prisoners have all admitted that no one could any longer say on which side victory would rest. If we think of the absolute confidence with which the German people had been sustained, this avowal is of great importance.

Letters seized on a dead officer speak of the imminence of a military and economic hemming-in of Germany. They discuss the possibility of Germany find-

ing herself after the war with "empty hands and pockets turned inside out." There is no longer any question of imposing the conqueror's law upon adversaries at his mercy, but of fighting with the energy of despair to secure an honorable peace. An officer of the General Staff who was made prisoner on Jan. 18 said: "Perhaps this struggle of despair has already begun."

There follows a chapter bearing the title, "The System of Lies," in which the review describes the methods by which it is alleged the German Government "made a sustained effort to create in the army an artificial state of mind based entirely upon lies and a scientific system of fables."

SONNET ON THE BELGIAN EXPATRIATION.

By THOMAS HARDY.

[From King Albert's Book.]

I DREAMT that people from the Land of
Chimes
Arrived one Autumn morning with their
bells,

To hoist them on the towers and citadels
Of my own country, that the musical rhymes

Rung by them into space at measured times
Amid the market's daily stir and stress,
And the night's empty starlit silentness,
Might solace souls of this and kindred climes.

Then I awoke: and, lo, before me stood
The visioned ones, but pale and full of fear;
From Bruges they came, and Antwerp, and
Ostend,

No carillons in their train. Vicissitude
Had left these tinkling to the invaders' ear,
And ravaged street, and smoldering gable-
end.

War Correspondence

A Month of German Submarine War

By Vice Admiral Kirchhoff of the German Navy

Under the heading, "A Month of U-Boat War," Vice Admiral Kirchhoff of the German Navy discusses the German submarine warfare against merchant shipping in its first month. The article, appearing in the *Hamburger Fremdenblatt* of March 19, 1915, is reproduced:

ON March 18 a month had passed since the beginning of our sharp procedure against our worst foe.

We can in every way be satisfied with the results achieved in the meantime! In spite of all "steps" taken before and thereafter, the English have everywhere had important losses to show at sea—some 200 ships lost since the beginning of the war, according to the latest statements of the Allies—so that even they themselves no longer dare to talk about the "German bluff."

On the new and greater "war zone" established by us, our submarines have known how to work bravely, and have been able, for instance, to operate successfully on a single morning on the east coast, in the Channel, and in the Irish Sea. We have heard of many losses of our opponents, and on the other hand of the subjugation of only two of our brave U-boats. Ceaselessly they are active on the coasts of Albion; shipping is paralyzed at some points; steamship companies—including also many neutral ones—have suspended their sailings; in short, our threat of a more acute condition of war "with all means at hand" has been fully fulfilled.

The "peaceful shipping," too, has taken notice of it and adjusted itself according to our instructions. The official objections of neutrals have died away without effect; throughout the world we have already been given right; the shipping circles of the neutral States are in great part holding entirely back. The

empty threats that floated over to us from across the Channel, that the captured crews of German submarines will be treated differently than other prisoners—yes, as plain pirates and sea robbers—those are nothing but an insignificant ebullition of British "moral insanity." They are a part of the hypocritical cant without which, somehow, Great Britain cannot get along. If Great Britain should act in accordance with it, however, then we shall know what we, for our part, have to do!

German and probably English mines, too, have helped our submarines in clearing up among the English mercantile and war fleet. Many merchant ships warned long in advance have been compelled to believe in the warning, and with them frequently a great part of their crews—"without any warning whatever," as our opponents like to say.

All measures of defense, yes, even more significant, all measures of deception and boastful "ruses de guerre," and even all attempts to hush up the news of German accomplishments and whenever possible to suppress it completely—all these efforts have been futile. Our results surpass the expectations that had been cherished. Who knows how many accomplishments other than those which have been published may also have been achieved? Foreign newspapers report a large number of steamships overdue. From overseas likewise we receive favorable reports about the sinking of enemy ships. But the best is the news

that our submarines have succeeded in sinking two English auxiliary cruisers and perhaps also one or two larger English transport ships with several thousand men on board.

The last announcement has filled us all with greatest satisfaction. This, our latest method of warfare, is "truly humane"; it leads more speedily to the goal than anything else, so that the number of victims will in the end be smaller after all. It brings peace to all of us sooner than the empty paper protests and crying to Heaven about violence

and international law, law of the sea, and laws of humanity could do. In the innocent exalted island kingdom many a fellow is already striking; why should not even the recruit strike, who is also beginning to get a glimmer of the truth that there are no props in the ocean waves?

The more opponents come before the bows of our ships and are sunk, the better! Down with them to the bottom of the sea; that alone will help! Let us hope that we shall soon receive more such cheerful news.

Three Weeks of the War in Champagne

By a British Observer

The following article, issued by the British Press Bureau, London, March 18, 1915, is from a British observer with the French forces in the field who has the permission of General Joffre to send communications home from time to time, giving descriptions of the work, &c., of the French Army which will be of interest to the British reader.

I PROPOSE to give some account of the operations which have been in progress for the last three weeks in Champagne. Every day since Feb. 15 the official communiqués find something to say about a district which lies midway between Rheims and Verdun. The three places which are always mentioned, which form the points of reference, are Perthes-lez-Hurlus, Le Mesnil-lez-Hurlus, and Beauséjour Farm. The distance between the first and the last is three and one-half miles; the front on which the fighting has taken place is about five miles; and the French have been attacking at one point or another in this front every day for the last three weeks. It is, therefore, an operation of a different kind to those which we have seen during the Winter months. Those were local efforts, lasting a day or two, designed to keep the enemy busy and prevent him from withdrawing

troops elsewhere; this is a sustained effort, made with the object of keeping a constant pressure on his first line of defense, of affecting his use of the railway from Bazancourt to Challerange, a few miles to the north, and of wearing down his reserves of men and ammunition. It may be said that Feb. 15 marks the opening of the 1915 campaign, and that this first phase will find an important place when the history of the war comes to be written.

We must first know something of the nature of the country, which is entirely different to that in which the British Army is fighting. It is one vast plain, undulating, the hills at most 200 feet higher than the valleys, gentle slopes everywhere. The soil is rather chalky, poor, barely worth cultivating; after heavy rain the whole plain becomes a sea of shallow mud; and it dries equally quickly. The only features are the pine woods, which have been planted by hundreds. From the point of view of profit, this would not appear to have been a success; either the soil is too poor, or else it is unsuitable to the maritime pine; for the trees are rarely more than 25 feet high. As each rise is topped, a new stretch of plain, a new set of small woods appear, just like that which has been left behind.

ELEUTHERIOS K. VENIZELOS

The great Greek statesman who recently resigned as Prime Minister.

(Photo from Medem Photo Service.)

LORD HARDINGE OF PENSURST
Who, as Viceroy, rules England's Indian Empire during the critical period of the war.

The villages are few and small, most of them are in ruins after the fighting in September; and the troops live almost entirely in colonies of little huts of wood or straw, about four feet high, dotted about in the woods, in the valleys, wherever a little water and shelter is obtainable. Lack of villages means lack of roads; this has been one of the great difficulties to be faced; but, at the same time, the movement of wagons across country is possible to a far greater extent than in Flanders, although it is often necessary to use eight or ten horses to get a gun or wagon to the point desired.

From the military point of view the country is eminently suitable for troops, with its possibilities of concealment, of producing sudden surprises with cavalry, and of manoeuvre generally. It is, in fact, the training ground of the great military centre of Châlons; and French troops have doubtless been exercised over this ground in every branch of military operation, except that in which they are engaged at the present moment.

What commander, training his men over this ground, could have imagined that the area from Perthes-lez-Hurlus to Beauséjour Farm would become two fortress lines, developed and improved for four months; or that he would have to carry out an attack modeled on the same system as that employed in the last great siege undertaken by French troops, that of Sebastopol in 1855? Yet this is what is being done. Every day an attack is made on a trench, on the edge of one of the little woods or to gain ground in one of them; every day the ground gained has to be transformed so as to give protection to its new occupants and means of access to their supports; every night, and on many days, the enemy's counter-attacks have to be repulsed.

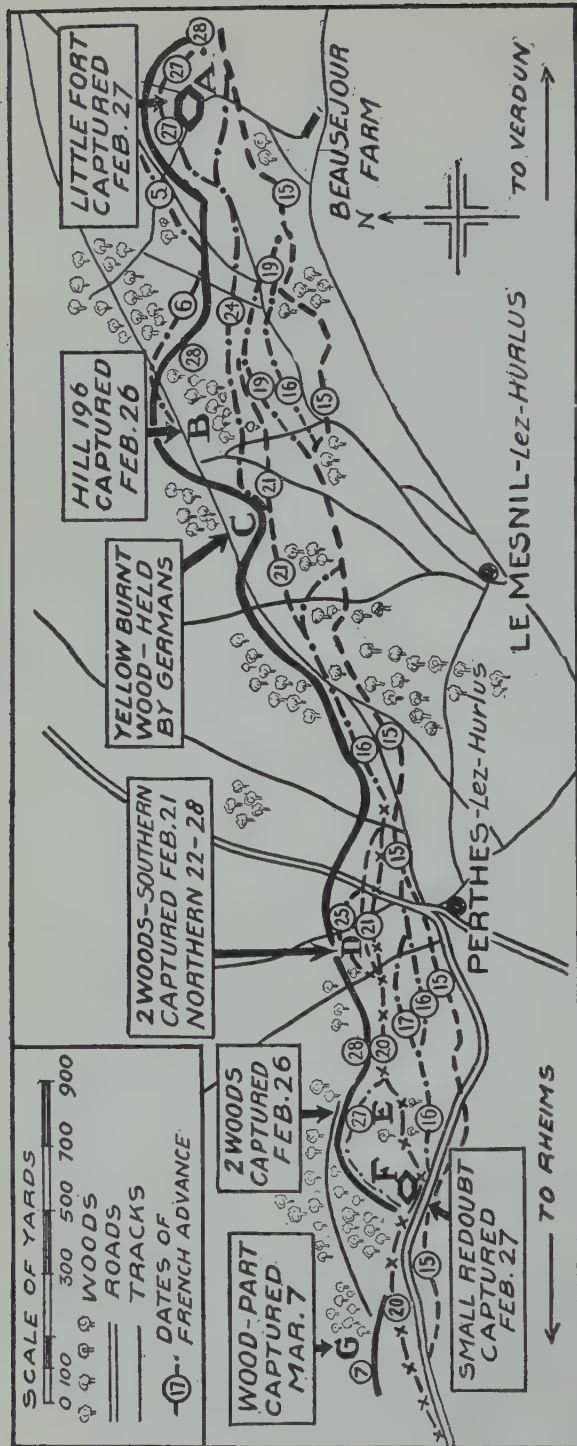

Each attack has to be prepared by a violent and accurate artillery fire; it may be said that a trench has to be morally captured by gun fire before it can be actually seized by the infantry. Once in the new trench, the men have to work with their intrenching tools, without exposing themselves, and wait for a counter-attack, doing what damage they can to the enemy with hand gre-

nades and machine guns. Thus the amount of rifle fire is very small; it is a war of explosives and bayonets.

Looking at the battle at a distance of about 2,000 yards from the enemy's line, the stillness of what one sees is in marked contrast to the turmoil of shells passing overhead. The only movement is the cloud of smoke and earth that marks the burst of a shell. Here and there long white lines are visible, when a trench has brought the chalky subsoil up to the top, but the number of trenches seen is very small compared to the number that exist, for one cannot see into the valleys, and the top of the ground is an unhealthy place to choose for seating a trench. The woods are pointed out, with the names given them by the soldiers, but it needs fieldglasses to see the few stumps that remain in those where the artillery has done its work. And then a telephone message arrives, saying that the enemy are threatening a counter-attack at a certain point, and three minutes later there is a redoubled whistling of shells. At first one cannot see the result of this fire—the guns are searching the low ground where the enemy's reserves are preparing for the movement, but a little later the ground in front of the threatened trench becomes alive with shell bursts, for the searching has given place to the building up of a wall of fire through which it is impossible for the foe to pass without enormous loss.

The attached map may enable us to look more closely at what has been achieved. The lowest dotted line, numbered 15, is the line of the French trenches on Feb. 15. They were then close up to the front of the German line with its network of barbed wire, its machine-gun emplacements, often of concrete, and its underground chambers for sheltering men from the shells. Each successive dotted line shows the line held by the French on the evening of the date written in the dotted line. Thus the total gain of ground, that between the most southerly and the most northerly dotted lines, varies between 200 yards, where the lines are close together northeast of

Map of the French Operations in the Champagne

Some of the severest fighting on the western battle front took place in this little section of about four miles of trenches, lying between Rheims and Verdun. For a whole month from Feb. 15, the attacks were kept up by the French forces almost continuously, and the sketch gives the graphic result of changes for three weeks of that time. Obviously the purpose of the French was to pierce the German line and cut the railway a few miles to the rear. Incidentally, the French aimed to keep their opponents busy, and thus

prevent any reinforcements being sent to von Hindenburg in the east.

The total gain of ground—that between the most southerly and most northerly dotted lines—varies from 200 yards northeast of Perthes to 1,400 yards, half way between Le Mesnil and Beausejour Farm. But the whole of this space has been a series of trenches and fortified woods, each of which had to be attacked separately.

The letters (A to G) in the sketch indicate the points of the severest fighting. A (the "little fort") was taken and lost three times

before the French finally held it. B saw some of the stiffest encounters, the Germans attacking the hill nearly every day after the French captured it, and even the Prussian Guard being put in. The woods at C, D, and E were centres of terrific combats, in which trenching and mining were continuous tasks. The redoubt at F was captured only after large losses on both sides. At the extreme west is still another wood, (G,) which the French attacked three times before they were successful in getting a foothold there.

Perthes, and 1,400 yards, half way between Le Mesnil and Beauséjour Farm. But the whole of this space has been a series of trenches and fortified woods, each of which has had to be attacked separately.

Some of the points where the fighting has been heaviest are shown in letters on the map. A is the "little fort," a redoubt on an open spur, holding perhaps 500 men. This was first attacked in January; it was partly taken, but the French in the end retained only the southern corner, where they remained for something like a fortnight. On Feb. 16 it was again taken in part, and lost the same day. On the 17th the same thing happened. On the 23d they once more got into the work; in the evening they repulsed five separate counter-attacks; then a sixth succeeded in turning them out. On the 27th they took all except a bit of trench in the northern face, and two days later they made that good, as well as a trench about fifty yards to the north of the work.

B is a small hill, marked 196. The capture of this, with its two lines of trenches, was one of the most brilliant pieces of work done. Since this date, the 26th, the enemy have continued to counter-attack nearly every day. It was here that the Prussian Guard was put in; but they have failed to get it back, and their losses have been very high. The prisoners stated that one regiment had its Colonel and all the superior officers killed or wounded. C is a wood, called the "Yellow Burnt Wood." It is still in the hands of the Germans, a regular nest of machine guns, which command the ground not only to the front but also down valleys to the east and west. The French are just in the southwest corner.

At D there are two woods; the southern we will call No. 3, the northern No. 4. On the 16th our allies got a trench just south of No. 3; they got into the wood on the 18th, and fought backward and forward in the wood that day and all the 19th and 20th; by the evening of the 20th they had almost reached the northern edge. On the 21st a stronger counter-attack than usual was repulsed, and in

pursuing the retiring enemy they secured the northern edge. On the 22d there was more fighting in No. 3, but in the end the French managed to make their way into No. 4 as far as a trench which runs along a crest midway through the wood. The next six days saw continuous fighting in No. 4, sometimes near the northern end, sometimes at the crest in the middle, and occasionally back near the southern end. The French now hold the northern edge, and have pushed troops into the "Square" wood just north of the line of the 25th.

At E again there are two small woods; these were both captured on the 26th, but the trenches in the northern one had been mined, and the French had no sooner seized them than they were blown up. At F there was another small redoubt; part of this was taken on the 19th from the east, but the work was not finally captured till the 27th, when 240 corpses were found in it. On the extreme west, at G, is a wood which has twice been unsuccessfully attacked. On the first occasion troops got into the wood, but a severe snowstorm prevented the artillery from continuing to assist them, and they were driven out. The second was an attempt to surprise the enemy at 2 A. M. on the 25th; this also failed. A third attack was made on March 7 and was successful; the French line now runs through the wood.

The above will serve to show the tenacity which is required for an operation of this kind. Up to the present the French have made steady and continuous progress, and their success may be best judged from the fact that they have not been forced back on any day behind the line they held in the morning, despite innumerable counter-attacks. And this is not merely a question of ground, but one of increasing moral superiority, for it is in the unsuccessful counter-attacks that losses are heavy, and these and the sense of failure affect the morale of an army sooner or later.

Will the French push through the line? Will a hole be made, or is the enemy like a badger, who digs himself in rather faster than you can dig him out?

I cannot tell; it would indeed be an astonishing measure of success for a first attempt, and the enemy may require a great deal more hammering at many points before he has definitely had enough at any one point. But these

operations have brought the day closer, and turn our thoughts to the time when we shall be able to move forward, and one finds the cavalrymen wondering whether perhaps they, too, will get their chance.

The Germans Concrete Trenches

By F. H. Gailor, American Rhodes Scholar of New College, Oxford

[From The London Daily Mail, March 24, 1915.]

BERGEN-OP-ZOOM.

AT the kind invitation of General Longchamps, German Military Governor of the Province of Namur, I spent two days with him going along the country in and behind the firing line in Northern France from near Rheims to the small village of Monthois, near Vouziers, on the Aisne.

About five miles out of Monthois we came to the artillery positions of the Germans. We could see the flashes of the guns long before we reached the hills where they were placed, but when we came up and dismounted the position was most cleverly concealed by a higher hill in front and the heavy woods which served as a screen for the artillery. I noticed many holes where the French shells had burst, and the valley to the north looked as if some one had been experimenting with a well digger. One 21-centimeter shell had cut a swath about 100 yards long out of the woods on the hill where we dismounted. The trees were twisted from their stumps as if a small cyclone had passed, and one could realize the damage the shells could do merely by the displaced air.

We went on forward into the valley on foot and stopped about two hundred yards in front and to the left of where the German guns were firing. There, although of course we could not see the French position, we could hear and see their shells as they exploded. They were firing short, one of the officers told me, because they thought the Germans were on the forward hill. He could see one of

the French aeroplanes directing their fire, but I could not make it out. We stayed there listening to the shells and watching the few movements of German batteries that were taking place. A party of officers hidden by the trees were taking observations and telephoning the results of the German fire and, no doubt, of the French fire in the German trenches. There was no excitement; but for the noise the whole scene reminded me of some kind of construction work, such as building a railroad.

After about an hour, when nothing had happened, one began to realize that even such excitement may become monotonous and be taken as a matter of course. One of the officers told me that the Germans had been there since the beginning of October and that even the trenches were in the same position as when they first came.

Certainly the trenches seem permanent enough for spending many Winters. A number of them have now been built of concrete, especially in that swampy part near the Aisne where they strike water about three feet underground. The difficulty is in draining out the water when it rains.

Some of the trenches have two stories, and at the back of many of them are subterranean rest houses built of concrete and connected with the trenches by passages. The rooms are about seven feet high and ten feet square, and above the ground all evidence of the work is concealed by green boughs and shrub-

bery so that they may escape the attention of the enemy's aeroplanes.

With the noise and the fatigue, the men say it is impossible to sleep naturally, but they become so used to the firing and so weary that they become oblivious of everything even when shells are falling within a dozen yards of them. They stay in the trenches five days and then get five days' rest. In talking to the men one feels the influence on them of a curious sort of fatalism—they have been lucky so far and will come through all right. One sees and feels everywhere the spirit of a great game. The strain of football a thousand times magnified. The joy of winning and boyish pleasure in getting ahead of the other fellows side by side with the stronger passions of hatred and anger and the sight of agony and death.

We talked to some of the little groups of men along the road who were going back to their five days in the trenches. Of course all large units are split up so as not to attract attention. They were all the same, all sure of winning, and all bearded, muddy, and determined. I could not help thinking of American football players at the end of the first half. These men seemed all the same. I have no recollection of a single individual. The "system" and its work has made a type not only of clothes but of face. Their answers to the usual questions were all the same, and one felt in talking to them that their opinions were machine-made. Three points stood out—Germany is right and will win; England is wrong and will knuckle under; we hate England because we are alike in religion, custom, and opinion, and it is the war of kindred races. Everywhere one met the arguments and stories of unfairness and cruelty in fighting that have appeared in the English papers, but with the names reversed. English soldiers had surrendered and then fired; had shot from beneath a Red Cross flag or had killed prisoners. The stories were simple and as hackneyed as most of those current in England.

The concrete rest houses were interesting. Most of them have furniture made from trees "to amuse us and pass the time." Both officers and men use the same type of house, though discipline forbids that the same house be used by both officers and men. The light in these houses is bad and the ventilation not all that it should be, but they are extremely careful about sanitation, and everywhere one smells disinfectants and sees evidence of scrupulous guarding against disease. Oil and candles are scarce and the "pocket electric" that all the men and officers carry does not last long enough for much reading. There are always telephone connections, but in most cases visits are impossible save by way of the underground passages and the trenches.

One officer described the life as entirely normal; another said, in speaking of a Louis XV. couch which had been borrowed from a near-by château and was the pride of a regiment, "Oh! we are cave-dwellers, but we have some of the luxuries of at least the nineteenth century."

The Major Commandant at Rethel showed me a letter from a friend demanding "some easy chairs and a piano for his trench house," and the Major said, "I hear they have music up on the Yser, but the French are too close to us here!"

All that I saw of the German Red Cross leads me to believe that it is adequate and efficient. At Rethel we saw a Red Cross train of thirty-two cars perfectly equipped. The cars are made specially with open corridors, so that stretchers or rubber-wheeled trucks may be rolled from one car to another. The berths are in two tiers, much like an American sleeping car, and each car when full holds twenty-eight men. There is an operating car fully equipped for the most delicate and dangerous cases; in fact, when we saw the train at Rethel it had stopped on its way to Germany for an operation on a man's brain.

The Spirits of Mankind

By Woodrow Wilson, President of the United States

The conviction that great spiritual forces will assert themselves at the end of the European war to enlighten the judgment and steady the spirits of mankind was expressed by President Wilson in an address of welcome delivered at the Maryland annual conference of the Methodist Protestant Church at Washington on April 8, 1915. The text of his address appears below.

THESE are days of great perplexity, when a great cloud of trouble hangs and broods over the greater part of the world. It seems as if great, blind, material forces had been released which had for long been held in leash and restraint. And yet underneath that you can see the strong impulses of great ideals.

It would be impossible for men to go through what men are going through on the battlefields of Europe and struggle through the present dark night of their terrible struggle if it were not that they saw, or thought that they saw, the broadening of light where the morning should come up and believed that they were standing each on his side of the contest for some eternal principle for right.

Then all about them, all about us, there sits the silent, waiting tribunal which is going to utter the ultimate judgment upon this struggle, the great tribunal of the opinion of the world; and I fancy I see, I hope that I see, I pray that it may be that I do truly see, great spiritual forces lying waiting for the outcome of this thing to assert themselves, and are asserting themselves even now to enlighten our judgment and steady our spirits.

No man is wise enough to pronounce judgment, but we can all hold our spirits in readiness to accept the truth when it dawns on us and is revealed to us in the outcome of this titanic struggle.

It is of infinite benefit that in assemblages like this and in every sort of as-

semblage we should constantly go back to the sources of our moral inspiration and question ourselves as to what principle it is that we are acting on. Whither are we bound? What do we wish to see triumph? And if we wish to see certain things triumph, why do we wish to see them triumph? What is there in them that is for the lasting benefit of mankind?

For we are not in this world to amuse ourselves with its affairs. We are here to push the whole sluggish mass forward in some particular direction, and unless you know the direction in which you want to go your force is of no avail. Do you love righteousness? is what each one of us ought to ask himself. And if you love righteousness are you ready to translate righteousness into action and be ashamed and afraid before no man?

It seems to me, therefore, that it is worth suggesting to you that you are not sitting here merely to transact the business and express the ideals of a great church as represented in the State of Maryland, but you are here also as part of the assize of humanity, to remind yourselves of the things that are permanent and eternal, which if we do not translate into action we have failed in the fundamental things of our lives.

You will see that it is only in such general terms that one can speak in the midst of a confused world, because, as I have already said, no man has the key to this confusion. No man can see the outcome, but every man can keep his own spirit prepared to contribute to the net result when the outcome displays itself.

“What the Germans Say About Their Own Methods of Warfare”

By Joseph Bedier, Professor in the College de France

[From an article in the *Revue de Paris* for January, 1915.]

I PURPOSE to show that the German armies cannot altogether escape the reproach of violating on occasion the law of nations. I shall establish this by French methods, through the use of documents of sound value.

My texts are genuine, well vouched for, and I have taken pains to subject them to a critical examination, as scrupulous and minute as heretofore in times of peace I expended in weighing the authority of some ancient chronicle, or in scrutinizing the authenticity of some charter. Perhaps this care was born of professional habit, or due to a natural craving for exactness, but in either case it is a voucher for the work, which is meant for all comers—for the passer-by, for the indifferent, and even for my country's foes. My wish is that the veriest looker-on, idly turning these pages, may be confronted only with documents whose authenticity will be self-evident, if he is willing to see, and whose ignominious tale will reach his heart, if ye have a heart.

I have, moreover, sought for documents not only incontestably genuine but of unquestioned authority. Accusation is easy, while proof is difficult. No belligerent has ever been troubled to find mountains of testimony, true or false, against his enemy; but were this evidence gathered by the most exalted magistrates, under the most solemn judicial sanction, it must unfortunately long remain useless; until the accused has full opportunity to controvert it, every one is free to treat it as false or, at the best, as controvertible. For this reason I shall avoid resting the case upon Belgian or French statements, though I know them to be true. My

purpose has been to bring forward such testimony that no man living, be he even a German, should be privileged to cast a doubt upon it. German crimes will be established by German documents.

These will be taken mainly from the “War Diaries,” which Article 75 of the German Army Regulations for Field Service enjoins upon soldiers to keep during their marches, and which were seized by the French upon the persons of their prisoners, as military papers, as authorized by Article 4 of The Hague Convention of 1907. The number of these is daily increasing, and I trust that some day, for the edification of all, the complete collection may be lodged in the Germanic section of manuscripts in the National Library. Meantime, the Marquis de Dampierre, paleographer and archivist, graduate of the *Ecole des Chartes*, is preparing, and will shortly publish, a volume in which the greater part of these notebooks will be minutely described, transcribed, and clarified. Personally, I have only examined about forty of them, but they will answer my purpose, by presenting relevant extracts, furnishing the name, rank, and regiment of the author, with indications of time and place. Classification is difficult, mainly because ten lines of a single text not infrequently furnish evidence of a variety of offenses. I must take them almost at random, grouping them under such analogies or association of ideas or images as they may offer.

I.

The first notebook at hand is that of a soldier of the Prussian Guard, the Gefreiter Paul Spielmann, (of Company

the north of Dinant—a saddening spectacle—to make one shiver. At the entrance to the village lay the bodies of some fifty citizens, shot for having fired upon our troops from ambush. In the course of the night many others were shot down in like manner, so that we counted more than two hundred. Women and children, holding their lamps, were compelled to assist at this horrible spectacle. We then sat down midst the corpses to eat our rice, as we had eaten nothing since morning. (Fig. 4.)

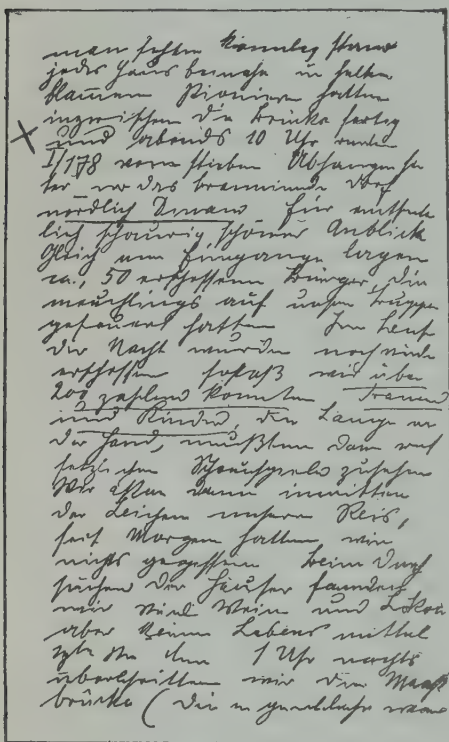

Figure 4.

Here is a military picture fully outlined, and worthy to compete in the Academy of Fine Arts of Dresden. But one passage of the text is somewhat obscure and might embarrass the artist—"Women and children, holding their lamps, were compelled to assist at this horrible spectacle." What spectacle?—the shooting, or the counting of the corpses? To get some certainty on this historic point, the artist should question that noble soldier—the Colonel of the 178th.

His work of that night, however, was in accord with the spirit of his com-

panions in arms, and of his chiefs. We may assure ourselves of this by consulting the Sixth Report of the Belgian Commission of Inquiry upon the violation of the rules of the law of nations (Havre, Nov. 10, 1914) and the ignoble proclamations placarded by the Germans throughout Belgium. I will content myself with three short extracts.

Extract from a proclamation of General von Bülow, placarded at Liège, Aug. 22, 1914:

The inhabitants of the city of Andenne, after having protested their peaceful intentions, were guilty of a treacherous surprise upon our troops. It was with my consent that the General in Chief set fire to the whole locality, and that about one hundred persons were shot.

(The Belgian report controverts the accusation against the inhabitants of Andenne of having taken hostile measures against the German troops, and adds: "As a matter of fact, more than two hundred persons were shot"—almost everything was ravaged. For a distance of at least three leagues the houses were destroyed by fire.)

Extract from a proclamation of Major Dieckmann, placarded at Grivegnée, Sept. 8, 1914:

Any one not responding instantly to the command "raise your arms" is subject to the penalty of death.

Extract from proclamation of Marshal Baron von der Goltz, placarded at Brussels, Oct. 5, 1914:

Hereafter the localities nearest the place where similar acts (destruction of railways or telegraphic lines) were done—whether or not they were accomplices in the act—will be punished without mercy. To this end hostages have been taken from all the localities adjacent to railways menaced by similar attacks, and upon the first attempt to destroy the railways, telegraphic or telephone lines, they will at once be shot.

III.

I copy from the first page of an unsigned notebook, (Fig. 5:)

Langeviller, Aug. 22.—Village destroyed by the Eleventh Battalion of Pioneers. Three women hanged to trees; the first dead I have seen.

Who can these three women be?—criminals undoubtedly—guilty of having fired upon German troops, unless, in-

Münchener Neueste Nachrichten.

unser braver Offiziersstellvertreter W. hat ja mit eigener Lebensgefahr Wadung an die Brigade von unserer bedrängten Lage gemacht; er wird wohl auch ungefähr angegeben haben, in welchem Haus wir uns aufhalten. Zum Ueberflus stecken wir auch noch ein weißes Leintuch oben zum Dachfenster hinaus:

In dieser Lage, vollständig abgeschnitten von unserer Brigade, mühten wir wohl zwei Stunden ausschalten haben, da stürzen plötzlich durch ein geöffnetes Fenster — die Brüftung ist ganz nieder — zwei elegante junge Damen herein, weiße Bettlächer in den Händen schwingend, und ich mir zu Füßen werfend. Die Situation war mir, man verzeihe mir diesen Ausdruck, hochdramatisch. Die eine spricht deutsch, d. h. sie liest einzelne Worte heraus, die ich mir zusammenreichte. Ihre Mutter und Schwester sind gefangen von den Deutschen, sie selbst sollen den Maître von St. Dié holen, sonst werden die beiden als Geiseln erschossen. Eine halbe Stunde hat ihnen der Herr General Zeit gegeben. Nun sind sie auf der Suche in unserer Artillerie- und Infanteriefeuer gekommen, und sind über die Leichen der Unfertigen hinweg in unser Haus gesprungen.

Ich lasse sie in den bombenbedeckten Weinkeller hineinverführen. Verhütung: Würde später mit dem Herrn General persönlich sprechen. Außerdem wurde ich schon längst, daß der Herr Maître mit samt den Beigeordneten verhaftet ist, ebenso mit unser weiserer Biedermaier, der für herabgelassen ist.

Aber die anderen Zivilisten haben mir verhasst und da kommt mir ein guter Gedanke. Sie werden auf Stühle gesetzt und ihnen bedeutet, einen Sitzplatz mitten in der Straße zu nehmen. Säuberungen und Töten auf der einen, ein paar Gewehrschüsse auf der anderen Seite. Man wird allmählich furchtbar hart. Dann liegen sie kraus auf der Straße. Wie diese Stöße geteilt sie losgelassen, weiß ich nicht, aber ihre Hände sind die ganze Zeit trampfhaft gestützt.

So ließ sie mir tun, aber das Mittel hilft sofort. Das Artilleriefeuer aus der Häusern läßt sofort nach, wir können jetzt auch das gegenüberliegende Haus besetzen und sind damit die Herren der Hauptstraße. Was sich jetzt noch auf der Straße zeigt, wird niedergeschossen. Auch die Artillerie hat mittlerweile träge gearbeitet, und als gegen 7 Uhr abends die Brigade zum Sturm vorrückt, am uns zu setzen, kann ich die Meldung erstatten: „St. Dié vom Gegner frei!“

Wie ich später erfuhr, hat das Reserve-Bataillon, das nördlich von uns in St. Dié eindrang, ganz ähnliche Erfahrungen gemacht wie wir. Vier vier Zivilisten, die sie ebenfalls auf die Straße zogen, wurden jedoch von den Franzosen erschossen. Ich habe sie selbst am Krankenhaus mitten in der Straße liegen sehen.

Nun noch eine Episode von diesem Tag, die ich weils, welcher Geist unsere Soldaten, auch in solch kritischer Situation beherrscht. Es war gerade in dem Augenblick, in dem keiner von uns für sein Leben einen Wunderring mehr gegeben hätte, da tritt unser Hornist — er ist der Lappus eines bayerischen Reservemannes — auf mich zu, in der Hand — ein Glas Bier. „Bier gefällig, Herr Oberleutnant?“ — Er hat in aller Seelenruhe hinter dem Büfett ein „Hä!“ Bier angezapft und jedem ein Glas kredenzte, auch manchem, dem dies der letzte Schluck werden sollte.

Ja, ja, das Leben bewegt sich in Gegenjahren, am meisten im Krieg.

Oberleutnant A. Chereize. (m.)

was compelled to barricade himself in a house, (Fig. 9:)

We arrested three civilians, and a bright idea struck me. We furnished them with chairs and made them seat themselves in the middle of the street. There were supplications on one part, and some blows with the stocks of our guns on the other. One, little by little, gets terribly hardened. Finally, there they were sitting in the street. How many anguished prayers they may have muttered, I cannot say, but during the whole time their hands were joined in nervous contraction. I am sorry for them, but the stratagem was of immediate effect. The enfilading directed from the houses diminished at once; we were able then to take possession of the house opposite, and thus became masters of the principal street. From that moment every one that showed his face in the street was shot. And the artillery meanwhile kept up vigorous work, so that at about 7 o'clock in the evening, when the brigade advanced to rescue us, I could report "Saint-Dié has been emptied of all enemies."

As I learned later, the — Regiment of Reserves, which came into Saint-Dié further north, had experiences entirely similar to our own. The four civilians whom they had placed on chairs in the middle of the street were killed by French bullets. I saw them myself stretched out in the street near the hospital.

V.

Article 28 of The Hague Convention of 1907, subscribed to by Germany, uses this language: "The sacking of any town or locality, even when taken by assault, is prohibited." And Article 47 runs: "[in occupied territory] pillage is forbidden."

We shall see how the German armies interpret these articles.

Private Handschuhmacher (Eleventh Battalion of Chasseurs Reserves) writes in his notebook:

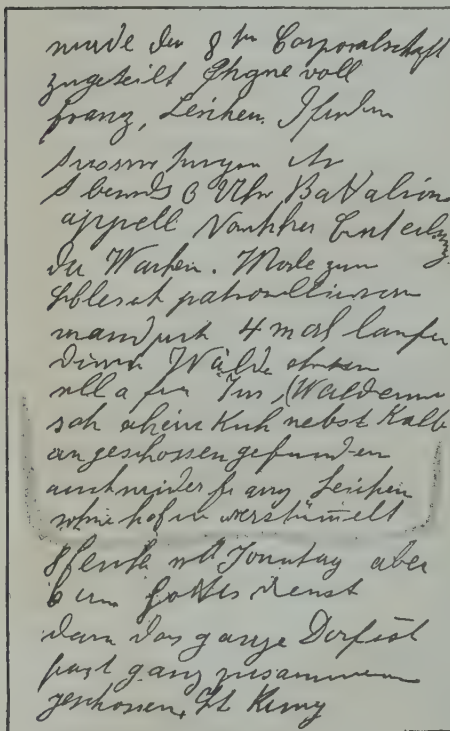

Aug. 8, 1914, Gouvvy, (Belgium).—There, the Belgians having fired on some German soldiers, we started at once pillaging the merchandise warehouse. Several cases—eggs, shirts, and everything that could be eaten was carried off. The safe was forced and the gold distributed among the men. As to the securities, they were torn up.

This happened as early as the fourth day of the war, and it helps us to understand a technical article on the operations of the military treasury (Der Zahlmeister im Felde) in the Berliner Tage-

Saint-Dié at the end of August. He entered the town at the head of a column, and while waiting for reinforcements

Figure 9.

About thirty soldiers of Stenger's Brigade (112th and 142d Regiments of Baden Infantry) were questioned. I have read their depositions, taken under oath and signed with their own names; all confirming the fact that this order of the day was given to them on the 26th of August. In one place by the Major Mosebach, in another by Lieut. Curtius, &c. Most of these witnesses said that they were ignorant whether the order was carried out, but three among them testified that it was carried out under their own eyes in the Forest of Thiaville, where ten or twelve wounded French, already made prisoners by a battalion, were done away with; two others of the witnesses saw the order carried out along the road of Thiaville, where several wounded, found in the ditches by the company as it marched past, were killed.

Figure 13.

Of course, I cannot here produce the original autograph of General Stenger, nor am I here called upon to furnish the names of the German prisoners who gave this testimony. But I shall have no

trouble to establish entirely similar crimes on the faith of German autographs.

For instance, we find in the notebook of Private Albert Delfosse (111th Infantry of Reserves, Fourteenth Reserve Corps, (Fig. 13:)

In the woods (near Saint-Rémy, 4th or 5th of September)—Found a very fine cow and a calf killed; and again the corpses of Frenchmen horribly mutilated.

Must we understand that these bodies were mutilated by loyal weapons, torn perhaps by shells? This may be, but it would be a charitable interpretation, which is belied by this newspaper heading, (Figs. 14 and 15:)

Jauer, Sonntag, Den 18, Oktober, 1914.

Nr. 245.

106. Jahrgang.

This is a heading of a newspaper picked up in a German trench. Jauer is a city of Silesia, about fifty kilometers west of Breslau, where two battalions of the 154th Regiment of Saxon Infantry are garrisoned. One Sunday morning, Oct. 18, doubtless at the hour when the inhabitants—women and children—were wending their way to church, there was distributed throughout the quiet little town, and through the hamlets and villages of the district, the issue of this local paper with the following inscription: "A day of honor for our regiment, Sept. 24, 1914," as the title of an article of some two hundred lines, sent from the front by a member of the regiment—the sub-officer Klemm of the First Company, 154th Infantry Regiment.

The sub-officer Klemm relates how, on the 24th of September, his regiment having left Hannonville in the morning, accompanied by Austrian batteries, suddenly came up against a double fire of infantry and artillery. Their losses were terrible, and yet the enemy was still invisible. Finally, says this officer, it was found that the bullets came from above, from trees which the French

soldiers had climbed. From this point let me quote verbatim, (Fig. 16):

They're brought down from the trees like squirrels, to get a hot reception with bayoneted stock; they'll need no more

doctors' care. We are not fighting loyal enemies, but treacherous brigands. [Note—It is scarcely necessary to point out that it is no more "treacherous," but quite as lawful, to fire from the branches of a tree as from a window, or from a trench,

fest alle. Schon werden die ersten Franzmänner entdeckt. Von den Bäumen werden sie heruntergeknallt wie Eichhörnchen, unten mit Kolben und Seitengewehr „warm“ empfangen, brauchen sie keinen Arzt mehr, wir kämpfen nicht mehr gegen ehrliche Feinde, sondern gegen tüftliche Räuber. Springend gehst über die Dichtung hinüber — da! dort! in den Hecken stecken sie drin, nun aber drauf. Barbon wird nicht gegeben. Stehend, freihändig, höchstens kniend wird geschossen, an Deckung denkt niemand mehr. Wir kommen an eine Mulde, tote und verwundete Rohlosen liegen massenhaft umher, die Verwundeten werden erschlagen oder erstochen, denn schon wissen wir, daß diese Lumpen, wenn wir vorbei sind, uns im Rücken besauern.

Mit der größten Erbitterung wird gekämpft.

Dort liegt ein Franzmann lang ausgestreckt, das Gesicht auf dem Boden, er stellt sich aber nur tot. Der Fußtritt eines strammen Musketiers belebt ihn, daß wir da sind. Sich umdrehend, ruft er Barbon, aber schon ist er mit den Worten: „Siehst du, du B...“, so stecken eure Dinger“ auf der Erde selbstenagelt. Neben mir das unheimliche Krachen kommt von den Kolbenschlägen her, die ein 154er mächtig auf einen französischen Kahlkopf niederfallen läßt. Wohlweislich benutzte er zu der Zeit ein französisches Benehrt, um das feinnige nicht zu zerklagen. Leute mit besonders weichem Gemüt geben verwundeten Franzosen die Gnadenkugel, die anderen haben und stehen nach Möglichkeit. Tapfer haben sich die Gegner geschlagen, es waren Elitetruppen, die wir vor uns hatten, auf 30—10 Meter ließen sie uns heran kommen, dann war's allerdings zu spät. Massenhaft wegemoorfene Tornister und Waffen zeugen davon, daß sie fliehen wollten, aber das Entsetzen beim Anblick der selbstgekauften „Unholde“ hat ihnen die Füße gelähmt und mitten im schmalen Siege hat ihnen die deutsche Kugel ihr „Stopp“

Figure 16.

there the red trousers are lying in masses, here and there—dead or wounded. We club or stab the wounded, for we know that these rascals, as soon as we are gone by, will fire from behind. We find one Frenchman lying at full length upon his face, but he is counterfeiting death. A kick from a robust fusilier gives him notice that we are there. Turning over he asks for quarter, but he gets the reply—“Oh! is that the way, blackguard, that your tools work?” and he is pinned to the ground. On one side of me I hear curious cracklings. They're the blows which a soldier of the 154th is vigorously showering upon the bald pate of a Frenchman with the stock of his gun; he very wisely chose for this work a French gun, for fear of breaking his own. Some men of particularly sensitive soul grant the French wounded the grace to finish them with a bullet, but others scatter here and there, wherever they can, their clubbings and stabbings. Our adversaries have fought bravely. They were élite troops that we had before us. They had allowed us to come within thirty, and even within ten, meters—too close. Their arms and knapsacks thrown down in heaps showed that they wanted to fly, but upon the appearance of our “gray phantoms” terror paralyzed them,

and, on the narrow path in which they crowded, the German bullets brought them the order to halt! There they are at the very entrance of their leafy hiding places, lying down moaning and asking for quarter, but whether their wounds are light or grievous, the brave fusiliers saved their country the expensive care which would have to be given to such a number of enemies.

Now the recital continues very ornate, very literary, and the writer relates how his Imperial Highness Prince Oscar of Prussia, being advised of the exploits (perhaps, indeed, other exploits than these) of the 154th and of the Regiment of Grenadiers, which forms the Brigade with the 154th, declared them both worthy of the name of “King's Brigade,” and the recital closes with this phrase: “When night came on, with a prayer of thankfulness on our lips we fell asleep to await the coming day.” Then adding, by way of postscript, a little phrase “Heimkehr vom Kampf.” He carries the notebook—prose and verse together—to his Lieutenant, who countersigns it: “Certified as correct, De Niem, Lieutenant Commanding the Company,” and then he sends his paper to his town of Jauer, where he is quite confident that he will find some newspaper publisher to accept it, printers to set it up, and a whole population to enjoy it. Now, let me ask any reader—whatever be his country—if he can imagine it possible for such a tale to be spread abroad in any paper in his language, in his native town, for the edification of his wife and his children. In what other country than in Germany is such a thing conceivable? Not in France, at all events. Now, if my readers want another document to show how customary it is in the German Army to mutilate the wounded, well, I will borrow one from the notebook of Private Paul Glöde of the Ninth Battalion of Pioneers, Ninth Corps, (Figs. 17 and 18:)

Aug. 12, 1914, in Belgium.—One can get an idea of the fury of our soldiers in seeing the destroyed villages. Not one house left untouched. Everything eatable is requisitioned by the unofficered soldiers. Several heaps of men and women put to execution. Young pigs are running about looking for their mothers.

are the work of isolated brutes, (such as, unfortunately, may be found even in the most noble armies,) but that, on the contrary, the crimes represented here are collective actions in obedience to service orders, and such as rest upon and dishonor not only the individual but the entire troop, the officers, and the nation; and if we will further note that these thirty notebooks taken at random—Bavarian, Saxon, Pomeranian, Brandeburger, or from the provinces of Baden and the Rhine—must of necessity represent hundreds and thousands of others quite similar, as we may judge from the frightful monotony of their recitals; if we consider all this, we must, I think, be forced to admit that these atrocities are nothing less than the practical application of a methodically organized system.

VII.

H. M. the Emperor of Germany, by ratifying The Hague Convention of 1907, covenanted (Article 24) that "it

is forbidden (c) to kill or wound an enemy who, having laid down his arms, or being without means of defense, has surrendered unconditionally. (d) To declare that no quarter shall be given."

Have the German armies respected these covenants? Throughout Belgian and French reports depositions such as the following abound. This is taken from a French Captain of the 288th Infantry:

On the 22d, in the evening, I learned that in the woods, about one hundred and fifty meters north of the square formed by the intersection of the great Calonne trench with the road from Vaux-les-Palameis to Saint-Rémy, there were corpses of French soldiers shot by the Germans. I went to the spot and found the bodies of about thirty soldiers within a small space, most of them prone, but several still kneeling, and all having a precisely similar wound—a bullet through the ear. One only, seriously wounded in his lower parts, could still speak, and told me that the Germans before leaving had ordered them to lie down and that then had them shot through the head; that he, already wounded had secured indulgence by stating that he was the father of three small children. The skulls of these unfortunates were scattered; the guns, broken at the stock, were scattered here and there; and the blood had besprinkled the bushes to such an extent that in coming out of the woods my cape was spattered with it; it was a veritable shambles.

I quote this testimony, not to base any accusations upon it, but simply to give precision to our indictment. I will not lay stress upon it as evidence, for I wish to keep to the rule which I have laid down—to have records of nothing but German sources of information.

I will quote here the text of an order of the day addressed by General Stenger, in command of the Fifty-eighth German Brigade, on the 26th of August, to the troops under his orders:

From this day forward no further prisoners will be taken. All prisoners will be massacred. The wounded, whether in arms or not in arms, shall be massacred. Even the prisoners already gathered in convoys will be massacred. No living enemy must remain behind us.

Signed—First Lieutenant in Command of the Company, Stoy; Colonel Commanding the Regiment, Neubauer; General in Command of the Brigade, Stenger.

Dogs chained, without food or drink. And the houses about them on fire. But the just anger of our soldiers is accompanied also by pure vandalism. In the villages, already emptied of their inhabitants, the houses are set on fire. I feel sorry for this population. If they have made use of disloyal weapons, after all, they are only defending their own country. The atrocities which these non-combatants are still committing are revenged after a savage fashion. *Mutilations of the wounded are the order of the day.*

This was written as early as the 12th of August—the tenth day after the invasion of innocent Belgium—and these wounded creatures that were tortured had done nothing more than defend their land against Germany—their native land—which Germany had sworn, not only to respect but, if need be, to defend. And yet, in many countries pharisees reading these lines will go forward tranquilly to their churches, or their temples, or their banking houses, or their foreign offices, saying: "In what do these things concern us?" "Ja, ja, this is war." Yes, it is war, but war such as was never made by the soldiers of Marceau, such as never will be made by the soldiers of Joffre, such as never has been made and never will be made by France—"Mother of Arts, of Arms, and of Laws." Yes, it is war, but war such as Attila would not have carried on if he had subscribed to certain stipulations; for, in subscribing them, he would have awakened to the notion, which alone distinguishes the civilized man from the barbarian, distinguishes a nation from a horde—respect for the word once given. Yes, it is war, but war the theory of which could only be made up by such pedant megalomaniacs as the Julius von Hartmanns, the Bernhards, and the Treitschkes; the theory—which accords to the elect people the right to uproot from the laws and customs of war what centuries of humanity, of Christianity, and chivalry have at great pains injected into it; the theory of systematic and organized ferocity; today exposed to public reprobation, not only as an odious thing, but no less silly and absurd. For have we not reached the ridiculous when the incendiaries of Lou-

vain, and Malines, and Rheims, the assassins of women and children, and of the wounded, already find it necessary to repudiate their actions, at least in words, and to impose upon the servility of their ninety-three Kulturträger such denials as this: "It is not true that we are making war in contempt of the law of nations, nor that our soldiers are committing acts of cruelty, or of insubordination, or indiscipline. * * * We will carry this conflict through to the end as a civilized people, and we answer for this upon our good name and upon our honor!" Why this humble and pitiful repudiation? Perhaps because their theory of war rested upon the postulate of their invincibility, and that, in the first shiver of their defeat upon

the Marne, it collapsed, and now their repudiation quickly follows—in dread of the *lex talionis*.

I will stop here. I leave the conclusion to the allied armies, already in sight of victory.

NOTE.—General Stenger's order of the day, mentioned on page , was communicated orally by various officers in various units of the brigade. Consequently, the form in which we have received it may possibly be incomplete or altered. In face of any doubt, the French Government has ordered an inquiry to be made into the prisoners' camps. Not one of the prisoners to whom our magistrates presented the order of the day in the

above-mentioned form found a word to alter. They one and all declared that this was the order of the day which had been orally given in the ranks, repeated from man to man; many added the names of the officers who had communicated the order to them; some related in what a vile way it had been carried out under their eyes. All the evidence of these German soldiers was collected in a legal manner, under the sanction of an oath, and it is after reading their depositions that I wrote the order of the day.

The text of all this evidence was transmitted to all the French Embassies and Legations in foreign countries on the 24th of October, 1914. Every neutral wishing to clear his conscience is at liberty to obtain it from the representatives of the French Republic, who will certainly respond willingly.

THE RECRUIT.

By HORTENSE FLEXNER.

HE had a woodland look—half-startled,
gay—

As if his eyes, light-thirsty, had not
learned

To wake accustomed on earth's joyous day.

A child, whose merriment and wonder
burned

In harmless flame, even his uniform

Was but a lie to hide his wind-wild grace,

Whose limbs were rounded youth, too supple,
warm,

To hold the measure of the street-made
pace.

Music and marching—colors in the sky—

The crowded station, then the train—
farewell!

For all he had the glance, exultant, shy,

That seemed to marvel, "More to see—to
tell!"

Yet with his breathing moved, hid by his coat,

A numbered, metal disk, strapped round his
throat!

American Reply to Britain's Blockade Order

By William J. Bryan, American Secretary of State

WITH the publication on April 6, 1915, of its note in reply to the British Government's Order in Council, proclaiming a virtual blockade against commerce to and from Germany—printed in the April, 1915, number of THE NEW YORK TIMES CURRENT HISTORY—the American Government rested its case. The text of the note to Great Britain follows:

WASHINGTON, March 30, 1915.

The Secretary of State to the American Ambassador at London:

You are instructed to deliver the following to his Majesty's Government in reply to your Nos. 1,795 and 1,798 of March 15: The Government of the United States has given careful consideration to the subjects treated in the British notes of March 13 and March 15, and to the British Order in Council of the latter date.

These communications contain matters of grave importance to neutral nations. They appear to menace their rights of trade and intercourse, not only with belligerents but also with one another. They call for frank comment in order that misunderstandings may be avoided. The Government of the United States deems it its duty, therefore, speaking in the sincerest spirit of friendship, to make its own view and position with regard to them unmistakably clear.

The Order in Council of the 15th of March would constitute, were its provisions to be actually carried into effect as they stand, a practical assertion of unlimited belligerent rights over neutral commerce within the whole European area and an almost unqualified denial of the sovereign rights of the nations now at peace.

This Government takes it for granted that there can be no question what those

rights are. A nation's sovereignty over its own ships and citizens under its own flag on the high seas in time of peace is, of course, unlimited, and that sovereignty suffers no diminution in time of war, except in so far as the practice and consent of civilized nations has limited it by the recognition of certain now clearly determined rights which it is conceded may be exercised by nations which are at war.

A belligerent nation has been conceded the right of visit and search, and the right of capture and condemnation, if upon examination a neutral vessel is found to be engaged in unneutral service or to be carrying contraband of war intended for the enemy's Government or armed forces.

It has been conceded the right to establish and maintain a blockade of an enemy's ports and coasts and to capture and condemn any vessel taken in trying to break the blockade. It is even conceded the right to detain and take to its own ports for judicial examination all vessels which it suspects for substantial reasons to be engaged in unneutral or contraband service and to condemn them if the suspicion is sustained. But such rights, long clearly defined both in doctrine and practice, have hitherto been held to be the only permissible exceptions to the principle of universal equality of sovereignty on the high seas as between belligerents and nations not engaged in war.

It is confidently assumed that his Majesty's Government will not deny that it is a rule sanctioned by general practice that, even though a blockade should exist and the doctrine of contraband as to unblockaded territory be rigidly enforced, innocent shipments may be freely transported to and from the United States

through neutral countries to belligerent territory, without being subject to the penalties of contraband traffic or breach of blockade, much less to detention, requisition, or confiscation.

Moreover, the rules of the Declaration of Paris of 1856—among them that free ships make free goods—will hardly at this day be disputed by the signatories of that solemn agreement.

His Majesty's Government, like the Government of the United States, have often and explicitly held that these rights represent the best usage of warfare in the dealings of belligerents with neutrals at sea. In this connection I desire to direct attention to the opinion of the Chief Justice of the United States in the case of the *Peterhof*, which arose out of the civil war, and to the fact that that opinion was unanimously sustained in the award of the Arbitration Commission of 1871, to which the case was presented at the request of Great Britain. From that time to the Declaration of London of 1909, adopted with modifications by the Order in Council of the 23d of October last, these rights have not been seriously questioned by the British Government. And no claim on the part of Great Britain of any justification for interfering with the clear rights of the United States and its citizens as neutrals could be admitted. To admit it would be to assume an attitude of unneutrality toward the present enemies of Great Britain, which would be obviously inconsistent with the solemn obligations of this Government in the present circumstances. And for Great Britain to make such a claim would be for her to abandon and set at naught the principles for which she has consistently and earnestly contended in other times and circumstances.

The note of his Majesty's principal Secretary of State for Foreign Affairs, which accompanies the Order in Council, and which bears the same date, notifies the Government of the United States of the establishment of a blockade which is, if defined by the terms of the Order in Council, to include all the coasts and ports of Germany and every port of possible access to enemy terri-

tory. But the novel and quite unprecedented feature of that blockade, if we are to assume it to be properly so defined, is that it embraces many neutral ports and coasts, bars access to them, and subjects all neutral ships seeking to approach them to the same suspicion that would attach to them were they bound for the ports of the enemies of Great Britain, and to unusual risks and penalties.

It is manifest that such limitations, risks, and liabilities placed upon the ships of a neutral power on the seas, beyond the right of visit and search and the right to prevent the shipment of contraband already referred to, are a distinct invasion of the sovereign rights of the nation whose ships, trade, or commerce is interfered with.

The Government of the United States is, of course, not oblivious to the great changes which have occurred in the conditions and means of naval warfare since the rules hitherto governing legal blockade were formulated. It might be ready to admit that the old form of "close" blockade, with its cordon of ships in the immediate offing of the blockaded ports, is no longer practicable in the face of an enemy possessing the means and opportunity to make an effective defense by the use of submarines, mines, and aircraft; but it can hardly be maintained that, whatever form of effective blockade may be made use of, it is impossible to conform at least to the spirit and principles of the established rules of war.

If the necessities of the case should seem to render it imperative that the cordon of blockading vessels be extended across the approaches to any neighboring neutral port or country, it would seem clear that it would still be easily practicable to comply with the well-recognized and reasonable prohibition of international law against the blockading of neutral ports, by according free admission and exit to all lawful traffic with neutral ports through the blockading cordon.

This traffic would, of course, include all outward-bound traffic from the neutral country and all inward-bound traffic to the neutral country, except contraband in transit to the enemy. Such pro-

cedure need not conflict in any respect with the rights of the belligerent maintaining the blockade, since the right would remain with the blockading vessels to visit and search all ships either entering or leaving the neutral territory which they were in fact, but not of right, investing.

The Government of the United States notes that in the Order in Council his Majesty's Government give as their reason for entering upon a course of action, which they are aware is without precedent in modern warfare, the necessity they conceive themselves to have been placed under to retaliate upon their enemies for measures of a similar nature, which the latter have announced it their intention to adopt, and which they have to some extent adopted, but the Government of the United States, recalling the principles upon which his Majesty's Government have hitherto been scrupulous to act, interprets this as merely a reason for certain extraordinary activities on the part of his Majesty's naval forces and not as an excuse for or prelude to any unlawful action.

If the course pursued by the present enemies of Great Britain should prove to be in fact tainted by illegality and disregard of the principles of war sanctioned by enlightened nations, it cannot be supposed, and this Government does not for a moment suppose, that his Majesty's Government would wish the same taint to attach to their own actions or would cite such illegal acts as in any sense or degree a justification for similar practices on their part in so far as they affect neutral rights.

It is thus that the Government of the United States interprets the language of the note of his Majesty's principal Secretary of State for Foreign Affairs, which accompanies the copy of the Order in Council, which was handed to the Ambassador of the United States by the Government in London and by him transmitted to Washington.

This Government notes with gratification that "wide discretion is afforded to the prize court in dealing with the trade of neutrals in such a manner as may in

the circumstances be deemed just, and that full provision is made to facilitate claims by persons interested in any goods placed in the custody of the Marshal of the prize court under the order." That "the effect of the Order in Council is to confer certain powers upon the executive officers of his Majesty's Government," and that "the extent to which these powers will be actually exercised and the degree of severity with which the measure of blockade authorized will be put into operation are matters which will depend on the administrative orders issued by the Government and the decisions of the authorities especially charged with the duty of dealing with individual ships and cargoes, according to the merits of each case."

This Government further notes with equal satisfaction the declaration of the British Government that "the instructions to be issued by his Majesty's Government to the fleet and to the customs officials and executive committees concerned will impress upon them the duty of acting with the utmost dispatch consistent with the object in view, and of showing in every case such consideration for neutrals as may be compatible with that object, which is succinctly stated, to establish a blockade to prevent vessels from carrying goods for or coming from Germany."

In view of these assurances formally given to this Government, it is confidently expected that the extensive powers conferred by the Order in Council on the executive officers of the Crown will be restricted by orders issued by the Government, directing the exercise of their discretionary powers in such a manner as to modify in practical application those provisions of the Order in Council, which, if strictly enforced, would violate neutral rights and interrupt legitimate trade. Relying on the faithful performance of these voluntary assurances by his Majesty's Government, the United States takes it for granted that the approach of American merchantmen to neutral ports situated upon the long line of coast affected by the Order in Council will not be interfered with when it is

know that they do not carry goods which are contraband of war or goods destined to or proceeding from ports within the belligerent territory affected.

The Government of the United States assumes with the greater confidence that his Majesty's Government will thus adjust their practice to the recognized rules of international law because it is manifest that the British Government have adopted an extraordinary method of "stopping cargoes destined for or coming from the enemy's territory," which, owing to the existence of unusual conditions in modern warfare at sea, it will be difficult to restrict to the limits which have been heretofore required by the law of nations. Though the area of operations is confined to "European waters, including the Mediterranean," so great an area of the high seas is covered and the cordon of ships is so distant from the territory affected that neutral vessels must necessarily pass through the blockading force in order to reach important neutral ports which Great Britain as a belligerent has not the legal right to blockade and which, therefore, it is presumed she has no intention of claiming to blockade.

The Scandinavian and Danish ports, for example, are open to American trade. They are also free, so far as the actual enforcement of the Order in Council is concerned, to carry on trade with German Baltic ports, although it is an essential element of blockade that it bear with equal severity upon all neutrals.

This Government, therefore, infers that the commanders of his Majesty's ships of war, engaged in maintaining the so-called blockade, will be instructed to avoid an enforcement of the proposed measures of non-intercourse in such a way as to impose restrictions upon neutral trade more burdensome than those which have been regarded as inevitable, when the ports of a belligerent are actually blockaded by the ships of its enemy.

The possibilities of serious interruption of American trade under the Order in Council are so many, and the methods proposed are so unusual, and seem liable to constitute so great an impediment and embarrassment to neutral commerce, that the Government of the United States, if the Order in Council is strictly enforced, apprehends many interferences with its legitimate trade which will impose upon his Majesty's Government heavy responsibilities for acts of the British authorities clearly subversive of the rights of neutral nations on the high seas. It is, therefore, expected that the Majesty's Government, having considered these possibilities, will take the steps necessary to avoid them, and, in the event that they should unhappily occur, will be prepared to make full reparation for every act which, under the rules of international law, constitutes a violation of neutral rights.

As stated in its communication of Oct. 22, 1914, "this Government will insist that the rights and duties of the United States and its citizens in the present war be defined by the existing rules of international law and the treaties of the United States irrespective of the provisions of the Declaration of London, and that this Government reserves to itself the right to enter a protest or demand in each case, in which those rights and duties so defined are violated or their free exercise interfered with by the authorities of the British Government."

In conclusion you will reiterate to his Majesty's Government that this statement of the view of the Government of the United States is made in the most friendly spirit, and in accordance with the uniform candor which has characterized the relations of the two Governments in the past, and which has been in large measure the foundation of the peace and amity existing between the two nationals without interruption for a century.

BRYAN.

Germany's Conditions of Peace

The First Authoritative German Presentation of the Idea

By Dr. Bernhard Dernburg, Late German Colonial Secretary of State

THAT Germany would be willing to make peace on the basis of a free neutral sea, guaranteed by the powers, was indicated in a letter written by Dr. Bernhard Dernburg, ex-Colonial Secretary of Germany, and read at a pro-German mass meeting held in Portland, Me., on April 17, 1915. After an explanatory note Dr. Dernburg divided into numbered clauses his letter, as follows:

(1) Whatever peace is concluded should be of a permanent nature; no perfunctory patching up should be permitted. The horror of all the civilized nations of the Old World slaughtering one another, every one convinced of the perfect righteousness of their own cause—a recurrence, if it could not be avoided absolutely, should be made most remote, so as to take the weight from our minds that all this young blood of the best manhood of Europe might be spilled in vain.

(2) For this purpose it must be borne in mind that the world has changed considerably since the last big conflagration, and that all the countries striving for humanity and civilization are now one big family, with interests, spiritual as well as commercial, interlocking to a degree that no disturbance of any part of the civilized globe can exist without seriously affecting the rest. A disturbance in one quarter must make quite innocent bystanders involuntary victims, to the serious detriment of spiritual peace and commercial pursuits.

The great highway on which thoughts and things travel are the high seas. I can with full authority disclaim any ambition by my country as to world dominion. She is much too modest, on the one hand, and too experienced, on the other hand, not to know that such a state will never be tolerated by the rest.

Events have shown that world dominion can only be practiced by dominion of the high seas. The aim of Germany is to have the seas, as well as the narrows, kept permanently open for the free use of all nations in times of war as well as in times of peace. The sea is nobody's property and must be free to everybody. The seas are the lungs from which humanity draws a fresh breath of enterprise, and they must not be stopped up.

I, personally, would go so far as to neutralize all the seas and narrows permanently by a common and effective agreement guaranteed by all the powers, so that any infringement on that score would meet with the most severe punishment that can be meted out to any transgressor.

(3) A free sea is useless except combined with the freedom of cable and mail communications with all countries, whether belligerent or not. I should like to see all the cables jointly owned by the interested nations and a world mail system over sea established by common consent. But, more than this, an open sea demands an open policy. This means that, while every nation must have the right, for commercial and fiscal purposes, to impose whatever duties it thinks fit, these duties must be equal for all exports and imports for whatever destination and from whatever source. It would be tantamount to world empire, in fact, if a country owning a large part of the globe could make discriminating duties between the motherland and dominions or colonies as against other nations.

This has been of late the British practice. German colonies have always been open to every comer, including the motherland, on equal terms. Such equality of

treatment should be the established practice for all the future. The only alternative to an open sea and free intercourse policy would be a Chinese wall around each country. If there is no free intercourse every country must become self-sufficient. Germany has proved that it can be done. But this policy would mean very high customs barriers, discrimination, unbounded egotism, and a world bristling in arms. While the free sea policy stands for the true aims of international relations, namely, in exchange of goods, which must benefit either party, to be mutually satisfactory, it will engender friendly feeling among all the peoples, advance civilization, and thereby have a sure tendency toward disarmament.

(4) Germany has been taxed with disregarding treaty obligations, tearing up a scrap of paper—a solemn engagement of international character regarding Belgium. I have the less reason to enter into this matter since—if it was a breach of international law at all—it has been followed up by all other belligerents by destroying other parts of that code so essential to the welfare of the community of nations. Two German men-of-war have been destroyed in neutral waters. The protests that the Government of this country had to make against Great Britain's treatment of international sea law and the rights of the neutrals are too numerous to be recounted. Chinese neutrality has been violated in the grossest way.

In disregard of all conventions, China is now being subjected to demands incompatible with the rights of self-respecting nations. Egypt and Cyprus have been annexed by Great Britain, disregarding all treaties. Germany's diplomatic representatives have been driven from China, Morocco, and Egypt—all countries sovereign at the time. The Declaration of London, which had been set up by the Government of the United States as the governing document, had to be dropped as such. There is practically no part of international law that could stand the test. Justice toward neutrals compels that international law

should be re-established in a codified form, with sufficient guarantees so as to save, as far as possible, all the neutrals from possible implication in a war in which they do not take part.

(5) Germany does not strive for territorial aggrandizement in Europe; she does not believe in conquering and subjugating unwilling nations—this on account of a spirit of justice and her knowledge of history. No such attempts have ever been permanently successful.

Belgium commands the main outlet of Western German trade, is the natural foreland of the empire, and has been conquered with untold sacrifice of blood and treasure. It offers to German trade the only outlet to an open sea and it has been politically established, maintained, and defended by England in order to keep these natural advantages from Germany.

The love for small peoples that England heralds now will never stand investigation, as shown by the destruction of the small Boer republics. So Belgium cannot be given up. However, these considerations could be disregarded if all the other German demands, especially a guaranteed free sea, were fully complied with and the natural commercial relationship of Belgium to Germany was considered in a just and workable form. In this case Germany will not fail when the times come to help in rebuilding the country; in fact, she is doing so now.

(6) Germany is a country smaller in size than California, but populated thirty-five times as thickly as that State. She loves and fosters family life, and sees her future in the raising of large families of healthy children under the home roof and under the national flag. German parents have no desire to expatriate every year a considerable number of their children. This implies that her industrial development, which would alone give occupation to the yearly increase of pretty nearly a million people, should go on unhampered.

The activity of her people should have an outlet in the development of such foreign parts as need or wish for development. Great Britain has shown very little foresight in constantly opposing such efforts,

playing Morocco into the hands of France, a nation that remained stationary for forty-four years, with little more than half of the population of Germany, and with a system equally undermining religion and morality in keeping families small for the sake of worldly comforts.

England, furthermore, constantly obstructed the German endeavor to reclaim for the benefit of all of the world the granary in Mesopotamia. A permanent peace will mean that this German activity must get a wide scope without infringement upon the rights of others. Germany should be encouraged to continue her activities in Africa and Asia Minor, which can only result in permanent benefit to all the world. Americans have a saying "that it will never do good to sit on a safety valve."

There is nothing in the program of my country which would not be beneficial to the rest of the world, especially the United States. That this is so the events of the last months have conclusively shown, and a better appreciation of what Germany really stands for has recently

taken place. So, if I plead the cause of my country, I am not pleading as a German alone, but as a citizen of a country who wishes to be a useful and true member of the universality of nations, contributing by humanitarian aims and by the enhancement of personal freedom to the happiness of even the lowliest members of the great world community.

I am proud to say that I cannot only give this assurance, but produce facts, and I beg to refer to the modern system of social reforms which Germany inaugurated and carries through at an expense which is every year larger by half than the expense of the military system.

The brunt of this war has not been borne by the men who fight, but by the women who suffer, and it will be one of the proudest and most coveted achievements that Germany will gain in rewarding in a dignified and permanently beneficial way the enormous sacrifices of womanhood, to alleviate to the extent of the possible the hardships and sorrows that this war has brought upon them.

The Allies' Conditions of Peace

By Sir Edward Grey

Sir Edward Grey, presiding at a lecture on the war by Mr. Buchan, delivered March 22, 1915, reviewed the origin and causes of the conflict. Germany, he said, refused every suggestion made to her for settling the dispute by means of a conference. On her must rest for all time the appalling responsibility for having plunged Europe into this war. One essential condition of peace must be the restoration to Belgium of her independence and reparation to her for the cruel wrong done to her. England claims for herself and her allies claim for themselves, and together will secure for Europe, the right of independent sovereignty for the different nations, the right to pursue a national existence in the light of general liberty.

THE occasion of our meeting this afternoon is to hear a lecture from my friend Mr. Buchan on the strategy of the war, and he is sure to make it informing and interesting. His friends know him as a man of fine public spirit and patriotism, in whom a crisis such as this in his country's history arouses the noblest feelings. I am sorry that an engagement makes it necessary for me to return soon to the Foreign Office, and therefore it will be a great disappointment to me not to hear the whole of the lecture. I take the opportunity to make my apology now, and also to make one or two remarks on the origin and issues of the war. While we are engaged in considering the particular methods by which the war may be prosecuted to a successful conclusion do not let us lose sight even for a moment of the character and origin of this war and of the main issues for which we are fighting. Hundreds of millions of money have been spent, hundreds of thousands of lives have been lost, and millions have been maimed and wounded in Europe during the last few months. And all this might have been avoided by the simple method of a conference or a joint discussion between the powers concerned which might have been held in London, at The Hague, or wherever and in whatever form Germany would have consented to have it. It would have been far easier to have settled by conference the dispute between Austria-Hungary and Serbia, which Germany made the occasion for this war, than it was to get successfully through

the Balkan crisis of two years ago. Germany knew from her experience of the conference in London which settled the Balkan crisis that she could count upon our good will for peace in any conference of the powers. We had sought no diplomatic triumph in the Balkan Conference; we did not give ourselves to any intrigue; we pursued impartially and honorably the end of peace, and we were ready last July to do the same again.

In recent years we have given Germany every assurance that no aggression upon her would receive any support from us. We withheld from her one thing—we would not give an unconditional promise to stand aside, however aggressive Germany herself might be to her neighbors. Last July, before the outbreak of the war, France was ready to accept a conference; Italy was ready to accept a conference; Russia was ready to accept a conference; and we know now that after the British proposal for a conference was made, the Emperor of Russia himself proposed to the German Emperor that the dispute should be referred to The Hague. Germany refused every suggestion made to her for settling the dispute in this way. On her rests now, and must rest for all time, the appalling responsibility for having plunged Europe into this war and for having involved herself and the greater part of the Continent in the consequences of it.

We know now that the German Government had prepared for war as only people who plan can prepare. This is the fourth time within living memory that Prussia had made war in Europe.

In the Schleswig-Holstein war, in the war against Austria in 1866, in the war against France in 1870, as we now know from all the documents that have been revealed, it was Prussia who planned and prepared these wars. The same thing has occurred again, and we are determined that it shall be the last time that war shall be made in this way.

We had assured Belgium that never would we violate her neutrality so long as it was respected by others. I had given this pledge to Belgium long before the war. On the eve of the war we asked France and Germany to give the same pledge. France at once did so. Germany declined to give it. When, after that, Germany invaded Belgium we were bound to oppose Germany with all our strength, and if we had not done so at the first moment, is there any one who now believes that when Germany attacked the Belgians, when she shot down combatants and non-combatants in a way that violated all the rules of war of recent times and the laws of humanity of all time—is there any one who thinks it possible now that we could have sat still and looked on without eternal disgrace?

Now what is the issue for which we are fighting? In due time the terms of peace will be put forward by our Allies in concert with us—in accordance with the alliance that exists between us—and published to the world. One essential condition must be the restoration to Belgium of her independence, national life, and free possession of her territory, and reparation to her as far as reparation is possible for the cruel wrong done to her. That is part of the great issue for which we, with our allies, are contending, and the great part of the issue is this—We wish the nations of Europe to be free to live their independent lives, working out their own form of government for themselves, and their own national developments, whether they be great nations or small States, in full liberty. This is our ideal. The German ideal—we have had it poured out by German professors and publicists since the war began—is that of the Germans as a superior people, to whom all

things are lawful in the securing of their own power, against whom resistance of any sort is unlawful—a people establishing a domination over the nations of the Continent, imposing a peace which is not to be liberty for every nation, but subservience to Germany. I would rather perish or leave the Continent altogether than live on it under such conditions.

After this war we and the other nations of Europe must be free to live, not menaced continually by talk of “supreme war lords,” and “shining armor,” and the sword continually “rattled in the scabbard,” and heaven continually invoked as the accomplice of Germany, and not having our policy dictated and our national destinies and activities controlled by the military caste of Prussia. We claim for ourselves and our allies claim for themselves, and together we will secure for Europe, the right of independent sovereignty for the different nations, the right to pursue a national existence, not in the shadow of Prussian hegemony and supremacy, but in the light of equal liberty.

All honor for ever be given from us whom age and circumstances have kept at home to those who have voluntarily come forward to risk their lives, and give their lives on the field of battle on land and on sea. They have their reward in enduring fame and honor. And all honor be from us to the brave armies and navies of our Allies, who have exhibited such splendid courage and noble patriotism. The admiration they have aroused, and their comradeship in arms, will be an ennobling and enduring memory between us, cementing friendships and perpetuating national good will. For all of us who are serving the State at home or in whatever capacity, whether officials, or employers, or wage earners, doing our utmost to carry on the national life in this time of stress, there is the knowledge that there can be no nobler opportunity than that of serving one's country when its existence is at stake, and when the cause is just and right; and never was there a time in our national history when the crisis was so great and so imperative, or the cause more just and right.

South Africa's Romantic Blue Paper

Recording the Vision of "Oom Niklaas," the Boer Seer of Lichtenburg

[FROM THE NEW YORK TIMES, April 18, 1915.]

THE South African "Blue Paper" is out. It is unique. However widely and however eagerly the official documents of the other countries involved in the present war may have been read, they could not be called romantic in any sense of the word.

The "Blue Paper" issued by the Union of South Africa presents a distinct contrast. In the third paragraph of the very first page of this weighty document, which deals with the recent rebellion, is the following unusual sentence:

It is not surprising, then, that in the ferment aroused by the gigantic struggle in Europe, which seemed to be shaking the world to its foundations, young men began to see visions and old men to dream dreams of what the outcome might be for South Africa.

And this is followed by a still stranger passage:

The times were not without their signs. There was a seer in Lichtenburg who had visions of strange import. Years ago and long before any one in this country had dreamed of war he beheld a great fight of bulls, six or seven of them, engaged in bloody combat; a gray bull had emerged victorious from the contest.

The bulls signified the great nations of Europe, and the gray bull was Germany. Thousands had discussed this strange vision and had remembered its prophetic character when, later, war actually broke out. The vision seemed ominous. Germany was predestined to triumph.

The seer is Niklaas van Rensburg, and he runs through this Government report like a scarlet thread through gray homespun. It is around his influence that the uprising of Sept. 15 is built. It is under his roof that all manner of lurid conspiracies are hatched. Not only do his words carry with the crowds that gather before his house to hear his prophecy, but his warnings shape the actions of

some of the Transvaal Generals. The Government report will not go so far as to brand "Oom Niklaas" as a hoax. Says the preface:

It is desired to point out that the narrative of events has been compiled in as objective a manner as possible, and that it contains no statement which is not borne out by evidence in possession of the Government.

Evidently, to denounce visions of gray bulls as hocus-pocus would be to describe a puzzling situation much too subjectively, since the Government has apparently no evidence that these are not genuine prophecy. The best the Government can do is to call them "extraordinary and apparently quite authentic."

But the extraordinary part of it is that an illiterate old soothsayer should be considered important enough to be included in an official report.

His most famous and most influential prophecy, the one that will go down in the history of South Africa, was that which concerned General de la Rey and the fatal number 15.

The prophecy which came back to the minds of van Rensburg's followers when war broke out was one concerning General de la Rey, the intrepid soldier who had commanded the Lichtenburg burghers in the Boer war and since become President of the Western Transvaal Farmers' Association. Van Rensburg had always admired General de la Rey. He had frequently hinted to his circle that great things were in store for him. One of his visions had been well known to General de la Rey and his friends for some years. The report says:

The seer had beheld the number 15 on a dark cloud from which blood issued, and then General de la Rey returning home without his hat. Immediately afterward came a carriage covered with flowers.

JOHN REDMOND

The great Irish leader, who says that Ireland has now taken
her proper place in the British Empire.

(Photo from P. S. Rogers.)

This was several years ago. But the people did not forget the prophecy, and when war broke out in Europe the Western Transvaal—in the Lichtenburg-Wolmaransstad area, where van Rensburg's influence was strongest—was immediately aflame. The Government does not seek to minimize the importance of this influence:

When the war at last broke out, the effect in Lichtenburg was instantaneous. The prophecies of van Rensburg were eagerly recalled, and it was remembered that he had foretold a day on which the independence of the Transvaal would be restored.

Certain individuals could be seen daily cleaning their rifles and cartridges in order to be ready for the day. Within a week of the declaration of war between England and Germany the district was further profoundly stirred by the news (now become generally known) that a great meeting of local burghers was to be held at Treurfontein on the 15th of August, and that certain local officers were commandeering their burghers to come to this meeting armed and fully equipped for active service.

The outbreak of the war in Europe suddenly brought the Lichtenburger's prophecy down to earth and crystallized the dream. The commandants were evidently as convinced that independence was at hand as the crowd.

Careful inquiries by other local officers brought to light the following facts:

Veld Kornet, I. E. Claassen, and Commandant F. G. A. Wolmarans of Ward Onder Hartsvier had been commandeering their own burghers as well as their political friends since the first week of August to come to the meeting which was to be held at Treurfontein on the 15th. The instructions given to these men were that they were to come with rifle, horse, saddle and bridle, and as much ammunitions and provisions as they could manage to bring.

The meeting was to be addressed by General de la Rey, and it was generally believed that the assembled burghers would march on Potchefstroom immediately after the meeting.

None doubted the truth of the seer's prophecy now. The Western Transvaal took it for its guide with implicit confidence.

The strange vision of the number 15, which had long been common knowledge, was now discussed with intense interest. The 15, it was said, signified the 15th of August, the day of the meeting. That would be the day which had been so long expected—the day of liberation.

Van Rensburg was now the oracle. His prophecies with regard to the great war had been signally fulfilled. Germany was at grips with England, and her triumph was looked upon as inevitable.

The day had arrived to strike a blow for their lost independence. Van Rensburg assured his following that the Union Government was "finished." Not a shot would be fired. The revolution would be complete and bloodless.

Between the 10th and the 15th the plotters in Lichtenburg were actively preparing for the day. There is evidence that German secret agents were working in concert with them. When doubters asked how they could be so certain that the 15 signified a day of the month—and of the month of August in particular—they were scornfully if illogically told that "in God's time a month sooner or later made no difference."

Of course, General de la Rey was the storm centre. He had been mentioned in the same vision with the number 15 and it was taken for granted that he would play the chief rôle in the Treurfontein meeting. De la Rey was the unquestioned ruler of the Western Transvaal. The report states:

He possessed an unrivaled influence and was looked up to as the uncrowned king of the West. His attitude at the meeting would sway the mass of his adherents and decide the question of peace or war.

Accordingly, General Louis Botha, Premier of the South African Union, summoned General de la Rey to Pretoria some days before the meeting, and persuaded him to use his best efforts to allay excitement.

On the 15th the meeting was held. The situation was a tense one. Not one of the burghers present doubted the outcome. Yet General de la Rey exhorted them to remain cool and calm. He urged them to await the turn of events in Europe. After his address a "strange and unusual silence" was observed, says the "Blue Paper."

A resolution was passed unanimously expressing complete confidence in the Government to act in the best interests of South Africa in the present world crisis. The burghers appeared to have taken their leader's advice to heart, as they dispersed quietly to their homes.

All danger of a rebellious movement had apparently been averted.

The only difficulty was that the prophecy of "Oom Niklaas" was still

standing. The fact that the uprising had failed did not seem in the least to invalidate the vision. If the mysterious number did not mean Aug. 15, then perhaps it did mean Sept. 15.

Accordingly, preparations were laid for a rebellion for the latter date. The plot was engineered by Lieut. Colonel Solomon G. Maritz and General Christian Frederick Beyers. Maritz is a brilliant though unlettered Colonel who won distinction in the Boer war, while Beyers was the Commandant General of the South African Union forces. Beyers is dead now; Maritz and some of the prominent men associated in the conspiracy are in prison awaiting trial.

Beyers and Maritz did not trust entirely to the prophecy of the seer of Lichtenburg. Maritz had already obtained a guarantee from the authorities in German West Africa, with whom he had been in communication for some time, that in the event of Germany's victory the Free State and the Transvaal would be given their freedom. He had organized the back-veldt Boers into readiness to go over into German West Africa at a moment's notice. In the Free State, General de Wet was ready to aid the rebellion, and the Western Transvaal, already excited, could easily be swung into line.

The regiments of the west were to concentrate at Potchefstroom early in September for their annual training. At that time the members of the Government, among them General de la Rey, who is a member of the Legislative Assembly, would be in Cape Town for the session of the Parliament.

Everything made the 15th of September look like an auspicious date for the conspirators and those who believed in van Rensburg. But General de la Rey still remained the storm centre. He was the factor which upset all plans. He was the most difficult obstacle. A large personality, his influence could never be discounted. If he could be induced to join the conspiracy the cause was as good as won. Should he oppose the movement it was lost, for neither Beyers nor Major Kemp, a leader in his district in West Transvaal, could hope to do any-

thing against General de la Rey in the west.

General de la Rey believed in the Lichtenburg prophet. A strong man, of extraordinary force and intelligence, the whole course of his plans might be altered by a new vision from van Rensburg. Beyers knew this, says the report, and saw the way by which he should win the General to the conspiracy.

There is evidence to prove that General Beyers set himself systematically to work in General de la Rey's mind in order to induce him to join the conspiracy.

General de la Rey was known to hold strong religious views, which colored his whole outlook. The seer, van Rensburg, who was always full of religious talk, had in this way acquired a considerable amount of influence over General de la Rey.

There is the best of evidence (General Beyers's own statement) for the belief that he himself did not scruple to work on General de la Rey's mind through his religious feelings.

Just how Beyers accomplished this has not yet been revealed, but there was material enough to his hand. The news from Europe was disquieting. The German drive to Paris seemed irresistible. It looked as if in a week or two Germany would have the Allies at her mercy.

The prophet saw visions in which 40,000 German soldiers were marching up and down the streets of London. He predicted significantly that the new South African State would have at its head "a man who feared God." The Government of Premier Botha and General Smuts, the Minister of Finance and Defense, was "finished." He had seen the English leaving the Transvaal and moving down toward Natal. When they had gone far away, a vulture flew from among them and returned to the Boers and settled down among them. That was Botha. As for Smuts, he would flee desperately to England and would never be seen in South Africa again. Through it all ran the strange number 15.

This was excellent material for the conspirators. But the problem was to get General de la Rey away from the Parliament session at Cape Town and into the Potchefstroom camp at the psychological moment. Beyers sent a series of

INDIAN OCEAN

ATLANTIC OCEAN

urgent telegrams to Cape Town hinting at important business. He emphasized the need for General de la Rey's immediate presence in Potchefstroom. He had evidently not yet broached the conspiracy to the General, but hoped only to get him to the camp at the critical moment when his presence would prove the deciding factor.

Everything in Potchefstroom was in readiness. The Active Citizen Force concentrated here—about 1,600 men—was to start the uprising. The movement was to be promptly seconded throughout the Western Transvaal. The "Vierkleur" was to be hoisted, and a march made on Pretoria, men and horses being commandeered on the way. This was to take place on Tuesday, the 15th. There was an attempt to line up the prophet to add to the theatric effect, says the report.

On the night of the 14th the "Prophet" himself was specially sent for by motor car to be personally present on the 15th to witness the consummation of his prophecy. The conspirators hoped to profit by the impression he would undoubtedly make on those who still hesitated.

Unfortunately for them, however, the seer refused to leave his home, saying that "it was not yet clear to him that that was his path."

The signal for the revolt was to be the arrival of General Beyers and General de la Rey in the Potchefstroom camp. The latter was returning from Cape Town via Kimberley, and was due to arrive in Potchefstroom on the 15th. But for some reason he chose to come back through the Free State, and by the 15th was only at Johannesburg.

This upset plans. Beyers had to act quickly. He had his chauffeur overhaul his motor car, equip it with new tubes and covers, in readiness for "a long journey." In a short time the car was on its way to bring General de la Rey from Johannesburg to Pretoria, where Beyers would meet him.

There was no time to be lost. It was too late to stage the rebellion for the 15th, but Beyers arranged for it to be at 4 o'clock on the morning of Wednesday, the 16th.

General de la Rey arrived in Pretoria.

General Beyers met him and asked him to go immediately with him to Potchefstroom.

The car came within sight of Johannesburg. A police cordon had been thrown around the town for the purpose of capturing three desperadoes, known as the "Foster gang," who were trying to escape in a motor car. The police were instructed to stop all motors and to examine in particular any car containing three men.

Beyers's car held three men. It was racing at high speed. It was, of course, challenged by the police and ordered to stop. But Beyers knew nothing of the "Foster gang" and the reason for the police cordon. Keyed up to the highest pitch of nervous tension, his immediate conclusion was that his plot had been discovered and that the police were after him. He believed he was trapped.

Meanwhile, Major Kemp at Potchefstroom grew more and more anxious as the hours slipped by. Midnight came, and no news of the two Generals. About 3 o'clock in the morning, says the report, an officer sharing the tent of a Lieutenant Colonel by the name of Kock, who was Kemp's confidant, was awakened by the entrance of a man. It proved to be Major Kemp. He leaned over Kock's bed and whispered something in his ear.

Kock, in a profoundly startled voice, exclaimed, "Oh, God!"

Kemp left immediately, and Kock then whispered to his friend: "General de la Rey is dood geskiet," (General de la Rey has been shot dead.)

The effect of this news on South Africa can be imagined. The whole country was aflame. This was what the number 15 meant. The General had indeed "returned home without his hat, followed by a carriage full of flowers."

Report ran through every town that General de la Rey had been deliberately assassinated by the Government. As a matter of fact, the report states that the shooting was purely accidental, done by the police under the belief that this motor car which would not halt at their com-

mand contained the "Foster gang." Beyers exhibited the motor-car everywhere, arousing sentiment to the highest pitch.

The rest was easy. The rank and file, at least, now believed firmly in the prophet. He had always said that Gen-

eral Botha would offer no resistance, that the revolution would be bloodless, and thousands went over to the cause led by Maritz and Beyers in this belief. But it was not until Oct. 12 that martial law was proclaimed in South Africa. The rebellion had begun.

THE BELLS OF BERLIN

[From Punch of London.]

(Which are said to be rung by order occasionally to announce some supposed German victory.)

The Bells of Berlin, how they hearten the Hun

(Oh, dingle dong dangle ding dongle ding dee;)

No matter what devil's own work has been done

They chime a loud chant of approval, each one,

Till the people feel sure of their place in the sun

(Oh, dangle ding dongle dong dingle ding dee.)

If Hindenburg hustles an enemy squad

(Oh, dingle dong dangle ding dongle ding dee,)

The bells all announce that the alien sod

Is damp with the death of some thousand men odd,

Till the populace smiles with a gratified nod

(Oh, dangle ding dongle dong dingle ding dee.)

If Tirpitz behaves like a brute on the brine

(Oh, dingle dong dangle ding dongle ding dee,)

The bells with a clash and a clamor combine

To hint that the Hated One's on the decline,
And the city gulps down the good tidings like wine,

(Oh, dangle ding dongle dong dingle ding dee.)

The Bells of Berlin, are they cracked through and through

(Oh, dingle dong dangle ding dongle ding dee,)

Or deaf to the discord like Germany, too?

For whether their changes be many or few,

The worst of them is that they never ring true,

(Oh, dangle ding dongle dong dingle ding dee.)

Warfare and British Labor

By Earl Kitchener, England's Secretary of State for War

In his speech delivered in the House of Lords on March 15, 1915, Earl Kitchener calls upon the whole nation to work, not only in supplying the manhood of the country to serve in the ranks, but in supplying the necessary arms, ammunition, and equipment for successful operations in various parts of the world.

FOR many weeks only trench fighting has been possible owing to the climatic conditions and waterlogged state of the ground.

During this period of apparent inaction, it must not be forgotten that our troops have had to exercise the utmost individual vigilance and resource, and, owing to the proximity of the enemy's lines, a great strain has been imposed upon them. Prolonged warfare of this sort might be expected to affect the morale of an army, but the traditional qualities of patience, good temper, and determination have maintained our men, though highly tried, in a condition ready to act with all the initiative and courage required when the moment for an advance arrived. The recently published accounts of the fighting in France have enabled us to appreciate how successfully our troops have taken the offensive. The German troops, notwithstanding their carefully prepared and strongly intrenched positions, have been driven back for a considerable distance and the villages of Neuve Chapelle and L'EpINETTE have been captured and held by our army, with heavy losses to the enemy.

In these operations our Indian troops took a prominent part and displayed fine fighting qualities. I will in this connection read a telegram I have received from Sir John French:

Please transmit following message to Viceroy India: I am glad to be able to inform your Excellency that the Indian troops under General Sir James Willcocks fought with great gallantry and marked success in the capture of Neuve Chapelle and subsequent fighting which took place on the 10th, 11th, 12th and 13th of this month. The fighting was very severe and the losses heavy, but nothing daunted them. Their tenacity, courage

and endurance were admirable and worthy of the best traditions of the soldiers of India.

I should like also to mention that the Canadian Division showed their mettle and have received the warm commendation of Sir John French for the high spirit and bravery with which they have performed their part. Our casualties during the three days' fighting, though probably severe, are not nearly so heavy as those suffered by the enemy, from whom a large number of prisoners have been taken.

Since I last spoke in this House substantial reinforcements have been sent to France. They include the Canadian Division, the North Midland Division, and the Second London Division, besides other units. These are the first complete divisions of the Territorial Force to go to France, where I am sure they will do credit to themselves and sustain the high reputation which the Territorials have already won for themselves there. The health of the troops has been remarkably good, and their freedom from enteric fever and from the usual diseases incidental to field operations is a striking testimony to the value of inoculation and to the advice and skill of the Royal Army Medical Corps and its auxiliary organizations.

The French army, except for a slight withdrawal at Soissons, owing to their reinforcements being cut off by the swollen state of the Aisne River, have made further important progress at various points on the long line they hold, especially in Champagne. Association with both our allies in the western theatre has only deepened our admiration of their resolute tenacity and fighting qualities.

In the Eastern theatre the violent Ger-

man attacks on Warsaw have failed in their purpose, and a considerable concentration of German troops to attack the Russian positions in East Prussia, after causing a retirement, are now either well held or are being driven back. In the Caucasus fresh defeats have been inflicted by the Russians on the Turks, and the latter have also been repulsed by our forces in Egypt when they attempted to attack the Suez Canal. The operations now proceeding against the Dardanelles show the great power of the allied fleets, and, although at the present stage I can say no more than what is given in the public press on the subject, your Lordships may rest assured that the matter is well in hand.

The work of supplying and equipping new armies depends largely on our ability to obtain the war material required. Our demands on the industries concerned with the manufacture of munitions of war in this country have naturally been very great, and have necessitated that they and other ancillary trades should work at the highest possible pressure. The armament firms have promptly responded to our appeal, and have undertaken orders of vast magnitude. The great majority also of the employees have loyally risen to the occasion, and have worked, and are working, overtime and on night shifts in all the various workshops and factories in the country.

Notwithstanding these efforts to meet our requirements, we have unfortunately found that the output is not only not equal to our necessities, but does not fulfill our expectations, for a very large number of our orders have not been completed by the dates on which they were promised. The progress in equipping our new armies, and also in supplying the necessary war material for our forces in the field, has been seriously hampered by the failure to obtain sufficient labor, and by delays in the production of the necessary plant, largely due to the enormous demands not only of ourselves, but of our allies.

While the workmen generally, as I have said, have worked loyally and well, there have, I regret to say, been instances where absence, irregular time-

keeping, and slack work have led to a marked diminution in the output of our factories. In some cases the temptations of drink account for this failure to work up to the high standard expected. It has been brought to my notice on more than one occasion that the restrictions of trade unions have undoubtedly added to our difficulties, not so much in obtaining sufficient labor, as in making the best use of that labor. I am confident, however, that the seriousness of the position as regards our supplies has only to be mentioned, and all concerned will agree to waive for the period of the war any of those restrictions which prevent in the very slightest degree our utilizing all the labor available to the fullest extent that is possible.

I cannot too earnestly point out that, unless the whole nation works with us and for us, not only in supplying the manhood of the country to serve in our ranks, but also in supplying the necessary arms, ammunition, and equipment, successful operations in the various parts of the world in which we are engaged will be very seriously hampered and delayed. I have heard rumors that the workmen in some factories have an idea that the war is going so well that there is no necessity for them to work their hardest. I can only say that the supply of war material at the present moment and for the next two or three months is causing me very serious anxiety, and I wish all those engaged in the manufacture and supply of these stores to realize that it is absolutely essential not only that the arrears in the deliveries of our munitions of war should be wiped off, but that the output of every round of ammunition is of the utmost importance, and has a large influence on our operations in the field.

The bill which my noble friend is about to place before the House as an amendment to the Defense of the Realm act is calculated to rectify this state of things as far as it is possible, and, in my opinion, it is imperatively necessary. In such a large manufacturing country as our own the enormous output of what we require to place our troops in the field thoroughly equipped and found with

ammunition is undoubtedly possible, but this output can only be obtained by a careful and deliberate organization for developing the resources of the country so as to enable each competent workman to utilize in the most useful manner possible all his ability and energy in the common object which we all have in view, which is the successful prosecution and victorious termination of this war. [Cheers.] I feel sure that there is no business or manufacturing firm in this country that will object for one moment to any delay or loss caused in the product of their particular industry when they feel that they and their men are taking part with us in maintaining the soldiers in the field with those necessities without which they cannot fight.

As I have said, the regular armament firms have taken on enormous contracts vastly in excess of their ordinary engagements in normal times of peace. We have also spread orders both in the form of direct contracts and subcontracts over a large number of subsidiary firms not accustomed in peace time to this class of manufacture. It will, I am sure, be readily understood that, when new plant is available for the production of war material, those firms that are not now so engaged should release from their own work the labor necessary to keep the machinery fully occupied on the production for which it is being laid down, as well as to supply sufficient labor to

keep working at full power the whole of the machinery which we now have.

I hope that this result will be attained under the provisions of the bill now about to be placed before you. Labor may very rightly ask that their patriotic work should not be used to inflate the profits of the directors and shareholders of the various great industrial and armament firms, and we are therefore arranging a system under which the important armament firms will come under Government control, and we hope that workmen who work regularly by keeping good time shall reap some of the benefits which the war automatically confers on these great companies.

I feel strongly that the men working long hours in the shops by day and by night, week in and week out, are doing their duty for their King and country in a like manner with those who have joined the army for active service in the field. [Cheers.] They are thus taking their part in the war and displaying the patriotism that has been so manifestly shown by the nation in all ranks, and I am glad to be able to state that his Majesty has approved that where service in this great work of supplying the munitions of war has been thoroughly, loyally and continuously rendered, the award of a medal will be granted on the successful termination of the war. [Cheers.]

SAVIORS OF EUROPE

By Rene Bazin

[From King Albert's Book.]

I BELIEVE that King Albert and Belgium, in sacrificing themselves as they have done for right, have saved Europe.

I believe that in order to act with such decision it was essential to have a King, that is to say, a leader responsible to history, of an old and proved stock.

I believe that for such action a Christian nation was essential, a nation capable of understanding, of accepting, and of enduring the ordeal.

I believe that the first duty of the Allies will be to restore the Kingdom of Belgium, and that the example shown by the King and his people will be exalted in all civilized countries as long as the world reads history.

Britain's Peril of Strikes and Drink

By David Lloyd George, Chancellor of the Exchequer.

The gravity of labor disputes in the present time of national danger was dealt with by Mr. Lloyd George in a speech to his constituents at Bangor on Feb. 28, 1915, special reference being made to the Clyde strike. He declared that compulsory arbitration in war time was imperative, as it was "intolerable that the lives of Britons should be imperiled for a matter of a farthing an hour." This was essentially an engineers' war, for equipment was even more needed than men. Mr. Lloyd George went on to comment on the adverse effect of drinking upon production, and added: "We have great powers to deal with drink, and we shall use them."

I HAVE promised for some time to address a meeting at Bangor. I have been unable to do so because Ministers of the Crown have been working time and overtime, and I am sorry to say that we are not even able to make the best of the day of rest, the urgency is so great, the pressure is so severe. I had something to say today, otherwise I should not have been here, and I had something to say that required stating at once. This is the only day I had to spare. It is no fault of mine. It is because we are entirely absorbed in the terrible task which has been cast upon our shoulders. I happened to have met on Friday morning, before I decided to come down here, one of the most eminent Scottish divines, a great and old friend of mine, Dr. Whyte of Edinburgh. We were discussing what I have got to say today. I remarked to him, "I have only one day on which to say it, and as that is Sunday afternoon I am very much afraid my constituents won't listen to me." He replied, "If they won't have you, come to Scotland, and we will give you the best Sunday afternoon meeting you ever had." But I thought I would try Wales first. [Cheers.] He told me that in the Shorter Catechism you are allowed to do works of charity and necessity, and those who tell me that this is not work of necessity do not know the need, the dire need, of their country at this hour. At this moment there are Welshmen in the trenches of France fac-

ing cannon and death; the hammering of forges today is ringing down the church bells from one end of Europe to the other. When I know these things are going on now on Sunday as well as the week days I am not the hypocrite to say, "I will save my own soul by not talking about them on Sundays." [Cheers.]

Do we understand the necessity? Do we realize it? Belgium, once comfortably well-to-do, is now waste and weeping, and her children are living on the bread of charity sent them by neighbors far and near. And France—the German Army, like a wild beast, has fastened its claws deep into her soil, and every effort to drag them out rends and tears the living flesh of that beautiful land. The beast of prey has not leaped to our shores—not a hair of Britain's head has been touched by him. Why? Because of the vigilant watchdog that patrols the deep for us; and that is my complaint against the British Navy. It does not enable us to realize that Britain at the present moment is waging the most serious war it has ever been engaged in. We do not understand it. A few weeks ago I visited France. We had a conference of the Ministers of Finance of Russia, France, Great Britain, and Belgium. Paris is a changed city. Her gayety, her vivacity, is gone. You can see in the faces of every man there, and of every woman, that they know their country is in the grip of grim tragedy. They are

resolved to overcome it, confident that they will overcome it, but only through a long agony.

No visitor to our shores would realize that we are engaged in exactly the same conflict, and that on the stricken fields of the Continent and along the broads and the narrows of the seas that encircle our islands is now being determined, not merely the fate of the British Empire, but the destiny of the human race for generations to come. [Cheers.] We are conducting a war as if there was no war. I have never been doubtful about the result of the war, [cheers,] and I will give you my reasons by and by. Nor have I been doubtful, I am sorry to say, about the length of the war and its seriousness. In all wars nations are apt to minimize their dangers and the duration. Men, after all, see the power of their own country; they cannot visualize the power of the enemy. I have been accounted as a pessimist among my friends in thinking the war would not be over before Christmas. I have always been convinced that the result is inevitably a triumph for this country. I have also been convinced that that result will not be secured without a prolonged struggle. I will tell you why. I shall do so not in order to indulge in vain and idle surmises as to the duration of the war, but in order to bring home to my countrymen what they are confronted with, so as to insure that they will leave nothing which is at their command undone in order, not merely to secure a triumph, but to secure it at the speediest possible moment. It is in their power to do so. It is also in their power, by neglect, by sloth, by heedlessness, to prolong their country's agony, and maybe to endanger at least the completeness of its triumphs. This is what I have come to talk to you about this afternoon, for it is a work of urgent necessity in the cause of human freedom, and I make no apology for discussing on a Sunday the best means of insuring human liberty. [Cheers.]

I will give you first of all my reasons for coming to the conclusion that after this struggle victory must wait on our banners if we properly utilize our re-

sources and opportunities. The natural resources of the allied countries are overwhelmingly greater than those of their enemies. In the man capable of bearing arms, in the financial and economic resources of these countries, in their accessibility to the markets of the world through the command of the sea for the purpose of obtaining material and munitions—all these are preponderatingly in favor of the allied countries. But there is a greater reason than all these. Beyond all is the moral strength of our cause, and that counts in a struggle which involves sacrifices, suffering, and privation for all those engaged in it. A nation cannot endure to the end that has on its soul the crimes of Belgium. [Loud cheers.] The allied powers have at their disposal more than twice the number of men which their enemies can command. You may ask me why are not those overwhelming forces put into the field at once and this terrible war brought to a triumphant conclusion at the earliest possible moment. In the answer to that question lies the cause of the war. The reason why Germany declared war is in the answer to that question.

In the old days when a nation's liberty was menaced by an aggressor a man took from the chimney corner his bow and arrow or his spear, or a sword which had been left to him by an ancestry of warriors, went to the gathering ground of his tribe, and the nation was fully equipped for war. That is not the case now. Now you fight with complicated, highly finished weapons, apart altogether from the huge artillery. Every rifle which a man handles is a complicated and ingenious piece of mechanism, and it takes time. The German arsenals were full of the machinery of horror and destruction. The Russian arsenals were not, and that is the reason for the war. Had Russia projected war, she also would have filled her arsenals, but she desired above everything peace. ["Hear, hear!"] I am not sure that Russia has ever been responsible for a war of aggression against any of her European neighbors. Certainly this is not one of them. She wanted peace, she needed peace, she meant peace, and she

would have had peace had she been left alone. She was at the beginning of a great industrial development, and she wanted peace in order to bring it to its full fructification. She had repeatedly stood insolences at the hands of Germany up to the point of humiliation, all for peace, and anything for peace.

Whatever any one may say about her internal Government, Russia was essentially a peaceable nation. The men at the head of her affairs were imbued with the spirit of peace. The head of her army, the Grand Duke Nicholas, [cheers,] is about the best friend of peace in Europe. Never was a nation so bent on preserving peace as Russia was. It is true Germany six or seven years ago had threatened to march her legions across the Vistula and trample down Russia in the mud, and Russia, fearing a repetition of the same threat, was putting herself in a position of defense. But she was not preparing for any aggression, and Germany said, "This won't do. We don't like people who can defend themselves. We are fully prepared. Russia is not. This is the time to plant our dagger of tempered steel in her heart before her breastplates are forged." That is why we are at war. [Cheers.] Germany hurried her preparations, made ready for war. She made a quarrel with the same cool calculation as she had made a new gun. She hurled her warriors across the frontier. Why? Because she wanted to attack somebody, a country that could not defend herself. It was the purest piece of brigandage in history. [Cheers.] All the same there remains the fact that Russia was taken at a disadvantage, and is, therefore, unable to utilize beyond a fraction the enormous resources which she possesses to protect her soil against the invader. France was not expecting war, and she, therefore, was taken unawares.

What about Britain? We never contemplated any war of aggression against any of our neighbors, and therefore we never raised an army adequate to such sinister purposes. During the last thirty years the two great political parties in the State have been responsible for the

policy of this country at home and abroad. For about the same period we have each been governing this country. For about fifteen years neither one party nor the other ever proposed to raise an army in this country that would enable us to confront on land a great Continental power. What does that mean? We never meant to invade any Continental country. [Cheers.] That is the proof of it. If we had we would have started our great armies years ago. We had a great navy, purely for protection, purely for the defense of our shores, and we had an army which was just enough to deal with any small raid that happened to get through the meshes of our navy, and perhaps to police the empire. That was all, no more. But now we have to assist neighbors becoming the victims of a power with millions of warriors at its command, and we have to improvise a great army, and gallantly have our men flocked to the standard. [Cheers.] We have raised the largest voluntary army that has been enrolled in any country or any century—the largest voluntary army, and it is going to be larger. [Cheers.]

I saw a very fine sample of that army this morning at Llandudno. I attended a service there, and I think it was about the most thrilling religious service I have ever been privileged to attend. There were men there of every class, every position, every calling, every condition of life. The peasant had left his plow, the workman had left his lathe and his loom, the clerk had left his desk, the trader and the business man had left their counting houses, the shepherd had left his sunlit hills, and the miner the darkness of the earth, the rich proprietor had left his palace, and the man earning his daily bread had quitted his humble cottage. There were men there of diverse and varied faiths who worshipped at different shrines—men who were in array against each other months ago in bitter conflict, and I saw them march with one step under one flag to fight for the same cause, and I saw them worship the same God. What has brought them together? The love of their native land, resentment for a cruel

wrong inflicted upon the weak and defenseless. More than that, what brought them together was that instinct which comes to humanity at critical times when the moment has arrived to cross rivers of blood in order to rescue humanity from the grip of some strangling despotism. [Cheers.] They have done nobly. That is what has brought them together, but we want more, [cheers,] and I have no doubt we will get more.

If this country had produced an army which was equal in proportion to its population to the number of men under arms in France and in Germany at the present moment there would be three millions and a half in this country and 1,200,000 in the Colonies. [Cheers.] That is what I mean when I say our resources are quite adequate to the task. It is not our fight merely—it is the fight of humanity. [Cheers.] The allied countries between them could raise armies of over twenty millions of men. Our enemies can put in the field barely half that number.

Much as I should like to talk about the need for more men, that is not the point of my special appeal today. We stand more in need of equipment than we do of men. This is an engineers' war, [cheers,] and it will be won or lost owing to the efforts or shortcomings of engineers. I have something to say about that, for it involves sacrifices for all of us. Unless we are able to equip our armies our predominance in men will avail us nothing. We need men, but we need arms more than men, and delay in producing them is full of peril for this country. You may say that I am saying things that ought to be kept from the enemy. I am not a believer in giving any information which is useful to him. You may depend on it he knows, but I do not believe in withholding from our own public information which they ought to possess, because unless you tell them you cannot invite their co-operation. The nation that cannot bear the truth is not fit for war, and may our young men be volunteers, while the unflinching pride of those they have left behind them in their deed of sacrifice ought to satisfy the most apprehensive that we are not a

timid race, who cannot face unpleasant facts! The last thing in the world John Bull wants is to be mollicoddled. The people must be told exactly what the position is, and then we can ask them to help. We must appeal for the co-operation of employers, workmen, and the general public; the three must act and endure together, or we delay and maybe imperil victory. We ought to requisition the aid of every man who can handle metal. It means that the needs of the community in many respects will suffer acutely vexatious, and perhaps injurious, delay; but I feel sure that the public are prepared to put up with all this discomfort, loss, and privation if thereby their country marches triumphantly out of this great struggle. [Cheers.] We have every reason for confidence; we have none for complacency. Hope is the mainspring of efficiency; complacency is its rust.

We laugh at things in Germany that ought to terrify us. We say, "Look at the way they are making their bread—out of potatoes, ha, ha!" Aye, that potato-bread spirit is something which is more to dread than to mock at. I fear that more than I do even von Hindenburg's strategy, efficient as it may be. That is the spirit in which a country should meet a great emergency, and instead of mocking at it we ought to emulate it. I believe we are just as imbued with the spirit as Germany is, but we want it evoked. [Cheers.] The average Briton is too shy to be a hero until he is asked. The British temper is one of never wasting heroism on needless display, but there is plenty of it for the need. There is nothing Britishers would not give up for the honor of their country or for the cause of freedom. Indulgences, comforts, even the necessities of life they would willingly surrender. Why, there are two millions of them at this hour who have willingly tendered their lives for their country. What more could they do? If the absorption of all our engineering resources is demanded, no British citizen will grudge his share of inconvenience.

But what about those more immediately concerned in that kind of work? Here

I am approaching something which is very difficult to talk about—I mean the employers and workmen. I must speak out quite plainly; nothing else is of the slightest use. For one reason or another we are not getting all the assistance we have the right to expect from our workers. Disputes, industrial disputes, are inevitable; and when you have a good deal of stress and strain, men's nerves are not at their best. I think I can say I always preserve my temper in these days—I hope my wife won't give me away—[laughter]—and I have no doubt that the spirit of unrest creeps into the relations between employer and workmen. Some differences of opinion are quite inevitable, but we cannot afford them now; and, above all, we cannot resort to the usual method of settling them.

I suppose I have settled more labor disputes than any man in this hall, and, although those who only know me slightly may be surprised to hear me say it, the thing that you need most is patience. If I were to give a motto to a man who is going to a conference between employers and workmen I would say: "Take your time; don't hurry. It will come around with patience and tact and temper." But you know we cannot afford those leisurely methods now. Time is victory, [cheers,] and while employers and workmen on the Clyde have been spending time in disputing over a fraction, and when a week-end, ten days, and a fortnight of work which is absolutely necessary for the defense of the country has been set aside, I say here solemnly that it is intolerable that the life of Britain should be imperiled for the matter of a farthing an hour.

Who is to blame? That is not the question, but—How it is to be stopped? Employers will say, "Are we always to give way?" Workmen say, "Employers are making their fortunes out of an emergency of the country; why are not we to have a share of the plunder?" ["Hear, hear!" and laughter.] There is one gentleman here who holds that view. [Laughter.] I hope he is not an engineer. [Renewed laughter.] "We work harder than ever," say the workmen. All I can

say is, if they do they are entitled to their share. But that is not the point—who is right? Who is wrong? They are both right and they are both wrong. The whole point is that these questions ought to be settled without throwing away the chances of humanity in its greatest struggle. [Cheers.] There is a good deal to be said for and there is a vast amount to be said against compulsory arbitration, but during the war the Government ought to have power to settle all these differences, and the work should go on. The workman ought to get more. Very well, let the Government find it out and give it to him. If he ought not, then he ought not to throw up his tools. The country cannot afford it. It is disaster, and I do not believe the moment this comes home to workmen and employers they will refuse to comply with the urgent demand of the Government. There must be no delay.

There is another aspect of the question which it is difficult and dangerous to tackle. There are all sorts of regulations for restricting output. I will say nothing about the merits of this question. There are reasons why they have been built up. The conditions of employment and payment are mostly to blame for those restrictions. The workmen had to fight for them for their own protection, but in a period of war there is a suspension of ordinary law. Output is everything in this war.

This war is not going to be fought mainly on the battlefields of Belgium and Poland. It is going to be fought in the workshops of France and Great Britain; and it must be fought there under war conditions. There must be plenty of safeguards and the workman must get his equivalent, but I do hope he will help us to get as much out of those workshops as he can, for the life of the nation depends on it. Our enemies realize that, and employers and workmen in Germany are straining their utmost. France, fortunately, also realizes it, and in that land of free institutions, with a Socialist Prime Minister, a Socialist Secretary of State for War, and a Socialist Minister of Marine, the employers and workmen are subordinating

everything to the protection of their beautiful land.

I have something more to say about this, and it is unpleasant. I would wish that it were not I, but somebody else that should say it. Most of our workmen are putting every ounce of strength into this urgent work for their country, loyally and patriotically. But that is not true of all. There are some, I am sorry to say, who shirk their duty in this great emergency. I hear of workmen in armaments works who refuse to work a full week's work for the nation's need. What is the reason? They are a minority. The vast majority belong to a class we can depend upon. The others are a minority. But, you must remember, a small minority of workmen can throw a whole works out of gear. What is the reason? Sometimes it is one thing, sometimes it is another, but let us be perfectly candid. It is mostly the lure of the drink. They refuse to work full time, and when they return their strength and efficiency are impaired by the way in which they have spent their leisure. Drink is doing us more damage in the war than all the German submarines put together.

What has Russia done? [Cheers.] Russia, knowing her deficiency, knowing how unprepared she was, said, "I must pull myself together. I am not going to be trampled upon, unready as I am. I will use all my resources." What is the first thing she does? She stops the drink. [Cheers.] I was talking to M. Bark, the Russian Minister of Finance, a singularly able man, and I asked, "What has been the result?" He said, "The productivity of labor, the amount of work which is put out by the workmen, has gone up between 30 and 50 per cent." [Cheers.] I said, "How do they stand it without their liquor?" and he replied, "Stand it? I have lost revenue over it up to £65,000,000 a year, and we certainly cannot afford it, but if I proposed to put it back there would be a revolution in Russia." That is what the Minister of Finance told me. He told me that it is entirely attributable to the act of the Czar himself. It was a bold and courageous step—one of the most

heroic things in the war. [Cheers.] One afternoon we had to postpone our conference in Paris, and the French Minister of Finance said, "I have got to go to the Chamber of Deputies, because I am proposing a bill to abolish absinthe." [Cheers.] Absinthe plays the same part in France that whisky plays in this country. It is really the worst form of drink used, not only among workmen, but among other classes as well. Its ravages are terrible, and they abolished it by a majority of something like 10 to 1 that afternoon. [Cheers.]

That is how those great countries are facing their responsibilities. We do not propose anything so drastic as that—we are essentially moderate men. [Laughter.] But we are armed with full powers for the defense of the realm. We are approaching it, I do not mind telling you, for the moment, not from the point of view of people who have been considering this as a social problem—we are approaching it purely from the point of view of these works. We have got great powers to deal with drink, and we mean to use them. [Cheers.] We shall use them in a spirit of moderation, we shall use them discreetly, we shall use them wisely, but we shall use them fearlessly, [cheers,] and I have no doubt that, as the country's needs demand it, the country will support our action and will allow no indulgence of that kind to interfere with its prospects in this terrible war which has been thrust upon us.

There are three things I want you to bear in mind. The first is—and I want to get this into the minds of every one—that we are at war; the second, that it is the greatest war that has ever been fought by this or any other country, and the other, that the destinies of your country and the future of the human race for generations to come depend upon the outcome of this war. What does it mean were Germany to win? It means world power for the worst elements in Germany, not for Germany. The Germans are an intelligent race; they are undoubtedly a cultivated race; they are a race of men who have been responsible for great ideas in this world. But this would mean the dominance of the worst

elements among them. If you think I am exaggerating just you read for the moment extracts from the articles in the newspapers which are in the ascendancy now in Germany about the settlement which they expect after this war. I am sorry to say I am stating nothing but the bare, brutal truth. I do not say that the Kaiser will sit on the throne of England if he should win. I do not say that he will impose his laws and his language on this country as did William the Conqueror. I do not say that you will hear the tramp, the noisy tramp of the goose step in the cities of the Empire. [Laughter.] I do not say that Death's Head Hussars will be patrolling our highways. I do not say that a visitor, let us say, to Aberdaron, will have to ask a Pomeranian policeman the best way to Hell's Mouth. [Loud laughter.] That is not what I mean. What I mean is that if Germany were triumphant in this war it would practically be the dictator of the international policy of the world. Its spirit would be in the ascendant. Its doctrines would be in the ascendant; by the sheer power of its will it would bend the minds of men in its own fashion. Germanism in its later and worst form would be the inspiring thought and philosophy of the hour.

Do you remember what happened to France after 1870? The German armies left France, but all the same for years after that, and while France was building up her army, she stood in cowering terror of this monster. Even after her great army was built France was oppressed with a constant anxiety as to what might happen. Germany dismissed her Ministers. Had it not been for the intervention of Queen Victoria in 1874 the French Army would never have been allowed to be reconstructed, and France would simply have been the humble slave of Germany to this hour. What a condition for a country! And now France is fighting not so much to recover her lost provinces, she is fighting to recover her self-respect and her national independence; she is fighting to shake off this nightmare that has been on her soul for over a generation, [cheers,] a France

with Germany constantly meddling, bullying, and interfering. And that is what would happen if Russia were trampled upon, France broken, Britain disarmed. We should be left without any means to defend ourselves. We might have a navy that would enable us, perhaps, to resent insult from Nicaragua, [laughter,] we might have just enough troops, perhaps, to confront the Mad Mullah—I mean the African specimen. [Loud laughter.]

Where would the chivalrous country be to step in to protect us as we protected France in 1874? America? If countries like Russia and France, with their huge armies, and the most powerful navy in the world could not face this terrible military machine, if it breaks that combination, how can America step in? It would be more than America can do to defend her own interests on her own continent if Germany is triumphant. They are more unready than we were. Ah! but what manner of Germany would we be subordinate to? There has been a struggle going on in Germany for over thirty years between its best and its worst elements. It is like that great struggle which is depicted, I think, in one of Wagner's great operas between the good and the evil spirit for the possession of the man's soul. That great struggle has been going on in Germany for thirty or forty years. At each successive general election the better elements seemed to be getting the upper hand, and I do not mind saying I was one of those who believed they were going to win. I thought they were going to snatch the soul of Germany—it is worth saving, it is a great, powerful soul—I thought they were going to save it. So a dead military caste said, "We will have none of this," and they plunged Europe into seas of blood. Hope was again shattered. Those worst elements will emerge triumphant out of this war if Germany wins.

What does that mean? We shall be vassals, not to the best Germany, not to the Germany of sweet songs and inspiring, noble thoughts—not to the Germany of science consecrated to the service of man, not to the Germany of a virile philosophy that helped to break the

shackles of superstition in Europe—not to that Germany, but to a Germany that talked through the raucous voice of Krupp's artillery, a Germany that has harnessed science to the chariot of destruction and of death, the Germany of a philosophy of force, violence, and brutality, a Germany that would quench every spark of freedom either in its own land or in any other country in rivers of blood. I make no apology on a day consecrated to the greatest sacrifice for coming here to preach a holy war against that. [Great cheering.]

Concluding this speech in Welsh, Mr. Lloyd George said: "War is a time of sacrifice and of service. Some can render one service, some another, some here and some there. Some can render great assistance, others but little. There is not one who cannot help in some measure, whether it be only by enduring cheerfully his share of the discomfort. In the old Welsh legend there is a story of a man who was given a series of what appeared to be impossible tasks to perform ere he could reach the desires of his heart. Among other things he had to do was to recover every grain of seed that had been sown in a large field and bring it all in without one missing by sunset. He came to an anthill and won all the hearts and enlisted the sympathies of the industrious little people. They spread over the field, and before sundown the seed was all in except one, and as the sun was setting over the western skies a lame ant hobbled along with that grain also. Some of us have youth and vigor and suppleness of limb; some of us are crippled with years or infirmities, and we are at best but little ants. But we can all limp along with some share of our country's burden, and thus help her in this terrible hour to win the desire of her heart." [Loud cheers.]

Mr. Lloyd George and his party returned after the meeting to Llandudno, where today he will inspect the First Brigade of the Welsh Army Corps.

BRITAIN'S MUNITIONS COMMITTEE

LONDON, April 14.—*The Times* says this morning:

An important step has at last been

taken by the Government toward the solution of the supreme problem of the moment—the organization of the national output of munitions of war. A strong committee has been appointed, with full power to deal with the question. It is to be representative of not merely one department but of the Treasury, Admiralty, War Office, and Board of Trade; in short, of the whole Government, with all its resources and authority.

The Chancellor of the Exchequer is to be Chairman, and the first meeting will be held today.

The work before the committee is nothing less than the organization of the whole resources of the nation for the production of materials of war. Hitherto, in spite of many warnings and some half-hearted attempts at organization, there has been no central, co-ordinated authority.

It is an open secret that it was during Lloyd George's visit to France at the beginning of the year that he first appreciated the scientific organization of labor which our Allies had already achieved. Not content with utilizing and extending the existing armament plant, the French have long since diverted several temporarily irrelevant industries to the main business of waging war.

With reference to the drink problem The Times says:

While the Government is apparently considering the expropriation of all the licensed houses in the kingdom, this far-reaching proposal has not at present gone beyond the stage of inquiry and consultation, and it is tolerably certain that it will go no further unless it is assured of no serious opposition in the country.

The Parliamentary Opposition, the leaders of which have been consulted in a general way, are believed to stand by the principle which they followed since the war began, namely: They are not prepared to quarrel with any measure which the Government regards as necessary for the active prosecution of the war so long as no injustice is done to established interests.

Italy's Evolution as Reflected in Her Press

Italy has reached her present position through the development of a policy the steps of which have been brightly illuminated by the press of the Peninsula. The most important of these steps may be designated as follows:

First, the declaration of the Government to the German Ambassador at Rome on Aug. 1, 1914, that it did not regard the conflict begun by Austria-Hungary and Germany as a defensive war and hence not binding on it as a member of the Triple Alliance, and its subsequent declarations of "neutrality," of "armed neutrality," and of "a neutrality which is likely to be broken if the interests of the country demanded it."

Second, Premier Salandra's speech of Dec. 3 for "armed, alert neutrality," and the declaration in Parliament on Dec. 5 by Signor Giolitti showing that the declaration of Aug. 1 was merely a repetition of one conveyed to Austria in the Summer of 1913, when Austria had suggested that she aid Bulgaria in subduing Serbia.

Third, the arrival in Rome in December of the former German Imperial Chancellor, Prince von Bülow, as Extraordinary Ambassador to the Quirinal, for the purpose of keeping Italy neutral, and, when this seemed doubtful, to negotiate between Italy and Austria what territorial compensation the latter would render the former in order to perpetuate the neutrality of the Peninsula.

Aside from the influence of these official acts, which invited press comments, the Italian papers have paid keen attention to the conduct of the war, concerning which the Government could not, on account of its neutrality, offer an opinion. Among such incidents of conduct have been the British declaration of a protectorate over Egypt and the bombardment of the Dardanelles by the Franco-British fleet.

In order to weigh the full significance of the comments of the Italian papers on these subjects a word may be said concerning the status of the journals themselves:

The most conspicuous is the *Idea Nazionale*, a paper of Rome practically dedicated to intervention. Then comes the conservative and solid *Corriere della Sera* of Milan, whose Rome correspondent, Signor Torre, has peculiar facilities for learning the intentions of the Ministry. Both the *Tribuna* and the *Giornale d'Italia* are considered Government organs, but, while the former rarely comments with authority except on accomplished facts, the latter, although often voicing the unofficial and personal opinions of Premier Salandra, who is known to be privately in favor of intervention, also voices the sentiment of former Premier Giolitti, who is known to be for continued neutrality. The *Stampa* of Turin is a Giolitti organ.

The *Osservatore Romano* is the well-known Vatican organ, which naturally supports Austria, a Catholic country, where such support does not conflict too pointedly with the sentiments of Catholics in neutral countries. Other clerical papers with strong pro-German opinions and with German industrial backing are the *Corriere d'Italia* and the *Popolo Romano*. The *Messaggero* of Rome and the *Secolo* of Milan, influenced by important British and French interests, are for intervention at all costs. The *Avanti* is the Socialist organ.

CAUSES OF ITALY'S NEUTRALITY.

From the Corriere della Sera, Aug. 2, 1914:

Italy's decision to remain neutral is based on three causes:

1. The terms of the Triple Alliance call for Italy's participation in war only if Germany or Austria-Hungary is attacked by another power. The present war is not a defensive war, but one brought on by Austria-Hungary and Germany.

2. The spirit of the alliance demands that no warlike action be taken involv-

ing the three countries without full mutual discussion and agreement. Italy was not even consulted by Austria-Hungary and the course of events was brought to her knowledge only by news agency reports.

3. When Italy went to war with Turkey, Austria prevented her from acting with a free hand in the Adriatic and the Aegean, thereby prolonging the war at an enormous cost in men and money to Italy. Italy would be justified in acting in precisely the same manner now toward Austria-Hungary.

From Secolo, Sept. 3, 1914:

During the last few days we have assisted at a deplorable example of our Latin impressionability. The first German victories have made Italians waver, and Germany is taking advantage of the popular nervousness, and is working on public opinion in countless ways. Italy is invaded by Germans, who assert that Germany will issue victorious, and that her commercial and industrial activity will not be arrested. We are inundated with German letters, telegrams, newspapers, and private communications from German commercial houses, all asserting that Germany will win, and that Italy should keep neutral, to be on the winning side.

We are not of that opinion. We cannot lose sight of England. Germany knows that England represents her great final danger, hence the bitterness with which she speaks of England in all the above communications. England is not playing a game of bluff. She is not impotent by land, as Germany says, and may give Germany a mortal blow by sea. The war may possibly end in a titanic duel between England and Germany. In this case England will go through with the struggle calmly and grimly, smiling at difficulties and disregarding losses.

From the Corriere d'Italia, Sept. 17, 1914:

We do not know what Italy will do tomorrow, but we are of opinion that, in face of all eventualities, it is the elementary duty of patriotism not to trouble the calm expectancy of public opinion and not to mar the task of the Government, already difficult enough.

From the Messaggero, Sept. 18, 1914:

The Italian Nation is beginning to ask itself whether it ought to remain until the conclusion of peace in an attitude of resignation. It is necessary for us with clear vision to take our place in the fighting line. While the destinies of a new Europe are being decided on the battlefields of Champagne, Belgium, Galicia, and Hungary the Government is assuming a grave responsibility be-

fore the country in deciding to be disinterested in the struggle. The keen popular awakening which is manifested in demonstrations, meetings, and public discussions shows that growing preoccupation and varied uneasiness will not cease so long as the fate of the country is not decided at the right time by men who by temperament are best fitted to be interpreters of the soul and the interests of the nation.

From the Corriere della Sera, Oct. 4, 1914:

Many who now invoke a war of liberation complained at the beginning of August that Italy had not helped her allies. The declaration of neutrality then seemed the greatest act of wisdom performed by Italy for many years. Now, however, we must think of the future. Let us remember that the powers will only support our wishes when they have need of us. Gratitude and sympathy are mere phrases when the map of Europe is being redrawn. If Italy desire to safeguard her interests in the Adriatic she cannot postpone her decision till the last moment. Italy is isolated; the Triple Alliance treaty cannot defend her even if it be still in force. Italy and Austria, as Count Nigra and Prince Bülow said, must be allies or enemies. Can they remain allies after what has happened?

ITALY'S ARMED, ALERT NEUTRALITY.

From the Idea Nazionale, Dec. 3, 1914:

The day on which Italy will undertake to realize those aspirations she will find full and unconditional support. Great Britain is favorable to Italy gaining supremacy in the Adriatic, which is so necessary to her existence. If Great Britain needs Italy's support in Africa it will be only a matter of one or two army corps, and such an expedition, while having a great moral and political importance, would not diminish Italian military power in Europe.

From the Avanti, Dec. 4, 1914:

Premier Salandra's speech was Jesuitical. It contents the Jingoese by certain

dubious phrases, while discontenting the Clerical and Conservative neutrals.

From the Corriere d'Italia, Dec. 4, 1914:

This much-applauded word, "aspirations," was not (in Signor Salandra's speech) meant to refer to any particular belligerent, and the Cabinet consequently has no program.

From the Stampa, Dec. 5, 1914:

Austria, before the war, disclaimed any intention of occupying Serbia, and her declaration cannot be disregarded by Italy, whose relations with Austria have been always conditional on the maintenance of the Balkan status quo, which Austria now threatens to alter. The Italian Government cannot ignore this condition, especially as during the Libyan war Austria menaced Italy, unless she desisted from bombarding the Albanian coast. Thus the Serbian situation may constitute a new factor.

From the Corriere della Sera, Jan. 31, 1915:

Italy's true policy is to come to a friendly agreement with the Slavs, which will guarantee their mutual interests. Italy wants a national settlement in the Balkan Peninsula, independent of the great powers. In no circumstances can Italy bind her lot to Austria-Hungary's policy.

BRITISH PROTECTORATE OVER EGYPT.

From the Idea Nazionale, Dec. 19, 1914:

The British Government's act merely sanctions a situation already existing in fact since 1882. In our governing circle it is not thought that the change of régime in Egypt will occasion, at least for the time being, any great modifications in public law in relation to the international statutes regulating the position of foreigners in Egypt.

From the Tribuna, Dec. 20, 1914:

The Mediterranean agreement, in which Italy, too, has taken part, implicitly recognized the actual status Eng-

land had acquired in Egypt. Now the war has demonstrated the judicial incongruity of a Turkish province in which and for which the English had to carry out warlike operations against Turkey. The protectorate already existed in substance, and Great Britain might now even have proclaimed annexation.

From the Giornale d'Italia, Dec. 19, 1914:

Great Britain had for some months been preparing this event, which legally regulates a situation which has existed in fact. The present situation has been brought about without any disturbance, like everything that England does, in silence, neatly and without disturbing any one. Nobody can be astonished at Great Britain's declaration of a protectorate over Egypt.

THE DARDANELLES.

From the Giornale d'Italia, March 7, 1915:

It will be extremely difficult for Italy longer to remain neutral. The attack by the allied fleet on the Dardanelles has brought up three great problems affecting Italian interests. The first of these problems is the new rule to allow Russia access to the Mediterranean through the Dardanelles; the second concerns the equilibrium of the Balkans, and the third the partition of Asiatic Turkey, which affects the equilibrium of the Eastern Mediterranean. It is impossible for Italy to keep out of the solution of such problems unless she be satisfied to see not only the powers of the Triple Entente settle these affairs according to their interests, but also the small but audacious and resolute nation, Greece.

From the Messaggero, March 17, 1915:

The cession of the Trentino would be valueless if it implied the abandonment of Italian aspirations in Venetia Giulia, (land west of the Julian Alps,) in the Adriatic, and in Asia Minor, and submission to German policy. We cannot obtain by neutrality the territory we want, nor, if we renew the Triple Alliance, can we make an agreement with

Great Britain for our security in the Mediterranean.

VON BUELOW'S WORK AND PLEA FOR INTERVENTION.

From the Corriere della Sera, Feb. 8, 1915:

Happily our aspirations in the Adriatic, our interests in the Central Mediterranean and in Northern Africa coincide admirably with the policy which it is easiest for us to pursue. Unless we profit with the utmost prudence, with the greatest circumspection, by the present rare opportunity which history offers us to set the finishing touches to our unification, to render our land and sea frontiers immeasurably more secure than they are, to harmonize our foreign with our domestic policy, we shall experience after the close of the war the darkest and most difficult days of our existence. The crisis through which we are passing is the gravest we have yet encountered. Let us make it a crisis of growth, not a symptom of irreparable senile decay.

From the Stampa, March 15, 1915:

There is surely no possibility of an Austro-Italian war without German intervention. If Italy attacks Austria, Germany will attack Italy; nor will Austria make concessions, for Austria, like Turkey, never changes her system, even when wrong.

From the Giornale d'Italia, March 19, 1915:

Italy either can obtain peacefully intermediate and certain satisfaction of her sacred aspirations, together with the protection of her great and complex interests, or she can have recourse to the supreme test of arms. It is absurd to think that Italy, after seven months of preparation, when she is in an especially advantageous diplomatic and military position, will be satisfied with the Biblical mess of pottage or less—mere promises.

However negotiations go the great national interests must be protected at any costs. This is the firm will of the country and the duty of the Government. For fifty years Italy has made great sacrifices to be an element of peace in Europe. The equilibrium and peace of the Continent were broken through the fault of others against Italy's desire and without consulting her. Others have the responsibility for the present terrible crisis, but Italy would be unworthy if she did not issue with honor and advantage from the conflict. Greece, Rumania, and Bulgaria are awaiting Italy's move and will follow suit. Thus Italian influence is great at this moment, which must be seized, as it is in her power to contribute to the formation of a new international combination.

SOME RUSES DE GUERRE.

By A. M. WAKEMAN.

(Respectfully submitted to the British Government.)

GREAT Churchill's plan to fool the foe is simple and unique—
You only take a neutral flag and hoist it at your peak.
Thereby a ship with funnels four looks just like one with two,
Because the pattern has been changed on her Red, White, and Blue.

Now, cannot you improve on this, and so protect your towns,
As well as all your gallant ships at anchor in the Downs?
Old London, with the Stars and Stripes, might well pass for New York;
And Baltimore for Maryland instead of County Cork.

To mouth of Thames (N-O-R-E) just add four letters more,
Then hoist the Danish ensign, and, behold, 'tis Elsinore!
And Paris will be Washington if, on the Eiffel Tower,
They raise the flag of U. S. A., (a well-known neutral power.)

Your sailors might wear Leghorn hats, and out upon the blue,
They'd look like sons of Italy, (at present neutral, too;)
And, if upon your King the Hun would try to work some ill,
With pickelhaube on his head he'd pass for Uncle Bill.

THE EUROPEAN WAR AS SEEN BY CARTOONISTS

The Great Question

"If I remain neutral, will you remain neutral?"

"If you were neutral, would he be neutral?"

"If he is neutral then we will remain neutral."

"If we remain neutral, will they remain neutral?"

"And you also, neutral?"

"Shall you remain neutral?"

—From *Lustige Blaetter*, Berlin.

"Belgium—Belgium—Belgium!"

America's Neutrality

By Count Albert Apponyi

[From THE NEW YORK TIMES, March 28, 1915.]

The letter which follows was sent by Count Albert Apponyi to Dr. Nicholas Murray Butler, and was written in the latter part of last month in Budapest. Count Apponyi, who is one of the most distinguished of contemporary European statesmen, was President of the Hungarian Parliament from 1872 to 1904. He was formerly Minister of Public Instruction, Privy Councillor, Member of the Permanent Court of Arbitration at The Hague, and Member of the Interparliamentary Union.

I HAVE been greatly interested in your account of American neutrality in the present European crisis.

I must confess that I had seen it in a somewhat different light before and that some of the facts under our notice still appear to me as hardly concordant with the magnificent attitude of impartiality, nay, not even with the international duties of neutrality, which intellectual and official America professes to keep.

We cannot explain to ourselves that a neutral power should suffer the selling of arms and ammunition by its citizens to one of the belligerent parties, when no such selling to the other party is practically feasible; we cannot understand why America should meekly submit to the dictates of England, declaring all foodstuffs and manufacturing materials contraband of war, with not even a show of right and with the clear and openly proclaimed intention of starving Germany and Austria-Hungary; why, on the other hand, America should use an almost threatening language against Germany, and against Germany alone, when the latter country announces reprisals against the English trade, which, under given circumstances, can be considered only as acts of legitimate self-defense against an enemy who chooses to wage war not on our soldiers only, but on our women and children, too.

With all the respect we feel for the United States, we cannot find this attitude of their Government either fair or dignified. I offer these remarks in no spirit of uncalled-for criticism, but because I see how much the moral authority of the United States and their splendid situation as the providential peace

makers of some future—alas! still far off—day has been impaired by the aforementioned proceedings. We cannot help considering them as so many acts of ill-disguised hostility against ourselves and of compliance with our foes. How can you expect, then, to have your good offices accepted with confidence by both belligerent parties when the times are ripe for them? It seems like the throwing away of a magnificent opportunity, and I think that those who, like yourself, cherish for your country the noble ambition of being some day the restorer of peace, should exert themselves to prevent practices which, if continued, would disable her to play any such part.

In your letter you strike the keynote of what I cannot help considering the partiality of Americans for the Entente powers. It is the idea that "in the western area of conflict, at least, there is an armed clash between the representatives of dynastic institutions and bureaucratic rule on the one hand with those of representative government and liberal institutions on the other." I can understand that it impresses some people that way, but I beg to enter a protest against this interpretation of the conflict.

Liberal or less liberal institutions have nothing to do with it in the west; the progress of democracy in Germany will not be stopped by her victory, it will rather be promoted by it, because the masses are conscious of bearing the burden of war and of being the main force of its vigorous prosecution, and they are enlightened and strong enough to insist on a proper reward. Rights cannot be denied to those who fulfilled duties involving self-sacrifice of the sublimest kind with unflinching devotion.

No practical interest of democracy then is involved in the conflict of the western powers.

As to their representing liberal institutions in a higher or lower degree, I am perfectly willing to admit England's superior claims in that respect, but I am not at all inclined to recognize such superiority in modern France, republic though she calls herself. The omnipresence and omnipotence of an obtruding bureaucratic officialism is just what it has been under the old monarchy; religious oppression has only changed sides, but it still flourishes as before. In former times the Roman Catholic religion was considered as a State religion and in her name were dissent and Freemasonry oppressed; today atheism is the official creed, and on its behalf are Catholic believers oppressed.

Separation of Church and State, honestly planned and loyally fulfilled in America has been perverted in modern France into a network of vexations and unfair measures against the Church and her faithful servants; the same term is used and this misleads you to cover widely different meanings. In a word, it is a perfect mistake to consider modern France as the "sweet land of liberty" which America is. A German citizen, with less show of political rights, enjoys more personal freedom than is granted to a French one, if he happens to differ from the ruling mentality.

So stand things in the western area of conflict. But how about the east? You are kind enough to admit in your letter that "from this (the aforementioned) standpoint of course the appearance of Russia among the allies is an anomaly and must be explained on other grounds." Anomaly is a rather tame word to characterize the meaning of this appearance of Russia. I should hardly designate it by this term.

She does not "appear among the allies." She is the leading power among them; it is her war, as Mr. Tsvolski, the Russian Ambassador to Paris, very properly remarked: "*C'est ma guerre.*" She planned it, she gave Austria-Hungary no chance to live on peaceful terms with her neighbors, she forced it upon us, she

drew France into it by offering her a bait which that poor country could not resist, she created the situation which England considered as her best opportunity for crushing Germany. I must repeat it over and over again: it is in its origin a Russian war, with a clearly outlined Russian program of conquest.

Here, then, you have a real clash between two principles; not shades of principles as these may subsist between Germany and her western foes, but principles in all their essential features; not between different tints of gray, but between black and white, between affirmation and negation; affirmation of the principle of human dignity, liberty, safety, and negation of the same; western evolution and eastern reaction.

I wonder why those prominent Americans who are so deeply impressed by the comparatively slight shades of liberalism differentiating Germany from England and France are not struck by the absolute contrast existing between Muscovitism and western civilized rule as represented by Austria-Hungary and Germany; that they overlook the outstanding fact that while in the western area the conflict has nothing whatever to do with the principles embodied in the home policy of the belligerents, in the east, on the other hand, these principles will in truth be affected by the results of war, since a Russian victory, followed by a Russian conquest, would mean the retrogression of western institutions and the corresponding expansion of eastern ones over a large area and large numbers of men.

It is the consciousness of fighting in this war which has been forced upon us, against the direst calamity threatening our kind and on behalf of the most precious conquests of progress and civilization, which enhances our moral force so as to make it unconquerable. The hope which I expressed in my first letter, that Serbia's doom would soon be fulfilled, has been prostrated by the mistakes of an over-confident Commander in Chief; but that means postpone only and does not alter the prospects of war in their essentials.

Good progress is achieved in the campaign against Russia; a chapter of it may be brought to a happy close before long. The spirit of the country shows no symptom of weakening; it is really wonderful what a firm resolve pervades our whole people, though every man between twenty and forty-two stands in the field, and though the losses are frightful. Economically we hold out easily; the expenses of war are defrayed by inner loans, which give unexpected results; every bit of arable land is tilled as in time of peace, the old, the women and the half-grown youths doing the work of their absent supporters, neighbors assisting each other in a spirit of brotherhood truly admirable. In cases of urgent need we have the prisoners of war, whose number increased to nearly 300,000 (in Austria-Hungary alone) and to whom it is a real boon to find employment in the sort of work they are accustomed to.

The manufacturing interest, of course, suffers severe losses; but the number of the unemployed is rather less than usual, since a greater part of the "hands" is absorbed by the army. In a word, though the sufferings of war are keenly felt, they are less severe than had been expected, and there is not the smallest indication of a break-down. The area of Germany, Austria, and Hungary taken as a whole is self-supporting with regard to foodstuffs. The English scheme of starving us is quite as silly as it is abominable. England can, of course, inflict severe losses on our manufacturers by closing the seas against their imports and exports; but this is not a matter of life and death, such as the first reprisals of Germany, if successful, may prove to England.

Generally speaking, it seems likely that England will be caught in the net of her own intrigue. She did not scruple to enlist the services of Japan against her white enemies, but this act of treachery will be revenged upon herself. The latest proceedings of Japan against China can have one meaning only—the wholesale expulsion of the white man from Eastern Asia. The Japs do not care one straw who wins in Europe; they seized upon their own opportunity for their own pur-

poses. England only gets her deserts; but how do Americans feel about it? Can America be absolved from a certain amount of responsibility for what may soon prove imminent danger to herself? Has not her partiality for England given encouragement to methods of warfare unprecedented in the history of civilized nations and fruitful of evil consequences to neutral nations?

To us, in our continental position, all this means much less than it means to you. It does not endanger our prospects. We feel comparatively stronger every day. Our losses, though enormous, are only one-half of those of the Entente armies, according to the Geneva Red Cross Bureau's calculation. The astounding number of unwounded prisoners of war which Russia loses at every encounter, and even in spaces of time between two encounters, shows that the moral force of her army is slowly giving way, while the vigor of our troops is constantly increasing. After six months of severe fighting our military position is certainly stronger than the position of the Entente powers, though the latter represent a population of 250,000,000, (English colonies and Japan not included,) against the 140,000,000 of Germany, Austria-Hungary, and Turkey. Who can doubt on which side superior moral power fights? Who can doubt, therefore, what the ultimate result promises to be?

If it takes more time to bring matters to a decision—and a decision must be obtained at any price, if there is to follow a period of permanent peace—part, at least, of the responsibility for the horrors of the protracted war, for the slaughter of many hundred thousands more of human beings, rests on America. But for the American transports of guns and ammunition, the power of Russia would give way in a shorter time, considering her enormous losses in that respect and her inability to supplement them from her own workshops.

It is very edifying that American pacifists are exerting themselves against the current of militarism which appears to spread in their country; but wouldn't it be better still, more to the purpose and certainly practically more urgent, to insist

upon a truly neutral attitude of the great republic, to protest against her feeding the war by providing one belligerent side with its implements? Do American pacifists really fail to see that their country by such proceedings disables herself from being the peacemaker of the future? Do they think it immaterial from the standpoint of her moral power, as well as of her material interests, how central Europe, a mass of 120,000,000, think of her, feel about her?

I hope my readers will not find fault with me for using such plain language. My well-known enthusiastic regard for the great American commonwealth makes it unnecessary that I should protest against the charge of meaning disrespect or anything else whatever but a sincere desire to state with absolute sincerity how we feel about these matters, in what light they appear to us. I think America must know this, because it is part of the general situation she has to reckon with when shaping her policies. I fervently hope these policies will remain in concordance with the great principles on which the commonwealth is built and with the teaching embodied in that farewell address which is read once a year in Congress and in which the greatest American emphatically warns his countrymen from becoming entangled in the conflicts of European nations.

A few words more about the future of Europe may be said on this occasion. I have read with the keenest interest your own and Mr. Carnegie's statements concerning a future organization of Europe on the pattern of the United States. My personal views concerning this magnificent idea have been expressed in anticipation in my America lectures of the year 1911. Allow me to quote my own words:

Analogies are often misleading, the most obvious ones especially so. Nothing seems more obvious than to draw conclusions from the existing union of American States to a possible union of European nations; but no fancied analogy is to be applied with greater caution than this one. The American Union's origin was the common struggle of several English colonies, now States, for their emancipation; unity of purpose was the main

principle of their growth, union its natural result.

Europe, on the other hand, is, in her origin and in her present state, a compound of conflicting interests and struggling potentialities. Mutual antagonism remained the principle of growth embodied in the several national lives. The juridical formula of this system is the principle of national sovereignty in its most uncompromising interpretation and most limitless conception. As such it is the natural result of a historical growth mainly filled with antagonism; in the consciousness of (European) nations it lives as synonymous with national honor, as something above doubt and discussion.

Let me add to this the following remarks:

1. Any sort of union among the nations of Europe appears impossible if it is meant to include Russia. Russia represents eastern mentality, which implies an inadmissible spirit of aggression and of conquest. It seems to be a law of nature on the old Continent that eastern nations should wish to expand to the west as long as they are powerful. Not to mention the great migration of nations which gave birth to mediaeval organizations, you may follow this law in the history of the Tartars, of the Turks, and of Russia herself. The spirit of aggressiveness vanishes only when decay sets in, which is still far from being the case of Russia, or when a nation is gradually converted to Occidental mentality, which, I hope, will some day be her happy lot. But till then, and that may mean a century or two, any sort of union including Russia would mean a herd of sheep including a wolf.

2. What I hope then, for the present, as the most desirable result of the war, is a thorough understanding between the nations of the Western European Continent, construction of a powerful political block, corresponding to the area of western mentality, in close connection with America; such a block would discourage aggression from the east; it would urge Russia on the path of reform and home improvement. England would be welcome to join it, on condition of renouncing those pretensions to monopolizing the seas which are as constant a menace to peace as Russian aggressiveness is. So we should have, if not "the

United States of Europe," which at present lies beyond the boundary lines of possibilities, a strong peace union of the homogeneous western nations. Alas! this result can be reached only by destroying the present unnatural connections, which mean the continuance of war till a crushing decision is obtained.

3. The American colonies of England did not think of union as of a peace scheme; they had been compelled into it by war, by the necessity of self-defense. It is only such an overpowering motive which has force enough to blot out petty rivalries and minor antagonisms. If union between States belonging to the same race and not divided either by history or by serious conflicting interests could be effected only under the pressure of a common peril, we must infer "a *minor ad majus*" that such a powerful incentive will be more necessary still to persuade into union nations of different races, each cherishing memories of mutual collisions and actually aware of not unimportant clashing interests.

The menace of aggression from the east has been brought home to us by the present war; gradually it will be understood even by those Occidentals who at present unhappily lend their support to that aggression. On this perception of the higher common interests of self-defense do I build the possibilities of a western coalition. But a time may

come when Russia will be compelled to join it and to complete thereby the union of the whole of Europe; it may come sooner than the conversion of Russia to western ideas could be effected by natural evolution; it may come through the yellow peril, the menace of which has been brought nearer to us by the accursed policy of England.

Let Japan organize the dormant forces of China, as it seems bent upon doing, and the same law of eastern aggressiveness which is at the bottom of the present war will push the yellow mass toward Europe. Russia, as comparatively western, will have to bear their first onset; for this she will require Occidental assistance, and in the turmoil of that direful conflict—or, let us hope, in order to avoid it—she will readily give up all designs against her western neighbors, and she may become really western by the necessities which impel her to lean on the west.

But this may or may not happen. What I see before me as a tangible possibility is the great western block. It is the only principle of reconstruction after war that contains a guarantee of a permanent peace; it is the one, therefore, which the pacifists of all nations should strive for, once they get rid of the passing mentality of conflict that now obscures the judgment of the best among us.

Neutral Spirit of the Swiss

An Interview With President Motta of the Swiss Confederation

[From The London Times, Jan. 30, 1915.]

BERNE, Jan. 20.

THE President of the Swiss Confederation is the symbol of a democracy so perfect that the man in the street is not quite sure who the President is. He knows that he is one of a council of seven, and that he is elected for one year, and that is all. In the Federal Palace, the Berne Westminster and Downing Street, the anonymity is almost as complete. Officers pass and repass in the corridors—one of the signs, like the waiting military motor cars at the door, of mobilization—but this does not change the spirit, simple and civilian, of the interior.

M. Motta, Chief of State for this year, is a man of early middle life. He is the best type of Swiss, a lawyer by profession, whose limpid French seems to express culture as well as candor. Nor could one doubt for a moment the sincerity of his speech. Speaking on the Swiss position in the war, M. Motta was anxious to remove the impression that it was colored, dominated by the existence of the German-speaking cantons, more numerous than the French. "Of course," he said, "we have our private sympathies, which incline us one way or the other, and there is the language tie—though here we are greatly attached to our Bernese patois—but I would have you believe the Swiss are essentially just and impartial, they look at the war objectively.

"We have good-will toward all the nations. Need I say that we respect and esteem England? Have you not found that you are well received? There is no antagonistic feeling against any one. Our neutrality is imposed upon us by our position, a neutrality that is threefold in its effects, for it is political, financial, and economic. Italy, France, Germany, Austria, are our neighbors; we send them

goods, and we receive supplies from them in return."

We then talked of the army, of that wonderful little army which, at this moment, is watching the snowy passes of the Alps. Two years ago it is said to have impressed the Kaiser on manoeuvres; perhaps for that reason he has refrained to pass that way. Outside, in the slippery streets, over which the red-capped children passed with shouts of glee, I had seen something of the preparations; the men, steel-like and stolid, marching by, the officers, stiff and martial-looking, saluting right and left under the quaint arcades of this charming city. Colored photographs of corps commanders adorned the windows and seemed to find a ready sale. These things pointed in the same direction. Switzerland, posted on her crests, was watching the issue of the terrific struggle in the plains.

"We must defend our neutrality," the President said, "our 600 years of freedom. There is not a single man in the country who thinks differently. I am an Italian-Swiss, one of the least numerous of our nationalities, but there is only one voice here as elsewhere—only one voice from Ticino to Geneva. That we shall defend our neutrality is proved by the great expenditure on our army; otherwise, it would be the height of folly."

The President spoke of army expenditure, of the simple army system, of the reorganization which had been carried out some years before. Switzerland was spending £20,000 a day, a large sum for a small country. Since the day when the general mobilization had been decreed—some classes have now been liberated—Switzerland had spent £4,500,000. It was a lot of money.

The army, of course, was a militia; some few officers were professional sol-

diers, others were drawn from a civil career and were doctors, lawyers, engineers, and merchants. In 1907 the country had consented to lengthen the periods of training in what are quaintly called the "recruits' schools" and "rehearsal schools." In the former category the men do sixty-five days' training a year, in the latter forty-five.

"I assure you," continued M. Motta, "whatever sympathy the German-Swiss may feel toward Germany, the French-Swiss toward France, or the Italian toward Italy, it is nothing like as warm and as intimate as that which each Swiss feels toward his fellow-Swiss."

This was the national note which dominated everything. At first there was a little difficulty in the councils of the nation. Some showed a tendency to lose their balance, but that phase had passed, and each day, I gathered, purely Swiss interests were coming uppermost.

"And the press, M. le President?"

M. Motta admitted that some writers

had been excessive in their language and had been lacking in good taste; but, on the whole, he thought the newspapers had impartially printed news from both sides, and he cited a list of leading organs—Switzerland is amazingly full of papers—which had been conspicuous for their moderation.

And then there was the question of contraband. Orders were very precise on the subject; the Cabinet had limitless power since the opening of the war; if there was any smuggling it was infinitesimal, and, as to foodstuffs, Switzerland regretted she could not import more for her own needs. The Government had established a monopoly and forbidden re-exportation, but supplies were not up to the normal. The route by the Rhine was closed.

Finally came the phrase, concluding the conversation: "Whoever violates our neutrality will force us to become the allies of his enemy." There could be nothing more categorical.

TO KING AND PEOPLE.

By WALTER SICHEL.

[From King Albert's Book.]

*All the great things have been done by the
little peoples.*—DISRAELI.

SIRE, King of men, disdainer of the mean,
Belgium's inspirer, well thou stand'st
for all
She bodes to generations yet unseen,
Freedom and fealty—Kingship's coronal.

Nation of miracles, how swift you start
To super-stature of heroic deeds
So brave, so silent beats your bleeding heart
That ours, e'en in the flush of welcome,
bleeds.

No sound of wailing. Look, above, afar,
Throbs in the darkness with triumphant
ray

A little yet an all-commanding star,
The morning star that heralds forth the
day.

A Swiss View of Germany

By Maurice Millioud

M. Maurice Millioud, an eminent member of the Faculty of the University of Lausanne, Switzerland, has written an article of marked breadth and penetration in which he presents a quite novel view of the forces which, in combination, have brought Germany to its actual position. These forces are political, social, and economic; beneath and through them works the subtle impulsion of a national conception of right and might which the author sums up as the "ideology of caste." Want of space forbids the publication of the entire article. We give its most significant parts with such summary of those portions which it was necessary to omit as, we trust, will enable our readers to follow the general argument.

HUMANITARIANS the most deeply buried in dreams yield with stupefaction to the evidence of fact. European war was possible, since here it is, and even a world war, for all continents are represented in the mêlée. Millions of men on the one side or the other are ranged along battle fronts of from 500 to 1,000 kilometers. We are witnessing a displacement of human masses to which there is nothing comparable except the formidable convulsions of geologic ages.

The world then was in formation. Will a new Europe, a new society, a new humanity, take form from the prodigious shock by which our imagination is confounded?

We can at least seek to understand what we cannot hinder.

This war was not a matter of blind fate, but had been foreseen for a long time. What are the forces that have set the nations in movement? I do not seek to establish responsibility. Whosoever it may be, those who have let loose the conflict have behind them peoples of one mind. That, perhaps, is the most surprising feature in an epoch when economic, social, and moral interests are so interwoven from one end of the earth to the other that the conqueror himself must suffer cruelly from the ruin of the conquered.

The Governments have determined the day and the hour. They could not have done it in opposition to the manifest will of the nations. Public sentiment has seconded them. What is it then which rouses man from his repose, impels him to de-

sert his gains, his home, the security of a regular life, and sends him in eager search for bloody adventures?

This problem involves different solutions because it embraces a number of cases. Between the Russians, the French, the English, the Germans there is a similarity of will, but not, it seems, an analogy of sentiment. I shall undertake to analyze the case of Germany. It has peculiar interest on account of its importance, of its definiteness, of the comparisons to which it leads, and the reflections which it suggests. Numerous facts easy to verify and in part recent permit us to throw some light upon it and offer us a guarantee against hazardous conjectures.

Defining a caste as "a group of men bound to each other by solidarity of functions in society," such as the Brahmins of India and the feudal nobility, Prof. Millioud says that he will use the terms as equivalent or nearly equivalent to a "directing class." Quoting the article from Vorwaerts which led to the suspension of that Socialist organ and which "admits by implication that responsibility for the war falls on Germany," he proceeds to examine the origins of the influence of the war party and the interests it served.

Here we must have recourse to history. In Germany the dominant class is composed in part of an aristocracy by birth and of bourgeois capitalists, more or less of them ennobled. The interior policy of Germany since 1871 and even since 1866 is explained by the relations, sometimes kindly, sometimes hostile, of these two categories of persons, by the opposition

or the conjunction of these two influences, and not by a struggle of the dominant class against the socialistic mass. That struggle, which is in France and is becoming in England a fact of essential gravity, has been in Germany only a phenomenon of secondary importance. It has determined neither the profound evolution of the national life nor the chief decisions of the Government.

In Germany, as is known, the abolition of the ancien régime did not take place brusquely as in France. After the revolution and the French occupation, the noble caste recovered all its privileges. It has lost them little by little, but not yet entirely. Even the liquidation of the property of the feudal régime was not completed until toward 1850. Napoleon made some sad cuts in the little sovereignties, but from 1813 to 1815 the princely families did their utmost to recover their independence. The greater part were mediatized, but their tenacity offered a serious obstacle up to 1871 to the establishment of German unity.

That unity was accomplished in spite of them, by sword and fire, as Bismarck said, that is to say, by the wars of 1866 and 1870. Care was taken, however, not to abase them more than was strictly necessary, for it was intended to maintain the hierarchy. What was wanted was a monarchical unity, made from above down, and not a democratic unity brought about by popular impulsion.

On the other hand, the smaller nobles formed, after 1820, a vast association for the defense of their rights, the *Adelskette*. Moreover, they could not be sacrificed, in the first place, because they had rendered invaluable services in the wars of independence, they had arisen as one man, and they had ruined themselves in sacrifices for the national cause, they had organized the people and led it to victory, finally because they served to restrain the high nobility whose domination was feared. They sustained the throne against the princes, the higher nobility against the democracy, the lesser nobility against the higher, the two forming an intermediary class between the monarch and the nation. That was the

social conception which prevailed with those who were working to realize the unity of Germany, so that the nobility, lesser or higher, in default of its privileges retained its functions.

Treitschke, in his last lessons, about 1890, called it "a political class." For the bourgeois, he said, wealth, instruction, letters, arts. Their part is fine enough. The nobility is apt at governing. That is its special distinction. For a long time, in fact, the nobility has filled alone or almost alone the great administrative, governmental, and military posts.

Bismarck was the finished type, the representative par excellence of this class of men. He had their intellectual and moral qualities carried to the highest degree of superiority. But he underwent evolution after 1871, and his caste with him, under the pressure of general circumstances.

Bismarck was a Junker, a Prussian rustic, monarchist, particularist, agrarian and militarist. Each of his qualities is an attribute of a mentality of caste, a very curious one, not lacking in grandeur, but very narrow and not always adequate to the conduct of affairs.

Monarchist means anti-Parliamentarian. The fine scorn of rhetoric and even of public discussion, a conviction that democracy will not lead to anything beyond a display of mediocrity, that is one of the salient features of his mind. Patriotism conceived as an attachment to personal relations, as the service of one man, the subject, to another man, the King, and not the service of an anonymous person, the functionary, to an abstraction, the State, the republic, this was formerly designated by the word faithful, (*féal*), which has disappeared from our vocabulary because it is without meaning in our present moral state.

The Junker is particularist, at least he was. The political and administrative centralization which the Jacobins achieved in France inspires him with horror. For him it is disorder. He sees in it nothing but a dust heap of individuals crushed beneath a formula. Even today, when the German accuses France of anarchy, that is what he means. He fig-

ures to himself the nation as a vast hierarchy of liberties, an autonomy of States within the empire, of provinces within the State, of communes within the province, of proprietors within the commune. Equality is equality of rank, of worth, of wealth, of force, but impersonal equality before the law is for him an unnatural thing, an invention of the professors which at heart he despises.

He is agrarian and militarist, that is to say, conservative and enamored of force. In 1830 four-fifths of the population lived by agriculture and the landlord governed his peasants patriarchally. He kept the conservatist spirit of a rustic, a very lively sense of authority and the military instinct. He had scant liking for distant enterprises or adventures. He was at once religious, warlike, and realist, knowing how to nurse his ambitions and to confine his view to what was within reach.

Bismarck for a long time was the decided opponent of naval armaments and colonial policy, in short, of imperialism. Even his projects for social reform—insurance against sickness, against old age—which have been accepted as concessions to modern ideas, were due entirely to his monarchical and patriarchal conception of the State. He copied the ancient decrees of Colbert as to naval personnel. He would have gone as far as assurance against non-employment. In the dominion of the King, he said, no one should die of hunger.

The Junker made a force of Prussia; he made Prussia itself. It was due to him that she passed after 1815 from the form of a *Polizeistaat* to the form of *Kulturstaat*, the latter only an expansion of the former. In place of a watchful, regulating, and vexatious State she became an organized State, the instructor of youth, the protector of religion, the source of inspiration for agricultural reforms, and all great commercial and industrial enterprises. This State was not an emanation from the national will, but the creator of a nation, the living and moving self-incarnation of the Hegelian "idea," that is to say, the Divine thought.

Of all the German aristocracy the noble of Pomerania or Brandenburg, the Prus-

sian Junker, represented this social type most definitely. In the south the liberal tendencies—to be exact, the memories of the French Revolution—persisted far into the nineteenth century. But it is well known that German unity was accomplished by military force and against liberalism.

After 1871, and even after Sadowa, the problem of interior policy which presented itself was that of the "Prussianization" of Germany. At one time it seemed that Bismarck was on the point of succeeding in it. What was that national liberal party upon which he depended for so long? It was the old liberal party, with advanced tendencies tainted with democratic liberalism and even with cosmopolitanism, keeping up its relations with the intellectuals, the university men, who made so much noise with pen and voice about 1848 and later. They dreamed of the unity of Germany in the democratic liberty and moral hegemony of their nation, having become in Europe the sobered heir of the French Revolution.

Under the influence of Bismarck they sacrificed to their dream of unity, to their national dream, their liberal dream, and they secured for the Chancellor the support of the upper bourgeoisie.

It was indeed the Prussianization of Germany, but in that spirit and in that system contemporary German militarism would never have fructified. It was contrary to the characteristic tendencies of a monarchical State supported by a conservative caste, which was also particularist, military, and agricultural. A State of this kind tends to become a closed State.

What then happened? An event of capital importance which everybody knows, but of which we only now begin to see the consequences. It was the radical transformation of Germany from an agricultural to an industrial nation. In its origin this phenomenon dates from before the nineteenth century. By 1848 it had become perceptible. Since 1866, and especially since 1871, it has dominated the entire social evolution of the empire. Here, in fact, is the revolution.

It partakes of the character of a tragedy, it has overturned the conditions of life throughout the entire German territory.

At the close of the War of Independence, four out of five Germans lived on the land, two out of three were engaged in agriculture. By 1895 the agricultural population was only 35.7 per cent. That, supported by industry and commerce, kept continually increasing. In 1895 it was 50.6 per cent.

This progress of industry and trade indicates the rise of a new class of the population, that of the capitalists. It seemed at first that their arrival would result in a dispossession of the nobility. For example, under the ancien régime the bourgeois could not acquire the property of the nobles. Toward 1880, for Eastern Prussia only, 7,086 estates of 11,065 belonged to non-nobles. They could have been acquired only with money. Capital was supplanting birth. Today even, in Prussia, five members of the Ministry, a little more than one-third, are bourgeois not enjoying the particle von.

The new dominant class encroached upon the ancient in two ways, by depriving it of its clientele and by acquiring a considerable weight in the State. "The weight of a social class" is the totality of its means of action, which it possesses on account of its numbers, its personal influence, its wealth, and the importance of the interests which it represents. The clientele of the agrarian nobility was essentially the peasants, who have continually diminished in number, the attraction of industrial and commercial employments having caused a great migration to the interior, to the factories, and the cities.

For many years this phenomenon has been disclosed by statistics and pointed out by economists and sociologists, but no remedy has been found. Today, although emigration abroad has much moderated, Germany has not labor for its tillage. It is obliged to import farm hands and even cereals. It no longer produces foodstuffs sufficient for its own support.

Moreover, the peasant who remains

upon the soil is freed from the landlord, and agricultural production has become specialized—industrialized. There is the case, for instance, of that peasant woman who declared that she had not the time to wash her linen and who sent it to the steam laundry at Karlsruhe. Here is not merely an economic transformation, but a moral evolution. The agriculturist who no longer produces in order to consume but in order to sell, and who must live from the product of his sales, tries to produce as much as possible. He hires foreign labor to get from it all that he can. The impersonal relations of employer and employed replace the patriarchal traditions. Thus the land owner finds himself caught in the mechanism of the capitalistic system.

As to the "weight" of the new class, it increased prodigiously during the years following the war of 1870, thanks to the millions which the empire could invest in its industries and which allowed it to endow its commerce and its merchant marine, to complete the network of its roads, canals, and railways.

The law of concentration of capital was verified on this occasion in a striking manner. In the famous years 1871 to 1874, which the Germans call the *Gründejahre*, the foundation years, gigantic industrial and commercial enterprises took a spring which seemed irresistible. A Director of the Deutsche Bank, of the Dresdener Bank, the President of a company for transatlantic commerce, such as the Hamburg-American Line, or of the committee of great electric establishments, enjoyed an influence in the councils of the State far greater than that of a Baron, a Count, or a little mediatized Prince.

What was the aristocracy of birth going to do about it? Struggle desperately? It took that tack at first. Bismarck ranged himself in its support for some time. He was himself an agrarian. But he was not long in installing paper mills on his estates at Varzin. It is said that the Emperor himself possesses porcelain factories. A part of the nobility for a long time tried to adapt itself to the new

method of production. It took to it awkwardly and often ended in ruin.

Freytag has described this phenomenon at its beginnings in a romance which is a chef d'oeuvre. A part of the nobility yielded, fell into the hands of the financiers, the money lenders, the managers of agricultural enterprises, sold their lands, and took refuge in the great civil, administrative and military posts. The remainder resisted as well as they could. There was antagonism between their interests and those of the capitalists, between the religious and particularist tendencies on one hand and free thought and cosmopolitanism on the other. The agrarians demanded tariff duties on agricultural products to raise the price of their foodstuffs. The industrials wanted a low cost of living in order to avoid the rise of wages and to compete with better advantage for foreign markets.

Bismarck was the target for vehement opposition when he inclined toward the party of the traders and the industrials in his colonial and tariff policy. This evolution came about 1879. For a while the great Chancellor was looked upon almost as a traitor.

Nevertheless, his view was just. Balancing the forces on the one hand by those on the other, ceding protective duties first to one side and then to the other, offsetting the advantages which he offered to one side by the prerogatives which he accorded to the other, he finally succeeded in reconciling them.

From this reconciliation of the two dominant classes has resulted the extraordinary power of Germany. The bourgeois parties have from time to time grumbled over the military appropriations, but they have always voted them. And militarism, which is the support of the aristocracy, has been placed at the service of capitalistic ambition. By the prestige of force, awakening hopes here and inspiring fears there, more than once by the help of manoeuvres of intimidation, it has become an instrument of economic conquest.

Other combinations, other reciprocal interlacings, have taken place which have given an exceptional and unique

character to contemporary Germany. It is a case of social psychology of extreme interest. To describe it would require long detail. The combination of the aristocratic and military tendency with the industrial and plutocratic tendency, the tendency of the police spirit, the regularizing spirit of the *Kulturstaat* with the individual initiative of the capitalist *entrepreneur*, methodical habits of administration with the love of risk characteristic of the speculator, all this constitutes imperialism, German imperialism, distinct from every other, because to a definite object, economic conquest, it adds another, less precise, in which the moral satisfaction dear to aristocracy, the pleasure of dominating, the love of displaying force, the tendency to prove one's own superiority to one's self, play a large part.

Economic conquest has become a necessity for Germany. Transformed into an industrial State, it no longer produces its own food. Since 1885 its imports have exceeded its exports by 1,353,000,000 marks. Whence did Germany derive these 1,300,000,000 marks which were needed, good year and bad, to meet its balance of trade? It owes them to its maritime commerce and the revenue of its capital invested abroad. Its maritime commerce then must augment and must triumph over all competition. At every cost it must open for itself outlets for its industrial products in order to buy foodstuffs which it does not produce sufficiently. If not, famine.

Let us see now how the complicated play of all these social forces and the effect of this economic situation have been embodied in formulas, what has been its intellectual expression.

This is no idle question, for men have always claimed to be guided by ideas, and generally they are, but they rarely know where their ideas come from or in what they consist. Without intellectual expression imperialism would not have extended to all the classes of society. The passion of economic conquest did not prevail throughout the whole of Germany. The bourgeois in the Liberal provinces, the corps of officers, the corps of teach-

ers, the clergy were refractory to it. This direct form of imperialism does not seduce them. Not everybody can see his country and the universe through the eyes of an oligarch of high finance. A doctrine works with power when it appeals to instincts, when it awakens collective emotions, diverse enough in themselves, and joins them to each other with an appearance of logical deduction. It is not indispensable, but it is useful that it should borrow the language of the day. In the mediaeval epoch this language was religious. Beginning with the seventeenth century it was metaphysical. In our own time it is a scientific language set off by Greek words.

If the German philosophies of the second half of the nineteenth century are considered, there are not many of them that pass beyond the limit of the school. They are honest, scholarly productions elaborated by men who have read much, of whom some, like Wundt, are eminent specialists, but who have not conquered either their subjects or their readers. One feels that they are not of their century.

It is not from them, it is not from Eucken, the pleasant popularizer, it is not from Windelbund or Ostwald that the cultivated public sought the direction for its thought. To satisfy the need of general ideas which was everywhere felt, associations were formed, churches with or without God, of which a very important one was the "Monistenbund," in which Haeckel exploited his materialism transformed into a sort of biological pantheism.

But it was outside of the associations and outside of the school that the flame of creative genius burned brightly. The man of the last generation was Nietzsche. That his thought has been perverted by his interpreters there is no doubt. They have taken this eagle who gazed unblinded at the sun and exhibited him to the young people in all sorts of philosophic rôles for the benefit of the industrial and military coalition. Nietzsche depicted in lines of fire the resurrection of heroism, his vision of the superman was that of an ardent soul, steeled by sufferings,

meditating a tragic conception of life with serenity, and in his solitary individualism surmounting the infirmity of man and his own by the insistent will to eternal ascension.

He was made the apostle of brute force, a sort of Messiah of the "struggle for life." Moreover, he was soon put one side and Gobineau was revived. He also, who if he did not have genius had wit, would have been surprised and hardly flattered perhaps by the rôle which they made him play. The dolichocephalic (long-skulled) blonde whom he celebrated was not exactly the one whom we are now judging by his works, but at least he proclaimed the superiority of the German race.

His doctrine was the centre around which were gathered a complete ensemble of dogmas and of very diverse theories, whose connected thread it is not easy to discover when it is searched for logically, but appears quite distinctly when not reason, but reasons, are demanded. The reasons are found in the need of justifying in theory the economic and military imperialism, born as we have seen from conditions of fact and from very practical motives.

I do not pretend that it was calculated, nor that the optimates made express requisition of the naturalists, economists, and historians and sociologists and moralists to provide an imperialistic philosophy for the use of adult and normal dolichocephalous blondes. But there certainly was a coincidence. It may have been due to the influence of what is called a *milieu ambiant*, that of the commercial and military party. The authors of the doctrine lived in a special atmosphere. Their intellect was there formed—or deformed—their work consisted in gathering facts, inventing reasonings, elaborating formulas, so as to subject natural science, history and morality to the service of that keen will for hegemony which was in Germany the common characteristic and was the connecting link between the ancient and the new directing class.

To convince one that this is so, it is enough to arrange the works of the pan-Germanists in a series passing from the simplest to the most complicated.

The dates are of no importance. We might put at one of the extremes the works of the Prussian General, von Bernhardi, and at the other the gigantic lucubration of a famous pan-German zealot, a neophyte, a convert, almost a deserter, Mr. Houston Stewart Chamberlain.

Prof. Millioud examines at some length and acutely the tendencies and teachings of von Bernhardi, now familiar to American readers, sums up the work of the philosophers of minor rank and turns to Mr. Chamberlain.

With Mr. Chamberlain the thesis of vital competition, the morality of force, the judgment of history against little nations, the civilizing mission imposed upon greater Germany by its very greatness, by its economic, scientific and artistic superiority, everything tends to the glorification of the German, to his duty to govern the whole world which he feels so imperatively and which he accepts with such a noble simplicity. * His work is not easily summarized, not only because it counts 1,379 pages and two appendices, but because all is in everything, and everything in the universe is also in Mr. Chamberlain's book. And the German has made everything. Not indeed the world; that he has only remade and is about to remake. But he has a way of remaking so creative that one might say that without him the Creator Himself would be a bit embarrassed. He has gathered to himself alone the heritage of Greece and Rome as far as it was worth anything. From the year 1200 to the year 1800 he founded, ripened, and saved a new civilization several times over. The mother of our sciences and our arts, Italy, is Germanic; the great architecture of the Middle Ages is Germanic; the true interpretation of Christianity, the true conception of art, the true social economy, the love of nature, the sense of individuality, the exploration of the world and of the soul, the great re-awakenings of conscience, all the great flashes of thought are Germanic; everything is Germanic, except you and me, perhaps; so much the worse for me and so much the worse for you. After this book, the success of which has been pro-

digious, it would truly seem that there is nothing more to say. Germanic thought has appropriated the universe to itself. It only remained for the German sword to complete the work. It is drawn!

I have tried to describe the modifications, or rather the successive additions, by which the elementary themes disclosing economic, political, and military appetites in the directing class have been disguised as theories of biology, history, political economy, sociology, and morality. It would take another study or another article to show how science was perverted to such ends. The severity of methods, rigor in the determination of facts, precision in reasoning, prudence in generalization, serene impartiality and objectivity in verification, in a word the scientific spirit, cannot be bent to so many pleasant compromises without sacrificing a great part of its dignity and its title to respect.

This has been a singular and melancholy event for those of us who have been raised in respect for German science and in admiration for its methods, as well as for its discoveries. Certainly, from Liebig to Roëntgen and to Behring, from Kant to Wundt, Germany has counted many distinguished pioneers. In the matter of fecund originality, however, and creative inspiration, Italy and France have always equaled, if not surpassed, her. She has had no Marconi, no Pasteur or Poincaré, no Carrel.

What we have received from her so long that it has become almost a matter of instinct is less dazzling flashes than an equal and constant light. And the savants, the university men who bring to us anthropological romances, history stuffed with legends and personal prejudices, sociology constructed in contempt of the facts!

In these later days we have seen all these joining under the guidance of their most illustrious members to address the civilized nations in an appeal in which by virtue of their quality as savants they undertook to pronounce upon facts which they don't understand, to deny those which they cannot help understanding, and solemnly to declare that it is not true that Germany has violated

the neutrality of the territory of Belgium. For proof of this, nothing but their word of honor. Do they take us for those young gentlemen who said to Monge, "Professor, give us your word of honor that this theorem is true and we will excuse you from the demonstration of it"?"

Fully to explain the rôle of the intellectual savants and university men in the formation of the ideology of caste which prevails among the Germans it would be necessary to recite the history of instruction in Germany, not such as Davis and Paulson have written it, but such as it actually is under the influence of institutions and programmes—I mean the moral history of instruction.

The great Frederick was wont to cry, "I commence by taking; afterward I shall always have pedants enough to establish my rights." Pedants or not, the members of the teaching corps of every grade in Germany are a wheel of the State, their mission is to form not men, but Germans, to inculcate the national idea. Their views have penetrated even to the common people.

Germany receives a double education—that of the school and that of the barracks. The spirit of these two institutions is the same, and their influence,

which has been exercised since 1848 in opposition to humanitarian and internationalist ideas, has encountered no serious obstacles, for it went readily with certain old instincts which it was not difficult to reawaken and which general circumstances favored.

"*Latrocinia nullam habent infamiam*," said Caesar, speaking of the Germans. Pillage brings no shame. This desire of gain, this positive and realistic tendency is one of the motives which the brusque and prodigious economic expansion of Germany has promoted in the most efficient manner.

This total assimilation of a people of 70,000,000 of souls by an aristocratic, almost a feudal, directing class, a combination of plutocrats and militarists, is in reality a most curious phenomenon, more than curious, in a sense grandiose, and in any case full of suggestions and menaces.

Surrender of body and soul, confidence almost religious, enthusiastic faith, the directing class has conquered everything within in order to conquer everything without. Now it stakes everything upon the cast of the dice. I have not undertaken to decide whether it is just or not. The event will determine whether it is genius or madness.

THE LAND OF MAETERLINCK

By Alfred Sutro

[From King Albert's Book.]

I HAVE translated many books of Maeterlinck's; I have wandered with him among the canals of Bruges and the fragrant gardens of Ghent; I have seen the places where he dreamed of Pelléas and Mélisande, and the hives of the bees he loved. Through him I learned to know Belgium; today all the world knows. Her cities are laid waste now and her people scattered, but her people will return and rebuild the cities, and the enemy will be dust. The day will come when the war will be far distant, a thing of the past, remote, forgotten, but never, while men endure or heroism counts, will it be forgotten what the Belgians did for Liberty's sake and for the sake of Albert, their King.

America and Prohibition Russia

Two Mustard Seeds of Reform Carried From This Land to the Steppes

By Isabel F. Hapgood

WHEN Russia recently abolished the sale of liquor, first in the shops run as a Government monopoly, and, after a brief experience of the beneficent results, in the restaurants and clubs as well, an astonished and admiring world recognized the measure as one of the greatest events in the moral history of a nation. It takes rank with the reforms of Peter the Great. It almost casts into the shade the emancipation of the serfs.

There has always existed in Russia a strong party which severely disapproved of Peter precisely because he forced "Western" ideas upon them. Their idea has always been that Russia would have developed a far higher degree of genuine culture and far more precious spiritual qualities had she been left to the promptings of her own genius and its "healthy, natural" development. And there are, indubitably, persons scattered through the vast Russian Empire who entertain parallel opinions with regard to the total prohibition of liquor just effected, and with regard to the projected change in the calendar now assumed to be imminent. I trust that I shall not increase their numbers to dangerous proportions if I call attention to the fact that these reforms have also, like Peter the Great's ideas, been imported from the West—from the Far West, the United States. I am sure my fellow-countrymen will be gratified to learn the truth, and I cheerfully accept the risk, and assume that Russia will, in all probability, remain ignorant of my interference!

It is true that we do not have actual, effective prohibition anywhere here in America, and that we do not seem to be within measurable distance of such an achievement; that Russia has distanced us again in this, just as she distanced us by emancipating her serfs, without a

war, before we emancipated our slaves, with the aid of a war. But we have supplied the scriptural mustard seed in the case of prohibition in Russia, and have either furnished the seed for the change in the calendar, or, at any rate, have provided elements that have hastened its growth to a very remarkable degree.

Mustard seed No. 1 was carried over from the United States in the Autumn of 1887 and sown on the good ground of the late Count Tolstoy, and other noble men, whence—as results show—it spread abroad with a swiftness suggestive rather of the proverbial weed than of the fair flower its blossoming has shown it to be.

In the Autumn of 1886 Dr. Peter Semjonovitch Alexyeff of Moscow, accompanied by his wife, sailed for Canada and the United States for the purpose of inspecting the hospitals, prisons, and elementary schools; and they came for the Winter because some parts of Canada during that season possess a climate similar to that of Central Russia, while in other parts the climates are identical. In fact, Canada is the only country in the world where the climatic conditions are at all analogous. The construction of new hospitals, the adaptation of already existing buildings for hospital use, the internal arrangement, and the perfection of their internal machinery had long been matters of deep interest to Dr. Alexyeff.

Germany and France, with climates so different from that of Russia, could not furnish him with the information available in North America, where, in his opinion, the habits and conditions of existence—such important factors in matters connected with hospitals and invalids—also differ less from those of Russia than do the general surroundings in the countries of the Continent. After visiting the principal cities of Canada and the

United States from Quebec to Vancouver, and from Boston to Washington, (some of them more than once,) Dr. Alexyeff arrived at the conclusion that the hospitals of the United States were better built and much better administered than those of London, Paris, Berlin, and Vienna.

Naturally, no one could spend nine months in investigating hospitals and prisons in this country without coming in contact with the liquor problem. Moreover, Dr. Alexyeff was a wideawake man, who took an interest not only in all matters connected with his profession, but in very many outside of it. He was, also, a man of very lofty character. His wife once wrote me concerning him somewhat as follows: "He walks, habitually, on such moral heights, in such a rarefied spiritual atmosphere, that I, the daughter of an English clergyman, reared accordingly, and myself (as you know) deeply in sympathy with it, find difficulty in following him." Obviously, he was precisely the man to appreciate the temperance movement, and to carry it to its logical conclusion. In the preface to a volume, "About America," which he published in Moscow in 1888, he writes:

Neither the wonders of wild nature in the Rocky Mountains nor the menacing might and grandeur of Niagara produce such an impression on a Russian as the success of the fight with drunkenness—the temperance movement—and the successful development, in all classes of society, of morality and the strict application of practical morals.

He did not confine himself to this brief, general statement. He wrote in praise of temperance, of prohibition, for learned Russian societies. Then he wrote a book entitled "Concerning Drunkenness." The Censor's permit to publish is dated March 29, (April 10,) 1887. It was published by the management of the magazine, *Russkaya Mysl*, (Russian Thought,) which may indicate that it had first appeared in that monthly as a series of articles, though I have not been able to verify the fact. The book may have been published promptly, or at least the article from the medical magazine may have been published in the cheap form (costing

two or three cents) used by the semi-commercial, semi-philanthropic firm "Posrednik," which may be rendered "Middleman" or "Mediator," designed for the dissemination of good and useful reading among the masses.

At any rate, "Concerning Drunkenness" appeared at the price of one ruble (about fifty cents) in 1891, prefaced by a dissertation by Count Tolstoy, "Why Do People Stupefy Themselves?" specially written for this occasion, as Dr. Alexyeff told me. (It has been translated under the title of "Alcohol and Tobacco," London, and published without any indication that Dr. Alexyeff inspired it.)

In 1896 a second edition, revised and enlarged, was published, also in Moscow; and to this the author added a list of helpful publications and a summary bibliography, which included books issued in various foreign countries, ranging in number from 705 for Great Britain and Colonies, 142 for the United States, 247 for Germany, 124 for ten other countries combined, (up to 1885 in all these cases,) to ten for Russia. Of these ten, four are in Latin, four in German, one is in Swedish and one in Russian—the latter, evidently, an article republished from *The Medical News*. On the whole, a list practically non-existent, so far as Russia was concerned!

Dr. Alexyeff had discovered a field of endeavor as virgin as the unplowed steppe. Only scientists desperately hard up for an unusual topic for a strictly academic discussion and recklessly willing to risk incurring universal unpopularity would have dreamed of unearthing those volumes. He promptly aroused Count Tolstoy's interest in the subject of temperance, which in this case signified prohibition, since the Count in his preface to Dr. Alexyeff's book (dated July 10-22, 1890,) treated liquor on the same basis as tobacco, which he had totally abjured at least two years previously. With Tolstoy, to become convinced that a reform was desirable was, as all the world knows, to become an ardent propagandist of that reform. Thanks to the efforts of Dr. Alexyeff, seconded by those of Tolstoy, temperance began to attract attention in Russia,

temperance societies were formed, and have been steadily increasing ever since in numbers and activity.

Eventually Mr. Tchelisheff arrived on the scene with his splendid vital force and practical solutions of the financial and other problems (or suggestions for them) that arise from prohibition, (especially when a Government monopoly and revenue are concerned,) which he most strenuously advocated when Mayor of Samara, as representative in the Duma—everywhere, in fact, where he could obtain a hearing, willing or unwilling, up to the Emperor Nicholas himself. And the Emperor showed that he was equal to the magnificent opportunity, and joined hands with the former peasant in aiding his country.

In an interview published by THE TIMES a while ago Mr. Tchelisheff mentions that his attention was first drawn to the subject of the evils of drunkenness by a book which he saw a muzhik reading. Judging from the point at which he inserts that mention into his outline sketch of his career (previous to the great famine which he—erroneously—assigns to the “end of the ’80s,” but which came in 1891) his interest was aroused precisely at the time when Dr. Alexyeff’s first utterances may be assumed to have seen the light of print. At any rate, it is an admitted fact that Dr. Alexyeff carried to Russia and to Tolstoy from the United States the idea and inspiration which has borne such wonderful fruit in the abolition of the liquor traffic “forever,” as the Imperial ukase runs.

Mr. Tchelisheff is a noteworthy figure in history accordingly, but Dr. Alexyeff should not be forgotten. When I made his acquaintance at Count Tolstoy’s, in Moscow, he had just requested (and obtained) a detail of service in Tchita, Trans-Baikal Province, Siberia, as physician to the political exiles there, thinking the region would repay study from many points of view, in his leisure hours. The preface to the first edition of his book “Concerning Drunkenness” is dated “July, 1899, Tchita,” and from Tchita I received my copy from him. In

that preface he states the scope of his book in a way which confirms my conviction that Mr. Tchelisheff was first stirred to interest, and in the end aroused to action, by the United States, via Dr. Alexyeff. He writes:

The battle which in all ages has been waged against drunkenness has been confined hitherto almost exclusively to the realms of medicine and ethics; the social part of the question is only just beginning to be worked out, and has hardly as yet won the rights of citizenship, and down to our own day there have been no serious legal measures adopted for the battle with drunkenness.

Therefore, he omits the legal aspects of the matter in his book and confines himself to an attempt at popularizing the information scattered in divers individual books, “borrowing everything which can lead to the ultimate goal—the extermination of the evil caused by the use of spirituous drinks.” He continues:

Public opinion has nowhere as yet, even in the lands where considerable success has attended the war on drunkenness, ripened sufficiently a desire to give, even incompletely, a summary of the information about that battle, and make my fellow-countrymen acquainted with a matter still little known in Russia, so I am prompted to write what follows.

The second edition of this book, with the surprising list of Russian treatises on drunkenness to which I have already alluded, is dated “June, 1895, Riga,” where he lived after his return from Siberia, as an official of the Government medical service, until his death in August, 1913. During the stay in Tchita of the Alexyeffs, the present Emperor (then the heir,) passed through it, on his way home (from the trip to India and Japan which came so near terminating fatally in the latter country) after having officially opened work upon the construction of the Trans-Siberian Railway, on the shores of the Pacific Ocean. A formal reception and ceremonies were organized in Tchita; and I allude to the matter because of a curious detail mentioned in a letter to me by Mrs. Alexyeff. Foreigners have very queer ideas, she said, as to the position and treatment of the political exiles in Siberia; some of the Tchita exiles served as heads of the committees for welcom-

ing the heir, and he shook hands with them and treated them exactly as he treated the Governor General of the Province.

Whether it was his admiration for the American temperance movement which influenced Dr. Alexyeff's views on everything American, I cannot say. But, assuredly, not many foreign visitors have pronounced upon our country such a panegyric as is contained in the preface to his "Across America." He writes:

Conscientious fulfillment of every duty, industry, energy, and moral purity are the typical qualities of the genuine American. It is difficult to form any idea of the wide development of philanthropy, the significance of religion, and the practical application to life of ethical principles, the application of moral obligations in business, the upright, God-fearing life of the Americans, unless one has lived among them. They have neither prostitution, founding hospitals, nor hospitals for venereal diseases. A European is not accustomed to see empty prisons and hospitals in densely settled localities—to come upon cities where there is nothing for the police, the Judges, and the doctors to do he finds startling. They have attained the height where priests, pastors, preachers, and teachers are rarely obliged to contend with indifference. * * *

After a trip to America it would be difficult to return an atheist—you are more likely to come back in a religious frame of mind. * * * Idleness and luxury are not among the distinguishing characteristics of the descendants of the Puritans. * * * In the light, transparent atmosphere of the States, simplicity, the cheerful, alert spirit infects the foreigner, makes him a more frank, trustful, optimistic warrior for the truth, and causes him to forget what it means to be downcast in spirit, or what spleen and hypochondria are.

Until he died, in Siberia, in Russia, everywhere, Dr. Alexyeff worked for temperance. He was enthusiastic about it when I saw him and his wife in England, in 1907.

Mr. Tchelisheff having been aroused to interest, theoretically, by America, via Dr. Alexyeff, as is fairly proven, it was only natural that he should proceed to make the personal observations on the practical, social side of drunkenness which he mentions in his Times interview. He noticed, during the great famine of 1891, that it was the drunkards

who had squandered their grain and pawned their possessions to the keepers of the dramshops who robbed other men's granaries and houses, burned, rioted, and murdered; while the men who did not drink had plenty of food and grain to hold out. We are informed from Russia that even during its still brief reign prohibition has resulted in remarkable improvement in health, living conditions, and bank accounts.

Mr. Tchelisheff is, as I have said, a noteworthy figure in history. He would be a remarkable figure in any land; but for those who are not acquainted with Russia, the rise of a man born a peasant, educated solely by his own efforts on stray newspapers and books which fell in his way in his schoolless village, and absolutely lacking in money or influence, ("svyazi"—connections, is the Russian version of "pull,") to the position of multi-millionaire and co-worker with the Emperor, is amazing almost beyond belief. In reality, it is as simple as the rise of an American newsboy, of an Edison or a Carnegie to a position of power in the United States. Fate, circumstances, as well as their own personality are the factors in all these cases; and in every similar case.

Moreover, there is in Russia no eternally impassable barrier of caste, but there is a genuine democracy which is not easy to define, but is very easily felt. For instance, the title of "Prince," (to which, unlike that of "Count" or "Baron"—conferrable—one must be born, runs the rule, with exceptions for such national heroes as Suvaroff,) counts for nothing or approximately that, unless its owner possesses, in addition, the wealth, character, learning or other characteristics which would render him a man of mark without it.

There are other interesting instances of peasants who have risen high in Russia, and Mr. Tchelisheff is their worthy successor. The founder of the great silversmiths' firm of Ovtchinnikoff was a serf. His successors have made it their rule, "out of gratitude to God," to maintain and educate a certain number of poor boys, who, when their intellectual

and technical training is completed, are free to remain with the firm as valued artists or to go forth independently. When the Emperor Alexander II. celebrated the twenty-fifth anniversary of his accession to the throne, all the Sovereigns of Europe sent him magnificent presents. These are assembled in his library, at the Winter Palace, Petrograd; and in the centre—accorded that place by the Russians with equal good feeling, good taste, and justice—is a large group in solid silver, representing a huge mass of rock upon whose pinnacles stand figures representing the different parts of the empire—Little Russia, Siberia, and so forth. The inscription reads: "To the Tzar-Liberator from the Liberated Serf." It was made by the Ovtchinnikoffs and presented by another ex-serf, who had become a millionaire railway magnate.

Mustard Seed No. 2 from America to Russia falls into a somewhat different category. It more nearly resembles one of those grains of antique wheat found in a tomb and sprouting vigorously when finally planted in congenial, helpful soil. I trust that my comparison may not be regarded as disrespectful. One could not, willingly, be disrespectful to the calendar, any more than to the thermometer!

Russia, by adhering to the Julian Calendar and refusing to adopt the Gregorian, has now fallen thirteen days behind the rest of the world. It falls behind about a day for every century. There are several reasons why Russia has not, up to now, remedied the serious inconvenience caused by this conflict of dates. One is—the Gregorian Calendar is Roman Catholic, and named after a Pope. It is, also, inaccurate. Worst of all, the rectification might—almost infallibly would, under ordinary circumstances—cause trouble at the outset, especially in one incalculably important direction.

Russian scientists long ago worked out a new calendar far more accurate than the Gregorian for thousands of years, and when the change is made that calendar will be adopted. The fundamental difficulty lies in the fact that all the people whose saints' days must inevi-

tably be skipped for the first year in the process of rectification will inevitably feel that they are being robbed of their guardian angels, that they are "orphans"—a mournful word greatly beloved of the Russian masses under multifarious circumstances, both material and spiritual—and orphaned in a peculiarly distressing and irrevocable way. They might even feel when their saints' days came around quite correctly the next year that some spurious adventurer—Angel of Darkness—was being foisted upon them.

Fanatics and professional mischief-makers would certainly seize with avidity upon such a godsend of a chance, unparalleled since the days of Peter the Great's father, when the Patriarch Nikon had the errors of the copyists in the Scriptures and church service books corrected. But the present war has fused all parties, united all hearts in patriotism, loyalty to, and confidence in their Emperor and created a fervid inclination amounting to enthusiasm to accept even the most drastic reforms he may make cheerfully, unquestionably, as for the good of the fatherland.

On the matter of the calendar reform America has for many years past been exerting a steadily increasing influence. During the past twenty years the steady flow of immigrants from Russia and other countries belonging to the Orthodox Catholic Church of the East, (Greco-Russian,) has increased to a great volume, and it seems destined to attain still greater proportions when the war is over. These people are obliged to work and keep holiday by the Gregorian calendar and to worship by the Julian. This entails hardships.

For example, a devout Russian who has been forced to remain idle on our Christmas and New Year's Days must sacrifice his pay—sometimes risk or lose his job—if he wishes to observe the feasts of his own church. A reform of the calendar would be hailed with joy by innumerable such immigrants, who have been over here long enough to consider calmly the practical aspects of a temporary dislocation of saints' days. The ecclesiastical authorities in this country

have frequently protested, in print, both here and in Russia, and I have been informed that the Holy Synod has been appealed to, more than once, to induce it to cast its influence into the balance with that of the scientists and the governmental authorities, who have been discussing the matter for years past, and hesitating over the probable consequences of action—a case of peasant joining hands with the rulers of Russia, once more like Mr. Tchelisheff and the Emperor Nicholas—or the people of the United States and the President—to secure a needed reform!

And these same peasant-immigrants in America have, without the shadow of a doubt, already written back to their relatives and friends in the old country—and

very frequently—about the difficulties of the antiquated Julian calendar, and these, in turn, can disseminate common sense about the change in a way which the Government, aided by the Holy Synod and the explanations of home-staying parish priests, unaided, could never effect. When the fitting time arrives, perhaps the Russian Government will avail itself of just this argument, among others—the welfare of friends in distant America. There has never been a propitious time in Russia to make that calendar reform since the reign of Peter the Great until now. And America may fairly be said to have brought from its dark hiding place the mustard seed which has been trying so long to germinate, and imparted to it a vivifying impulse.

THE MOTHER'S SONG.

By CECILIA REYNOLDS ROBERTSON.

HUSH, oh, my baby, your father's a
soldier,
He's off to the war, and we've nothing to eat.

And the glory is neither for you nor for me,
With the cockleburrr crushing the wheat.

Little boy baby, look well on your mother;
Some day you may ask why she bore you at all;

For the trenches are foul with the blood and the wallow,
And the bayonet is sharp for your fall.

Rest, rosy limbs, and blue eyes and gold lashes—

Made in the mold of the Saviour, they say!
Drink deep of my bosom, my starved, meagre bosom,

That—keeps you alive for the fray.

Sleep, oh, my man child, and smile in your sleeping,

But the gun has been fashioned to lay in your hand,

And your life blood flows smooth in your fair little body

The better to water and plensish the land!

Pan-American Relations As Affected by the War

Consequences of the European Conflict on Future Commerce Between the United States and Latin America

By Huntington Wilson,
Formerly Assistant Secretary of State.

I.

A STUDY of the effects of the war upon our relations with the other republics of this hemisphere involves political, commercial, financial and strategic elements of far-reaching scope and much complexity. The situation presents an opportunity. It offers a lesson even more vital than the opportunity. The political considerations are most relevant to the lesson; and the final text of the lesson will be the result of the war. The economic opportunity is already upon us, definite and clear. It will not wait. It must be grasped without delay and may therefore be first discussed.

There is something repellent in counting our advantages under the shadow of so great a tragedy but we must try to be as practical as those who are fond of accusing us of materialism. Does any one think that the steam-roller of admirably organized and Government-fostered German competition would pause if we lay in the road; that if we received a check, Anglo-Saxon cousinship and fair play would always mitigate British competition; or that then not a single European merchant in South America would ever again use scorn and detraction against our goods, or encourage, through influence with the press, prejudice due to "Yankee peril" nonsense? In short, is it likely

that all our competitors would suddenly love us just because we were in trouble? No, things are not as they should be and meanwhile must be dealt with as they are.

There used to be apparently very little hope of our shaking the tree and gathering the golden fruit of foreign enterprise unless forced to it by the collapse, through dire hard times, of the wonderful home market which has made spoiled children of our manufacturers. Now comes this war. It forces upon us a wonderful, a unique opportunity to gain and hold our proper place in the finance, trade, and enterprise of Latin America. The richness of the field is often exaggerated, but its cultivation is certainly worth the effort of men of foresight.

What are we going to do about it? This is the question; for if American business men do not do their part the ultimate effect of the war upon our economic interests in this part of the world will be unimportant. We must not be like the young gold miners who were looking exclusively for large nuggets with handles. We must go at it seriously and scientifically and solidly, not superficially, casually, and opportunistically. We must begin with the earnest intention of continuing our efforts for all time.

An enthusiastic commercial spasm will be worth nothing. There have got to be real efforts, real hard work, the expenditure of money for future and not merely immediate profits, a cheerful readiness to discard old and cherished methods, a new adaptability, a new painstaking attention to details. There has got to be serious study of foreign countries and keen interest in our relations to them. Without all this, mailing catalogues, (usually in English,) banquets and speeches and organizations will take us nowhere.

American business men are bestirring themselves. They know that we need ships to carry our goods advantageously, and banks for the favorable financing of our trade. They should be able to compel our Government's support where needful, as in a ship subsidy or a limited guarantee of reasonable profit to American investment in ships. In connection with our efforts at Caribbean commerce, as another instance, they should be able to get a flexible sliding scale tariff provision passed by Congress, so that, in dealing with the countries whose coffee or other special products we buy, we could induce them to give us for our exports reciprocal advantages over our competitors. Indeed, a kind of Caribbean tariff union might well be feasible and desirable.

So long ago as last August the British Government sent all over the world for samples and specifications of German goods which their manufacturers might contrive to displace. We should take corresponding action in regard to the goods of our competitors. Our manufacturers should be reconciled to sending to find out what each market wants instead of asking a population to take or leave what we make. Our commercial campaign should include the effort to replace goods from one belligerent country formerly handled by local merchants from another belligerent country, such as British goods previously sold through the German houses which so abound in these countries.

Good men from small countries without political significance in world-politics already make their influence felt

as employes of foreign Governments and as merchants in foreign countries. The war may set free many more men and send them about the world to work for their own interests, for the country they most believe in, and perhaps ultimately for an adopted country. International commerce must have its courtiers, and the good will of all such men should also be reckoned with. They spread friendship or prejudice against us. Many of them are importers and will push our goods or some one else's according to the manner in which we deal with them.

American manufacturers are doubtless weary of being told that they pack badly, that they are niggardly about credits, that they do not send enough or sufficiently qualified representatives, that they are careless of details, and so on. Still, before mentioning some further particular steps that should be taken, it is necessary to emphasize the fact that these same old faults are, and until corrected must remain, the chief detriments to our foreign trade."

In some of the republics there is a real disposition to deal with us; in others there is a preference for Europe. Now, as to many goods, they must deal with us or go without, although I am informed that a German firm, for example, has got word to its clients in these countries that it is prepared to fill orders via Copenhagen. If we think that our competitors have gone entirely or permanently out of business we shall be ridiculously and sadly disappointed. We shall be on trial, and if our exporters make good they will find a conservative disposition to continue to buy from us.

In the effort it is important to remember that there is much to live down in criticism of methods of the past. One Latin-American gentleman, an enthusiast for American commerce, exclaimed to me in despair: "*Son hombres capaces de poner una hacha Collins con vidrios para ventanas,*" which means: "they (the American exporters) are capable of packing a Collins hatchet with window glass." Others told me how leading firms always stamped their letters for domestic and not foreign postage. The office boy simply would not learn geography. No-

body minded paying the deficit, but through local red tape this seeming trifle sometimes caused two or even three weeks' delay in the delivery of important letters.

Certain of our strongest firms have been calmly ignoring shipping directions. What did they care if the packages had to cross the Andes on mule back, and if mules could only carry packages of a certain size and weight? What did they care if the duty remission for materials on some Government contract, or the customs classification of a shipment, depended on adherence to specific directions? I could multiply examples of the most amazing casualness and careless disregard, of bad packing, of ungenerous credit, which have enraged the importer.

A European merchant, many years established in a South American city, and knowing the community, has been selling pianos in this way: The manufacturer would quote him a price and deliver the piano, giving him long credit at an ordinary rate of interest. The merchant would finally sell the piano on the installment plan, receiving interest at a higher rate on the deferred payments, the merchant trusting the buyer, the manufacturer trusting the merchant, both thus making good profits, and the purchaser being accommodated. This man found the American manufacturer entirely unwilling to deal in this way.

European houses on the spot, whether independent or financed by large home houses, give credits for as long, sometimes, as a year. They would not continue to do so if they lost by doing it. Often this fits the customs of the local domestic trade. In one country the local retailer is expected to be paid within eighteen months. Naturally, our exporters' demand for "cash down on receipt of documents," even when the customer is well vouched for, does not appeal to him.

He prefers to get long credit from a European house, and pay interest for it, rather than to borrow from his bank at high interest or sink his own capital to

pay for American goods, long before he gets them, their price plus the profit of a commission house. Indeed, he is generally dissatisfied with the methods of American export trade as now conducted, which is almost exclusively through commission houses. These, it seems, might become more efficient through organization and more aggressive and scientific methods.

On the other hand, the export trade of certain of the big combinations is beginning to be pushed with commendable zeal and efficiency. Trade at large, to reach its greatest volume, must include the pushing of smaller lines of goods. These smaller lines, in the aggregate, would reach considerable sums, and it does not appear that there have hitherto existed efficient agencies for their marketing. To hold Latin-American trade we must equal our competitors in liberality of credits, in representation on the spot, and in other facilities.

There is no doubt that more American merchants resident in the trade centres would give valuable impetus to our commerce. Even our commission houses operating on the spot are so few that in handling many lines there is the greatest danger of their sacrificing the building up of a steady trade to the opportunities of unduly heavy profits now and then, and so damaging our general commercial interests. Then we must send many commercial travelers.

Just here, however, it cannot be too strongly emphasized that Americans sent to these countries to do business must above all be men of agreeable manners. In these countries many quite unworthy people have these: so a good man who lacks them is likely to be badly misjudged. They should have sympathetic personality and sufficient education, besides being men of sobriety and good character, and should be able to speak the language of the country.

All this will be expensive, but non-competing firms might join in sending men, or competing firms might, it is hoped, be guaranteed against the terrors of the Sherman law in order to join in sending a corps of representatives upon some basis of division of the

field or the profits. Combination is even more necessary abroad to put forth the nation's strength in world competition than it is for efficiency at home. These men would be students and salesmen, and perhaps future merchants who would settle in these countries and emulate the patriotic groups of resident foreigners who in so many places help to form an atmosphere favorable to their countries' interests.

They would work to replace with our goods those now shut off by the war, but also to introduce dozens of lines of American products which are now comparatively hard to find in these markets. A number of strong firms might join to establish commercial houses or selling agencies in trade centres of certain groups of countries. Commission houses might do the same if they carried samples and instructed their clients in packing, credits, &c., but in each case there should be American houses on the spot which would carry general lines and supply to the eye that visible evidence of the goods themselves which is such a valuable form of advertisement.

In the establishment of American houses in these countries, as in many other respects, much may be learned from the Germans. They bring out carefully selected young men. These, if efficient, have sure promotion. The partners retire before old age to make room for those who work up. The inefficient are dropped. It is a little like the principle of a good foreign service.

I think the most minute study should be given, first, to the nearer countries, say those north of the Equator, including the republics of the Caribbean. Each country must be separately studied. Primarily, there will be found a cry, sometimes desperate, for capital. Public works, concessionary and otherwise, have stopped for lack of funds from Europe. New developments in railroad building, mining, harbor works, plantations, are arrested. Where European credits have been customarily used to handle crops, there is distress, and no less so in cases in which such credit has previously been given by ostensibly

American houses operating really with European capital.

American capital may come to the rescue by advances upon good security through local banks. It can establish banks or buy controlling interests in existing banks, many of which pay their stockholders 15 per cent. or more. It can relieve the stagnation and make profitable investment by an active campaign for public and private contracts and for sound and fair concessions, not visionary or get-rich-too-quick schemes.

Supposably, the repairing of the destruction brought by the war will make European capital scarce for some years, but an effort will doubtless be made to retain for it its former preponderance in these countries; and so it is important that, whatever the war's effects upon our own money markets, use should be made of such an opportunity as does not come more than once.

To be sure, the scarcity of money in the United States makes this difficult, but the same worldwide money scarcity will secure an especially high rate of interest in Latin America, where even in normal times money can often be placed on excellent security in some of the countries, and at a rate very high indeed compared to that prevailing now in the United States. For safe investments with such a margin of profit, it is to be hoped that money, even if dear at home, will be forthcoming.

Undoubtedly the purchasing power of these republics has been hard hit by the cutting off of credits and markets by the war, as their Governments have been hard hit through the falling off of revenues from import duties. Some of the Governments will require foreign loans. Capital, I repeat—and I mean really American capital—is the urgent need. We are not asked to make them a present of capital to buy our goods with, but if we do not help finance them and buy their products they will have nothing with which to buy our goods.

The situation invites us to give capital and credit to take the place of the European supply which has failed. One need not fear that the returns will be uninvit-

ing, for Europe would hardly have been supplying credit and capital to Latin America as a mere matter of amiability. Thus our capital must regenerate Latin-American prosperity, while our bankers, merchants, and manufacturers are engaged in making solid, permanent arrangements, not opportunistic ones, to take possession of a great share in the present and still more in the growing future development and commerce of these countries. Capital, then, and credit are the first requisites.

The war has had the effect of making the Latin-American countries realize for once the economic importance to them of the United States. The products of some, like the tin of Bolivia and the nitrates of Chile, have been going almost entirely to Europe. Several republics suffer the more acutely in proportion to their previous failure to cultivate financial and commercial relations with the United States.

They now feel this and are compelled to a mood receptive to our advances. More, they are forced to seek new markets for their goods just as they are forced to buy some of ours. In this way there should come about new exports to the United States, and there should spring up there the corresponding new industries and habits of consumption, to the ultimate benefit of all the countries concerned.

Meanwhile, the United States is the only present economic hope of a number of the republics. It is to be hoped that our capitalists and business men will realize the responsibilities as well as the opportunities of profit in the rôle they are asked to play, and that their response to their new opportunities will be one of courage, thoroughness and intelligence, and one also of quiet patriotism.

II.

POLITICAL POTENTIALITIES.

Turning from the opportunity to the lesson, from the commercial and economic aspects of this question to those that are political in the large sense, one's imagination is appalled at the potentialities of

the yet unknown results of so vast an upheaval. Yet we must envisage some of these if we are to be prepared for their effect upon us. We must be ready for the impact of the resultant forces of these great dynamics. We must be ready everywhere, but nowhere more than in our relations with Latin America, in the zone of the Caribbean, and wherever the Monroe Doctrine as still interpreted gives us a varying degree of responsibility.

The war's first effect upon our Latin-American relations is to compel through commercial and financial rapprochement a larger measure of material interdependence, more contact, and, we may hope, a substitution of knowledge for the former reciprocity of ignorance. All this makes for better social and intellectual relations, good understanding and friendship, and so for political relations much more substantial in the case of many of the republics than the rather flimsy Pan-Americanism celebrated in eloquent speeches and futile international conferences.

There is little in Pan-Americanism of that kind. The "raza Latina" of eloquence is not itself homogeneous; still less so is the population of the whole hemisphere. And with Rio de Janeiro, Buenos Aires, and Santiago we have, of course, far less propinquity than we have with the capitals of Europe. But what we really can do is to build up, especially with the nearer republics, real ties of common interest and good neighborhood, and with the distant ones ties of commerce and esteem.

The war may tend to cure certain rather self-centred countries of affecting the morbid view that the people of the United States are lying awake nights contriving to devour them, when, in fact, it would be hard to find in a crowded street in the United States one in a thousand of the passersby who knew more than the name, at most, of one of those very few countries referred to.

Europe's preoccupation with the war temporarily deprives such a country and its few misguided prophets whose monomania is dread of that chimera, the

"Colossus of the North," of the pastime of nestling up to Europe in the hope of annoying us. It postpones, too, the hope of the morbid ones that we shall come to war with a powerful enemy. Now, perhaps, even these will appreciate the remark of a diplomatist of a certain weak country in contact with European powers, who once said: "If we only had the United States for a neighbor! What I can't understand is that your neighbors do not realize their good luck." Turning from these exceptional phenomena, the very fact of the war leaves the United States in a general position of greater political prestige.

Whatever the upshot of the European tragedy, its political and psychological consequences are likely to be great. If it result in new national divisions upon racial lines of more reality, who knows but that the awakened spirits of nationality will germinate fresh military ambitions? Or will the horrors of the war force political reforms and the search for assurance in more democratic institutions against any repetition of those horrors? And is popular government an assurance against useless war while men remain warlike even when not military?

Except from the successful countries or from those where disaster has brought such sobering change that men can return to work heartened with new hope, when the war is over there is likely to be a heavy emigration of disgusted people. Possibly even victory will be so dear that men will emigrate from a country half prostrate in its triumph. Many will come as the Puritans came, and as the bulk of our own excellent Germanic element came, and will cast in their lot with a new nation. We shall get a good share, but doubtless some will go to the republics of the far South, and some to the highlands of the tropics and through the canal to the West Coast. If so, this will tend gradually toward increased production and purchasing power, as well as toward a leavening of social, political, and economic conditions of life.

If the war were indecisive or left all the combatants more or less prostrated, peaceful immigration might give a big

impulse to the gradual growing up of powerful States in the temperate zone of the extreme South. The situation there, and the evolution of our own power, make it perhaps even now fair to consider the question of regarding as optional in any given case the assertion by us of the Monroe Doctrine much below the equator, let us say, beyond which it may possibly be doubtful whether we have nowadays much reason for special interest.

But, even so, our relations to South America and our obligations under the Monroe Doctrine, in spite of the blessed fortifications of the Atlantic and Pacific Oceans, leave us where it is tempting fate to be without a navy of the first magnitude, and a big merchant marine. We have seen what happened to Belgium and Luxemburg. We have seen how even some of the most enlightened nations can still make force their god. Nations learn slowly, and there are perhaps some new big ones coming on, like China.

If the war is a fight to a finish, and the Allies triumph, we can imagine Russia, with its teeming millions of people, occupied for a while in the Near East; Japan consolidating her position in the Far East, an increasingly powerful neighbor to us in the Philippines, the Hawaiian Islands, and the Pacific Ocean; France still a great power; and England as a world power of uncomfortably ubiquitous strength, able to challenge the Monroe Doctrine at will.

Or, let us suppose that Germany should triumph and that German emigration should swarm into the Caribbean countries, or into Brazil or some other country where there is already a large German colony—elated, triumphant Germans, not Germans disgusted by a disastrous war. Would Germany be likely to heed the Monroe Doctrine, or would it be only another "scrap of paper"?

In the present stage of civilization the safety of America should not be left dependent upon the forbearance of any power that may emerge dangerously strong from the war or that may other-

wise arise. The obligations and rights of our Latin-American relations, under the Monroe Doctrine and otherwise, like our security and our efficiency as a force for peace and good in the world, demand a big navy, a merchant marine, and the self-discipline and safeguard of adequate military preparedness. The

need of these and of a diplomacy of intelligent self-interest, continuity, and intense nationalism is the lesson brought home to us by the European war in its effects upon our Latin-American relations as well as upon our general position as a great power.

AN EASTER MESSAGE

By BEATRICE BARRY.

INTO what depths of misery thou art
hurled,
Belgium, thou second Saviour of the
World!

Thou who hast died
For all of Europe, lo, we bathe thy feet
So cruelly pierced, and find the service
sweet,
Thou crucified.

But though we mourn thy agony and loss,
And weep beneath the shadow of thy cross—
We know the day
That brings the resurrection and the life
Shall dawn for thee when war and all its
strife
Hath passed away.

Then, out of all her travail and her pain,
Belgium, though crushed to earth, shall rise
again;
And on the sod
Whence sprang a race so strong, so free
from guile,
Men shall behold, in just a little while,
The smile of God.

Land of the brave—soon, by God's grace, the
free—
Thy woe is transient; joy shall come to thee;
It cannot fail.
The darkest night gives way to rosy dawn,
And thou, perchance, shalt see on Easter
morn,
The Holy Grail.

An Interview on the War With Henry James

By Preston Lockwood

[From THE NEW YORK TIMES, March 21, 1915.]

ONE of the compensations of the war, which we ought to take advantage of, is the chance given the general public to approach on the personal side some of the distinguished men who have not hitherto lived much in the glare of the footlights. Henry James has probably done this as little as any one; he has enjoyed for upward of forty years a reputation not confined to his own country, has published a long succession of novels, tales, and critical papers, and yet has apparently so delighted in reticence as well as in expression that he has passed his seventieth year without having responsibly "talked" for publication or figured for it otherwise than pen in hand.

Shortly after the outbreak of the war Mr. James found himself, to his professed great surprise, Chairman of the American Volunteer Motor Ambulance Corps, now at work in France, and today, at the end of three months of bringing himself to the point, has granted me, as a representative of THE NEW YORK TIMES, an interview. What this departure from the habit of a lifetime means to him he expressed at the outset:

"I can't put," Mr. James said, speaking with much consideration and asking that his punctuation as well as his words should be noted, "my devotion and sympathy for the cause of our corps more strongly than in permitting it thus to overcome my dread of the assault of the interviewer, whom I have deprecated, all these years, with all the force of my preference for saying myself and without superfluous aid, without interference in the guise of encouragement and cheer, anything I may think worth my saying. Nothing is worth my saying that I cannot help myself out with better, I hold,

than even the most suggestive young gentleman with a notebook can help me. It may be fatuous of me, but, believing myself possessed of some means of expression, I feel as if I were sadly giving it away when, with the use of it urgent, I don't gratefully employ it, but appeal instead to the art of somebody else."

It was impossible to be that "somebody else," or, in other words, the person privileged to talk with Mr. James, to sit in presence of his fine courtesy and earnestness, without understanding the sacrifice he was making, and making only because he had finally consented to believe that it would help the noble work of relief which a group of young Americans, mostly graduates of Harvard, Yale, and Princeton, are carrying on along their stretch of the fighting line in Northern France.

Mr. James frankly desired his remarks to bear only on the merits of the American Volunteer Motor Ambulance Corps. It enjoys today the fullest measure of his appreciation and attention; it appeals deeply to his benevolent instincts, and he gives it sympathy and support as one who has long believed, and believes more than ever, in spite of everything, at this international crisis, in the possible development of "closer communities and finer intimacies" between America and Great Britain, between the country of his birth and the country, as he puts it, of his "shameless frequentation."

There are many people who are eloquent about the war, who are authorities on the part played in it by the motor ambulance and who take an interest in the good relations of Great Britain and the United States; but there is nobody who can tell us, as Mr. James can, about style and the structure of sentences, and

all that appertains to the aspect and value of words. Now and then in what here follows he speaks familiarly of these things for the first time in his life, not by any means because he jumped at the chance, but because his native kindness, whether consciously or unconsciously, seemed so ready to humor the insisting inquirer.

"It is very difficult," he said, seeking to diminish the tension so often felt by a journalist, even at the moment of a highly appreciated occasion, "to break into graceful license after so long a life of decorum; therefore you must excuse me if my egotism doesn't run very free or my complacency find quite the right turns."

He had received me in the offices of the corps, businesslike rooms, modern for London, low-ceiled and sparsely furnished. It was not by any means the sort of setting in which as a reader of Henry James I had expected to run to earth the author of "The Golden Bowl," but the place is, nevertheless, today, in the tension of war time, one of the few approaches to a social resort outside his Chelsea home where he can be counted on. Even that delightful Old World retreat, Lamb House, Rye, now claims little of his time.

The interviewer spoke of the waterside Chelsea and Mr. James's long knowledge of it, but, sitting not overmuch at his ease and laying a friendly hand on the shoulder of his tormentor, he spoke, instead, of motor ambulances, making the point, in the interest of clearness, that the American Ambulance Corps of Neuilly, though an organization with which Richard Norton's corps is in the fullest sympathy, does not come within the scope of his remarks.

"I find myself Chairman of our Corps Committee for no great reason that I can discover save my being the oldest American resident here interested in its work; at the same time that if I render a scrap of help by putting on record my joy even in the rather ineffectual connection so far as 'doing' anything is concerned, I needn't say how welcome you are to my testimony. What I mainly seem to grasp, I should say, is that in regard to testifying at all un-

limitedly by the aid of the newspapers, I have to reckon with a certain awkwardness in our position. Here comes up, you see, the question of our reconciling a rather indispensable degree of reserve as to the detail of our activity with the general American demand for publicity at any price. There are ways in which the close presence of war challenges the whole claim for publicity; and I need hardly say that this general claim has been challenged, practically, by the present horrific complexity of things at the front, as neither the Allies themselves nor watching neutrals have ever seen it challenged before. The American public is, of course, little used to not being able to hear, and hear as an absolute right, about anything that the press may suggest that it ought to hear about; so that nothing may be said ever to happen anywhere that it doesn't count on having reported to it, hot and hot, as the phrase is, several times a day. We were the first American ambulance corps in the field, and we have a record of more than four months' continuous service with one of the French armies, but the rigor of the objection to our taking the world into our intimate confidence is not only shown by our still unbroken inability to report in lively installments, but receives also a sidelight from the fact that numerous like private corps maintained by donations on this side of the sea are working at the front without the least commemoration of their deeds—that is, without a word of journalistic notice.

"I hope that by the time these possibly too futile remarks of mine come to such light as may await them Mr. Norton's report of our general case may have been published, and nothing would give the committee greater pleasure than that some such controlled statement on our behalf, best proceeding from the scene of action itself, should occasionally appear. The ideal would, of course, be that exactly the right man, at exactly the right moment, should report exactly the right facts, in exactly the right manner, and when that happy consummation becomes possible we shall doubtless revel in funds."

Mr. James had expressed himself with such deliberation and hesitation that I was reminded of what I had heard of all the verbal alterations made by him in novels and tales long since published; to the point, we are perhaps incorrectly told of replacing a "she answered" by a "she indefinitely responded."

I should, indeed, mention that on my venturing to put to Mr. James a question or two about his theory of such changes he replied that no theory could be stated, at any rate in the off-hand manner that I seemed to invite, without childish injustice to the various considerations by which a writer is moved. These determinant reasons differ with the context and the relations of parts to parts and to the total sense in a way of which no *a priori* account can be given.

"I dare say I strike you," he went on, "as rather bewilderedly weighing my words; but I may perhaps explain my so doing very much as I the other day heard a more interesting fact explained. A distinguished English naval expert happened to say to me that the comparative non-production of airships in this country indicated, in addition to other causes, a possible limitation of the British genius in that direction, and then on my asking him why that class of craft shouldn't be within the compass of the greatest makers of sea-ships, replied, after brief reflection: 'Because the airship is essentially a bad ship, and we English can't make a bad ship well enough.' Can you pardon," Mr. James asked, "my making an application of this to the question of one's amenability or plasticity to the interview? The airship of the interview is for me a bad ship, and I can't make a bad ship well enough."

Catching Mr. James's words as they came was not very difficult; but there was that in the manner of his speech that cannot be put on paper, the delicate difference between the word recalled and the word allowed to stand, the earnestness of the massive face and alert eye, tempered by the genial "comment of the body," as R. L. Stevenson has it.

Henry James does not look his seventy years. He has a finely shaped head, and a face, at once strong and serene, which

the painter and the sculptor may well have liked to interpret. Indeed, in fine appreciation they have so wrought. Derwent Wood's admirable bust, purchased from last year's Royal Academy, shown by the Chantrey Fund, will be permanently placed in the Tate Gallery, and those who fortunately know Sargent's fine portrait, to be exhibited in the Sargent Room at the San Francisco Exhibition, will recall its having been slashed into last year by the militant suffragettes, though now happily restored to such effect that no trace of the outrage remains.

Mr. James has a mobile mouth, a straight nose, a forehead which has thrust back the hair from the top of his commanding head, although it is thick at the sides over the ears, and repeats in its soft gray the color of his kindly eyes. Before taking in these physical facts one receives an impression of benignity and amenity not often conveyed, even by the most distinguished. And, taking advantage of this amiability, I asked if certain words *just* used should be followed by a dash, and even boldly added: "Are you not famous, Mr. James, for the use of dashes?"

"Dash my fame!" he impatiently replied. "And remember, please, that dogmatizing about punctuation is exactly as foolish as dogmatizing about any other form of communication with the reader. All such forms depend on the kind of thing one is doing and the kind of effect one intends to produce. Dashes, it seems almost platitudinous to say, have their particular representative virtue, their quickening force, and, to put it roughly, strike both the familiar and the emphatic note, when those are the notes required, with a felicity beyond either the comma or the semicolon; though indeed a fine sense for the semicolon, like any sort of sense at all for the pluperfect tense and the subjunctive mood, on which the whole perspective in a sentence may depend, seems anything but common. Does nobody ever notice the calculated use by French writers of a short series of suggestive points in the current of their prose? I confess to a certain shame for my not employing frankly that shade of

indication, a finer shade still than the dash. * * * But what on earth are we talking about?" And the Chairman of the Corps Committee pulled himself up in deprecation of our frivolity, which I recognized by acknowledging that we might indeed hear more about the work done and doing at the front by Richard Norton and his energetic and devoted co-workers. Then I plunged recklessly to draw my victim.

"May not a large part of the spirit which animates these young men be a healthy love of adventure?" I asked.

The question seemed to open up such depths that Mr. James considered a moment and began:

"I, of course, don't personally know many of our active associates, who naturally waste very little time in London. But, since you ask me, I prefer to think of them as moved, first and foremost, not by the idea of the fun or the sport they may have, or of the good thing they may make of the job for themselves, but by that of the altogether exceptional chance opened to them of acting blessedly and savingly for others, though indeed if we come to that there is no such sport in the world as so acting when anything in the nature of risk or exposure is attached. The horrors, the miseries, the monstrosities they are in presence of are so great surely as not to leave much of any other attitude over when intelligent sympathy has done its best.

"Personally I feel so strongly on everything that the war has brought into question for the Anglo-Saxon peoples that humorous detachment or any other thinness or tepidity of mind on the subject affects me as vulgar impiety, not to say as rank blasphemy; our whole race tension became for me a sublimely conscious thing from the moment Germany flung at us all her explanation of her pounce upon Belgium for massacre and ravage in the form of the most insolent, 'Because I choose to, damn you all!' recorded in history.

"The pretension to smashing world rule by a single people, in virtue of a monopoly of every title, every gift and every right, ought perhaps to confound us more by its grotesqueness than to alarm us

by its energy; but never do cherished possessions, whether of the hand or of the spirit, become so dear to us as when overshadowed by vociferous aggression. How can one help seeing that such aggression, if hideously successful in Europe, would, with as little loss of time as possible, proceed to apply itself to the American side of the world, and how can one, therefore, not feel that the Allies are fighting to the death for the soul and the purpose and the future that are in us, for the defense of every ideal that has most guided our growth and that most assures our unity?

"Of course, since you ask me, my many years of exhibited attachment to the conditions of French and of English life, with whatever fond play of reflection and reaction may have been involved in it, make it inevitable that these countries should peculiarly appeal to me at the hour of their peril, their need and their heroism, and I am glad to declare that, though I had supposed I knew what that attachment was, I find I have any number of things more to learn about it. English life, wound up to the heroic pitch, is at present most immediately before me, and I can scarcely tell you what a privilege I feel it to share the inspiration and see further revealed the character of this decent and dauntless people.

"However, I am indeed as far as you may suppose from assuming that what you speak to me of as the 'political' bias is the only ground on which the work of our corps for the Allies should appeal to the American public. Political, I confess, has become for me in all this a loose and question-begging term, but if we must resign ourselves to it as explaining some people's indifference, let us use a much better one for inviting their confidence. It will do beautifully well if givers and workers and helpers are moved by intelligent human pity, and they are with us abundantly enough if they feel themselves simply roused by, and respond to, the most awful exhibition of physical and moral anguish the world has ever faced, and which it is the strange fate of our actual generations to see unrolled before them. We welcome any lapse of logic that may connect inward

vagueness with outward zeal, if it be the zeal of subscribers, presenters or drivers of cars, or both at once, stretcher-bearers, lifters, healers, consolers, handy Anglo-French interpreters, (these extremely precious,) smoothers of the way; in short, after whatever fashion. We ask of nobody any waste of moral or of theoretic energy, nor any conviction of any sort, but that the job is inspiring and the honest, educated man a match for it.

"If I seem to cast doubt on any very driving intelligence of the great issue as a source of sympathy with us, I think this is because I have been struck, whenever I have returned to my native land, by the indifference of Americans at large to the concerns and preoccupations of Europe. This indifference has again and again seemed to me quite beyond measure or description, though it may be in a degree suggested by the absence throughout the many-paged American newspaper of the least mention of a European circumstance unless some not-to-be-blinked war or revolution, or earthquake or other cataclysm has happened to apply the lash to curiosity. The most comprehensive journalistic formula that I have found myself, under that observation, reading into the general case is the principle that the first duty of the truly appealing sheet in a given community is to teach every individual reached by it—every man, woman and child—to count on appearing there, in their habit as they live, if they will only wait for their turn.

"However," he continued, "my point is simply my plea for patience with our enterprise even at the times when we can't send home sensational figures. 'They also serve who only stand and wait,' and the essence of our utility, as of that of any ambulance corps, is just to be there, on any and every contingency, including the blessed contingency of a temporary drop in the supply of the wounded turned out and taken on—since such comparative intermissions occur. Ask our friends, I beg you, to rid themselves of the image of our working on schedule time or on guarantee of a maximum delivery; we are dependent on the humors of battle, on incalculable rushes and

lapses, on violent outbreaks of energy which rage and pass and are expressly designed to bewilder. It is not for the poor wounded to oblige us by making us showy, but for us to let them count on our open arms and open lap as troubled children count on those of their mother. It is now to be said, moreover, that our opportunity of service threatens inordinately to grow; such things may any day begin to occur at the front as will make what we have up to now been able to do mere child's play, though some of our help has been rendered when casualties were occurring at the rate, say, of 5,000 in twenty minutes, which ought, on the whole, to satisfy us. In face of such enormous facts of destruction—"

Here Mr. James broke off as if these facts were, in their horror, too many and too much for him. But after another moment he explained his pause.

"One finds it in the midst of all this as hard to apply one's words as to endure one's thoughts. The war has used up words; they have weakened, they have deteriorated like motor car tires; they have, like millions of other things, been more overstrained and knocked about and voided of the happy semblance during the last six months than in all the long ages before, and we are now confronted with a depreciation of all our terms, or, otherwise speaking, with a loss of expression through increase of limpness, that may well make us wonder what ghosts will be left to walk."

This sounded rather desperate, yet the incorrigible interviewer, conscious of the wane of his only chance, ventured to glance at the possibility of a word or two on the subject of Mr. James's present literary intentions. But the kindly hand here again was raised, and the mild voice became impatient.

"Pardon my not touching on any such irrelevance. All I want is to invite the public, as unblushingly as possible, to take all the interest in us it can; which may be helped by knowing that our bankers are Messrs. Brown Brothers & Co., 59 Wall Street, New York City, and that checks should be made payable to the American Volunteer Motor Ambulance Corps."

A Talk With Belgium's Governor

By Edward Lyall Fox

[From THE NEW YORK TIMES, April 11, 1915.]

Copyright, 1915, by the Wildman News Service.

IT would have been a very grave mistake not to have invaded Belgium. It would have been an unforgivable military blunder. I justify the invading of Belgium on absolute military grounds. What other grounds are there worth while talking about when a nation is in a war for its existence?"

It is the ruler of German Belgium speaking. The stern, serious-faced Governor General von Bissing, whom they call "Iron Fist," the man who crushes out sedition. Returning, I had just come up from the front around Lille, and almost the only clothes I had were those on my back; and the mud of the trenches still clung to my boots and puttees in yellow cakes. They were not the most proper clothes in which to meet King Albert's successor, but in field gray I had to go.

The Governor General received me in a dainty Louis Quinze room done in rose and French gray, and filled incongruously with delicate chairs and heavy brocaded curtains, a background which instantly you felt precisely suited his Excellency. In the English newspapers, which, by the way, are not barred from Berlin cafés, I had read of his Excellency as the "Iron Fist," or the "Heavy Heel," and I rather expected to see a heavy, domineering man. Instead, a slender, stealthy man in the uniform of a General rose from behind a tapestry topped table, revealing, as he did, a slight stoop in his back, perhaps a trifle foppish. He held out a long-fingered hand.

General von Bissing spoke no English. Somehow I imagined him to be one of those old German patriots who did not learn the language simply because it was English. Through Lieut. Herrmann I asked the Governor General what Germany was doing toward the reconstruction of Belgium. I told him America,

when I had left, was under the impression that Belgium was a land utterly laid waste by the German armies. I frankly told him that in America the common belief was that the German military Government meant tyranny; what was Germany doing for Belgium?

"I think," replied Governor General von Bissing, "that we are doing everything that can be done under the circumstances. Those farm lands which you saw, coming up from Lille to Brussels, were planted by German soldiers and in the Spring they will be harvested by our soldiers. Belgium has not been devastated, and its condition has been grievously misstated, as you have seen. You must remember that the armies have passed back and forth across it—German, Belgian, English, and French—but I think you have seen that only in the paths of these armies has the countryside suffered. Where engagements were not fought or shots fired, Belgium is as it was.

"There has been no systematic devastation for the purpose of intimidating the people. You will learn this if you go all over Belgium. As for the cities, we are doing the best we can to encourage business. Of course, with things the way they are now, it is difficult. I can only ask you to go down one of the principal business streets here, the Rue de la Neuf, for instance, and price the articles that you find in the shops and compare them with the Berlin prices. The merchants of Brussels are not having to sacrifice their stock by cutting prices, and, equally important, there are people buying. I can unhesitatingly say that things are progressing favorably in Belgium."

The conversation turned upon Belgian and English relations before this war.

The Governor General mentioned documentary evidence found in the archives in Brussels, proving an understanding between these countries against Germany. He spoke briefly about the point that the subjects of King Albert had been betrayed into the hands of English financiers and then laconically said: "The people of Belgium are politically undisciplined children."

"They are the victims of subtle propaganda that generally takes the form of articles in French and neutral newspapers," and General von Bissing looked me straight in the eyes, as though to emphasize that by neutral he meant the newspapers of the United States. "I can understand the French doing this," he said, "because they always use the Belgians and do not care what happens to them. It is beyond my comprehension, though, how the Government of any neutral country permits the publication of newspaper articles that can have but one effect, and that is to encourage revolt in a captured people. A country likes to call itself humanitarian, and yet it persists in allowing the publication of articles that only excite an ignorant, undisciplined people and lead them to acts of violence that must be wiped out by force," and the Governor General's mouth closed with a click.

"Do you know that the people of Brussels, whenever a strong wind carries the booming of heavy guns miles in from the front, think that French and English are going to recapture the city? Any day that we can hear the guns faintly, we know that there is an undercurrent of nervous expectancy running through the whole city. It goes down alleys and avenues and fills the cafés. You can see Belgians standing together, whispering. Twice they actually set the date when King Albert would return.

"This excitement, and unrest, and the feeling of the English coming in, is fostered and encouraged by the articles in French and neutral newspapers that are smuggled in. I do not anticipate any uprising among the Belgians, although the thoughtless among them have encouraged it. An uprising is not a topic of worry in our councils. It could do us

no harm. We would crush it out like that," and von Bissing snapped his thin fingers, "but if only for the sake of these misled and betrayed people, all seditious influences should cease."

I asked the Governor General the attitude of officials of the Belgian Government who were being used by the Germans in directing affairs.

"My predecessor, General von der Goltz," he replied, "informed me that the municipal officials in Brussels and most Belgian cities showed a good co-operative spirit from the start. The higher officials were divided, some refusing flatly to deal with the German administration. I do not blame these men, especially the railway officials, for I can see their viewpoint. In these days railway roads and troop trains were inseparable, and if those Belgian railway officials had helped us, they would have committed treason against their country. There was no need, though, for the Post Office officials to hold out, and only lately they have come around. Realizing, however, that without their department the country would be in chaos, the officials of the Department of Justice immediately co-operated with us. Today the Belgian Civil Courts try all ordinary misdemeanors and felonies. Belgian penal law still exists and is administered by Belgians. However, all other cases are tried by a military tribunal, the *Feld Gericht*."

I asked General von Bissing if there was much need for this military tribunal. I shall not forget his reply.

"We have a few serious cases," he said. "Occasionally there is a little sedition but for the most part it is only needle pricks. They are quiet now. They know why," and, slowly shaking his head, von Bissing, who is known as the sternest disciplinarian in the entire German Army, smiled.

We talked about the situation in America.

"The truth will come out," said von Bissing slowly. "Your country is renowned for fair play. You will be fair to Germany, I know. Your American Relief Commission is doing excellent work. It is in the highest degree nec-

King of Italy.

essary. At first the German Army had to use the food they could get by foraging in Belgium, for the country does not begin to produce the food it needs for its own consumption, and there were no great reserves that our troops could use. But the German Army is not using any of the Belgian food now."

I asked the Governor General if the Germans had not been very glad that America was sending over food.

"It is most important," he said, "that America regularly sends provisions to Belgium. Your country should feel very proud of the good it has done here. I welcome the American Relief Committee; we are working in perfect harmony. De-

spite reports to the contrary, we never have had any misunderstanding. Through the American press, please thank your people for their kindness to Belgium.

"But," he continued impressively, referring back to the justification of Germany's occupation and speaking with quiet force, "if we had not sent our troops into Belgium, the English would have landed their entire expeditionary army at Antwerp, and cut our line of communication. How do I know that? Simply because England would have been guilty of the grossest blunder if she had not done that, and the man who is in charge of England's Army has never been known as a blunderer.

A CHARGE IN THE DARK

By O. C. A. CHILD.

OUT of the trenches lively, lads!
Steady, steady there, number two!
Step like your feet were tiger's pads—
Crawl when crawling's the thing to do!

Column left, through the sunken road!
Keep in touch as you move by feel!
Empty rifles—no need to load—
Night work's close work, stick to steel!

Wait for shadows and watch the clouds,
When it's moonshine, down you go!
Quiet, quiet, as men in shrouds,
Cats a-prowl in the dark go slow.

Curse you, there, did you have to fall?
Damn your feet and your blind-bat eyes!
Caught in the open, caught—that's all!
Searchlights! slaughter—we meant surprise!

Shrapnel fire a bit too low—
Gets us though on the ricochet!
Open order and in we go,
Steel, cold steel, and we'll make 'em pay.

God above, not there to win?
Left, while my men go on to die!
Take them in, Sergeant, take them in!
Go on, fellows, good luck—good-bye!

A New Poland

By Gustave Herve

Gustave Hervé, author of the article translated below, which appears in a recent number of his paper, *La Guerre Sociale*—suppressed, it is reported, by the French authorities—has been described as “the man who fights all France.” He is 44 years old, and has spent one-fourth of his life in prison, on account of Socialistic articles against the French flag and Government. He used to continue writing such articles from prison and thus get his sentences lengthened.

Hervé has always opposed everything savoring of militarism and conquest. From his article on Poland it will be seen that, although he says nothing anti-French or antagonistic to the Allies in general, he desires a Russian triumph over Germany not for his own sake, but as a preliminary to a reconstruction of the Polish Nation out of the lands wrested from Poland by Russia, Germany, and Austria.

IN spite of its vagueness, the Grand Duke Nicholas's proclamation justifies the most sanguine hopes. This has been recognized not only by all the Poles whom it has reached, those of Russian Poland, and the three million Polish refugees who live in America, but moreover, all the Allies have interpreted it as a genuine promise that Poland would be territorially and politically reconstructed.

What would it be right to include in a reconstructed Poland, if the great principle of nationality is to be respected?

First, such a Poland would naturally include all of the Russian Poland of today—by that I mean all the districts where Poles are in a large majority. This forms a preliminary nucleus of 12,000,000 inhabitants, among whom are about 2,000,000 Jews. This great proportion of Jews is accounted for by the fact that Poland is in the zone where Jews are allowed to live in Russia.

Our new Poland would not comprise the ancient Lithuania—the districts of Wilno, Kovno, and Grodno—although Lithuania formerly was part of Poland and still has about one million Polish inhabitants who form the aristocracy and bourgeoisie. Lithuania, which is really the region of the Niemen, is peopled by Letts, who have their own language, resembling neither Polish nor Russian, and they likewise hope to obtain some day a measure of autonomy in the Russian Empire, with the right to use their language in schools, churches, and civil proceedings. One thing is certain: they would

protest, and rightly, against actual incorporation into the new Poland.

The 125,000 square kilometers and 12,000,000 inhabitants of Russian Poland, lying around Warsaw, would constitute the nucleus of reconstructed Poland.

Must we add to this the 79,000 square kilometers and 8,000,000 inhabitants of Galicia, which was Austria's share in the spoils of old Poland? Certainly, so far as western Galicia around Cracow is concerned, for this is a wholly Polish region, the Poles there numbering 2,500,000.

As for eastern Galicia, of which the principal city is Lemberg, (Lvov in Polish,) the question is more delicate. Though Eastern Galicia has over 1,500,000 Poles and 600,000 Jews, most of the population is Ruthenian. Now these Ruthenians, who are natives, subjugated in former times by the conquering Poles, and who still own much of the big estates, are related to the “Little Russians,” the southerners of Russia, and speak a dialect which is to Russian what Provençal is to French.

Besides, whereas the Poles are Catholics, the Ruthenians are Greek Orthodox Christians like the Russians, but differ from the latter in that they are connected with the Roman Church, and are thus schismatics in the eyes of the Russian priests.

Should these Ruthenians be annexed to Russia along with the 1,500,000 Poles and 500,000 Jews, among whom they have lived for centuries, they would scarcely look upon this as acceptable unless they were certain of having under Russian

rule at least equal political liberty and respect for their dialect and religion as they have under Austrian rule.

Should they be incorporated with the rest of Polish Galicia into the new Poland? It is hardly probable that they desire this, having enjoyed under Austria a considerable measure of autonomy as regards their language and schools. Would not the best solution be to make of Eastern Galicia an autonomous province of the reconstructed Poland, guaranteeing to it its local privileges?

That leaves for consideration the portion of Poland now forming part of Prussia.

There can be no question as to what should be done with the districts of Posen and Thorn. These are the parts of Poland stolen by Prussia, which the Prussians, a century and a quarter after the theft, have not succeeded in Germanizing.

North of the Posen district is Western Prussia, whose principal city is Dantzig; that too is a Polish district, stolen in 1772. Since then Dantzig has been Germanized and there are numerous German officials and employes in the other towns of the region. All the rural districts and a part of the towns, however, have remained Polish in spite of attempts to Germanize them as brutal as those applied to Posnania. But, if united Poland should include Western Prussia, as she has the right to do—there being no rule against what is right—Eastern Prussia, including Königsberg, will be cut off from the rest of Germany.

Now, Eastern Prussia, with the exception of the southern part about the Masurian Lakes, which has remained Polish, has been German from early mediaeval times. It is the home of the most reactionary junkers of all Prussia, a cradle of Prussian royalty and of the Hohenzollerns. Despite our hatred for these birds of prey, could we wish that

the new Poland should absorb these 2,000,000 genuine Germans?

If the region of Königsberg remains Prussian and the Masurian Lakes region is added to Poland, why not leave to Germany the strip of land along the coast, including Dantzig, in order that Eastern Prussia may thus be joined to Germany at one end?

Another question: There is in Prussian Upper Silesia a district, that of Oppeln, rich in iron ore, which was severed in the Middle Ages from Poland, but which has remained mostly Polish and which adjoins Poland. If the majority of Polish residents there demand it, would it not be well to join it once more to Poland, which would become, by this addition, contiguous to the Czechs of Bohemia?

To sum up:

Without laying hands on the German district of Königsberg, united Poland, by absorbing all the territory at present held by Prussia, in which the majority of the inhabitants are Poles, will take from the latter 70,000 square kilometers and 5,700,000 inhabitants. With these, the new Poland would have 24,000,000 inhabitants, including Eastern Galicia.

If Russia gave to this Poland in lieu of actual independence the most liberal autonomy and reconstructed a Polish kingdom under the suzerainty of the Czar—a Poland with its Diet, language, schools and army—would not the present war seem to us a genuine war of liberation and Nicholas II. a sort of Czar-liberator?

And if resuscitated Poland, taught by misfortune, compassionate toward the persecuted and proscribed because she herself has been persecuted and proscribed, should try to cure herself of her anti-Semitism, which has saddened her best friends in France, would not you say that she indeed deserved to be resuscitated from among the dead?

"With the Honors of War"

By Wythe Williams

[From THE NEW YORK TIMES, April, 1915.]

IT was just at the dawn of a March morning when I got off a train at Gerbéviller, the little "Martyr City" that hides its desolation as it hid its existence in the foothills of the Vosges.

There was a dense fog. At 6 A. M. fog usually covers the valleys of the Meurthe and Moselle. From the station I could see only a building across the road. A gendarme demanded my credentials. I handed him the *laisser-passer* from the Quartier Général of the "First French Army," which controls all coming and going, all activity in that region. The gendarme demanded to know the hour when I proposed to leave. I told him. He said it would be necessary to have the permit "*visé* for departure" at the headquarters of the gendarmerie. He pointed to the hazy outlines of another building just distinguishable through the fog.

This was proof that the town contained buildings—not just a building. The place was not entirely destroyed, as I had supposed. I went down the main street from the station, the fog enveloping me. I had letters to the town officials, but it was too early in the morning to present them. I would first get my own impressions of the wreck and the ruin. But I could see nothing on either hand as I stumbled along in the mud. So I commented to myself that this was not as bad as some places I had seen. I thought of the substantial station and the buildings across the road—untouched by war. I compared Gerbéviller with places where there is not even a station—where not one simple house remains as the result of "the day when the Germans came."

The road was winding and steep, dipping down to the swift little stream that twists a turbulent passage through the town. The day was coming fast but the

fog remained white and impenetrable. After a few minutes I began to see dark shapes on either side of the road. Tall, thin, irregular shapes, some high, some low, but with outlines all softened, toned down by the banks of white vapor.

I started across the road to investigate and fell into a pile of jagged masonry on the sidewalk. Through the nearness of the fog I could see tumbled piles of bricks. The shapes still remained—spectres that seemed to move in the light wind from the valley. An odor that was not of the freshness of the morning assailed me. I climbed across the wall. No wall of buildings barred my path, but I mounted higher on the piles of brick and stones. A heavy black shape was now at my left hand. I looked up and in the shadow there was no fog. I could see a crumbled swaying side wall of a house that was. The odor I noticed was that caused by fire. Sticking from the wall I could see the charred wood joists that once supported the floor of the second story. Higher, the lifting fog permitted me to see the waving boughs of a tree that hung over the house that was, outlined against a clear sky. At my feet, sticking out of the pile of bricks and stones, was the twisted iron fragments that was once the frame of a child's bed. I climbed out into the sunshine.

I was standing in the midst of a desolation and a silence that was profound. There was nothing there that lived, except a few fire-blackened trees that stuck up here and there in the shelter of broken walls. Now I understood the meaning of the spectral shapes. They were nothing but the broken walls of the other houses that were. They were all that remained of nine-tenths of Gerbéviller.

I wandered along to where the street

turned abruptly. There the ground pitched more sharply to the little river. There stood an entire half of a house unscathed by fire; it was one of those unexplainable freaks that often occur in great catastrophes. Even the window glass was intact. Smoke was coming from the chimney. I went to the opposite side and there stood an old woman looking out toward the river, brooding over the ruin stretching below her.

"You are lucky," I said. "You still have your home."

She threw out her hands and turned a toothless countenance toward me. I judged her to be well over seventy. It wasn't her home, she explained. Her home was "*là-bas*"—pointing vaguely in the distance. She had lived there fifty years—now it was burned. Her son's house for which he had saved thirty years to be able to call it his own, was also gone; but then her son was dead, so what did it matter? Yes, he was shot on the day the Germans came. He was ill, but they killed him. Oh, yes, she saw him killed. When the Germans went away she came to this house and built a fire in the stove. It was very cold.

And why were the houses burned? No; it was not the result of bombardment. Gerbéviller was not bombarded until after the houses were burned. They were burned by the Germans systematically. They went from house to house with their torches and oil and pitch. They did not explain why they burned the houses, but it was because they were angry.

The old woman paused a moment, and a faint flicker of a smile showed in the wrinkles about her eyes. I asked her to continue her story.

"You said because they were angry," I prompted. The smile broadened. Oh, yes, they were very angry, she explained. They did not even make the excuse that the villagers fired upon them. They were just angry through and through. And it was all because of those seventy-five French chasseurs who held the bridge. Some one called to her from the house. She hobbled to the door. "Anyone can tell you about the seventy-five chasseurs," she said, disappearing within.

I went on down the road and stood upon

the bridge over the swift little river. It was a narrow little bridge only wide enough for one wagon to pass. Two roads from the town converged there, the one over which I had passed and another which formed a letter "V" at the juncture with the bridge. Across the river only one road led away from the bridge and it ran straight up a hill, when it turned suddenly into the broad national highway to Lunéville about five miles away.

One house remained standing almost at the entrance to the bridge, at the end nearest the town. Its roof was gone, and its walls bore the marks of hundreds of bullets, but it was inhabited by a little old man of fifty, who came out to talk with me. He was the village carpenter. His house was burned, so he had taken refuge in the little house at the bridge. During the time the Germans were there he had been a prisoner, but they forgot him the morning the French army arrived. Everybody was in such a hurry, he explained.

I asked him about the seventy-five chasseurs at the bridge. Ah, yes, we were then standing on the site of their barricade. He would tell me about it, for he had seen it all from his house half way up the hill.

The chasseurs were first posted across the river on the road to Lunéville, and when the Germans approached, early in the morning, they fell back to the bridge, which they had barricaded the night before. It was the only way into Gerbéviller, so the chasseurs determined to fight. They had torn up the street and thrown great earthworks across one end of the bridge. Additional barricades were thrown up on the two converging streets, part way up the hill, behind which they had mitrailleuses which could sweep the road at the other end of the bridge.

About a half mile to the south a narrow footbridge crossed the river, only wide enough for one man. It was a little rustic affair that ran through the grounds of the Château de Gerbéviller that faced the river only a few hundred yards below the main bridge. It was a very ancient château, built in the twelfth century and restored in the seventeenth

century. It was a royal château of the Bourbons. In it once lived the great François de Montmorency, Duc de Luxembourg and Marshal of France. Now it belonged to the Marquise de Lamberty, a cousin of the King of Spain.

I interrupted, for I wanted to hear about the chasseurs. I gave the little old man a cigarette. He seized it eagerly—so eagerly that I also handed him a cigar. He just sort of fondled that cigar for a moment and then placed it in an inside pocket. It was a very cheap and very bad French cigar, for I was in a part of the country that has never heard of Havanas, but to the little old man it was something precious. "I will keep it for Sunday," he said.

I then got him back to the seventy-five chasseurs. It was just eight o'clock in the morning—a beautiful sunshiny morning—when the German column appeared around the bend in the road which we could see across the bridge, and which joined the highway from Lunéville. There were twelve thousand in that first column. One hundred and fifty thousand more came later. A band was playing "Deutschland über alles" and the men were singing. The closely packed front ranks of infantry broke into the goose step as they came in sight of the town. It was a wonderful sight; the sun glistened on their helmets; they marched as though on parade right down almost to the opposite end of the bridge.

Then came the command to halt. For a moment there was a complete silence. The Germans, only a couple of hundred yards from the barricade, seemed slowly to consider the situation. The Captain of the chasseurs, from a shelter behind the very little house that is still standing—and where his men up the two roads could see him—softly waved his hand.

Crack-crack-crack—crack-crack-crack-crack—crack-crack-crack! The bullets from the mitrailleuses whistled across the bridge into the front ranks of the "Deutschland über alles" singers, while the men behind the bridge barricade began a deadly rifle fire.

Have you ever heard a mitrailleuse? It is just like a telegraph instrument, with

its insistant clickety click-click-click, only it is a hundred times as loud. Indeed I have been told by French officers that it has sometimes been used as a telegraph instrument, so accurately can its operator reel out its hundred and sixty shots a minute.

On that morning at the Gerbéviller barricade, however, it went faster than the telegraph. These men on the converging roads just shifted their range slightly and poured bullets into the next ranks of infantry and so on back along the line, until Germans were dropping by the dozen at the sides of the little straight road. Then the column broke ranks wildly and fled back into the shelter of the road from Lunéville.

A half hour later a detachment of cavalry suddenly rounded the corner and charged straight for the barricade. The seventy-five were ready for them. Some of them got half way across the bridge and then tumbled into the river. Not one got back around the corner of the road to Lunéville.

There was another half hour of quiet, and then from the Lunéville road a battery of artillery got into action. Their range was bad, so far as any achievement against the seventy-five was concerned, so they turned their attention to the château, which they could easily see from their position across the river. The first shell struck the majestic tower of the building and shattered it. The next smashed the roof, the third hit the chapel—and so continued the bombardment until flames broke out to complete the destruction.

Of course the Germans could not know that the château was empty, that its owner was in Paris and both her sons fighting in the French Army. But they had secured the military advantage of demolishing one of the finest country houses in France, with its priceless tapestries, ancient marbles and heirlooms of the Bourbons. A howl of German glee was heard by the seventy-five chasseurs crouching behind their barricades. So pleased were the invaders with their achievement, that next they bravely swung out a battery into the road lead-

ing to the bridge, intending to shell the barricades. The Captain of chasseurs again waved his hand. Every man of the battery was killed before the guns were in position. It took an entire company of infantry—half of them being killed in the action—to haul those guns back into the Lunéville road, thus to clear the way for another advance.

From then on until 1 o'clock in the afternoon there were three more infantry attacks, all failing as lamentably as the first. The seventy-five were holding off the 12,000. At the last attack they let the Germans advance to the entrance of the bridge. They invited them with taunts to "*avancez.*" Then they poured in their deadly fire, and as the Germans broke and fled they permitted themselves a cheer. Up to this time not one chasseur was killed. Only four were wounded.

Shortly after 1 o'clock the German artillery wasted a few more shells on the ruined château and the chasseurs could see a detachment crawling along the river bank in the direction of the narrow footbridge that crossed through the château park a half mile below. The Captain of the chasseurs sent one man with a mitrailleuse to hold the bridge. He posted himself in the shelter of a large tree at one end. In a few minutes about fifty Germans appeared. They advanced cautiously on the bridge. The chasseur let them get half way over before he raked them with his fire. The water below ran red with blood.

The Germans retreated for help and made another attack an hour later with the same result. By 4 o'clock, when the lone chasseur's ammunition was exhausted, it is estimated that he had killed 175 Germans, who made five desperate rushes to take the position, which would have enabled them to make a flank attack on the seventy-four still holding the main bridge. When his ammunition was gone—which occurred at the same time as the ammunition at the main bridge was exhausted—this chasseur with the others succeeded in effecting a retreat to a main body of cavalry. If he still lives—this modern Horatius at the bridge

—he remains an unnamed hero in the ranks of the French Army, unhonored except in the hearts of those few of his countrymen who know.

During the late hours of the afternoon aeroplanes flew over the chasseurs' position, thus discovering to the Germans how really weak were the defenses of the town, how few its defenders. Besides, the ammunition was gone. But for eight hours—from 8 in the morning until 4 in the afternoon—the seventy-five had held the 12,000. General Joffre has said in one of his reports that the defense of the bridge at Gerbéviller had an important bearing on the battle of the Marne, which was just beginning, for it gave Castelnau's Army of the East time to dig its trenches a few miles back of Gerbéviller before the Germans got through.

Had that body of 12,000 succeeded earlier the 150,000 Germans that advanced the next day might have been able to fall on the French right flank during the most critical and decisive battle of the war. The total casualties of the chasseurs were three killed, three captured, and six wounded.

The little old man and I had walked to the entrance of the château park before he finished his story. It was still too early for breakfast. I thanked him and told him to return to his work in the little house by the bridge. I wanted to explore the château at leisure.

I entered the place—what was left of it. Most of the walls were standing. Walls built in the twelfth century do not break easily, even with modern artillery. But the modern roof and seventeenth century inner walls were all demolished. Not a single article of furniture or decoration remained. But the destruction showed some of the same freaks—similar to that little house left untouched by fire on the summit of the hill.

For instance, the Bourbon coat of arms above the grand staircase was untouched, while the staircase itself was just splintered bits of marble. On another fragment of a wall there still hung a magnificent stag's antlers. Strewed about in the corners I saw fragments of vases

that had been priceless. Even the remnants were valuable. In the ruined music room I found a piece of fresh, clean music, (an Alsatian waltz,) lying on the mantelpiece. I went out to the front of the building, where the great park sweeps down to the edge of the river. An old gardener in one of the side paths saw me. We immediately established cordial relations with a cigarette.

He told me how, after the chasseurs retreated beyond the town, the Germans—reduced over a thousand of their original number by the activities of the day—swept over the barricades of the bridge and into the town. Yes, the old woman I had talked with was right about it. They were very angry. They were ferociously angry at being held eight hours at that bridge by a force so ridiculously small.

The first civilians they met they killed, and then they began to fire the houses. One young man, half witted, came out of one of the houses near the bridge. They hanged him in the garden behind the house. Then they called his mother to see. A mob came piling into the château headed by four officers. All the furniture and valuables that were not destroyed they piled into a wagon and sent back to Lunéville. Of the gardener who was telling me the story they demanded the keys of the wine cellars. No; they did not injure him. They just held him by the arms while several dozen of the soldiers spat in his face.

While the drunken crew were reeling about the place, one of them accidentally stumbled upon the secret underground passage leading to the famous grottoes. These grottoes and the underground connection from the château were built in the fifteenth century. They are a half mile away, situated only half above ground, the entrance looking out on a smooth lawn that extends to the edge of the river. Several giant trees, the trunks of which are covered with vines, semi-shelter the entrance, which is also obscured by climbing ivy. The interior was

one of the treasures of France. The vaulted ceilings were done in wonderful mosaic. The walls decorated with marbles and rare sea shells. In every nook were marble pedestals and antique statuary, while the fountain in the centre, supplied from an underground stream, was of porphyry inlaid with mosaic.

The Germans looked upon it with appreciative eyes and cultured minds. But it did not please them. They were still very angry. Its destruction was a necessity of war. It could not be destroyed by artillery because it was half underground and screened by the giant trees. But it could be destroyed by picks and axes. A squad of soldiers was detailed to the job. They did it thoroughly. The gardener took me there to see. Not a scrap of the mosaic remained. The fountain was smashed to bits. A headless Venus and a smashed and battered Adonis were lying prone upon the ground.

The visitors to the château and environs afterward joined their comrades in firing the town. Night had come. Also across the bridge waited the hundred and fifty thousand reinforcements come from Lunéville. The five hundred of the two thousand inhabitants who remained were herded to the upper end of the town near the station. That portion was not to be destroyed because the German General would make his headquarters there.

The inhabitants were to be given a treat. They were to witness the entrance of the hundred and fifty thousand—the power and might of Germany was to be exhibited to them. So while the flames leaped high from the burning city, reddening the sky for miles, while old men prayed, while women wept, while little children whimpered, the sound of martial music was heard down the street near the bridge. The infantry packed in close formation, the red light from the fire shining on their helmets, were doing the goose step up the main street to the station—the great German army had entered the city of Gerbéviller with the honors of war.

General Foch, the Man of Ypres

An Account of France's New Master of War

[FROM THE NEW YORK TIMES, April, 1915.]

FIND out the weak point of your enemy and deliver your blow there," said the Commander of the Twentieth French Army Corps at Nancy at a staff banquet in 1913.

"But suppose, General," said an artillery officer, "that the enemy has no weak point?"

"If the enemy has no weak point," returned the commander, with a gleam of the eye and an aggressive tilt of the chin, "make one."

The commander was Foch—Ferdinand Foch—who has suddenly flashed before the world as the greatest leader in the French Army after Joffre, and who in that remark at Nancy gave the index to the basic quality of his character as a General. General Foch is today in command of the northern armies of France, besides being the chief Lieutenant and confidant of Joffre. Joffre conceives; Foch, master tactician, executes. He finds the weak point; if there is no weak point, he creates or seeks to create one.

When King George of England was at the front in France recently he conferred the Grand Cross of the Order of the Bath—the highest military distinction in the form of an order within the gift of the British Crown—on two Frenchmen. Joffre was one. The other was Foch.

"Foch? Foch? Who is Foch?" asked the British public, perplexed, when the newspapers printed the news of the granting of this signal honor.

"Foch is the General who was at the head of the French military mission which followed our army manoeuvres three years ago," replied a few men who happened to have been intimately acquainted with those manoeuvres.

"But what has that to do with the Grand Cross of the Order of the Bath?" asked John Bull. And the manoeuvre experts not being able to reply, the Eng-

lish newspapers demanded from their correspondents in France an answer to the query, "Who is Foch? Why the Grand Cross?"

And the main features of the answers to that query were these:

Foch is the "greatest strategist in Europe and the humblest," in the words of Joffre.

Foch is the hero of the Marne, the man who perceived on Sept. 9 that there must be a gap between the Prussian Guard and the Saxon Army, and who gathered enough artillery to crush the guard in the St. Gond marshes and forced both the Prussians and the Saxons, now separated, to retreat.

Foch is the man of Ypres, the commander who was in general control of the successful fight made by the French and the British, aided by the Belgians, to prevent the Germans from breaking through to Calais.

Foch, in short, is one of the military geniuses of the war, so record observers at the front. He is a General who has something of the Napoleonic in his composition; the dramatic in war is for him—secrecy and suddenness, gigantic and daring movements; fiery, yet coldly calculated attacks; vast strategic conceptions carried out by swift, unflinching tactics. Foch has a tendency to the impetuous, but he is impetuous scientifically. He has, however, taken all in all, much more of the dash and nervousness and warmth of the Southern Latin than has Joffre—cool, cautious, taciturn Joffre. Yet both men are from the south of France. They were born within a few miles of one another, within three months of one another, Foch being born on Oct. 2, 1851, and Joffre on Jan. 12, 1852.

Most writers who have dealt with Foch agree on this as one of his paramount

characteristics—the Napoleonic mode of military thought. When Foch was director of the *Ecole de Guerre*, where he had much to do with shaping the military views of many of the men who are now commanding units of the French Armies, he was considered to be possessed of almost an obsession on the subject of Napoleon. He studied Napoleon's campaigns, and restudied them. He went back much further, however, in his choice of a master, and gave intense application to the campaigns of Caesar. Napoleon and Caesar—these were the minds from which the mind of the Marne and Ypres has learned some of its lessons of success.

Here Foch invites comparison with another of the dominant figures of the war—General French. For French is described by his biographer as “a worshipper of Napoleon,” regarding him as the world's greatest strategist, and in following out and studying Napoleon's campaigns French personally covered and studied much of the ground in Belgium over which he has been fighting. French is a year younger than Foch. They are old friends, as are French and Joffre, and Joffre and Foch.

The inclination of Foch to something of the Napoleonic is shown beyond the realm of strategy and tactics. Foch is credited with knowing the French soldier, his heart, his mind, his capabilities, and the method of getting the most out of those capabilities, in a way reminiscent of the winner of Jena. And Foch knows not only the privates, but the officers. When he went to the front he visited each commander; the Colonels he called by name; the corps commanders, without exception, had attended his lectures at the *Ecole de Guerre*.

As for the men, Foch makes it his business to get into personal contact with them, as Napoleon used to do. Foch does not hobnob with them, there is no joking or familiarity, but he goes into the trenches and the occupied villages and looks the men over informally, inspects food or equipment, makes a useful comment or two, drops a phrase that is worth repeating, and leaves behind him en-

thusiasm and respect. The *Paris Figaro* says that he has the gift of setting souls afire, of arousing that élan in the French fighter which made that fighter perform military miracles when the “sun of Austerlitz” was high. It has been declared by a French writer that Foch knows the human element in the French Army better than any other man living.

With all his knowledge of men, his power of inspiring them, Foch is quiet, retiring, non-communicative, with no taste for meeting people in social intercourse. His life has been monotonous—work and work and work. He has the reputation of being a driver; he used to be particularly severe on shirkers in the war college, and such, no matter what their influence, had no chance of getting a diploma leading to an attractive staff position when Foch was Director. When he was in command at Nancy and elsewhere he used to work his staffs hard, and they had to share much of the monotony of work which has been chiefly Foch's life. He did not go in for society, merely making the formal calls required by the etiquette of garrison towns on the chief garrison hostesses, and giving dinners two or three times a year to his staff.

Foch, indeed, with his quiet ways and his hard work and his studying of Napoleon and Caesar, was characterized by some of the officers of the army as a pedant, a theorist, and these held that Foch had small chance of doing anything important in such a practical realm as that of real war.

Because of his Directorship of the *Ecole de Guerre* he was known to many officers, but as far as France at large was concerned his name was scarcely known at all last August. Yet officers knew him in other lands besides his own. His two great books, “*Principles of War*” and “*Conduct of War*,” have been translated into English, German, and Italian, and are highly regarded by military men. He has been ranked by the *Militär-Wochenblatt*, organ of the German General Staff, as one of the few strategists of first class ability among the Allies.

Foch is a slim man, with a great deal of nervous energy in his actions, being

so quick and graceful in movement, indeed, that a recent English observer declares he carries himself more like a man of 40 than one of 64. His gray blue eyes are particularly to be noticed, so keen are they. His speech is quick, precise, logical.

So little has Foch been known to the French public that it has been stated time and again that he is an Alsatian. He is not, but comes of a Basque family which has lived for many generations in the territory which is now the Department of the Hautes-Pyrénées, directly on the border of Spain. Foch was born in the town of Tarbes in that department. Joffre was born in the Department Pyrénées-Orientales, on the Spanish border to the east. Foch's father, Napoleon Foch, was a Bonapartist and Secretary of the Prefecture at Tarbes under Napoleon III. One of his two brothers, a lawyer, is also called Napoleon. The other is a Jesuit priest. Foch and these brothers attended the local college, and then turned to their professions.

In 1870 Foch served as a subaltern against the Germans, as did Joffre. After the war Foch began to win recognition as a man of brains, and at 26 he was given a commission as artillery Captain. Later he became Professor of Tactics in the Ecole de Guerre, with the title of Commandant, where he remained for five years, and then returned to regimental work. It was when Foch reached the grade of Brigadier General that he went back to the War College, this time as Director, one of the most confidential positions in the War Department. From this post he went to the command of the Thirteenth Division, thence to the command of the Eighth Corps at Bourges, and thence to the command of the Twentieth Corps at Nancy.

At the time that Foch was appointed Director of the Ecole de Guerre, Clemenceau was Premier, and upon the latter fell the task of choosing an officer for the important Directorship. There was keen competition for the position, many influential Generals desiring the appointment, and in consequence much wire-pulling went on. The story goes

that Clemenceau, a man of action, became impatient of the intrigues for the post, and determined to make his own choice unhampered.

According to the story, Clemenceau, after a conference one day upon routine business with Foch, asked the latter to dine. The Ecole de Guerre was not mentioned during the meal, the men chatting upon general topics. But as the coffee was being brought on, the Premier turned suddenly to the General and said, brusquely:

"By the way, I've a good bit of news for you. You're nominated Director of the Ecole de Guerre."

"Director of the Ecole de Guerre! But I'm not a candidate for the post."

"That is possible. But you're appointed all the same, and I know you will do excellent work in the position."

Foch thanked the Premier, but he still had some doubts, and added:

"I fear you don't know all my family connections. 'I have a brother who is a Jesuit.'"

"Jesuit be d——!" the Premier is reported to have roared in reply. "Oh, I beg your pardon, Mr. Director! You are the Director of the Ecole de Guerre. All the Jesuits in creation won't alter that—it is a fait accompli."

Among the confidential bits of work worthy of note that Foch has done for the War Department is the report he made upon the larger guns of the French field artillery, which have done such execution in the present war. For many weeks Foch went around the great Creusot gun works in the blouse of a workman, testing, watching, experimenting, analyzing.

Foch was one of the high officers in France who was not in the least surprised by the war and who had personally been holding himself in readiness for it for years. He felt, and often said, that a great war was inevitable; so much used he to dwell upon the certainty of war that some persons regarded him as an alarmist when he kept declaring that French officers should take every step within their power to get themselves and the troops ready for active service

at an instant's notice. He also held that France as a nation should prepare to the utmost of her power for the assured conflict.

In a recent issue of *The London Times* there was a description of Foch by a *Times* correspondent who had been at Foch's headquarters in the north of France. The correspondent's remarks are prefaced by the statement that in a late dispatch General French mentions General Foch as one of those whose help he has "once more gratefully to acknowledge." The correspondent writes in part:

What Ernest Lavisse has done for civilian New France in his direction of the *Ecole Normale* General Foch has done in a large measure for the officers of New France by his teaching of strategy and tactics at the *Ecole de Guerre*. He left his mark upon the whole teaching of general tactics.

I had the honor of being received recently by General Foch at his headquarters in the north of France—a house built for very different purposes many years ago, when Flemish civil architecture was in its flower. The quiet atmosphere of Flemish ease and burgo-master comfort has completely vanished. The building hums with activity, as does the whole town. A fleet of motor cars is ready for instant action. Officers and orderlies hurry constantly to and fro. There is an occasional British uniform, a naval airman's armored car, and above all the noise of this bustle, though lower in tone, the sound of guns in the distance from Ypres.

The director of all this activity is General Foch. There in the north he is putting his theories of war to the test with as much success as he did at the outbreak of hostilities in Lorraine and later in the centre during the battle of the Marne. Although born with the brain of a mathematician, General Foch's ideas upon war are by no means purely scientific. He refuses, indeed, to regard war, and more especially modern war, as an exact science. The developments of science have, indeed, but increased the mental and moral effort required of each participant, and it is only in the passions aroused in each man by the conflict of conception of life that the combatant finds the strength of will to withstand the horrors of modern warfare.

General Foch is a philosopher as well as a fighter. He is one of the rare philosophers who have proved the accuracy of their ideas in the fire of battle. A typical instance of this is given by "Miles" in a recent number of the *Correspondant*. During the battle of the Marne the Germans made repeated efforts to cut through the centre where General Foch commanded between Sézanne and Mailly. On three consecutive days General Foch was forced to retire. Every morning he resumed the offensive, with the result that his

obstinacy won the day. He was able to profit by a false step by the enemy to take him in the flank and defeat him.

General Foch's whole life and teaching were proved true in those days. He has resolved the art of war into three fundamental ideas—preparation, the formation of a mass, and the multiplication of this mass in its use. In order to derive the full benefit of the mass created it is necessary to have freedom of action, and that is only obtained by intellectual discipline. General Foch has written:

"Discipline for a leader does not mean the execution of orders received in so far as they seem suitable, just reasonable, or even possible. It means that you have entirely grasped the ideas of the leader who has given the order and that you take every possible means of satisfying him. Discipline does not mean silence, abstention, only doing what appears to you possible without compromising yourself; it is not the practice of the art of avoiding responsibilities. On the contrary, it is action in the sense of orders received."

Fifteen years ago at the *Ecole de Guerre* General Foch was fond of quoting Joseph de Maistre's remark, "A battle lost is a battle which one believes to have lost, for battles are not lost materially," and of adding, "Battles are therefore lost morally, and it is therefore morally that they are won." The aphorism can be extended by this off: "A battle won is a battle in which one will not admit one's self vanquished." As "Miles" remarks, "He did as he had said."

Ernest Dimnet in *The London Saturday Review* has this to say in part about Foch and his two widely known books:

During his two terms of service at the *Ecole de Guerre* he produced two considerable works, "*Principes de la Guerre*" and "*De la Conduite de la Guerre*," which give a high idea of their author's character and talent. There is nothing in them that ought to scare away the average reader. Their style has the geometrical lucidity which is the polytechnician's birthright, but in spite of the deliberate impersonality generally attached to that style of writing, there emanates from it a curious quality which gradually shows us the author as a living person.

We have the impression of a vast mental capacity turned to the lifelong study of a fascinating subject and acquiring in it the dignity of attitude and the naturalness which mastery inevitably produces. War has been the constant meditation of this powerful brain. In "*La Conduite de la Guerre*" this meditation is the minute historical examination of the battles of the First Empire and 1870. "Nothing can replace the experience of war," writes the author, "except the history of war," and it is clear that he understands the word "history" as all those who go to the past for a lesson in greatness understand it.

"Les Principes de la Guerre" is more immediately technical, yet it strikes one as being less a speculation than a visualizing of what modern war was sure to be. If the reader did not feel that he lacks the background which only the contemplation a million times repeated of concrete details can create, he would be tempted to marvel at the

extraordinary simplicity of these views. But a good judge who was very near the General until a wound removed him for a while from the—to him—fascinating scene tells me that this simplicity and directness—which marked the action of Foch at the battle of the Marne as they formerly marked his teaching—are the perfection to which only a few can aspire.

THE UNREMEMBERED DEAD

By ELLA A. FANNING.

"For those who die in war, and have none to pray for them."—Litany.

WE lay a wreath of laurel on the sward,
Where rest our loved ones in a deep
repose

Unvexed by dreams of any earthly care,
And, checking not our tears, we breathe a
prayer,

Grateful for even the comfort which is ours—
That we may kneel and sob our sorrow there,
And place the deathless leaf, the rarest
flowers.

Though Winter's cruel fingers brown the sod,
It's dearer far than all the world beside!
Forms live again—we gaze in love and pride
On youthful faces prest close to our own.
Eyes smile to ours; we hear each tender tone,
Grief's smart is softened—less the sense of
loss.

This grave we have, at least; we're not
alone!

And they must know of our unchanging love—
Our tender thought—our memory—our
prayers!

And in our constancy, ah! each one shares
To whom death comes on distant battle-
fields,

When life's last breath not even the solace
yields—

"There's one who'll mourn for me—whose
tears will flow!"—

Not even a grave is theirs, unnamed, un-
wept!

God rest their souls—the dead we do not
know!

Canada and Britain's War Union

By Edward W. Thomson, F. R. S. L., F. R. S. C.

[FROM THE NEW YORK TIMES, April, 1915.]

CANADA'S political relation to Great Britain, and, indeed, to all other countries, has been essentially altered by Canada's quite voluntary engagement in the war. Were feudal terms not largely inapplicable, one might aver that the vassal has become the suzerain's ally, political equality connoted.

But, indeed, Canadians were never vassals. They have ever been Britons, whatever their individual origins, retaining the liberties of their political birthright. While in a certain tutelage to their own monarchs' immediate Ministries, they have continually, slowly, consciously, expanded their freedom from such tutelage, substituting for it self-government or rule by their own representatives, without forsaking but rather enhancing their allegiance to the common Crown. This has long been the symbol of their self-government, even as it is to old country kinsmen the symbol of rule by themselves.

The alteration manifested by Canada's active, voluntary engagement in the European war is the change from Canadians holding, as they formerly did, that Great Britain was bound to defend Canada, while Canadians were not bound to defend Great Britain outside Canada. The "dependency" has not been now dragged in; it acted as an independency; it recognized its participation with Great Britain in a common danger; it proceeded quite voluntarily, quite independently, to recruit, organize, dispatch, and maintain large forces for the common cause. Canada's course has become that of a partner in respect of acceptance of risks and of contribution to expenses.

This partner has no formally specified share in gains, or in authority, or in future policy of the concern. Canada has no obvious, distinct, admitted way or voice

as to the conduct of war or making of peace. She appears, with the other self-governing Dominions of the Crown, as an ally having no vote in settlements, none of the prerogatives of an ally. Hence some observers in Great Britain, in Canada, in other realms of the Crown contend that the old, expressed relations between Great Britain, Canada, and the other Dominions must inevitably be extensively changed formally as well as actually in consequence of the war.

Some say imperial federation cannot but ensue. Others argue that formal independence must arrive if such federation come not speedily. Others contend for an Empire League of sister States. Nobody ventures to mention what was often talked publicly by Canadians from thirty to fifty years ago, and later by Goldwin Smith, viz., Canada's entrance to the United States as a new tier of sovereign States. The idea of severance from Great Britain has vanished. Discussion of the other alternatives is not inactive, but it is forced. It engages the quidnuncs. They are talkers who must say something for the delight of hearing themselves; or they are writers who live under the exigency of needing to get "something different" daily into print. They are mostly either "Jingoes" or Centralizationists, as contra to Nationalists or Decentralizationists, long-standing opponents.

Each set perceives their notions liable to be profoundly affected by Canada's fighting in Europe. Each affects belief that their own political designs cannot but be thereby served; each is afflicted with qualms of doubt. They alike appreciate the factors that make for their opponent's cause. Both know the strength of popular attachment to Great Britain; both know the traditional and inbred loathing of the industrious masses for

the horrible bloodshed and insensate waste of treasure in war. Both sets balance inwardly the chances that sentiments seemingly irreconcilable and about equally respectable may, after the war, urge Canadians either to draw politically closer to their world-scattered kin, or to cut ligaments that might pull them again and again, time without end, into the immemorial European shambles.

But is the Canadian public excitedly interested in the discussion? Not at all. Spokesmen and penmen of the two contentious factions are victimized by their own perfervid imaginations. The electorate, the masses, are not so swayed. The Canadian people, essentially British no matter what their origins, are mainly, like all English-speaking democracies, of straight, primitive, uncomplicated emotions, and of essentially conservative mind. They "plug" along. The hour and the day hold their attention. It is given to the necessary private works of the moment, as to the necessary public conduct of the time.

They did not, as a public, spin themselves any reasons or excuses for their hearty approval of Canada's engagement in the war. Her or their contributions of men and money to its fields of slaughter and waste appeared and appear to them natural, proper, inevitable. They applauded seriously the country's being "put in for it" by agreement of the two sets of party politicians, and without any direct consultation of the electorate in this, the most important departure Canada ever made, because prompt action seemed the only way, and time was lacking for debate about what seemed the next thing that had to be done. In fact, the Canadian people, regarded collectively, felt and acted in this case with as much ingenuousness as did those Tyrolese mountaineers, bred, according to Heine, to know nothing of politics save that they had an Emperor who wore a white coat and red breeches.

When the patriots climbed up to them, and told them with oratory that they now had a Prince who wore a blue coat and white breeches, they grasped their rifles, and kissed wife and children, and went down the mountain and offered their lives in defense

of the white coat and the dear old red breeches.

But did they forsake their relish of and devotion to their customary, legendary Tyrolese liberties? No more will the Canadian masses, by reason of their hearty participation in the war, incline to yield jot or tittle of their usual, long-struggled-for, gradually acquired, valuable and valued British self-governing rights. Can the Jingoese or Centralizationists scare them backward? Or the Decentralizationists or Separatists hurry them forward? Won't they just continue to "plug along" as their forefathers did in the old country and in the new, gaining a bit more freedom to do well or ill at their own collective choice—that is, if the war result "as usual" in British security, according to confident British expectation.

Such is the Canadian political situation. It has been essentially similar any time within living memory. The people approve in politics what they feel, instinctively, to be the profitable or the decent and reasonable necessary next thing to do. Which signifies that those controversialists are probably wrong who conceive that a result of the war, if it be a win for the Allies, will cause any great formal change in Canada's political relation to Great Britain.

The truly valuable change in such relations is already secured; it cannot but become more notably established by future discussion; it is and will be a change by reason of greatly increased influence on Great Britain by Canada and the other Dominions. And it appears highly probable that such inevitable change in influence or weight of the new countries is sufficient for all sentiments concerned, and for all useful purposes on behalf of which formal changes are advocated by doctrinaires and idealists.

The British peoples have acquired by long practice in very various politics a way of making existing arrangements "do" with some slight patching. They are instinctively seized of the truth of Edmund Burke's maxim, "Innovation is not improvement." They have "muddled along" into precisely the institutions that suit any exigency, their sanest political

philosophers recognizing that the exigency must always be most amenable to the most flexible system.

It is because the existing arrangements between London and the several Dominion capitals don't suit logicians that they do suit experienced statesmen pretty well. Because these institutions can be patched as occasion may require, they are retained for patching on occasion. Because the loose, go-as-you-please organization of the so-called "empire" has revealed almost incredible unity of sentiment and purpose, practiced statesmen regard it as a prodigious success. They are mighty shy of affiliating with any of the well-meaning doctrinaires who have been explaining any time within the last century that the system is essentially incoherent and absurd and urgently needs profound change with doctrinaire improvements.

Sir Robert Borden, for instance. Some days ago he most amiably gave me a little private talk on these matters, of course on the tacit understanding that he was not to be "interviewed" as for close reporting of his informal sentences. He was, by the way, apparently in robust health, as if, like Mr. Asquith, of a temperament to flourish under the heaviest responsibilities ever laid on a Prime Minister in his own country. No statesman could be of aspect and utterance less hurried, nor more pleasant, lucid, cautious, disposed to give a friendly caller large and accurate information briefly, while disclosing nothing at variance with or unfindable in his published speeches. Of some of them he repeated apposite slices; to others he referred for further enlightenment as to his views on imperial federation. Really he was neither secretive nor newly informative. The Premier of Canada at any time is governed, much as I have endeavored to show how the electors are, by that natural, instinctive course of the general loyal Canadian mind, which constitutes "the situation" and controls Governmental proceedings on behalf of the public.

Well meaning persons who allege Sir Robert to have either favored or disfavored imperial federation have been inac-

curate. Precisely what imperial federation may be nobody knows, for the simple and sufficient reason that nobody has ever sketched or elaborated a scheme in that regard which appeared or appears desirable as a change from the all-compelling situation. What has never been adopted as desirable cannot be termed practicable in statesmen's language. To declare an untried scheme impracticable might be an error of rashness.

The idea of federating the empire has long attracted Sir Robert, with many other admirable Canadians and Britons, since it connotes or involves the concept of British Union for all worthy and necessary purposes, including maintenance of local autonomy or self-government, surely a most praiseworthy design. Discussion of that idea is unlikely to be harmful; it may be useful; something may come of it that may seem desirable and practicable to substantially all interests and people concerned. A consummation devoutly to be wished, but not to be rushed! One point, frequently specified in Sir Robert's public speeches, was stated as follows in a recent report, pamphleted for distribution by his own side:

It is impossible to believe that the existing status, so far as it concerns the control of foreign policy and extra-imperial relations, can remain as it is today. All are conscious of the complexity of the problem thus presented; and no one need despair of a satisfactory solution, and no one can doubt the profound influence which the tremendous events of the past few months and of those in the immediate future must exercise upon one of the most interesting and far-reaching questions ever presented for the consideration of statesmen.

There Sir Robert was recommending no particular solution. A little earlier in the same speech he illustrated the deep sense of all experienced British statesmen that there never is or can be in the British system any final solution of any grave problem, the vital essence of the system being flux and change to suit ever-changing circumstance.

In so far as this empire may be said to possess a Constitution, it is of modern growth and is still in the stage of development. One can hardly conceive that it will ever distinctly emerge from that state or attain a status in

PRINCE VON BUELOW
German Ambassador to Italy.

which constitutional development is no longer to be anticipated. Indeed, the genius of the British people and all our past history lead us to believe the contrary. The steps in advance have been usually gradual and always practical; and they have been taken on instinct rather than upon any carefully considered theory.

Which was admonition at once of the Centralizationists and their opponents, the Nationalists.

Whatever alteration of existing British inter-arrangements may come after the war will be done on instinct in view of circumstances that cannot now be foreseen. Wherefore clamorers for this or that, their favorite scheme, are now inopportunists. Hence they are neglected by the public as unimpressive, futile wasters of breath or ink. Indeed Canada, Great Britain, the whole race of mankind are now swept on the crest of a huge wave of Fate. When it casts them ashore, recedes, leaves men to consider what may best be done for the future, then will have come the time to rearrange political fabrics, if need be. Then Sir Robert Borden will probably continue in his often clearly specified opinion that Canada, if remaining liable as now to be drawn into Great Britain's more perilous wars—a liability which must ever urge Canada to strong participation in order that the peril may be the sooner ended—ought to have a share in controlling Great Britain's foreign policy. Which sharing Mr. Asquith declared last year impracticable, in that sense inadmissible.

Westminster must retain freedom to move, act, strike quickly. Her course toward Germany had to be decided last August within a few hours. Obviously her freedom, her power for promptitude would be hindered in proportion to need for such consultation with and approval by councilors of many distant countries as is presupposed by advocates of imperial federation. Why establish control by cumbersome, superfluous machinery when the war has made it clear as the sun at high noon that the essential desideratum, British Union, exists now? All the notable communities of the King's realms have demonstrated that they are in the mind, the condition of a voluntary empire. What more

can be desired save by such as desire old country domination of all the concerned countries, and who really long for a formal and subservient Empire?

Sir Richard Jebb, a deep student of the Empire problem, declared clearly last November the meaning of that general voluntary British war union which is a wonder of mankind, and in the course to teach a profound, general political lesson. He wrote:

That the war will in any event change the external relations is evident. But why, if we win, should it change the political relations between the parts, except to the extent of encouraging us to conserve and develop the existing system which has given so signal an example of effective imperial unity in time of need? Continually talking of imperial unity, we fail to recognize it when we have got it. There is never going to be a moment when one might say "Yesterday we were not united; today the Grand Act (of Imperial Federation understood) has been signed; henceforth we are united."

The cult of the Grand Act is a snare and a delusion. Whatever may happen hereafter—even the Grand Act itself—posterity is likely to look back upon August, 1914, as the moment when the British Empire reached the zenith of its unity. Let us remember that the existing system is not stationary, though its principle (voluntary union) may be final. It has been developing steadily since 1902.

The Australian fleet unit, the first of the Dominion navies, which enables each to exert upon foreign policy the full weight of its importance in the empire, was not begun until 1910. The corollary, that any Dominion Minister appointed to reside in London should have free and constant access to the British Prime Minister and Foreign Secretary, was only conceded in January, 1912, and has not yet been taken advantage of, even by Australia.

But the development is all true to principle. What principle? Voluntary co-operation, as opposed to central compulsion. In war, as in peace, each of the Britannic nations is free to do or not to do. But we have invoked naval and military co-ordination, with results which the Australian Navy has already exemplified (on the Emden, &c.)

Has this system of the free Commonwealth, as distinguished from the German principle of a centralized empire organized primarily for war, broken down under the supreme test, as so many of our prophets predicted? On the contrary, it has alone saved South Africa to the empire, besides eliciting unrestricted military aid from each part. Why change it for something diametrically opposed to its spirit, substituting compulsion for liberty, provinces for nation-States?

Sir Richard Jebb's sentence, specifying

the nature of the Australian influence on foreign policy, seems apt reply to Sir Robert Borden's oft-repeated specification that a share in control of foreign policy should accrue to the Dominions by reason of their participation in or liability to war. This liability really compels them to engage with all their strength, lest they comfort an enemy by abstention, or by confining their armaments to self-defense, which might and would be read as disapproval of Britain's course, if the war were one of magnitude endangering her. A system more powerfully requiring Great Britain to take heed that her quarrel be just, lest she be not thrice armed by approving children, can scarcely be imagined.

On this matter I have had the pleasure and benefit, during the last twelve years, of talking with Sir Wilfrid Laurier often. In the quoted Jebb view he agreed closely when I saw him a few days ago. He remarked, with special regard to this article for *THE NEW YORK TIMES*, that his point of insistence at the Imperial Conferences of 1902, 1907, 1911, and on all proper occasions, has been that local autonomy—that is, complete self-government for each of the Dominions—is not only consistent with British unity but necessary thereto as promoting and conserving that unity.

When Mr. Asquith's denial of the practicability of giving the Dominions a direct share in control of Great Britain's foreign policy is considered, the Jebb-Laurier view would appear one to which Sir Robert Borden, cautious statesman, must be led by recognition that potent influence on foreign policy cannot but come to Dominions energetically providing at once for their own defense and for their power to aid Great Britain all along the line.

As to imperial federation, Sir Wilfrid remarked that he has ever been openly attracted by that aspiration toward permanent British union, on which advocacy of the vague project has ever been bot-tomed. He is, as he said to me, and as all his long series of political actions have manifested, British in heart and way of political thinking, as indeed sub-

stantially all his French-Canadian compatriots are. British liberality, not to say liberalism, has attached them to the British system as firmly as any community originating from the United Kingdom. It was a French-Canadian statesman who asserted, some fifty years ago, when many British-Canadians seemed tending toward union with the United States, "The last shot fired in Canada for British connection will be from a French-Canadian." That was before the civil war abolished slavery.

But, even as the Britishism of Old Country liberals is strongly tinged by devotion to ideals which Americans are wont to regard as theirs—ideals making for settled peace, industry, the uplift of the "common people," fair room and reward for those abilities which conspicuously serve the general welfare—so Sir Wilfrid and his compatriots acknowledge their Britishism to be acutely conscious of political kinship with the American people. The French-Canadian yearning, like that of many Canadians of British origin, is rather for English-speaking union—a union of at least thorough understanding and common designs with the American people—than for the narrower exclusive British union sought by Canadian imperial federationists.

Sir Wilfrid said, in effect, (I do not profess to report his very words,) that federation of those British communities widely separated by geography, but alike in race, language, laws, principles, has always attracted him as a project of excellent intentions. It is at worst a noble dream. That dream has become less impracticable than it was formerly, he thinks, by reason of the essential diminution of the world, diminution of distances and of time by latter-day inventions.

Against the idea of general representation in a central Parliament at London, Sir Wilfrid pointed out that Edmund Burke objected "*opposit natura*"—nature forbade it. The wisest of political philosophers could not foresee the telegraph, wireless, steam, airships. These have made a useful central imperial Parliament at least conceivable. Could it be more useful than the advisory

council, or Imperial Conference which has become quadrennial, and might possibly become annual? That is matter for discussion. Sir Wilfrid said that such is the political genius of the British race that he would be rash who alleged any design impracticable toward which the race may tend so generally as to put it under discussion for arrangement of details. Conservation of local self-government, prime essential to agreement for union on common purposes, might prove reconcilable with federated defense.

But there is, to Sir Wilfrid's way of thinking, one large objection against now attempting imperial federation. Its agitators contemplate a scheme immense, yet not sufficiently inclusive. They do not contemplate English-speaking solidarity. They purpose leaving out the majority of English-speakers—the American people. In this they do not follow Cecil Rhodes, a chief propagandist of their main design. It is true that the idea of getting Americans to participate in any formal union with all the rest of their brethren by race and tongue seems now impractical. But time works wonders. Mr. Gladstone foresaw the United States a people of six hundred comfortable millions, living in union before the end of the next century. The hegemony of the English-speaking nations seems likely to be within attainment by that one of them which appears destined to become far the most powerful of all in numbers, in wealth, and in security of environment. Time may show to our successors in this world some effective method of establishing agreements amounting to that solidarity for English-speaking action which has been acclaimed as existent for English-speaking thinking by a mind so eminently reasonable as that of Lord Haldane.

It would be hasty, thinks Sir Wilfrid, and it might be injurious for the British countries to move toward any sort of formal union ostensibly tending to set them collectively apart from the United States. Give great beneficent ideas time to develop. Britons can well afford to take their time, since the war

has shown existent among them an almost perfect union of sentiment and purpose. And this, apparently, with the blessed effect of enhancing general American good-will to Britons. From so much good understanding more may ensue, Sir Wilfrid concluded.

Such Canadians as hold Edmund Burke to have been a spokesman of consummate political wisdom are apt to regard the busy stir of doctrinaires, who scream for closer political junction of the British peoples, even as Burke regarded the hurry of some of the same kidney in his time. Resolute to bind the thirteen colonies forever to England, they proceeded to offend, outrage, and drive those colonies to independence. Be it remembered that these colonies had contributed so loyally, so liberally to England's armaments and wars that grateful London Parliaments had insisted on voting back to them the subsidies they had granted, holding the contributions too generous. To later proposals of foolish henchmen of George III., proposals that the colonies, since they had revealed themselves as strong and rich, should be dragged into some formal political subordination by which, as by latter-day Imperial Federation, they might be involuntarily mustered and taxed for imperial purposes, Burke said:

Our hold on the colonies is the close affection which grows from common names, from kindred blood, from similar privileges, and equal protection. These are the ties which, though light as air, are strong as links of iron. Let the colonies always keep the idea of their civil rights associated with your Government; they will cling and grapple to you, and no force under heaven will be of power to tear them from their allegiance. * * *

As long as you have the wisdom to keep the sovereign authority of this country as the sanctuary of liberty, the sacred temple consecrated to our common faith, wherever the chosen race and sons of England worship freedom, they will turn their faces toward you. The more they multiply, the more friends you will have. The more ardently they love liberty, the more perfect will be their obedience. Slavery they can have anywhere. It is a weed that grows on every soil. They may have it from Spain; they may have it from Prussia; but until you become lost to all feeling of your true interest and your natural dignity, freedom they can have from none but you.

This is the commodity of price, of which you have the monopoly. * * * Do not entertain so weak an imagination as that your registers and your bonds, your affidavits and your sufferances, * * * your letters of office and your instructions and your suspending clauses are the things that hold together the great contexture of this mysterious whole. These things do not make your Government. Dead instruments, passive tools as they are, it is the spirit of the English communion that gives all their life and efficacy to them. It is the spirit of the English Constitution which, infused through the mighty mass, pervades, feeds, unites, invigorates, vivifies every part of the empire, even to the minutest member.

And the doctrinaires of Centralization, vociferating their fad of Imperial Federation, would have that Constitution, in the moment of its supreme triumph for unity, cast away! Cast away for a new and written one by which Great Britain

and all her children alike would chain themselves together! Well may practical statesmen view the doctrinaires with some disdain, not unmindful of Burke's immortal scorn of such formalists:

"A sort of people who think that nothing exists but what is gross and material, and who, therefore, far from being qualified to be directors of the great movement of empire, are not fit to turn a wheel in the machine. To men truly initiated and rightly taught, those ruling and master principles which, in the opinion of such men as I have mentioned, have no substantial existence, are in truth everything and all in all. Magnanimity in politics is not seldom the truest wisdom; and a great empire and little minds go ill together."

ENGLAND.

By JOHN E. DOLSON.

BIRTH land of statesmen, bards, heroes,
and sages;
Mother of nations—the homes of the
free;

Builder of work that will last through the
ages,

Hope for Humanity centres in thee.

Now that thy bugles their clear calls are
shrilling,

Now that thy battle voice echoes world-
wide,

O'er the long reaches of sea rush the willing
Sons of thy children to fight by thy side.

Eager to aid thee with treasure and tissue,
Other leal millions will come to thy call.

Civilization is staked on the issue—

Woe to Mankind if thy lion should fall!

Fall he will never, till English force slacken

In the great soul of thy dominant race,

Now, as of old, do the Destinies beckon

Thee to be highest in power and place.

Conflicts now raging will pass into story,

Nations may sink in defeat or disgrace;

Long be thy future resplendent with glory,

Long be thy triumphs the pride of our race!

American Aid of France

By Eugene Brieux

[From THE NEW YORK TIMES, April, 1915.]

M. Eugène Brieux, the celebrated French poet and playwright, who is in this country as the official representative of the French Academy—the "Forty Immortals"—has written a remarkable tribute to American aid of France during the present war. The address, which is herewith presented, was read by M. Brieux at the residence of Mrs. John Henry Hammond of New York City recently before a gathering of two hundred men and women who have been interested in the work of the American Ambulance Hospital in Paris.

MISS MARIE VAN VORST, who nursed the wounded at the American Ambulance in Paris, will speak to you of it as an eyewitness. From her you will receive direct news of your splendid work of humanity. While she was caring for wounded French, English, and German I was attached to another hospital at Chartres. It happens, therefore, that I have never seen the American Military Hospital created by you, but I am not in ignorance concerning it any more than any other Parisian, any more, indeed, than the majority of the French people.

I know that the American Ambulance is the most remarkable hospital that the world has seen. I know that you, since the beginning of the war, have brought the aid of medical science to wounded men and that you have given not only money, but an institution, all ready, complete and of the most modern type, and, even more, that you have sent there your best surgeons and a small army of orderlies and nurses.

I know that at first one could not find a place; that there was available only a building in course of construction, intended to be the Pasteur School at Neuilly. This building was far from completion; it lacked doors and there were no stairs. I know that in three weeks your generosity, your energy, and your quick intelligence has made of this uncertain shell a modern military hospital, with white walls, electric light, baths, rooms for administering anaesthetics, operating rooms, sterilizing plants, apparatus for X-rays, and a dental

clinic. I know that automobiles, admirably adapted to the service, carried the wounded. And yet I do not know all. I know only by instinct of the devotion of your young girls, of your women, and of your young men, belonging often to prominent families, who served as stretcher bearers and orderlies.

I am not ignorant of the fact that they count by the hundreds those who have been cured at the American Ambulance at Neuilly, nor of the further fact that the rate of mortality is extremely low, although they have sent you those most gravely injured. I know that it is all free; that there are no charges made for the expenses of administration; that for the service rendered by your people there is no claim, and that every cent of every dollar subscribed goes entirely and directly to the care of the wounded. I know also that the expenses at the hospital are \$4,000 a day, and that ever since the beginning your charity has met this demand.

Such splendid effort has not been ignored or misunderstood. The President of the French Republic has cabled to President Wilson his appreciation and his gratitude; General Fevier, Inspector General of Hospitals of the French Army, has publicly expressed his admiration; the English physicians and public men have shared their sentiments.

As to the people of Paris, as to the French nation, they have been touched to the depths of their being. And yet in France we have found all this quite natural. I shall tell you why. We have so high a regard for you that when you

do anything well no one is surprised. I believe that if a wounded soldier arriving at your hospital exclaimed, "This is wonderful!" his comrade who had been ahead of him would answer in a tone of admonition: "That surprises you? You do not know then that it is done by the Americans, by the people from the United States?" In this refusal to be astonished in the face of remarkable achievements, when they come from you, there is a tribute, a praise of high quality which your feelings and your patriotism will know how to appreciate.

I have said that all that comes from you which is good and great seems natural to us, and I have given you a reason; but there is another. In France we are accustomed to consider the Republic of the United States as an affectionate, distant sister. When one receives a gift from a stranger one is astonished and cries out his thanks, but when the gift comes from a brother or from some one who, on similar occasions, has never failed, the thanks are not so outspoken but more profound. One says: "Ah, it is you, my brother. I suffer. I expected you. I knew that you would come, for I should have gone to you had you needed me. I thank you."

And, indeed, we are closely bound together, you and we. Without doubt, common interest and an absence of possible competition helps to that end, but there is something more which unites us—it is our kindred sentiments. It is this kinship which has created our attraction for each other and which has cemented it; it is our common ground of affections, of hatreds, of hopes; our ideals rest upon the same high plane. To mention but one point, one of you has said: "The United States and France are the only two nations which have fought for an ideal." And it is that which separates us, you and us, from a certain other nation, and which has served to bring us two close together.

We love you and we are grateful for what you are doing for us. When the day came for my departure from France to represent here the French Academy I asked of Mr. Poincaré, who had visited

the American Ambulance at Neuilly, if duty did not forbid me to go. "No," he said to me. "Go to the United States. Carry greetings to the great nation of America." And he gave to me, for your President, the letter with which you are familiar, where he expressed the admiration and the sympathy that he has for you.

I have been traveling North and South in the Eastern part of the United States. I have had many opportunities to admire your power and the extent of your efforts. Today, in thinking of the American Ambulance Hospital in Paris, I admire your persistence in labor. You have established this hospital. That was good. But it costs a thousand dollars a day, and yet you keep on with the work. That is doubly good. Indeed, one can understand that you have not been willing, after having created this model hospital, that some day through lack of support its doors should close and the wounded you have taken in be turned over to others; certainly those first subscribers undertook a sort of moral obligation to themselves not to permit the work to fail. But, none the less, it is admirable that it should be so. To give once is something, but it is little if one compares the value of the first gift to those which follow.

The first charity is easily understood. Suddenly war is at hand. Its horrors can be imagined and every one feels that he can in some measure lessen them, and he opens his purse. Then time passes, the war continues, and one becomes accustomed to the thoughts that were at first unbearable—it is so far away and so long. Others in this way were checked after their first impulse.

But you, you have thought that, if it is good to establish a hospital, that alone was not enough, and that each day would bring new wounded to replace those who, cured, took up their guns again and returned to the field of battle. And since at the American Ambulance the wounded are cured quickly, the very excellence of your organization, the science of your surgeons, and the greatness of your sacrifices all bring upon you other and new sacrifices to be made.

But the word "sacrifice" is badly chosen. You do not make sacrifices, for you are strong and you are good. When you decide upon some new generous act you have only to appeal to your national pride, which will never allow an American undertaking to fail. You have the knowledge of the good that you are doing, and that, for you, is sufficient. You know that, thanks to your generosity, suffering is relieved, and you know that, thanks to the science of your surgeons, this relief is not merely momentary, but that the wounded man who would have remained a cripple if he had been less ably cared for, will be, thanks to you, completely cured, and that, instead of dragging out a miserable existence, he will be able to live a normal life and support a family which will bless

you. Such men will owe it all to the persistence of your generosity.

I return always to that point, and it is essential. To give once is a common impulse, common to nearly all the world. It means freeing one's self from the suffering which good souls feel when they see others suffer. But to give again after having given is a proof of reflection, of an understanding of the meaning of life; it is to work intelligently; it is to insure the value of the first effort; it means the possession of goodness which is lasting and far-seeing. That is a rare virtue. You have it. And that is why I express a three-fold thanks, for the past, for the present, and for the future—thanks that come from the bottom of the heart of a Frenchman.

A FAREWELL.

By EDNA MEAD.

LOOK, Love! I lay my wistful hands in
thine
A little while before you seek the dark,
Untraversed ways of War and its Reward,
I cannot bear to lift my gaze and mark
The gloried light of hopeful, high emprise
That, like a bird already poised for flight,
Has waked within your eyes.
For me no proud illusions point the road,
No fancied flowers strew the paths of strife:
War only wears a horrid, hydra face,
Mocking at strength and courage, youth and
life.
If you were going forth to cross your sword
In fair and open, man-to-man affray,
One might be even reconciled and say,
"This is not murder; only passion bent
On pouring out its poison"—one could pray
That the day's end might see the madness
done
And saner souls rise with the morrow's sun.
But this incarnate hell that yawns before
Your bright, brave soul keyed to the fighter's
clench—
This purgatory that men call the "trench"—
This modern "Black Hole" of a modern
war!
Yea, Love! yet naught I say can save you, so
I lay my heart in yours and let you go.

Stories of French Courage

By Edwin L. Shuman

[From THE NEW YORK TIMES, April, 1915.]

THERE has just appeared in Paris a book called "La Guerre Vue d'Une Ambulance," which brings the war closer to the eye and heart than anything else I have read. It is written by Abbé Felix Klein, Chaplain of the American Ambulance Hospital at Neuilly, a suburb of Paris, and has the added merit of describing the noble work which American money and American Red Cross nurses are doing there for the French wounded. The abbé, by the way, has twice visited the United States in recent years, has many warm friends here, and has written several enthusiastic books about the "Land of the Strenuous Life."

When the war broke out this large-hearted priest and busy author dropped all his literary and other plans to minister to the wounded soldiers brought to the war hospital established by Americans in the fine new building of the Lycée Pasteur, which was to have received its first medical students a few weeks later. There were 250 beds at first, and later 500, with more than a hundred American automobiles carrying the wounded to it, often direct from the front.

Through all these months Abbé Klein has labored day and night among these sufferers, cheering some to recovery, easing the dying moments of others with spiritual solace, and, hardest of all, breaking the news of bereavement to parents.

From day to day, through those terrible weeks of fighting on the Aisne and the Marne, with Paris itself in danger, the good abbé wrote brief records of his hopes and fears regarding his wounded friends, and set down in living words the more heroic or touching phases of their simple stories. Let me translate a few of them for the reader.

Take, for instance, the case of Charles Marée, a blue-eyed, red-bearded hero of thirty years, an only son who had taken the place of his invalid father at the head of their factory, and who had responded to the first call to arms. During his months of suffering his parents were held in territory occupied by the enemy and could not be reached. The abbé goes on to tell his story:

Let us not be deceived by the calm smile on his face. For six weeks Charles Marée has been undergoing an almost continual martyrdom, his pelvis fractured, with all the consequences one divines, weakened by hemorrhage, his back broken, capable only of moving his head and arms. * * * He is one of our most fervent Christians: I bring him the communion twice a week, and he never complains of suffering. He is also one of our bravest soldiers; he has received the military medal, and when I asked him how it came about he told me the following in a firm tone and with his hand in mine, for we are great friends:

"It was given to me the 8th of October. I had to fulfill a mission that was a little difficult. It was at Mazingarbe, between Béthune and Lens, and 9 o'clock in the evening. Two of the enemy's armored automobile guns had just been discovered approaching our lines. I was ordered to go and meet them with a Pugeot of twenty-five or thirty horse power—I was automobilist in the Thirtieth Dragoons.

"I left by the little road from Vermelles on which the two hostile machines were reported to be approaching. After twenty minutes I stopped, put out my lights, and waited. A quarter of an hour of profound silence followed, and then I caught the sound of the first mitrailleuse. With one spin of the wheel I threw my machine across the middle of the road. That of the enemy struck us squarely in the centre. The moment the shock was past I rose from my seat with my revolver and killed the chauffeur and the mechanic.

"But almost immediately the second machine gun arrived. The two men on it comprehended what had happened. While one of them stopped the machine, the other aimed at me under his seat and fired a revolver ball that pierced both thighs; then they turned their machine and retreated. My companion, happily, was not hurt, so he

could take me to Vermelles, where the ambulance service was. The same evening they gave me the military medal, for which I had already been proposed three times."

After three months of suffering, borne without complaint, this man died without having been able to get a word to his parents. The abbé had become deeply attached to him, and the whole hospital corps felt the loss of his courageous presence.

Some of the horror of war is in these pages, as where the author says:

The doctors worked till 3 o'clock this morning. They had to amputate arms and legs affected with gangrene. The operating room was a sea of blood.

Some of the pathos of war is here, and even a little of its humor, but most of all its courage. Both of the latter are mingled in the case of an English soldier who was brought in wounded from the field of Soissons.

"I fought until such a day, when I was wounded."

"And since then?"

"Since then I have traveled."

An English infantry officer, a six-footer, brought to the hospital with his head bandaged in red rather than white, showed the abbé his cap and the bullet hole in it.

"A narrow escape," said the abbé in English, and then learned that the escape was narrower than the wounded forehead indicated. Another bullet, without touching the officer, had pierced the sole of his shoe under his foot, and a third had perforated his coat between the body and the arm without breaking the skin.

The author's attitude toward the Germans, always free from bitterness, is sufficiently indicated in such a paragraph as this:

This afternoon I gave absolution and extreme unction to an Irishman, who has not regained consciousness since he was brought here. He had in his portfolio a letter addressed to his mother. The nurse is going to add a word to say that he received the last sacraments. A Christian hope will soften the frightful news. Emperors of Austria and Germany, if you were present when the death is announced in that poor Irish home, and in thousands, hundreds of thousands of others, in England, in France, in Russia, in Servia, in Belgium, in your own countries, in all Europe, and even in Africa and Asia!

* * * May God enlighten your consciences!

The French wounded in the hospital at Neuilly—during the period when the German right wing was being beaten back from Paris—frequently accused the German regulars of wanton cruelty, but testified to the humanity of the reservists. The author relates several episodes illustrating both points. Here are two:

"The regulars are no good," said a brave peasant reservist. "They struck me with the butts of their rifles on my wound. They broke and threw away all that I had. The reserves arrive, and it is different; they take care of me. My comrade, wounded in the breast, was dying of thirst; he actually died of it a little while afterward. I dragged myself up to go and seek water for him; the young fellows aimed their guns at me. I was obliged to make a half-turn and lie down again."

Another, who also begins by praising the German field officers, saw soldiers of the active army stripping perfectly nude one of our men who had a perforated lung, and whom they had made prisoner after his wound: "When they saw that they would have to abandon him, they took away everything from him, even his shirt, and it was done in pure wickedness, since they carried nothing away."

One of the most amazing escapes is that of a soldier from Bordeaux, told partly in his own racy idiom, and fully vouched for by the author. After relating how he left the railway at Nan-teuil and traversed a hamlet pillaged by the Germans he continues:

We form ourselves into a skirmish line. The shells come. The dirt flies: holes to bury an ox? One can see them coming: zzz—boom! There is time to get out of the way.

Arrived at the edge of the woods, we separate as scouts. We are ordered to advance. But, mind you, they already have our range. The artillery makes things hum. My bugler, near me, is killed instantly; he has not said a word, poor boy! I am wounded in the leg. It is about two o'clock. As I cannot drag myself further, a comrade, before leaving, hides me under three sheaves of straw with my head under my knapsack. The shells have peppered it full of holes, that poor sack. Without it—ten yards away a comrade, who had his leg broken and a piece of shell in his arm, received seven or eight more wounds.

I stayed there all day. In the evening the soldiers of the 101st took me into the woods, where there were several French wounded and a German Captain, wounded the evening before. He was suffering too, poor wretch. About midnight the French soldiers came to seek those who were transportable. They left only my comrade, myself and the German Captain. There were other wounded further

along, and we heard their cries. It was dreary.

These wounded men passed two whole days there without help. On the third day the Germans arrived and the narrator gave himself up for lost. But the German Captain, with whom the Frenchmen had divided their food and drink, begged that they be cared for. Ultimately they were taken to the German camp and their wounds attended to. But in a few minutes the camp became the centre of a violent attack, and again it looked as if the last day of the wounded prisoners had come.

Suddenly the Germans ran away and left everything. An hour later, when the firing ceased, they returned, carried away the wounded of both nationalities on stretchers, crowded about twenty-five of them into one wagon (the narrator's broken leg was not stretched out, and he suffered,) and all the way the wagon gave forth the odor of death. All day they rode without a bite to eat. At 1 o'clock at night they reached the village of Cuvergnon, where their wounds were well attended to. The following day the Germans departed without saying a word, but the villagers cared for the wounded, both friends and enemies, and in time the American automobiles carried them to Neuilly.

It is a paradise [added the wounded man.] Now we are saved. But what things I have seen! I have seen an officer with his brain hanging here, over his eye. And black corpses, and bloated horses! The saddest time is the night. One hears cries: "Help!" There are some who call their mothers. No one answers.

All these recitals of soldiers are stamped with the red badge of courage. A priest serving as an Adjutant was superintending the digging of trenches close to the firing line on the Aisne. He had to expose himself for a space of three feet in going from one trench to another. In that instant a Mauser bullet struck him under the left eye, traversed the nostril, the top of the palate, the cheek bone and came out under the right ear. He felt the bullet only where it came out, but soon he fell, covered with blood and believed he was wounded to death. Then his courage returned,

and he crawled into the trench. Comrades carried him to the ambulance at Ambleny, with bullets and "saucepans" raining about them from every direction. In time he was transferred to the American Hospital at Neuilly. "I'm only a little disfigured and condemned to liquids," he told his friend the abbé. "In a few weeks I shall be cured and will return to the front."

Abbé Klein tells the curious story of a Zouave and his faithful dog. In one of the zigzag corridors connecting the trenches near Arras the man was terribly wounded by a shell that killed all his companions and left him three-quarters buried in the earth. With only the dead around him, he "felt himself going to discouragement," to use the author's mild phrase, when his dog, which had never left him since the beginning of the war, arrived and began showing every sign of distress and affection. The wounded man told the author:

It is not true that he dug me out, but he roused my courage. I commenced to free my arms, my head, the rest of my body. * Seeing this, he began scratching with all his might around me, and then caressed me, licking my wounds. The lower part of my right leg was torn off, the left wounded in the calf, a piece of shell in the back, two fingers cut off, and the right arm burned. I dragged myself bleeding to the trench, where I waited an hour for the litter carriers. They brought me to the ambulance post at Roclincourt, where my foot was taken off, shoe and all; it hung only by a tendon. From there I was carried on a stretcher to Anzin, then in a carriage to another ambulance post, where they carved me some more. * * * My dog was present at the first operation. An hour after my departure he escaped and came to me at Anzin.

But when the Zouave was sent to Neuilly the two friends had to separate. At the railway station he begged to take his dog along, and told his story; but the field officer, touched though he was, could not take it upon himself to send a dog on a military train. The distress of both man and beast was so evident that more than one nurse had tears in her eyes as the train pulled out.

They tried to pet the dog, dubbed him Tue-Boches, offered him dog delicacies of all sorts, but in vain. He refused all food and remained for two days "sad

to death." Then some one went to the American Hospital, told how the dog had saved the Zouave, and the upshot of it was that the faithful animal, duly combed and passed through the disinfecting room, was admitted to the hospital and recovered his master and his appetite. But at last accounts his master was still very weak, and "in the short visit which the dog is allowed to make each day, he knows perfectly, after a tender and discreet good morning, how to hold himself very wisely at the foot of the bed, his eyes fixed upon his patient."

Thanks to modern science, the cases of tetanus are few in this war, but there are many deaths from gangrene, because, with no truce for the removal of the wounded, so many lie for days before receiving medical aid. Abbé Klein tells of one Breton boy, as gentle a soul as his sister—"my little Breton," he always calls him, affectionately—and comments again and again upon the boy's patient courage amid sufferings that could have but one end. The infection spread in spite of all that science could do, and even amputation could not save him. At last he ceased to live, "like a poor little bird," as his French attendant, herself a mother with three boys in the army, said with tears.

Saddest of all are the bereaved wives and mothers. The reader will find many of them in the good Chaplain's book, and they will bring the war closer than anything else. Sometimes they stand mute under the blow, looking on the dead face without a sound, and then dropping unconscious to the floor. Sometimes they cry wild things to heaven. The Chaplain's work in either case is not easy, and some of his most touching pages depict such scenes.

There was a boy of twenty years, who was slowly but surely dying of gangrene. Let the abbé tell the end of the story:

At 9 o'clock the parents arrive. Frightened at first by the change, they are reassured to see that he is suffering so little, and soon leave him, as they think, to rest. When they return at 10, suddenly called, their child is dead. Their grief is terrible. The father still masters himself, but the mother utters cries. They are led to the chapel, while some one comes to look for me. The poor woman,

who was wandering about stamping and wringing her hands, rushes to me and cries, no, it is not possible that her son is dead, a child like that, so healthy, so beautiful, so lovable; she wishes me to reassure her, to say it is as she says. Before my silence and the tears that come to my eyes her groans redouble, and nothing can calm her: "But what will become of us? We had only him."

Nothing quiets her. My words of Christian hope have no more effect than what the father tries to say to her. For a moment she listens to my account of the poor boy's words of faith, of the communion yesterday, of his prayer this morning. But soon she falls back into her distraction, and I suggest to the husband that he try to occupy her mind, to make a diversion of some kind; the more so, I add, as I must leave to attend a burial. She hears this word: "I don't want him to be taken from me. You are not going to bury him at once!" I explain softly that no one is thinking of such a thing; that on the contrary I am going to take her to those who will let her see her boy. We go then to the office, and I hurry away to commence the funeral of another.

I learn on my return that they have seen their son, such as death has made him, and that on hearing the cries of the mother, three other women, already agitated by the visit to their own wounded and by the funeral preparations, have fallen in a faint.

One day last Fall President Poincaré, accompanied by M. Viviani and General Gallieni, was received at the American Hospital by Mr. Herrick, the American Ambassador, and by the members of the Hospital Committee. Abbé Klein has words of praise not only for Mr. Herrick, but also for his predecessor, Mr. Bacon, and for his successor, Mr. Sharp. His admiration for the devoted American women who are serving as nurses in the hospital is expressed frequently in his pages. He says the labors of the American nurses and those of the French nurses complement each other admirably. Of the founding and maintenance of the hospital at Neuilly, he says:

The resources are provided wholly by the charity of Americans. From the beginning of the war the administrative council of their Paris hospital took the initiative in the movement. The American colony in France, almost unaided, gave the half-million francs that was subscribed the first month. New York and other cities of the United States followed their lead, and, in spite of the financial crisis that grips there as elsewhere, one may be sure that the funds will not be wanting. America has its Red Cross, which, justly enough, aids the wounded of all nations; but, among the belligerents, it has chosen to dis-

tinguish the compatriots of Lafayette and Rochambeau; our field hospital is the witness of their faithful gratitude. France will not forget.

Later the abbé recorded in his diary that the 500 beds would soon be filled, but added that the generous activity of the Americans would not end there. They would establish branch hospitals. Large sums had been placed at the disposal of the committee to found an "ambulance" in Belgium and another in France as near the front as prudence permitted. Toward the end of January he recorded the gift of \$200,000 from

Mrs. Harry Payne Whitney, and its use by the committee to establish an affiliated hospital at the College of Juilly, in the Department of Seine-et-Marne. He added that still other branches were about to be founded with American funds.

Abbé Klein writes out of a full and sincere heart, whether as a priest, a patriot, or a man who loves his fellow-men; and, without seeking it, he writes as a master of phrase. His new book probably will soon be translated and published in the United States.

A TROOPER'S SOLILOQUY

By O. C. A. CHILD

'TIS very peaceful by our place the now!
Aye, Mary's home from school—the
little toad—

And Jeck is likely bringing in the cow,
Away from pasture, down the hillside road.

Now Nancy, I'll be bound, is brewing tea!
She's humming at her work the way she
will,
And, happen so, she maybe thinks of me
And wishes she'd another cup to fill.

'Tis very queer to sit here on this nag
And swing this bit o' blade within my
hand—

To keep my eye upon that German flag
And wonder will they run or will they
stand;

To watch their Uhlans forming up below,
And feel a queersome way that's like to
fear;
To hope to God that I won't make a show,
And that my throat is not too dry to cheer;

To close my eyes a breath and say "God
bless
And keep all safe at home, and aid us win,"
Then straighten as the bugle sounds "Right,
Dress * * *"
Hurrah! Hurrah! Hurrah! We're going
in!

American Unfriendliness

By Maximilian Harden

[From THE NEW YORK TIMES, April, 1915.]

Maximilian Harden, author of the article of which the following is a translation, is the widely known German journalist and publicist who has been termed "the German George Bernard Shaw." The article was published in the second February number of *Die Zukunft*.

JAPAN and the United States are being wooed. Ever since the Western powers' hope of speedy decisive blows on the part of Russia have shriveled up, they would like to lure the Japanese Army, two to four hundred thousand men, to the Continent. What was scoffed at as a whim of Pinchon and Clemenceau now is unveiled as a yearning of those at the head of the Governments.

The sentimental wish to see Germany's collapse completed by the activities of the allied European powers now ventures only shyly into the light of day. The ultimate wearing down of the German Army assures us of victory; but a speedy termination of the war under which the whole hemisphere suffers would be preferable. The Trans-Siberian Railway could bring the Japanese to Poland and East Prussia. The greatness of the expenditures therefor cannot frighten him who knows what tremendous sums each week of the war costs the Allies. Where it is a question of our life, of the existence of all free lands, every consideration must vanish. Public opinion desires an agreement with the Government of the Mikado.

These sentences I found in the Temps. England will not apply the brakes. Mr. Winston Churchill, to be sure, lauds the care-free fortune of his fatherland, which even after Trafalgar, he says, did not command the seas as freely as today; but in his inmost heart even this "savior of Calais" does not cheat himself concerning the fact that it is a matter of life and death. In order not to succumb in such a conflict, England will sacrifice its prosperous comfort and the lordly pride of the white man just as willingly as it would, if necessary, Gibraltar and Egypt,

(which might be within the reach of German armies in the Spring.)

Will Japan follow the luring cry? Any price will be paid for it. What is Indo-China to the Frenchmen, whose immense colonial empire is exploited by strangers, if thereby they can purchase the bliss of no longer being "the victims of 1870"? And the yellow race that co-operated on Europe's soil in the most momentous decision of all history would live in splendor such as had never before been seen, and could keep China, the confused, reeling republic, for at least a generation in its guardianship.

The land of the Stars and Stripes is only being asked to give its neutrality the color of good-will. It is, for the time being, unlikely that the United States would stand beside our opponents with army and navy, as has been urgently counseled by Mr. Roosevelt, (who received the honorary doctor's title in Berlin and as a private citizen reviewed a brigade drill at the Kaiser's side.) Nevertheless, experience warns us to be prepared for every change of weather, from the distant West, as well as the distant East, (and to guard ourselves alike against abuse and against flattery.)

The sentiment of the Americans is unfriendly to us. In spite of Princes' travels, Fritz monuments, exchanges of professors, Kiel Week, and cable compliments? Yes, in spite of all that. We can't change it. And should avoid impetuous wooing.

The missionaries of the Foreign Office brought along with them in trunks and bundles across the sea the prettiest eagerness; but in many cases they selected useless and in some cases even injurious methods. Lectures, pamphlets, defensive

writings—the number of the defenders and the abundance of their implements and talk only nursed suspicion. Whatever could be done for the explanation of the German conduct was done by Germania's active children, who know the country and the people.

The American business man never likes to climb mountains of paper. He has grown up in a different emotional zone, accustomed to a different standard of values than the Middle European. To feel his way into foreign points of view, finally to become, in ordinary daily relations, a psychologist, that will be one of the chief duties of the German of tomorrow. He may no longer demand that the stranger shall be like him; no longer denounce essential differences of temperament as a sin. The North American, among whose ancestors are Britons and Spaniards, Celts and Dutchmen, South Frenchmen and Low Germans, does not easily understand the Englishman, despite the common language; calls him surly, stiff, cold; charges him with selfishness and presumption, and has never, as a glance backward will show, shirked battle with him for great issues. For the most part, to be sure, it remains the scolding of relatives, who wish to tug at and tousel each other, not to murder each other.

Only before the comrade of Japan did the brow of Jonathan wrinkle more deeply. But every Briton swore that his knisman would bar the yellow man's way to Hawaii, California, and the Philippines, and put him in the fields of Asia only as a terror to the Russians or a scarecrow to the Germans. A doubt remained, nevertheless; and we missed the chance of a strong insurance against Japanese encroachment. Stroked caressing yesterday and boxed ears today:

Over there the dollar alone rules, and all diplomacy is a pestilential swamp; decency is an infrequent guest, with scorn grinning ever over its shoulder; the entrepreneur is a rogue, the official a purchasable puppet, the lady a cold-cream-covered lady-peacock.

The stubborn idealism, the cheerful ability of the American, his joy in giving, his achievements in and for art, science, culture—all that was scarcely

noticed. Such a caricature could not be erased by compliments.

Before Mr. Roosevelt bared his set of stallion's teeth (*Hengstgebiss*) to the Berliners, he had spoken cheerfully to Admirals Dewey and Beresford concerning the possibilities of a war of the Star-Spangled Banner against Germany. And gentler fellow-countrymen of the billboard man said:

You're amazing. Yourself devilishly greedy for profits, yet you scoff at us because we go chasing after business. You fetch heaps of money across the sea, and then turn up your sublimely snuffing noses as if it stinks.

To reach an understanding would have been difficult even in times of peace. The American is unwilling to be either stiff or subservient. He does not wish to be accounted of less value as a merchant than the officer or official; wishes to do what he likes and to call the President an ox outright if he pleases. Leave him as he is; and do not continually hurt the empire and its swarms of emigrant children by the attempt to force strangers into the shell of your will and your opinion.

Is it not possible that the American is analyzing the origin of the war in his own way? That he looks upon Belgium's fate with other eyes than the German? That he groans over "the army as an end in itself" and over "militarism"? That he does not understand us any quicker than the German Michel understands him? And that he puffs furiously when, after a long period of drought, the war, a European one, now spoils his trade?

Only for months at the worst, Sam; then it will spring up again in splendor such as has never been seen before. No matter how the dice fall for us, the chief winnings are going to you. The cost of the war (expense without increment, devastation, loss of business) amounts to a hundred thousand million marks or more for old Europa; she will be loaded down with loans and taxes. Even to the gaze of the victor, customers will sink away that were yesterday capable of buying and paying. Extraordinary risks cannot be undertaken for many a year

on our soil. But everybody will drift over to you—Ministers of Finance, artists, inventors, and those who scent profits. You will merely have to free yourselves from dross (and from the trust thought that cannot be stifled) and to weed out the tares of demagoguery; then you will be the effective lords of the world and will travel to Europe like a great Nürnberg that teaches people subsequently to feel how once upon a time it felt to operate in the Narrows.

The scope of your planning and of your accomplishment, the very rank luxuriance of your life, will be marveled at as a fairy wonder. We, victors and conquered and neutrals, will alike be confined by duty to austere simplicity of living. Your complaint is unfounded; only gird yourselves for a wee short time in patience. Whether the business deals which you grab in the wartime smell good or bad, we shall not now publicly investigate. If law and custom permit them, what do you care for alien heartache? If the statutes of international law prohibit them, the Governments must

insure the effectiveness thereof. Scolding does not help. Until the battle has been fought out to the finish, until the book of its genesis has been exalted above every doubt, your opinion weighs as heavy as a little chicken's feather to us. Let writer and talker rave till they are exhausted—not a syllable yet in defense.

We do not feel hurt, (haven't spare time for it;) indeed, we are glad that you gave ten millions each month for Belgium, that you intend to help care for Poland, that you are opening the savings banks of your children. But, seriously, we beg you not to howl if American ships are damaged by the attack of German submarines. England wishes to shut off our imports of foodstuffs and raw materials, and we wish to shut off England's. You do not attempt to land on our coast; keep away also from that of Britain. You were warned early. What is now to take place is commanded by merciless necessity; must be.

And let no woeful cries, no threats, crowd into Germany's ears.

ENDOWED WITH A NOBLE FIRE OF BLOOD

By A. Kouprine

[From King Albert's Book.]

NOT applause, not admiration, but the deep, eternal gratitude of the whole civilized world is now due to the self-denying Belgian people and their noble young sovereign. They first threw themselves before the savage beast, foaming with pride, maddened with blood. They thought not of their own safety, nor of the prosperity of their houses, nor of the fate of the high culture of their country, nor of the vast numbers and cruelty of the enemy. They have saved not only their fatherland, but all Europe—the cradle of intellect, taste, science, creative art, and beauty—they have saved from the fury of the barbarians trampling, in their insolence, the best roses in the holy garden of God. Compared with their modest heroism the deed of Leonidas and his Spartans, who fought in the Pass of Thermopylae, falls into the shade. And the hearts of all the noble and the good beat in accord with their great hearts. * * *

No, never shall die or lose its power a people endowed with such a noble fire of blood, with such feelings that inspire it to confront bereavement, sorrow, sickness, wounds; to march as friends, hand in hand, adored King and simple cottager, man and woman, poor and rich, weak and strong, aristocrat and laborer. Salutation and humblest reverence to them!

Chronology of the War

Showing Progress of Campaigns on All Fronts and Collateral Events
from Feb. 28, 1915, Up To and Including March 31, 1915

[Continued from the March Number]

CAMPAIGN IN EASTERN EUROPE

- March 1—Two German army corps are defeated in struggle for Przasnysz; Germans bombard Ossowetz.
- March 2—Russians win Dukla Pass; 10,000 Germans taken prisoner at Przasnysz; Russians reinforced on both flanks in Poland; Austrians meet reverse near Stanislaw; Austrians make progress in the Carpathians; Russians shell Czernowitz.
- March 3—Russians press forward from the Niemen and the Dniester; Austro-German army driven back in Galicia; Germans demolish two Ossowetz forts.
- March 4—Russians are pressing four armies through the mountain passes into Hungary; they have checked a new Bukowina drive on the part of the Austrians.
- March 5—Russians are taking the offensive from the Baltic Sea to the Rumanian frontier; German armies in the north have been split into isolated columns; Russians report the recapture of Stanislaw and Czernowitz; snow is retarding the invasion of Hungary.
- March 6—Russian centre takes up attack; Russians are gaining in North Poland; Austrians give ground in East Galicia.
- March 7—Germans start another drive in region of Pilica River; Austrians retreat in Bukowina.
- March 8—Russians silence two batteries of German siege artillery at Ossowetz; Austrians gain ground in the Carpathians and Galicia; it is reported that German troops in Northern Poland and Galicia are exhausted.
- March 9—Germans are raising the siege of Ossowetz and are retreating in Northern Poland; Russians claim that the Austrian offensive in Eastern Galicia is a complete failure.
- March 10—Germans attempt to break through Russian line in Northern Poland; General Elchorn's army, retreating from the Niemen, is being harried by Russian cavalry and has been pierced at one point; Austrians have successes in the Carpathians and Western Galicia.
- March 11—One million men are engaged in a series of battles in Northern Poland, the front being eighty miles long.
- March 12—In the Carpathians the Russians capture the villages of Lupkow and Smolnik and the surrounding heights.
- March 13—Russians check German offensive against Przasnysz; fighting in progress along Orzyc River; Austrians repulse Russian attack near Cisna in the Carpathians.
- March 14—Russians check German advance in Mlawa region.
- March 15—Russians capture the chief eastern defense of Przemysl, three miles from the heart of the defense system, Austrian troops which held the position leaving many guns in the snow; the siege ring is now drawn tighter; battle is on in Bukowina; there is fighting among the ice fields of the Carpathians.
- March 16—Russians take vigorous offensive and drive back army that was marching on Przasnysz; 100,000 men have been buried in a triangle a few miles in area between Warsaw and Skierniewice; Germans are making use of fireworks at night to locate Russian guns; Austrian Archduke Frederick suggests to Emperor Francis Joseph the abandonment of the campaign against Serbia, all troops to be diverted to the Carpathians.
- March 17—Przemysl is in peril; Russians have recrossed the German frontier in two places; there is fighting on a 600-mile front; it is reported that the Austrian Army in East Galicia has been flanked; a battle is being fought in the snow for the possession of Tarnowice.
- March 18—Germans threaten severe reprisals on Russians for devastation in East Prussia; German offensive in much of Poland is reported to be broken.
- March 19—Memel, German port on the Baltic, is occupied by the Russians; Tilsit is menaced; Von Hindenburg starts a new offensive in Central Poland; the Germans have lost heavily along the Pilica; Austrians claim that they have halted the Russian advance in the Carpathians.
- March 20—Russians win battle in streets of Memel; battle line extends to Rumanian border; sortie by Przemysl garrison is driven back; statistics published in Petrograd show that 95 towns and 4,500 villages in Russian Poland have been devastated as result of German invasion; damage estimated at \$500,000,000.

March 21—Austrians renew operations against Serbia and are defeated in artillery duel near Belgrade; Russians are advancing on Tilsit; another Przemysl sortie is repelled.

March 22—After a siege which began on Sept. 2, the longest siege in modern history, the great Galician fortress of Przemysl is surrendered to the Russians, who capture 9 Austrian Generals, 300 officers, and 125,000 men, according to Russian statements; the strategic value of Przemysl is considered great; as it guarded the way to Cracow and to important Carpathian passes; Germans retake Memel; Russians are preparing for vigorous offensive in the Carpathians; Austrians are shelling the Montenegrin front.

March 23—Demonstrations are held in Russia over fall of Przemysl; Germans say that the capture of the place cannot influence general situation.

March 24—Battle is being fought in the Carpathians; Russians march on Hungary and pursue strong column that had been seeking to relieve Przemysl; Germans withdraw big guns from Ossowetz.

March 25—Russians carry Austrian position on crest of Beskid Mountains in Lupkow Pass region and win victory in Bukowina; fighting in Southern Poland is resumed.

March 26—It is reported that the Austro-German armies in the Carpathians are withdrawing into Hungary; Germans retreat in the north.

March 27—Violent fighting in the Carpathians; Austrians make gains in Bukowina.

March 28—Russians break into Hungary and carry on offensive operations against Uzok and Lupkow Passes.

March 29—Austrians make gains at several points; Russians say that the Memel dash was a mere raid.

March 30—Russians storm crests in the Carpathians; Austrians are in a big drive across Bukowina; 160,000 Germans are reported as being rushed to Austria.

March 31—Russians are making their way down the southern slopes of the Carpathians into Hungary; German army corps reported trapped and cut to pieces in Northern Poland; Pola is preparing for a siege.

CAMPAIGN IN WESTERN EUROPE.

March 2—Germans are pouring reinforcements into Belgium; British gain ground near La Bassée.

March 4—Hard fighting in the Vosges; Germans spray burning oil and chemicals upon French advancing in Malancourt woods.

March 5—Germans checked at Rheims; report of Sir John French says situation is unchanged in Belgium; Germans are holding reserves in Alsace.

March 9—Floods hamper campaign in Alsace; it is reported that Germans are shelling factories in France which they cannot capture.

March 10—Germans declare that the French have failed in the Champagne district and have lost 45,000 men.

March 11—After several days of severe fighting the British capture Neuve Chapelle, the German loss being estimated by British at 18,000; the British also have lost heavily, particularly in officers; British believe they will now be able to threaten seriously the German position at La Bassée; French War Office says operations in Champagne have aided Russians by preventing Germans from reinforcing eastern armies.

March 12—British are pressing on toward Lille; they gain near Armentières, occupy Epinette, and advance toward La Bassée; Germans are intrenched in Aubers; the new drive is expected by Allies to prevent Germans in the west from sending reinforcements to the east.

March 13—Sir John French reports further gains in Neuve Chapelle region.

March 14—French occupy Vauquois, the key to a wide area of the Argonne; they capture trenches and occupy Embermenil; Belgians gain on the Yser; British repel German attack on Neuve Chapelle; it is announced that the French recently won a victory at Reichackerkopf in Alsace.

March 15—French capture trenches north of Arras; Germans drive back British south of Ypres; Germans meet reverse at Neuve Chapelle; it is announced that the French recently won a victory at Combres; French and British are preparing for a general offensive; the first installment is given out from French official sources of a historical review of the war, from the French viewpoint, covering the first six months.

March 16—Belgians cross the Yser; they drive Germans from trenches south of Nieupert; British retake St. Eloi; barbed wire fence, ten feet high, encompasses entire zone of German military operations in Alsace; British still hold Neuve Chapelle after several spirited attempts to retake it.

March 17—Westende bombarded; Belgians carry two positions in Yser region.

March 18—Belgian Army continues to advance on the Yser; French continue to hold the heights near Notre Dame de Lorette despite repeated shelling of their position; Germans are fortifying towns in Alsace.

March 19—Belgians and Germans are fighting a battle in the underground passages of a monastery in front of Ramscappelle; official British report tells of new German repulse at St. Eloi.

March 21—Germans take a hill in the Vosges.

March 24—New battle begins along the Yser.

March 26—Belgians make progress on road from Dixmude to Ypres.

March 27—French capture summit of Hartmanns-Wellerkopf Mountain.

March 29—French are pressing the Germans hard at various points in Champagne; as an offset, the Germans renew activity against Rheims with lively bombardments; sapping and mining operations are stated to be the only means of gaining ground in the Argonne.

TURKISH AND EGYPTIAN CAMPAIGN.

March 1—Turkish forces mass on Asiatic side of the Dardanelles under Essad Pasha, defender of Janina; Russians have completed the expulsion of Turks from Transcaucasus region and dominate the Black Sea.

March 3—Russians, after three days' battle, stop reinforcements for Turks in the Caucasus.

March 5—Turks abandon for the time the campaign against Egypt and recall troops.

March 7—British drive Turks back from the Persian Gulf, with considerable losses on both sides; it is reported that the Germans killed 300 Turks in a conflict between these allies after the Egyptian retreat.

March 9—Germans report that British were routed recently in Southern Mesopotamia.

March 12—General d'Amaade, commander of the French forces in Morocco, has been put in command of a force which is to aid the allied fleets in operations against Constantinople.

March 13—Turks are driven back in Armenia and Northwestern Persia.

March 16—Russians rout Turks in Armenia and threaten Turks in the Caucasus.

March 18—Turkish soldiers kill several civilians in the Urumiah district of Persia; Turks are massing large forces near Constantinople and on Asiatic side of the Dardanelles.

March 19—Russians occupy Archawa.

March 20—Turks reported to be four days' march from Suez Canal.

March 23—Turkish force operating against town of Suez is routed.

CAMPAIGN IN FAR EAST.

March 12—It is reported from Peking that nine Germans, among them the German Military Attaché at Peking, who is leading the party, escaped from Tsing-tao when it fell, and have made their way 1,000 miles into Manchuria, where they are trying to blow up tunnels along the Trans-Siberian railway; Russian troops are pursuing them.

CAMPAIGN IN AFRICA.

March 21—Official announcement is made that General Botha, Commander in Chief

of the Army of the Union of South Africa, has captured 200 Germans and two field guns at Swakopmund, German Southwest Africa.

NAVAL RECORD—GENERAL.

March 1—Norwegian steamer reports ramming a submarine off English coast.

March 2—Bulgaria protests to Austria, Russia, and Serbia against mines in the Danube; diligent inquiry in England fails to produce any evidence supporting report that British superdreadnought Audacious, wrecked by mine or torpedo on Oct. 27, is about to be restored to the fighting line.

March 3—Allied fleet silences three inner forts on the Asiatic side of the Dardanelles; Berlin report says British cruiser Zephyr was damaged.

March 4—Attack on Dardanelles continues; French ships bombard Bulair forts and destroy Kavak Bridge; Field Marshal von der Goltz has asked for German artillery officers to aid in defending Dardanelles, but it is reported that Germans cannot spare any; German submarine U-8 is sunk by destroyers of the Dover flotilla; German submarine chases hospital ship St. Andrew.

March 5—Allies report that six, possibly seven, German submarines have been sunk since beginning of the war; two Captains of British merchant ships claim prize for sinking German submarines; British Admiralty informs shipping interests that a new mine field has been laid in the North Sea; Germans report a French ammunition ship sunk at Ostend; Japanese report that the schooner Aysha, manned by part of the crew of the Emden, is still roving the Indian Ocean; there is despair in Constantinople as Dardanelles bombardment continues; Russian Black Sea fleet is steaming toward the Bosphorus; allied fleet is bombarding Smyrna.

March 6—British ships Queen Elizabeth and Prince George attack strong Dardanelles forts, they blow up one and damage two; allied landing party suffers loss; Asia Minor ports are being shelled; one-third of the Dardanelles reported clear of Turkish mines; concentration of Turkish fleet reported; Germans state that a submarine, reported by the Captain of British merchantman Thordis to have been sunk by his vessel, escaped; German Embassy at Washington expresses regret over torpedo attack on British hospital ship Asturias in February, stating that the attack, which did no harm, was due to mistake.

March 7—Queen Elizabeth and other ships continue bombardment of Dardanelles forts.

March 8—Allied fleet forces its way further into Dardanelles, British ships opening direct fire on main Turkish positions; more forts are silenced; most of the Allies' ships are hit, but little damage is done; effective fire at 21,000 yards against batteries on the Asiatic side; seaplanes are being much used for locating concealed guns; it is reported from Petrograd that when the allied fleets began the forcing of the Dardanelles a Russian ship was invited to head the column, and did so; ports on the Black Sea are destroyed by Russians; British Admiralty announces that prisoners from U-8 will be segregated under special restrictions, and they may be put on trial after the war because of German submarine methods; British collier Bengrove sunk in Bristol Channel by torpedo or mine.

March 9—German submarines sink three British merchantmen, thirty-seven men going down with one ship; Military Governor of Smyrna says that British have bombarded undefended villages; another British superdreadnought joins allied fleet at Dardanelles; French transports are on way with troops; Turks lose coal supply by Russian bombardment of Zunguldiak; report from Berlin that German submarine U-16 has sunk five merchantmen; British Admiralty states that German submarines, from Jan. 21 to March 3, sank fifteen British steamships out of a total of 8,734 vessels above 300 tons arriving at or departing from British ports in that period; more mines planted near Denmark.

March 10—German auxiliary cruiser Prince Eitel Friedrich anchors at Newport News for repairs and supplies; she brings passengers and crews of eleven merchant ships sunk by her in a cruise of 30,000 miles, including crew of American sailing ship William P. Frye, bound from Seattle to Queenstown with wheat, sunk on Jan. 28, despite protests of the Frye's Captain; more Dardanelles forts are reduced; batteries on Eren-Keui Heights silenced; British sink German submarine U-12; British collier Beethoven sunk.

March 11—President Wilson states that there will be "a most searching inquiry" into the sinking of the William P. Frye by the Prinz Eitel Friedrich, "and whatever action is taken will be based on the result of that inquiry"; Commander Thierichens of the Eitel defends sinking of the Frye, claiming her cargo was contraband; British warships are ordered to the entrance to the Capes of the Chesapeake to prevent escape of the Eitel; Eitel goes into drydock for repairs; more Dardanelles forts are damaged; mine sweeping is being conducted by the Allies at night; allied fleet before Smyrna gives Turkish commander twenty-four hours to surrender, otherwise bombardment will go

on; it is reported from The Hague that twelve German submarines are missing; Germans talk of reprisals if British do not treat submarine crews as prisoners of war.

March 12—Dardanus batteries on the Dardanelles are silenced; Germans are fortifying Constantinople; Allies' Consuls demand establishment of a neutral zone at Smyrna; British auxiliary cruiser Bayano sunk off coast of Scotland, probably by a submarine, with loss of 200; it is learned that British bark Conway Castle was sunk on Feb. 27 off the Chilean coast by the German cruiser Dresden; it is learned that French steamer Guadeloupe has been sunk off Brazil by the German auxiliary cruiser Kronprinz Wilhelm; it is reported from Berlin that Germans have sunk 111 merchant steamships, with tonnage of 400,000, since war began; British cotton ship Indian Prince is reported sunk.

March 13—England has lost 90 merchant ships and 47 fishing vessels, sunk or captured, since the war began; Vice Admiral Carden is stated to have predicted the forcing of the Dardanelles by Easter; fog delays Allies' operations in Dardanelles; five British warships wait for Eitel off Virginia Capes.

March 14—Three British cruisers sink German cruiser Dresden near Juan Fernandez Island; no damage to British ships; French steamer Auguste Conseil sunk by German submarine; German submarine U-29 is reported to have sunk five British merchantmen in the last few days; citizen of Leipzig offers reward to crew of submarine that sinks a British transport.

March 15—It is reported from Rio Janeiro that Kronprinz Wilhelm has sunk thirteen ships since she began her attack on Allies' commerce.

March 16—Officers of the Dresden at Valparaiso say their ship was sunk in neutral waters; British say she was sunk ten miles off shore; German liner Macedonia, interned at Las Palmas, Canary Islands, slips out of port; British cruiser Amethyst is reported to have made a dash to the further end of the Dardanelles and back; a mine sweeper of the Allies is blown up; Vice Admiral Carden, "incapacitated by illness," in words of British Admiralty, is succeeded in chief command in the Dardanelles by Vice Admiral De Robeck; Germany protests to England against promised harsh treatment of submarine crews; British and French warships again appear off coast of Belgium.

March 17—It is reported from Denmark that the German cruiser Karlsruhe has been sunk; it is reported from Spain that the Macedonia has been captured by a British cruiser; two British steamers are sunk and one is damaged by German sub-

- marines; German steamer *Sierra Cor-doba*, which aided the *Dresden*, is detained by Peruvian authorities until end of the war; British lose three mine sweepers and one sailing vessel in the Dardanelles.
- March 18—British battleships *Irresistible* and *Ocean* and French battleship *Bouvet* are sunk by floating mines in the Dardanelles while bombarding forts; 600 men lost with the *Bouvet*, but almost all of the British escape; British battle-cruiser *Inflexible* and French battleship *Gaulois* are badly damaged by shells from the forts; most of the forts suffer severely from the fleet fire; French submarine is sunk in the Dardanelles; there is a lull in bombardment of Dardanelles and of Smyrna; German submarine sinks British steamer *Glenartney* in English Channel; Copenhagen report says a German sea Captain states that the *Karlsruhe* was sunk in December.
- March 19—Negotiations are being carried on, with American Embassy at Constantinople as intermediary, to try to avert shelling of Pera when allied fleet forces the Dardanelles; British steamers *Hyndford* and *Bluejacket* torpedoed in English Channel.
- March 20—One French and two British battleships are on their way to Dardanelles to take place of vessels sunk; new attack is planned by Allies, with Russia co-operating; Turks say that the ships sunk on March 18 were torpedoed; Chilean seamen say *Dresden* was sunk in Chilean waters; Smyrna garrison is reinforced; dummy war fleet, composed of disguised merchantment, is reported to be ready in England for use in strategy against the Germans.
- March 21—German submarine sinks British collier *Cairntorr* off Beachy Head.
- March 22—British steamer *Concord* is torpedoed by a German submarine, but is stated not to have been sunk.
- March 23—Dutch steamer is fired on by a German trawler; Turks send reinforcements to Dardanelles forts.
- March 24—German vessels shell Russian positions near Memel; allied fleet resumes bombardment of Dardanelles forts; Allies land troops on Gallipoli Peninsula to help in a general attack on the forts which is planned on arrival of more British and French ships; many Europeans are leaving Constantinople.
- March 27—U. S. battleship *Alabama* is ordered to proceed to Norfolk at once to guard American neutrality should Prinz Eitel Friedrich leave port.
- March 28—British African liner *Falaba* is torpedoed and sunk by German submarine in St. George's Channel; she carried 160 passengers and crew of 90, of which total 140 were saved; many were killed by the torpedo explosion; British steamer *Aguila* is sunk by German submarine U-28 off Pembroke-shire coast; she carried three passengers and crew of forty-two, all pas-sengers and twenty-three of crew being lost; Russian Black Sea fleet attacks Bosphorus forts; Dardanelles forts again bombarded; German Government, in official statement, says that *Dresden* was sunk in neutral Chilean waters.
- March 29—Dutch steamer *Amstel* is blown up by a mine; Russians renew Bosphorus attack; allied fleet shells Dardanelles forts at long range; reinforced Russian fleet is showing activity in the Baltic; German Baltic fleet is out.
- March 31—London reports that three fleets and three armies will combine in attack on Dardanelles forts; the forts are again bombarded; British steamers *Flaminian* and *Crown of Castile* are sunk by German submarines; Prinz Eitel Friedrich coals under guard of American sailors and soldiers; Germans shell Libau.

NAVAL RECORD—EMBARGO AND WAR ZONE.

- March 1—Premier Asquith announces in the House of Commons the purpose of England and France to cut Germany off from all trade with the rest of the world; "the British and French Governments will, therefore, hold themselves free to detain and take into port ships carrying goods of presumed enemy destination, ownership, or origin"; officials in Washington think this attitude of the Allies disregards American rights.
- March 3—Germany alters relief ship rules; vessels may pass through the English Channel unmolested, but because of mines Germany cannot grant safe conduct for relief ships to and from England.
- March 4—Secretary Bryan makes public the text of German reply to American note suggesting modifications of war zone decree; Germany expresses willingness to make modifications if England will allow foodstuffs and raw materials to go to German civilians, and if England will make other modifications in her sea policy; German reply is forwarded to Ambassador Page to be submitted to the British Foreign Office for information of English Government; American State Department makes public part of a recent dispatch from Ambassador Gerard stating that German Government refuses to accept responsibility for routes followed by neutral steamers outside German waters; Henry van Dyke, American Minister at The Hague, advises the State Department that Germany is anxious to give every possible support to the work of American Relief Commission for Belgium, and will facilitate the passage of ships as much as possible.
- March 5—Holland-America Line steamer *Noorderdijk*, bound for New York, returns to Rotterdam badly disabled, it being reported that she was torpedoed in English Channel.

- March 6—Passenger service from Holland to England is to be extended.
- March 8—Germany includes in the war zone the waters surrounding the Orkney and Shetland Islands, but navigation on both sides of the Faroe Islands is not endangered.
- March 9—It is announced at Washington that identical notes of inquiry have been sent to the British and French Governments asking for particulars as to how embargo on shipments to and from Germany is to be enforced.
- March 13—Submarine blows up Swedish steamer Hanna, flying her own flag, off east coast of England; six of crew lost.
- March 15—Text made public of British Order in Council cutting off trade to and from Germany; British Government, replying to American note, refuses to permit foodstuffs to enter Germany for civilian population as suggested; British Government also replies to American note of inquiry as to particulars of embargo, Sir Edward Grey saying that object of Allies is, "succinctly stated, to establish a blockade to prevent vessels from carrying goods for or coming from Germany."
- March 17—Secretary Bryan makes public full text of six recent notes exchanged between the United States and the Allies and Germany regarding the embargo and the war zone; Allies contend German war methods compel the new means of reprisal.
- March 18—Denmark, Norway and Sweden make an identical representation to the Allies against the embargo decree on trade to and from Germany.
- March 20—Holland protests to Allies against embargo.
- March 21—German submarine U-28 seizes Dutch steamers Batavier V. and Zaanstroom and their cargoes.
- March 22—Holland asks explanation from Germany of seizure of Batavier V. and Zaanstroom.
- March 25—Submarine U-28 sinks Dutch steamer Medea.
- March 26—Dutch press is aroused over the sinking of the Medea; Ministry holds extraordinary council.
- March 27—Germany tells Holland that investigation into seizure of the Batavier V. and Zaanstroom has not been concluded.
- March 7—French official statement shows that French airmen during the war have made 10,000 aerial reconnaissances, consuming 18,000 hours in the air, and have traveled more than 1,116,000 miles; Zeppelin reported captured by allied airmen near Bethune.
- March 9—British seaplanes drop bombs on Ostend; Lieut. von Hidelen, who dropped bombs on Paris in September, is at Toulon as a prisoner of war.
- March 12—German airmen bombard Oso-wetz.
- March 14—Strassburg is threatened by a fire started by French airman's bomb; allied aeroplanes said to have wrecked Zeppelin near Tirlémont.
- March 17—German airman unsuccessfully aims five bombs at British coasting steamer Blonde in the North Sea.
- March 18—Bombs from Zeppelin kill seven in Calais.
- March 20—German airmen drop bombs near Deal, but all fall into the sea; one bomb narrowly misses American bark Manga Reva.
- March 21—Two Zeppelins drop bombs on Paris, but damage is slight; eight persons are injured; Zeppelin drops bombs on Calais, with slight damage, and is driven off by guns.
- March 22—Rotterdam reports that German aviators are aiming bombs indiscriminately at ships in the North Sea, one Taube dropping five bombs near a Belgian relief ship; airmen of Allies drop bombs on Mulheim, injuring three German soldiers.
- March 23—German aeroplane aims seven bombs at British steamer Pandion, all missing; Paris Temps says that authorities plan hereafter to fight Zeppelins by aeroplanes over Paris, something which had hitherto been avoided because of danger to Parisians.
- March 24—British airmen, in dash on Antwerp shipyards, destroy one German submarine and damage another; German aviators aim bombs and arrows at British freighter Teal, doing little damage.
- March 26—French drop bombs on Metz, killing three soldiers; little damage to property.
- March 27—German aviators drop bombs on Calais and Dunkirk; little damage.
- March 28—German aviator drops bombs on Calais; little damage.
- March 29—Germans state that during recent raid on Strassburg, bombs dropped by allied aviators killed two children and wounded seven others and one woman.
- March 30—Copenhagen reports that two Zeppelins have been badly damaged by a storm while manœuvring for a raid on England; Turkish seaplane drops bombs on British warship outside Dardanelles.

AERIAL RECORD.

- March 2—It is learned that in a recent air raid German aviators killed two women and a child at La Panne, a bathing town on Belgian coast.
- March 3—German aviator bombards Warsaw.
- March 4—French bombard German powder magazine at Rottweil.
- March 5—Zeppelin raid over Calais fails; Pegoud receives French military medal for his services.

March 31—Thirty German soldiers are killed and sixty wounded near Thourout, Belgium, by bombs dropped by airmen of Allies; fifteen German aeroplanes drop 100 bombs at Ostrolenka, Russia; German aeroplane aims bomb at Dutch trawler in North Sea, but misses her.

AUSTRIA.

March 1—Two Czech regiments revolt.

March 2—It is learned that the troops executed 200 civilians in Stanislaw.

March 17—Conviction is stated to prevail in Vienna that war with Italy is inevitable in the near future; many Austrians are declared to be indignant that Germany is trying to force the nation to cede territory to Italy.

March 18—Russian prisoners and Galician refugees are working on defensive fortifications in the Trentino, which are being prepared in event of war with Italy; heavy guns are being mounted in the mountain passes; fleet is again concentrated at Pola; Austria and Serbia agree to exchange interned men under 18 or over 50, and also women.

March 22—Men up to 52 are now being trained for active service; men formerly rejected as unfit are being called to the colors.

March 24—Five hundred thousand troops are massed in Southern Tyrol and the Trentino; many villages near the Italian frontier have been evacuated and many houses destroyed by dynamite, so as to afford better range for the big guns.

March 26—Army contract frauds are discovered in Hungary; rich manufacturers jailed.

BELGIUM.

March 2—Gen. von Bissing, German Governor General, says the tax recently ordered imposed on Belgians who do not return to their homes was suggested by Belgians themselves.

March 8—Belgian Press Bureau announces that King Albert now has an army of 140,000 men, a larger force than that which began the war.

March 9—As a result of new royal decrees calling refugee youths to the colors the number of recruits is increasing daily; a few days ago King Albert presented a number of recruits to two veteran regiments in a speech; Belgian officials are arrested by Germans on charge that they induced Belgian customs officials to go through Holland to join Belgian Army.

March 17—Government issues protest against the German allegation that documents found in Brussels show that Belgium and England had a secret understanding before the war of such a nature as to constitute a violation of Belgium's neutrality; the Government declares that conversations which took place between Belgian

and British military officers in 1906 and 1912 had reference only to the situation that would be created if Belgium's neutrality had already been violated by a third party; it is declared that the documents found by Germans, "provided no part of them is either garbled or suppressed," will prove the innocent nature of negotiations between Belgium and England.

March 18—Firm of Henri Leten is fined \$5,000 for violating order of German Governor General prohibiting payments to creditors in England.

March 20—One million pigs owned by Germans are billeted on the civilian population of Belgium, the Belgians being required to feed and care for the animals.

March 21—Germans are relaxing iron regulations to some extent in attempt to get the normal life of Belgium moving again.

March 23—Seventeen Belgian men are shot in Ghent barracks after having been found guilty by German court-martial of espionage in the interests of the Allies.

March 28—Belgian Legation at Washington issues official response to statement made by Herr von Jagow, the Imperial German Secretary of State, that "Belgium was dragged into the war by England"; response says that it was Germany, not England, that drew the nation into war.

BULGARIA.

March 6—Mobilization is now completed of three divisions of troops near Tirnova.

March 12—Heavy artillery is being transported to Janthe, near the Greek frontier.

March 20—Three Bulgarian soldiers are killed and several Greek soldiers are wounded in a fight which followed an attempted movement by strong Bulgarian force into the region of Demir-Hissar, formerly Turkish territory, now Greek.

March 26—Opposition leaders are demanding an interview with the King with a view of bringing about a change of policy favoring the Anglo-Franco-Russian alliance; Field Marshal von der Goltz is in Sofia.

March 30—Bulgaria is holding up shipments of German artillery and large quantities of ammunition destined for Constantinople.

CANADA.

March 5—Three transports arrive in England with 4,000 Canadian troops.

March 14—Second contingent is now in camp in England; it is expected that these troops will soon go to the front.

March 26—Publication of first account by Official Canadian Recorder with troops in the field of contingent's experiences; he states that there have been but few casualties so far; the infantry was held in reserve in the Neuve Chapelle fight, but the artillery was engaged.

March 27—There is made public in Ottawa the address delivered by General Alderon, commanding the Canadian Division, just before the men first entered the trenches; he warns against taking needless risks and tells the men he expects them to win, when they meet the Germans with the bayonet, because of their physique.

ENGLAND.

March 2—Order in Council promulgated providing for prize money for crews of British ships which capture or destroy enemy vessels to be distributed among officers and men at rate calculated at \$25 for each person aboard the enemy vessel at beginning of engagement; British spy system has been so perfected that it is said in some respects to excel the German; Embassy in Washington denies that women or children are interned in civilian camps.

March 4—Government appeals to aviators of British nationality in United States and Canada to join the Royal Flying Corps.

March 8—Shipowner offers \$2,000 apiece to next four merchant ships which sink German submarines.

March 9—House of Commons authorizes Government to take over control of engineering trade of country in order to increase output of war munitions.

March 14—John E. Redmond, leader of the Irish Nationalist Party, declares in speech that Ireland is now firmly united in England's cause, and that 250,000 Irishmen are fighting for Britain.

March 15—Kitchener discusses the war situation in House of Lords, he expresses anxiety over supply of war materials and blames labor unions and dram shops in part for the slow output; he praises the Canadian and Indian troops and the French Army; passport rules for persons going to France are made more stringent.

March 16—Heavy losses among officers cause anxiety; T. P. O'Connor says Irish are with the Allies; stringent passport rules are extended to persons going into Holland.

March 19—In six days 511 officers have been lost in killed, wounded, and missing; newspapers hint at conscription.

March 20—Officers lost since beginning of the war, in killed, wounded, and missing, now total 5,476, of which 1,783 have been killed.

March 23—It is reported that a second German spy was shot in the Tower of London on March 5, that a third spy is under sentence, and that a fourth man, a suspect, is under arrest.

March 24—Earl Percy is acting as Official Observer with the expeditionary force; warships are ordered not to get supplies from neutral nations in Western Hemisphere.

March 26—Field Marshal French says that "the protraction of the war depends entirely upon the supply of men and munitions," and if this supply is unsatisfactory the war will be prolonged; German newspapers charge British atrocities at Neuve Chapelle; Colonial Premiers may meet for consultation before terms of peace are arranged.

March 27—Storm of protest is aroused by suggestions of Dr. Lyttelton, Headmaster of Eton, that concessions should be made to Germany.

March 28—Premier Asquith is attacked by the Unionist press for alleged lack of vigor in direction of the war.

March 30—Three of the nine prison ships on which prisoners have been kept are vacated, and it is planned to empty the others by the end of April, prisoners being cared for on shore.

March 31—King George announces that he is ready to give up use of liquor in the royal household as an example to the working classes, it being stated that slowness of output of munitions of war is partly due to drink; Lord Derby announces that Liverpool dock workers are to be organized into a battalion, enlisted under military law, as a means of preventing delays in making war supplies.

FRANCE.

March 1—Official note issued in Paris states that there are 2,080,000 Germans and Austrians on the Russian and Serbian front, and 1,800,000 Germans on the French and Belgian front.

March 5—War Minister introduces bill in Chamber of Deputies giving authorization to call to the colors the recruits of 1915 and to start training those of 1916.

March 6—French Press Bureau estimates the total German losses since the beginning of the war, in killed, wounded, sick, and prisoners, at 3,000,000.

March 10—Foreign Office issues report on treatment of French civilian prisoners by the Germans, charging many instances of cruelty.

March 11—Eight thousand German and Austrian houses have been sequestered to date; bill introduced into Chamber of Deputies provides for burning of soldiers' bodies as a precaution against possible epidemic of disease; Mi-Carême festivities omitted because of the war.

March 12—Fine of \$100,000, to be paid before March 20, is imposed on inhabitants of Lille, in hands of the Germans, because of a demonstration over a group of French prisoners of war brought into the city.

March 14—Copenhagen report states that there has been a revolt in Lille.

March 25—War Ministry denies General von Bernhardt's charge that France and England had an arrangement for violation of the neutrality of Belgium.

March 28—A cannon is mentioned in the orders of the day for gallantry in action; General Joffre decorates thirty men for gallantry in action in the Champagne district.

March 31—Intense indignation is expressed by the French press over sinking of British passenger steamer Falaba by German submarine.

GERMANY.

March 5—Interned French civilians are sent to Switzerland for exchange for German civilians held by the French.

March 6—Government asks the United States to care for German diplomatic interests in Constantinople if Allies occupy the Turkish capital; two British prisoners of war are punished for refusing to obey their own officers.

March 7—Copenhagen reports that men up to 55 have been called out; it is stated that there are now 781,000 war prisoners interned in Germany.

March 8—British charge that German dum-dum bullets were found after a recent battle in Egypt.

March 10—Reichstag is informed that the budget is \$3,250,000,000—four times greater than any estimates ever before presented; a further war credit is asked of \$2,500,000,000, to insure financing the war until the late Autumn; Landsturm classes of 1869-1873 are summoned to the colors in the Rhine provinces.

March 15—Prussian losses to date (excluding Bavarian, Württemberg, Saxon, and naval losses) are 1,050,029 in killed, wounded, and missing.

March 16—German committee is planning to send Americans to the United States as propagandists to lay German case before the American people; 20,000 high school boys have volunteered for service.

March 18—Copenhagen reports that Emperor William and General von Falkenhayn, Chief of the German General Staff, arrived today at the German Army Headquarters near Lille to participate in a council of war; Chief President of the Province of East Prussia states that 80,000 houses have been entirely destroyed by the Russians and that 300,000 refugees have left the province; German War Department states that for every German village burned by the Russians three Russian villages will be burned by the Germans.

March 21—Archbishop of Cologne asks children for prayers and offerings, and suggests that they do without new clothes at confirmation.

March 22—Lieut. Colonel Kaden urges teachers and parents to foster hatred of England.

March 23—English women and children allowed to leave Belgium.

March 30—It is reported that Emperor William is holding an important war council in Berlin with military chiefs.

March 31—Much enthusiasm over sinking of British passenger steamer Falaba; official statistics of second war loan show that \$2,265,000,000 was subscribed, of which \$17,750,000 came from 452,113 persons in sums of \$50 or less; local option is permitted by German Federal Council.

GREECE.

March 3—Crown Council meets at the palace in Athens under Presidency of the King; among the eminent statesmen present are five ex-Premiers; deliberations deal with question whether Greece should take part in the war; further conferences of the Council are planned, and Parliament has been summoned to meet after the deliberations are finished.

March 4—Crown Council meets again.

March 10—M. Ghounaris completes formation of a new Cabinet; Ministerial statement declares that the observance of neutrality is imperative on Greece if she is to protect her national interests.

March 14—M. Venizelos, former Premier, says that Greece will soon be forced by course of events to abandon neutrality and join with Allies in operations against Constantinople and Smyrna; by so doing, he says, the Government can quadruple the area of Greece.

March 17—M. Venizelos is quoted by an Italian newspaper correspondent as saying that the Allies have twice asked Greece since the outbreak of the war to help Serbia, but attitude of Bulgaria prevented Greece from doing so; Venizelos resigned, according to this correspondent, because Crown Council overruled his plan to send 50,000 men to aid Allies.

HOLLAND.

March 2—Semi-official circles deny persistent reports that country is to enter the war; American Minister van Dyke says that he sees no signs of any change in the attitude of Holland.

ITALY.

March 2—Much Italian comment caused by introduction in Chamber of Deputies of bills against espionage, contraband, and publication in newspapers of news of military movements; Italy is hiring hulks of ships for grain storage.

March 3—General Zupelli, Minister of War, speaks in Chamber of Deputies in favor of a bill authorizing a recall to the colors of reserve officers; Government asks Chamber for authorization to take control of every industry connected with the defense of the country, including wireless telegraphy and aviation.

March 8—Premier Salandra hints at war at inauguration of new military harbor at Gaeta.

March 10—Garibaldians in the French Foreign Legion are allowed by French Government to return to Italy in response to call of certain categories of reservists by Italian Government.

March 11—Military preparations are being pushed with much vigor.

March 12—Soldiers near Austro-Italian frontier are drilling daily; new cannon is being tested; fleet is in readiness under Duke of the Abruzzi; Prince von Buelow is reported to have failed in his efforts to satisfy Italian demands for Austrian territory as the price of continued neutrality; it is said that Italy was asked to be satisfied with the Trentino, while nothing was said as to Trieste.

March 14—Rome reports that Emperor Francis Joseph, despite urgent solicitations of Emperor William, refuses to sanction any cession of territory to Italy and insists that von Buelow's negotiations with the Italian Government be stopped; Premier Salandra's personal organ, the *Giornale d'Italia*, says Italy must obtain territorial expansion; National League meets at Milan and demands, through intervention in the war, the liberation of all Italians from Austrian rule.

March 15—Exchange of telegraphic money orders with Austria is suspended; the traveling Post Offices on trains bound for the Austrian frontier are also stopped; it is denied that Austria has refused to cede any territory whatever, but that what she is willing to cede is far too little from the Italian viewpoint.

March 16—Report from Rome states that an authoritative outline of the territorial demands of Italy shows that she wishes a sweep of territory to the north and east which would extend her boundary around northern end of the Adriatic as far south as Fiume on the eastern coast; this would include Austrian naval base at Pola and the provinces of Trent and Trieste; von Buelow is said to have assured Italian Government that concessions will be made.

March 18—Germans are leaving the Riviera.

March 20—Identification cards for use in active service are distributed among soldiers.

March 21—King signs the decree promulgating a national defense law, which will become operative tomorrow; the law gives the Government various powers necessary for efficient war preparations; Parliament adjourns until the middle of May, leaving military preparations in hands of the Government.

March 22—Austrians and Germans are advised by their Consuls to leave Italy as quickly as possible.

March 23—Crowds in streets of Venice clamor for war; Government orders seizure of twenty-nine freight cars with material destined for Krupp gun works in Germany.

March 26—All is ready for general mobilization; seven complete classes are already under the colors; Austrian and German families are leaving.

March 27—Italian Consul at Buenos Aires calls a meeting of agents of Italian steamship lines and warns them to be in readiness for possible transportation of 60,000 reservists.

March 28—Report from Berne that Emperor William in person has persuaded Emperor Francis Joseph to cede the territory to Italy which the latter desires; it is also said that negotiations are being conducted with Rome directly and solely by Berlin.

PERSIA.

March 18—India Office of British Government says that documents have reached London showing that German Consular officers and business men have been engaged in intrigues with the object of facilitating a Turkish invasion of Persia.

March 20—Persian Government calls upon Russia to evacuate the Province of Azerbaijan, Northwest Persia.

March 25—Kurds and Turks are massacring Christians at Urumiah, Northwestern Persia; situation of American Presbyterian Mission there is described as desperate; Dr. Harry P. Packard, doctor of the American missionary station, risks his life to unfurl American flag and save Persian Christians at Geogtopa; 15,000 Christians are under protection of American Mission and 2,000 under protection of French Mission at Urumiah; it is learned that at Gulpashan, the last of 103 villages to be taken after resistance, the Kurds shot the male citizens in groups of five, while the younger women were taken as slaves; 20,000 Persian Christians are dead or missing, while 12,000 are refugees in the Caucasus; disease is raging among the refugees.

March 26—Turks force their way into the compound of the American Mission at Urumiah, seize some Assyrian Christian refugees and kill them; Turks beat and insult American missionaries; American and British Consuls at Tabriz, near Urumiah, have joined in appeal to General commanding Russian forces at Tabriz to go to relief of American Mission at Urumiah, which is described as practically besieged by Turks and Kurds; United States State Department is active and asks Ambassador Morgenthau at Constantinople to urge the Turkish Government to send protection; Persian War Relief Committee cables funds to American Consul at Tabriz for relief at Urumiah.

March 27—Turkish Grand Vizier issues orders that Christians in disturbed Persian regions be protected and uprisings be suppressed.

March 28—Turkish regulars are due to arrive at Urumiah to protect Christians and suppress disorder; Turkish War Office says that "no acts of violence had been committed at Urumiah"; Grand Vizier states that reported atrocities are "grossly exaggerated."

March 30—Turkish Government gives renewed assurances to Ambassador Morgenstau that protection will be given to Christians at Urumiah.

RUMANIA.

March 6—Parliament passes a law empowering Government to proclaim a state of siege until the end of the war, if such a step is thought necessary; military representatives of the Government are seeking to place large orders for arms and ammunition with American firms.

March 12—Prime Minister Jonesco is quoted in a newspaper interview as saying that he is sure the Allies will force the Dardanelles, the result of which will be that Rumania will join the war.

March 15—Rumania's war preparations are causing uneasiness in Austria-Hungary.

March 18—Government seizes a large quantity of shells in transit from Germany for Turkish troops.

RUSSIA.

March 1—Paris Temps says that the Allies have reached an agreement by which Russia will have free passage through the Dardanelles.

March 4—Village women capture and bind a detachment of German soldiers.

March 24—Congress of Representatives of the Nobility, in annual session at Petrograd, passes resolutions stating that "the vital interests of Russia require full possession of Constantinople, and both shores of the Bosphorus and the Dardanelles and the adjacent islands."

TURKEY.

March 9—American missionaries, arriving in New York from Jerusalem, say that the fall of the Dardanelles will probably mean a massacre of Jews and Gentiles in the Holy Land.

March 11—There is a panic in Constantinople and many foreigners are leaving.

March 15—All Serbs and Montenegrins have been ordered to leave Constantinople within twenty-four hours.

March 18—The rich are leaving Constantinople; Germans from the provinces are concentrating there.

March 19—Appalling conditions prevail in Armenia, following massacres by Turks and Kurds.

UNITED STATES.

March 1—Indictments are returned by the Federal Grand Jury in New York against the Hamburg-American Steamship Company and against officials of the line on the charge of conspiring against the United States by making out false clearance papers and false manifests in connection with voyages made by four steamships to supply German cruiser Karlsruhe and auxiliary cruiser Kaiser Wilhelm der Grosse with coal and provisions; indictments are returned by the Federal Grand Jury in New York against Richard P. Stegler, a German, Gustave Cook and Richard Madden on the charge of conspiracy to defraud the Government in obtaining a passport.

March 2—Three indictments charging the illegal transportation of dynamite in interstate commerce are returned by the Federal Grand Jury in Boston against Warner Horn, a German, who tried to destroy the international railway bridge at Vanceboro, Me., last month; extradition proceedings by Canada, officials state, will probably have to be halted until this indictment is disposed of.

March 7—Horn is made a Federal prisoner in Maine.

March 8—Carl Ruroede, who was arrested in January with four Germans to whom he had issued spurious American passports, pleads guilty in the Federal District Court to charge of conspiring to defraud the United States Government, and is sentenced to three years' imprisonment; the four Germans who bought passports are fined \$200 each; the Department of Justice is still investigating in belief there are other conspirators.

March 16—Stegler turns State's evidence and testifies against Cook and Madden in the Federal District Court.

March 18—Cook and Madden are found guilty, the jury making a strong recommendation for mercy; before the United States Commissioner at Bangor, Me., Horn claims that his act was an act of war and contests right of the courts to try him.

March 19—Stegler is sentenced to sixty days' imprisonment, and Cook and Madden to ten months; United States Commissioner at Bangor decides that Horn must stand trial in Boston.

March 24—Major General Hughes, Minister of Militia and Defense for Canada, states in the Canadian Parliament that two dozen Americans with the first Canadian contingent have fallen in battle, and that "hundreds more are in the Canadian regiments fighting bravely."

March 25—Horn is taken to Boston from Portland, after two unsuccessful attempts to obtain a writ of habeas corpus.

March 31—Leon C. Thrasher of Hardwick, Mass., an American by birth, was among the passengers lost on the *Falaba*; American Embassy in London and the State Department are investigating; the Thrasher family appeals to Washington for information about his death; Raymond Swoboda, American, a passenger on the French liner *Touraine*, which was imperiled by fire at sea on March 6, has been arrested in Paris charged with causing the fire.

RELIEF WORK.

March 1—Herbert C. Hoover, Chairman of the American Belgian Relief Committee, issues statement in London that the Germans have scrupulously kept their promise, given in December, not to make further requisitions of foodstuffs in the occupied zone of Belgium for use by the German Army; he says the Germans have never interfered with foodstuffs imported by the commission and that all these foodstuffs have gone to the Belgian civil population; Mr. Hoover further states that "every Belgian is today on a ration from this commission"; every State in the Union contributes to the fund for the Easter Argosy, the ship which it is planned the children of the United States will send with a cargo to Belgium in the name of Princess Marie José, the little daughter of the King and Queen of the Belgians; plans are made for the sending of two ships with cargoes supplied by the people of the State of New York.

March 2—American Red Cross sends large shipments of supplies to Serbia and Germany; four American Red Cross nurses sail for Germany; Serbian Agricultural Relief Committee asks for farming implements.

March 5—Mississippi, Ohio, and Nebraska form organizations to send relief ships; American Red Cross is sending large consignments of supplies to the American Relief Clearing House in Paris.

March 8—Report from London states that it has just become known in Budapest that Countess Széchenyi, formerly Miss Gladys Vanderbilt, contracted smallpox while nursing in a Budapest military hospital and has been dangerously ill for a fortnight; a hospital, exclusively for the care of wounded soldiers whose cases require delicate surgical operations, is ready for work at Compiègne under the direction of Dr. Alexis Carrel of the Rockefeller Institute for Medical Research.

March 9—In gratitude for American help, the municipal authorities of Louvain inform the American Commission for Relief in Belgium that, when Louvain is rebuilt, squares or streets will be named Washington, Wilson, and American Nation.

March 11—American Red Cross announces plan to send two units for service with the Belgian Army.

March 12—Philadelphians give \$15,000 for establishment of a Philadelphia ward in the American Ambulance Hospital in Paris; other wards bear the names of New York, Providence, New Haven, and Buffalo.

March 14—Letter to the British Red Cross from Sir Thomas Lipton says that typhus is threatening Serbia.

March 16—Mrs. John Hays Hammond, National Chairman of the War Children's Christmas Fund, has received letters from Princess Mary of England, and the Russian Ambassador to the United States, writing in behalf of the Empress of Russia, expressing thanks for the Christmas supplies sent from the United States.

March 17—Mme. Vandervelde, wife of the Belgian Minister of State, has collected nearly \$300,000 in the United States for Belgian relief, and plans to sail for Europe in a few days.

March 20—Serbian Legation in London sends appeal to United States for aid for Serbia from the Archbishop of Belgrade.

March 22—General Kamóroff, as special emissary of the Czar, visits the American Hospital in Petrograd and thanks the Americans for their help in caring for Russian wounded.

March 23—Contributions for the Easter Argosy reach \$125,000; letter to Belgian Relief Committee brings the thanks of King Albert for American help; American Red Cross sends twenty-seven tons of supplies to Belgian Red Cross.

March 24—General Joffre cables thanks to the Lafayette Fund, which is sending comfort kits to the French soldiers in the trenches.

March 25—American Commission for Relief in Belgium announces that arrangements have been completed for feeding 2,500,000 French in the north of France, behind the German lines; for the past month the commission has fed more than 500,000 French; it is planned that the Easter Argosy will sail on May 1.

March 26—Financial report issued in London by the American Commission for Relief in Belgium states that foodstuffs of a total value of \$20,000,000 have been delivered to Belgium since the commission began work, and \$19,000,000 worth of foodstuffs is in transit or stored for future shipments; \$8,500,000 has been provided by benevolent contributions, and the remaining \$30,500,000 through banking arrangements set up by the commission; of the benevolent contributions the United States has provided \$4,700,000; United Kingdom, \$1,200,000; Canada, \$900,000;

Australasia, \$900,000; clothing which has been distributed is estimated to have been worth an additional \$1,000,000; it is announced that Queen Alexandra, as President of the English Red Cross Society, has written an autograph note to Mrs. Whitelaw Reid in London expressing

gratitude for the aid given by the American Red Cross.
March 30—The cash collected by the Belgian Relief Fund, New York, now totals \$1,004,000, said to be the largest amount ever raised in the United States for relief of distress in a foreign country.

THE DAY

By HENRY CHAPPELL.

[The author of this poem is Mr. Henry Chappell, a railway porter at Bath, England. Mr. Chappell is known to his comrades as the "Bath Railway Poet."]

YOU boasted the Day, and you toasted
the Day,

And now the Day has come.
Blasphemer, braggart and coward all,
Little you reck of the numbing ball,
The blasting shell, or the "white arm's"
fall,

As they speed poor humans home.

You spied for the Day, you lied for the Day,
And woke the Day's red spleen,
Monster, who asked God's aid Divine,
Then strewed His seas with the ghastly mine;
Not all the waters of all the Rhine
Can wash thy foul hands clean.

You dreamed for the Day, you schemed for
the Day;

Watch how the Day will go.
Slayer of age and youth and prime
(Defenseless slain for never a crime)
Thou art steeped in blood as a hog in slime,
False friend and cowardly foe.

You have sown for the Day, you have grown
for the Day;

Yours is the Harvest red.
Can you hear the groans and the awful cries?
Can you see the heap of slain that lies,
And sightless turned to the flame-split skies
The glassy eyes of the dead?

You have wronged for the Day, you have
longed for the Day

That lit the awful flame.
'Tis nothing to you that hill and plain
Yield sheaves of dead men amid the grain;
That widows mourn for their loved ones slain,
And mothers curse thy name.

But after the Day there's a price to pay

For the sleepers under the sod,
And Him you have mocked for many a day—
Listen, and hear what He has to say:

"Vengeance is mine, I will repay."

What can you say to God?

THE LUSITANIA CASE

President Wilson's Speeches and Note to Germany

History of a Series of Attacks on American Lives in the German War Zone

President Wilson's note to Germany, written consequent on the torpedoing by a German submarine on May 7, 1915, of the British passenger steamship *Lusitania*, off Kinsale Head, Ireland, by which over 100 American citizens lost their lives, is dated six days later, showing that time for careful deliberation was duly taken. The President's Secretary, Joseph P. Tumulty, on May 8 made this statement:

"Of course, the President feels the distress and the gravity of the situation to the utmost, and is considering very earnestly, but very calmly, the right course of action to pursue. He knows that the people of the country wish and expect him to act with deliberation as well as with firmness."

Although signed by Mr. Bryan, as Secretary of State, the note was written originally by the President in shorthand—a favorite method of Mr. Wilson in making memoranda—and transcribed by him on his own typewriter. The document was then presented to the members of the President's Cabinet, a draft of it was sent to Counselor Lansing of the State Department, and, after a few minor changes, it was transmitted by cable to Ambassador Gerard in Berlin.

DEPARTMENT OF STATE,

WASHINGTON, May 13, 1915.

The Secretary of State to the American Ambassador at Berlin:

Please call on the Minister of Foreign Affairs and after reading to him this communication leave with him a copy.

In view of recent acts of the German authorities in violation of American rights on the high seas, which culminated in the torpedoing and sinking of the British steamship *Lusitania* on May 7, 1915, by which over 100 American citizens lost their lives, it is clearly wise and desirable

that the Government of the United States and the Imperial German Government should come to a clear and full understanding as to the grave situation which has resulted.

The sinking of the British passenger steamer *Falaba* by a German submarine on March 28, through which Leon C. Thrasher, an American citizen, was drowned; the attack on April 28 on the American vessel *Cushing* by a German aeroplane; the torpedoing on May 1 of the American vessel *Gulflight* by a German submarine, as a result of which two or more American citizens met their death; and, finally, the torpedoing and sinking of the steamship *Lusitania*, constitute a series of events which the Government of the United States has observed with growing concern, distress, and amazement.

Recalling the humane and enlightened attitude hitherto assumed by the Imperial German Government in matters of international right, and particularly with regard to the freedom of the seas; having learned to recognize the German views and the German influence in the field of international obligation as always engaged upon the side of justice and humanity; and having understood the instructions of the Imperial German Government to its naval commanders to be upon the same plane of humane action prescribed by the naval codes of other nations, the Government of the United States was loath to believe—it cannot now bring itself to believe—that these acts, so absolutely contrary to the rules, the practices, and the spirit of modern warfare, could have the countenance or sanction of that great Government. It feels it to be its duty, therefore, to address the Imperial German Government concerning them with the utmost frankness and in the earnest hope that it is not mistaken in expecting action on the part of the Imperial German Government, which will correct the unfortunate impressions which have been created, and vindicate once more the position of that Government with regard to the sacred freedom of the seas.

The Government of the United States has been apprised that the Imperial German Government considered themselves to be obliged by the extraordinary circumstances of the present war and the measures adopted by their adversaries in seeking to cut Germany off from all commerce, to adopt methods of retaliation which go much beyond the ordinary methods of warfare at sea, in the proclamation of a war zone from which they have warned neutral ships to keep away. This Government has already taken occasion to inform the Imperial German Government that it cannot admit the adoption of such measures or such a warning of danger to operate as in any degree an abbreviation of the rights of American shipmasters or of American citizens bound on lawful errands as passengers on merchant ships of belligerent nationality, and that it must hold the Imperial German Government to a strict accountability for any infringement of those rights, intentional or incidental. It does not understand the Imperial German Government to question

those rights. It assumes, on the contrary, that the Imperial Government accept, as of course, the rule that the lives of noncombatants, whether they be of neutral citizenship or citizens of one of the nations at war, cannot lawfully or rightfully be put in jeopardy by the capture or destruction of an unarmed merchantman, and recognize also, as all other nations do, the obligation to take the usual precaution of visit and search to ascertain whether a suspected merchantman is in fact of belligerent nationality or is in fact carrying contraband of war under a neutral flag.

The Government of the United States, therefore, desires to call the attention of the Imperial German Government with the utmost earnestness to the fact that the objection to their present method of attack against the trade of their enemies lies in the practical impossibility of employing submarines in the destruction of commerce without disregarding those rules of fairness, reason, justice, and humanity which all modern opinion regards as imperative. It is practically impossible for the officers of a submarine to visit a merchantman at sea and examine her papers and cargo. It is practically impossible for them to make a prize of her; and, if they cannot put a prize crew on board of her, they cannot sink her without leaving her crew and all on board of her to the mercy of the sea in her small boats. These facts it is understood the Imperial German Government frankly admit. We are informed that in the instances of which we have spoken time enough for even that poor measure of safety was not given, and in at least two of the cases cited not so much as a warning was received. Manifestly, submarines cannot be used against merchantmen, as the last few weeks have shown, without an inevitable violation of many sacred principles of justice and humanity.

American citizens act within their indisputable rights in taking their ships and in traveling wherever their legitimate business calls them upon the high seas, and exercise those rights in what should be the well-justified confidence that their lives will not be endangered by acts done in clear violation of universally acknowledged international obligations, and certainly in the confidence that their own Government will sustain them in the exercise of their rights.

There was recently published in the newspapers of the United States, I regret to inform the Imperial German Government, a formal warning, purporting to come from the Imperial German Embassy at Washington, addressed to the people of the United States, and stating, in effect, that any citizen of the United States who exercised his right of free travel upon the seas would do so at his peril if his journey should take him within the zone of waters within which the Imperial German Navy was using submarines against the commerce of Great Britain and France, notwithstanding the respectful but very earnest protest of his Government, the Government of the United States. I do not refer to this for the purpose of calling the attention of the Imperial German

Government at this time to the surprising irregularity of a communication from the Imperial German Embassy at Washington addressed to the people of the United States through the newspapers, but only for the purpose of pointing out that no warning that an unlawful and inhumane act will be committed can possibly be accepted as an excuse or palliation for that act or as an abatement of the responsibility for its commission.

Long acquainted as this Government has been with the character of the Imperial Government, and with the high principles of equity by which they have in the past been actuated and guided, the Government of the United States cannot believe that the commanders of the vessels which committed these acts of lawlessness did so except under a misapprehension of the orders issued by the Imperial German naval authorities. It takes it for granted that, at least within the practical possibilities of every such case, the commanders even of submarines were expected to do nothing that would involve the lives of noncombatants or the safety of neutral ships, even at the cost of failing of their object of capture or destruction. It confidently expects, therefore, that the Imperial German Government will disavow the acts of which the Government of the United States complains; that they will make reparation so far as reparation is possible for injuries which are without measure, and that they will take immediate steps to prevent the recurrence of anything so obviously subversive of the principles of warfare for which the Imperial German Government have in the past so wisely and so firmly contended.

The Government and people of the United States look to the Imperial German Government for just, prompt, and enlightened action in this vital matter with the greater confidence, because the United States and Germany are bound together not only by special ties of friendship, but also by the explicit stipulations of the Treaty of 1828, between the United States and the Kingdom of Prussia.

Expressions of regret and offers of reparation in case of the destruction of neutral ships sunk by mistake, while they may satisfy international obligations, if no loss of life results, cannot justify or excuse a practice the natural and necessary effect of which is to subject neutral nations and neutral persons to new and immeasurable risks.

The Imperial German Government will not expect the Government of the United States to omit any word or any act necessary to the performance of its sacred duty of maintaining the rights of the United States and its citizens and of safeguarding their free exercise and enjoyment.

BRYAN.

THE WARNING AND THE CONSEQUENCE—

THE GERMAN WARNING.

[On Saturday, May 1, the day that the Lusitania left New York on her last voyage, the following advertisement bearing the authentication of the German Embassy at Washington appeared in the chief newspapers of the United States, placed next the advertisement of the Cunard Line:

NOTICE!

TRAVELLERS intending to embark on the Atlantic voyage are reminded that a state of war exists between Germany and her allies and Great Britain and her allies; that the zone of war includes the waters adjacent to the British Isles; that, in accordance with formal notice given by the Imperial German Government, vessels flying the flag of Great Britain, or of any of her allies, are liable to destruction in those waters and that travellers sailing in the war zone on ships of Great Britain or her allies do so at their own risk.

IMPERIAL GERMAN EMBASSY

WASHINGTON, D. C., APRIL 22, 1915.

Despite this warning, relying on President Wilson's note to Germany of Feb. 10, 1915, which declared that the United States would "hold the Imperial Government of Germany to a strict accountability" for such an act within the submarine zone; relying, also, on the speed of the ship, and hardly conceiving that the threat would be carried out, over two

thousand men, women, and children embarked. The total toll of the dead was 1,150, of whom 114 were known to be American citizens.

The German Embassy's warning advertisement was repeated on May 8, the day following the loss of the Lusitania. On May 12 the German Embassy notified the newspapers to discontinue publication of the advertisement, which had been scheduled to appear for the third time on the following Saturday.]

GERMAN OFFICIAL REPORT.

[By The Associated Press.]

BERLIN, May 14, (via Amsterdam to London, May 15.)—From the report received from the submarine which sank the Cunard Line steamer Lusitania last Friday the following official version of the incident is published by the Admiralty Staff over the signature of Admiral Behncke:

The submarine sighted the steamer, which showed no flag, May 7 at 2:20 o'clock, Central European time, afternoon, on the southeast coast of Ireland, in fine, clear weather.

At 3:10 o'clock one torpedo was fired at the Lusitania, which hit her starboard side below the Captain's bridge. The detonation of the torpedo was followed immediately by a further explosion of extremely strong effect. The ship quickly listed to starboard and began to sink.

The second explosion must be traced back to the ignition of quantities of ammunition inside the ship.

It appears from this report that the submarine sighted the Lusitania at 1:20 o'clock, London time, and fired the torpedo at 2:10 o'clock, London time. The Lusitania, according to all reports, was traveling at the rate of eighteen knots an hour. As fifty minutes elapsed between the sighting and the torpedoing, the Lusitania when first seen from the submarine must have

Map Showing Locations of Ships Attacked in Submarine War Zone with American Citizens Aboard.

been distant nearly fifteen knots, or about seventeen land miles. The *Lusitania* must have been recognized at the first appearance of the tops of her funnels above the horizon. To the Captain on the bridge of the *Lusitania* the submarine would have been at that time invisible, being below the horizon.

BRITISH CORONER'S VERDICT.

[By The Associated Press.]

KINSALE, Ireland, May 10.—The verdict, rendered here today by the coroner's jury, which investigated five deaths resulting from the torpedoing of the *Lusitania*, is as follows:

We find that the deceased met death

from prolonged immersion and exhaustion in the sea eight miles south-east of Old Head of Kinsale, Friday, May 7, 1915, owing to the sinking of the *Lusitania* by torpedoes fired by a German submarine.

We find that the appalling crime was committed contrary to international law and the conventions of all civilized nations.

We also charge the officers of said submarine and the Emperor and the Government of Germany, under whose orders they acted, with the crime of wholesale murder before the tribunal of the civilized world.

We desire to express sincere condolences and sympathy with the relatives of the deceased, the Cunard Company, and the United States, many of whose citizens perished in this murderous attack on an unarmed liner.

GERMAN NOTE OF REGRET.

BERLIN, (via London,) May 10.—The following dispatch has been sent by the German Foreign Office to the German Embassy at Washington:

Please communicate the following to the State Department: The German Government desires to express its deepest sympathy at the loss of lives on board the Lusitania. The responsibility rests, however, with the British Government, which, through its plan of starving the civilian population of Germany, has forced Germany to resort to retaliatory measures.

In spite of the German offer to stop the submarine war in case the starvation plan was given up, British merchant vessels are being generally armed with guns and have repeatedly tried to ram submarines, so that a previous search was impossible.

They cannot, therefore, be treated as ordinary merchant vessels. A recent declaration made to the British Parliament by the Parliamentary Secretary in answer to a question by Lord Charles Beresford said that at the present practically all British merchant vessels were armed and provided with hand grenades.

Besides, it has been openly admitted by the English press that the Lusitania on previous voyages repeatedly carried large quantities of war material. On the present voyage the Lusitania carried 5,400 cases of ammunition, while the rest of her cargo also consisted chiefly of contraband.

If England, after repeated official and unofficial warnings, considered herself able to declare that that boat ran no risk and thus light-heartedly assumed responsibility for the human life on board a steamer which, owing to its armament and cargo, was liable to destruction, the German Government, in spite of its heartfelt sympathy for the loss of Amer-

ican lives, cannot but regret that Americans felt more inclined to trust to English promises rather than to pay attention to the warnings from the German side.

FOREIGN OFFICE.

ENGLAND ANSWERS GERMANY.*

[By The Associated Press.]

LONDON, Wednesday, May 12.—Inquiry in official circles elicited last night the following statement, representing the official British view of Germany's justification for torpedoing the Lusitania which Berlin transmitted to the State Department at Washington:

The German Government states that responsibility for the loss of the Lusitania rests with the British Government, which through their plan of starving the civil population of Germany has forced Germany to resort to retaliatory measures. The reply to this is as follows:

As far back as last December Admiral von Tirpitz, (the German Marine Minister,) in an interview, foreshadowed a submarine blockade of Great Britain, and a merchant ship and a

*In Germany's reply to the American protest against certain features of the "war zone" order, which was received in Washington on Feb. 14, occurred this expression:

If the United States * * * should succeed at the last moment in removing the grounds which make that procedure [submarine warfare on merchant vessels] an obligatory duty for Germany * * * and thereby make possible for Germany legitimate importation of the necessities of life and industrial raw material, then the German Government * * * would gladly draw conclusions from the new situation.

In the German note to the American Government, justifying the sinking of the Lusitania, presented above, appears this clause:

In spite of the German offer to stop the submarine war in case the starvation plan was given up * * *

These two expressions are referred to in the British official statement, published herewith, in these words:

It was not understood from the reply of the German Government [of Feb. 14] that they were prepared to abandon the principle of sinking British vessels by submarine.

Whether this may regarded as an opening for the renewal of the German offer in explicit terms, with the implication that England might accept it, is not explained.

hospital ship were torpedoed Jan. 30 and Feb. 1, respectively.

The German Government on Feb. 4 declared their intention of instituting a general submarine blockade of Great Britain and Ireland, with the avowed purpose of cutting off supplies for these islands. This blockade was put into effect Feb. 18.

As already stated, merchant vessels had, as a matter of fact, been sunk by a German submarine at the end of January. Before Feb. 4 no vessel carrying food supplies for Germany had been held up by his Majesty's Government, except on the ground that there was reason to believe the foodstuffs were intended for use of the armed forces of the enemy or the enemy Government.

His Majesty's Government had, however, informed the State Department on Jan. 29 that they felt bound to place in a prize court the foodstuffs of the steamer *Wilhelmina*, which was going to a German port, in view of the Government control of foodstuffs in Germany, as being destined for the enemy Government, and, therefore, liable to capture.

The decision of his Majesty's Government to carry out the measures laid down by the Order in Council was due to the action of the German Government in insisting on their submarine blockade.

This, added to other infractions of international law by Germany, led to British reprisals, which differ from the German action in that his Majesty's Government scrupulously respect the lives of noncombatants traveling in merchant vessels, and do not even enforce the recognized penalty of confiscation for a breach of the blockade, whereas the German policy is to sink enemy or neutral vessels at sight, with total disregard for the lives of noncombatants and the property of neutrals.

The Germans state that, in spite of their offer to stop their submarine war in case the starvation plan was given up, Great Britain has taken even more stringent blockade measures. The answer to this is as follows:

It was not understood from the reply of the German Government that they

were prepared to abandon the principle of sinking British vessels by submarine.

They have refused to abandon the use of mines for offensive purposes on the high seas on any condition. They have committed various other infractions of international law, such as strewing the high seas and trade routes with mines, and British and neutral vessels will continue to run danger from this course, whether Germany abandons her submarine blockade or not.

It should be noted that since the employment of submarines, contrary to international law, the Germans also have been guilty of the use of asphyxiating gas. They have even proceeded to the poisoning of water in South Africa.

The Germans represent British merchant vessels generally as armed with guns and say that they repeatedly ram submarines. The answer to this is as follows:

It is not to be wondered at that merchant vessels, knowing they are liable to be sunk without warning and without any chance being given those on board to save their lives, should take measures for self-defense.

With regard to the *Lusitania*: The vessel was not armed on her last voyage, and had not been armed during the whole war.

The Germans attempt to justify the sinking of the *Lusitania* by the fact that she had arms and ammunition on board. The presence of contraband on board a neutral vessel does render her liable to capture, but certainly not to destruction, with the loss of a large portion of her crew and passengers. Every enemy vessel is a fair prize, but there is no legal provision, not to speak of the principles of humanity, which would justify what can only be described as murder because a vessel carries contraband.

The Germans maintain that after repeated official and unofficial warnings his Majesty's Government were responsible for the loss of life, as they considered themselves able to declare that the boat ran no risk, and thus "light-heartedly assume the responsibility for the human lives on board a steamer which, owing to its armament and cargo,

is liable to destruction." The reply thereto is:

First — His Majesty's Government never declared the boat ran no risk.

Second—The fact that the Germans issued their warning shows that the crime was premeditated. They had no more right to murder passengers after warning them than before.

Third—In spite of their attempts to put the blame on Great Britain, it will tax the ingenuity even of the Germans to explain away the fact that it was a German torpedo, fired by a German seaman from a German submarine, that sank the vessel and caused over 1,000 deaths.

CAPTAIN TURNER TESTIFIES.

[By The Associated Press.]

KINSALE, Ireland, May 10.—The inquest which began here Saturday over five victims of the Lusitania was concluded today. A vital feature of the hearing was the testimony of Captain W. T. Turner of the lost steamship. Coroner Horga questioned him:

"You were aware threats had been made that the ship would be torpedoed?"

"We were," the Captain replied.

"Was she armed?"

"No, Sir."

"What precautions did you take?"

"We had all the boats swung when we came within the danger zone, between the passing of Fastnet and the time of the accident."

The Coroner asked him whether he had received a message concerning the sinking of a ship off Kinsale by a submarine. Captain Turner replied that he had not.

"Did you receive any special instructions as to the voyage?"

"Yes, Sir."

"Are you at liberty to tell us what they were?"

"No, Sir."

"Did you carry them out?"

"Yes, to the best of my ability."

"Tell us in your own words what happened after passing Fastnet."

"The weather was clear," Captain Turner answered. "We were going at a speed of eighteen knots. I was on the

port side and heard Second Officer Heford call out:

"'Here's a torpedo.'"

"I ran to the other side and saw clearly the wake of a torpedo. Smoke and steam came up between the last two funnels. There was a slight shock. Immediately after the first explosion there was another report, but that may possibly have been internal.

"I at once gave the order to lower the boats down to the rails, and I directed that women and children should get into them. I also had all the bulkheads closed.

"Between the time of passing Fastnet, about 11 o'clock, and of the torpedoing I saw no sign whatever of any submarines. There was some haze along the Irish coast, and when we were near Fastnet I slowed down to fifteen knots. I was in wireless communication with shore all the way across."

Captain Turner was asked whether he had received any messages in regard to the presence of submarines off the Irish coast. He replied in the affirmative. Questioned regarding the nature of the message, he replied:

"I respectfully refer you to the Admiralty for an answer."

"I also gave orders to stop the ship," Captain Turner continued, "but we could not stop. We found that the engines were out of commission. It was not safe to lower boats until the speed was off the vessel. As a matter of fact, there was a perceptible headway on her up to the time she went down.

"When she was struck she listed to starboard. I stood on the bridge when she sank, and the Lusitania went down under me. She floated about eighteen minutes after the torpedo struck her. My watch stopped at 2:36. I was picked up from among the wreckage and afterward was brought aboard a trawler.

"No warship was convoying us. I saw no warship, and none was reported to me as having been seen. At the time I was picked up I noticed bodies floating on the surface, but saw no living persons."

"Eighteen knots was not the normal speed of the Lusitania, was it?"

"At ordinary times," answered Captain Turner, "she could make 25 knots, but in war times her speed was reduced to 21 knots. My reason for going 18 knots was that I wanted to arrive at Liverpool bar without stopping, and within two or three hours of high water."

"Was there a lookout kept for submarines, having regard to previous warnings?"

"Yes, we had double lookouts."

"Were you going a zigzag course at the moment the torpedoing took place?"

"No. It was bright weather, and land was clearly visible."

"Was it possible for a submarine to approach without being seen?"

"Oh, yes; quite possible."

"Something has been said regarding the impossibility of launching the boats on the port side?"

"Yes," said Captain Turner, "owing to the listing of the ship."

"How many boats were launched safely?"

"I cannot say."

"Were any launched safely?"

"Yes, and one or two on the port side."

"Were your orders promptly carried out?"

"Yes."

"Was there any panic on board?"

"No, there was no panic at all. It was all most calm."

"How many persons were on board?"

"There were 1,500 passengers and about 600 crew."

By the foreman of the jury—In the face of the warnings at New York that the Lusitania would be torpedoed, did you make any application to the Admiralty for an escort?

"No, I left that to them. It is their business, not mine. I simply had to carry out my orders to go, and I would do it again."

Captain Turner uttered the last words of this reply with great emphasis.

By the Coroner—I am very glad to hear you say so, Captain.

By a jurymen—Did you get a wireless to steer your vessel in a northern direction?

"No," replied Captain Turner.

"Was the course of the vessel altered after the torpedoes struck her?"

"I headed straight for land, but it was useless. Previous to this the watertight bulkheads were closed. I suppose the explosion forced them open. I don't know the exact extent to which the Lusitania was damaged."

"There must have been serious damage done to the watertight bulkheads?"

"There certainly was, without doubt."

"Were the passengers supplied with lifebelts?"

"Yes."

"Were any special orders given that morning that lifebelts be put on?"

"No."

"Was any warning given before you were torpedoed?"

"None whatever. It was suddenly done and finished."

"If there had been a patrol boat about might it have been of assistance?"

"It might, but it is one of those things one never knows."

With regard to the threats against his ship Captain Turner said he saw nothing except what appeared in the New York papers the day before the Lusitania sailed. He had never heard the passengers talking about the threats, he said.

"Was a warning given to the lower decks after the ship had been struck?" Captain Turner was asked.

"All the passengers must have heard the explosion," Captain Turner replied.

Captain Turner, in answer to another question, said he received no report from the lookout before the torpedo struck the Lusitania.

Ship's Bugler Livermore testified that the watertight compartments were closed, but that the explosion and the force of the water must have burst them open. He said that all the officers were at their posts and that earlier arrivals of the rescue craft would not have saved the situation.

After physicians had testified that the victims had met death through prolonged immersion and exhaustion the Coroner summed up the case.

He said that the first torpedo fired by the German submarine did serious damage to the Lusitania, but that, not satis-

fied with this, the Germans had discharged another torpedo. The second torpedo, he said, must have been more deadly, because it went right through the ship, hastening the work of destruction.

The characteristic courage of the Irish and British people was manifested at the time of this terrible disaster, the Coroner continued, and there was no panic. He charged that the responsibility "lay on

the German Government and the whole people of Germany, who collaborated in the terrible crime.

"I propose to ask the jury," he continued, "to return the only verdict possible for a self-respecting jury, that the men in charge of the German submarine were guilty of willful murder."

The jury then retired and prepared their verdict.

Descriptions by Survivors

SUBMARINE CREW OBSERVED.

[By The Associated Press.]

LONDON, May 10.—The Fishguard correspondent of The Daily News quotes the Rev. Mr. Guvier of the Church of England's Canadian Railway Mission, a Lusitania survivor, as saying that when the ship sank a submarine rose to the surface and came within 300 yards of the scene.

"The crew stood stolidly on the deck," he said, "and surveyed their handiwork. I could distinguish the German flag, but it was impossible to see the number of the submarine, which disappeared after a few minutes."

ERNEST COWPER'S ACCOUNT.

QUEENSTOWN, Saturday, May 8, 3:18 A. M.—A sharp lookout for submarines was kept aboard the Lusitania as she approached the Irish coast, according to Ernest Cowper, a Toronto newspaper man, who was among the survivors landed at Queenstown.

He said that after the ship was torpedoed there was no panic among the crew, but that they went about the work of getting passengers into the boats in a prompt and efficient manner.

"As we neared the coast of Ireland," said Mr. Cowper, "we all joined in the lookout, for a possible attack by a submarine was the sole topic of conversation.

"I was chatting with a friend at the rail about 2 o'clock, when suddenly I caught a glimpse of the conning tower of a submarine about a thousand yards distant. I immediately called my friend's attention to it. Immediately we both

saw the track of a torpedo, followed almost instantly by an explosion. Portions of splintered hull were sent flying into the air, and then another torpedo struck. The ship began to list to starboard.

"The crew at once proceeded to get the passengers into boats in an orderly, prompt, and efficient manner. Miss Helcn Smith appealed to me to save her. I placed her in a boat and saw her safely away. I got into one of the last boats to leave.

"Some of the boats could not be launched, as the vessel was sinking. There was a large number of women and children in the second cabin. Forty of the children were less than a year old."

From interviews with passengers it appears that when the torpedoes burst they sent forth suffocating fumes, which had their effect on the passengers, causing some of them to lose consciousness.

Two stokers, Byrne and Hussey of Liverpool, gave a few details. They said the submarine gave no notice and fired two torpedoes, one hitting No. 1 stoke hole and the second the engine room. The first torpedo was discharged at 2 o'clock. In twenty-five minutes the great liner disappeared.

The Cunard Line agent states that the total number of persons aboard the Lusitania was 2,160.

MR. KESSLER'S DESCRIPTION.

[Special Cable to THE NEW YORK TIMES.]

LONDON, Monday, May 10.—Survivors of the Lusitania arriving in London yesterday from Queenstown told

some of their tragic experiences to THE NEW YORK TIMES correspondent.

They forcibly expressed the opinion that the *Lusitania* was badly handled in being run into waters where it was known submarines were waiting. Although not for a moment attempting to shift the blame from the "murderous Germans" for the sinking of a ship full of innocent passengers, they insisted that the officers of the steamship, knowing that submarines were lurking off the Irish coast, ought to have taken a different path to avoid all danger. * * *

George A. Kessler of New York, in an interview, gave the following description of the *Lusitania* sinking and of preliminary incidents aboard:

"On Wednesday I saw the crew taking tarpaulins from the boats, and I went up to the Purser and said:

"It's all right drilling your crew, but why don't you drill your passengers?"

"The Purser said he thought it was a good idea, and added, 'Why not tell Captain Turner, Sir?'

"The next day I had a conversation with the Captain, and to him suggested that the passengers should receive tickets, each with a number denoting the number of the boat he should make for in case anything untoward happened. I added that this detail would minimize difficulties in the event of trouble.

"The Captain replied that this suggestion was made after the disaster to the *Titanic*. The Cunard people had thought it over and considered it impracticable. He added that, of course, he could not act on the advice given, because he should first have the authority of the Board of Trade.

"I talked with the Captain generally about the torpedo scare, which neither of us regarded as of any moment. The Captain (you understand, of course, that we were smoking and chatting) explained his plans to me. He said that they were then slowing down, (in fact, we were going only about eighteen knots,) and that the ship would be slowed down until they got somewhere further on the voyage, and then they would go at all speed and get over the war zone.

"I asked him what the war zone was, and he said 500 miles from Liverpool.

"According to the next day's run, ending about two hours before the mishap occurred, we were about 380 or 390 miles from Liverpool. So we were in the war zone, and we were going only at a speed of eighteen knots at the critical moment.

"For the two days previous, as well as I remember, the mileage was 506 and 501, and on Thursday the mileage was 488. On Friday I was playing bridge when the pool was put up on the day's run and I heard twenty numbers go from 480 to 499. I thought it would be a grand speculation to buy the lowest number, as we were going so slow. I did buy it, and paid \$100. The amount in the pool was between \$300 and \$350, and when the pool was declared, I was the winner.

"The steward offered to hand over the money if I would go to his cabin, but I said that he could pay me later.

"Shortly after the steward had left me I was on the upper deck and looking out to sea. I saw all at once the wash of a torpedo, indicated by a snake-like churn of the surface of the water. It may have been about thirty feet away. And then came a thud."

Mr. Kessler told of the general rush for the deck and the second explosion. Then he continued:

"Mr. Berth and his wife, from New York, first-class passengers, were the last ones I spoke to. I should say that all the passengers in the dining saloon had come up on deck. The upper deck was crowded, and, of course, the passengers were wondering what was the matter, few really believing what it proved to be. Still they began to lower boats, and then things began to happen very quickly.

"Mr. Berth was trying to persuade his wife to get into a boat. She said she would not do so without him. He said, 'Oh, come along, my darling; I will be all right,' and I added to his persuasions.

"I saw him help her into the boat with the ropes of the davits. I fell into the

same boat, and we were slipped down into the water over the side of the liner, which was bulging out, the list being the other way. The boat struck the water, and after some seconds (it may have been a minute) I looked up and cried out, 'My God, the Lusitania is gone!'

"We saw the entire bulk, which had been almost upright just a few seconds before, suddenly lurch over away from us. Then she seemed to stand upright in the water, and the next instant the keel of the vessel caught the keel of the boat in which we were floating, and we were thrown into the water. There were only about thirty people in the boat, and I should say that all were stokers or third-class passengers. There may have been one or two first class; I cannot recall who they were.

"When the boat was overturned I sank fifteen or twenty feet. I thought I was gone. However, I had my life-belt around me, and managed to rise again to the surface. There I floated for possibly ten or fifteen minutes, when I saw and made a grab at a collapsible lifeboat at which other passengers were also grabbing. We managed to get it shipshape and clamber in. There were eight or nine in the boat, all stokers except one or two third-class passengers.

"It was partly filled with water and in the scramble which occurred the boat was overturned, and once more we were pitched into the water. This occurred, I should say, eight times, the boat usually righting itself. Before we were picked up by the Bluebell six of the party of eight or nine were lying drowned in the bilge water which was in the bottom."

When asked what he thought the effect of the sinking would be on the United States, Mr. Kessler answered:

"My God! what can America do? Nothing will bring back these people to life.

"It was cold-blooded, deliberate murder, and nothing else—the greatest murder the world has ever known. How will going to war mend that?"

To the question whether the loss of the liner could have been avoided, Mr. Kessler said slowly:

"That is a very serious question, and I hesitate to give an opinion on matters which are purely technical.

"Still, it seems to me as a landsman, and one who has crossed the ocean a great many times, that the safety of the Lusitania lay in speed. We were in the war zone by 140 or 150 miles, and every moment that we dawdled at fifteen or eighteen knots was an increase of our risk of being torpedoed.

"Again, (and of course I merely make the comment,) I cannot understand why there were no destroyers or patrol boats about, as we certainly had been led to expect there would be when we reached the war zone.

"The ship was torpedoed at 2:05 P. M. My watch stopped at 2:30. It was 5 o'clock when I was picked up by the Bluebell, and it was 10 o'clock before we were landed in Queenstown."

CHARLES FROHMAN'S DEATH.

[Special Cable to THE NEW YORK TIMES.]

LONDON, May 10.—A highly interesting story was told tonight by Rita Jolivet, the actress, who stood calmly chatting with Charles Frohman and Alfred G. Vanderbilt during the last tense moments before the Lusitania sank. The three of them, together with G. L. S. Vernon, Miss Jolivet's brother-in-law, and Mr. Scott, who had come all the way from Japan to enlist, joined hands and stood waiting to face death together. Miss Jolivet said:

We stood talking about the Germans and the rumor which had gained currency that a man, obviously of German origin, had been arrested for tampering with the wireless. The story was that the man had been discovered at 1 o'clock in the morning a day or two before doing something to the wireless apparatus and had been immediately imprisoned. I did not see the man arrested, so I am not sure about the story's truth, but there were good grounds for believing it.

We determined not to enter the boats, and just a minute or two before the end Mr. Frohman said with a smile: "Why fear death? It is the most beautiful adventure that life gives us."

Mr. Scott fetched three lifebelts, one

for Mr. Vanderbilt, one for Mr. Frohman, and one for my brother-in-law. He said he was not going to wear one himself, and my brother-in-law also refused to put his on. I hear that Mr. Vanderbilt gave his to a lady, Mrs. Scott. I helped to put a lifebelt on Mr. Frohman. My brother-in-law took hold of my hand and I grasped the hand of Mr. Frohman, who, as you know, was lame. Mr. Scott took hold of his other hand, and Mr. Vanderbilt joined the row, too. We had made up our minds to die together.

Then Mr. Frohman, in a perfectly calm voice, said: "They've done for us; we had better get out." He knew that his beautiful adventure was about to begin. He had hardly spoken when, with a tremendous roar, a great wave swept along the deck and we were all divided in a moment. I have not seen any of those brave men alive since. Mr. Frohman, Mr. Vanderbilt, and my brother-in-law were drowned. When Mr. Frohman's body was recovered there was the most beautiful and peaceful smile upon his lips.

VANDERBILT'S HEROIC END.

[Special Cable to THE NEW YORK TIMES.]

LONDON, May 9.—Two survivors of the *Lusitania* disaster have given testimony that Alfred G. Vanderbilt died heroically; that he went to death to save the life of a woman.

Thomas Slidell, a friend of Mr. Vanderbilt, who lives at the Knickerbocker Club in New York, and was travelling with him, told of the sacrifice first. Then tonight Norman Ratcliffe, who lives in Gillingham, Kent, and was returning from Japan, offered verification. Mr. Ratcliffe was rescued, after clinging to a box in the sea for three hours. With him was a steward of the *Lusitania*. He said:

This steward told me he had seen Mr. Vanderbilt on the *Lusitania*'s deck, shortly after the ship was struck, with a lifebelt about his body. When the ship gave every indication that it would sink within a few minutes, the steward said, Mr. Vanderbilt took off his lifebelt and gave it to a woman who passed him on the

deck, trembling with fear of the fate she expected to meet. The steward said Mr. Vanderbilt turned back, as though to look for another belt, and he saw him no more.

Telling of his last moments on the ship and his last sight of Mr. Vanderbilt, Mr. Slidell said:

I saw Alfred G. Vanderbilt only a few minutes before I left the ship. He was standing with a lifebelt in his hand. A woman came up to him, and I saw him place the belt around the woman. He had none for himself, and I know that he could not swim.

Only the day before we had been talking of a day and a dawn some years ago when we went down the bay at New York in his yacht and waited to welcome and dip our flag to the *Lusitania* on her maiden voyage. We saw the first and last of her. Vanderbilt, who had given largely to the Red Cross, was returning to England in order to offer a fleet of wagons and himself as driver to the Red Cross Society, for he said he felt every day that he was not doing enough.

KLEIN AND HUBBARD LOST.

Oliver O. Bernard, scenic artist of Covent Garden, said:

Only one or two of the shining marks which disasters at sea seem invariably to involve have lived to tell the *Lusitania*'s tale. Vanderbilt, the sportsman, is gone. Genial Charles Klein, the playwright, is gone. That erratic American literary genius, Elbert Hubbard, is gone, and with him a wife to whom he seemed particularly devoted. And Charles Frohman is gone.

Frohman's was the only body I could recognize in the Queenstown mortuary, and perhaps it will interest his many friends in London and New York to know that the famous manager's face in death gives uncommonly convincing evidence that he died without a struggle. It wears a serenely peaceful look.

Frohman must have found it more difficult for him to take his place in a lifeboat than any other man on the ship. He was quite lame, and hobbled about on deck laboriously with a heavy cane. He

seldom came to the general dining saloon, either out of sensitiveness or because of distress caused by his leg.

I last saw Alfred G. Vanderbilt standing at the port entrance to the grand saloon. He stood there the personification of sportsmanlike coolness. In his right hand was grasped what looked to me like a large purple leather jewel case. It may have belonged to Lady Mackworth, as

Mr. Vanderbilt had been much in company of the Thomas party during the trip, and evidently had volunteered to do Lady Mackworth the service of saving her gems for her. Mr. Vanderbilt was absolutely unperturbed. In my eyes, he was the figure of a gentleman waiting unconcernedly for a train. He had on a dark striped suit, and was without cap or other head covering.

Germany Justifies the Deed

[It should be borne in mind that the subjoined official and semi-official outgivings on behalf of Germany, announcing the destruction of the *Lusitania*, justifying it, striving to implicate the British Government, and to some extent modifying the original war zone proclamation of Feb. 18, 1915, were published prior to the receipt by the German Imperial Government of President Wilson's note of May 13. British official rejoinders and a statement by the Collector of the Port of New York are included under this head.—Editor.]

GERMAN OFFICIAL REPORT.

BERLIN, May 8, (via wireless to London, Sunday, May 9.)—The following official communication was issued tonight:

The Cunard liner *Lusitania* was yesterday torpedoed by a German submarine and sank.

The *Lusitania* was naturally armed with guns, as were recently most of the English mercantile steamers. Moreover, as is well known here, she had large quantities of war material in her cargo.

Her owners, therefore, knew to what danger the passengers were exposed. They alone bear all the responsibility for what has happened.

Germany, on her part, left nothing undone to repeatedly and strongly warn them. The Imperial Ambassador in Washington even went so far as to make a public warning, so as to draw attention to this danger. The English press sneered at the warning and relied on the protection of the British fleet to safeguard Atlantic traffic.

BRITAIN'S DENIAL.

LONDON, May 8.—The British Government today made the following announcement:

The statement appearing in some

newspapers that the *Lusitania* was armed is wholly false.

COLLECTOR MALONE'S DENIAL.

In THE NEW YORK TIMES of May 9, 1915, the following report appeared:

Dudley Field Malone, Collector of the Port, gave an official denial yesterday to the German charge that the *Lusitania* had guns mounted when she left this port on Saturday, May 1. He said:

"This report is not correct. The *Lusitania* was inspected before sailing, as is customary.

"No guns were found, mounted or unmounted, and the vessel sailed without any armament. No merchant ship would be allowed to arm in this port and leave the harbor."

This statement was given out by the Collector yesterday morning at his home, 270 Riverside Drive.

Herman Winter, Assistant Manager of the Cunard Line, 22 State Street, who was on the *Lusitania* for three hours before she sailed for Liverpool, denied the report that she ever carried any guns.

"It is true," Mr. Winter said, "that she had aboard 4,200 cases of cartridges, but they were cartridges for small arms, packed in separate cases, and could not

(Photo from P. S. Rogers.)

have injured the vessel by exploding. They certainly do not come under the classification of ammunition. The United States authorities would not permit us to carry ammunition, classified as such by the military authorities, on a passenger liner. For years we have been sending small-arms cartridges abroad on the Lusitania.

"The Lusitania had 1,250 steel shrapnel cases, but they were empty. There was no explosive of any sort aboard. As to the report that the Lusitania had guns aboard, I cannot assert too strongly that it is positively untrue. There were no guns whatever aboard. The Lusitania was an unarmed passenger steamer. Furthermore, she never has been armed, and never carried an unmounted gun or rifle out of port in times of war or peace."

"Then you unqualifiedly declare that the Lusitania was not armed against submarines?" he was asked.

"The ship," Mr. Winter replied, "was as defenseless against undersea and underhanded attack as a Hoboken ferryboat in the North River would be against one of the United States battleships."

Captain D. J. Roberts, Marine Superintendent of the Cunard Line, said yesterday that he was prepared to testify under oath in any court and from his personal knowledge that the Lusitania did not carry any guns when she sailed from New York at 12:28 P. M. on May 1 for Liverpool.

"It is my invariable custom to go through the passenger ships every day they are in port," he said, "and I made my last inspection of the Lusitania on sailing day at 7 A. M. There were no guns or plates or mountings where guns could be fitted on the Lusitania, nor have there been since she has been in the service. The ship has never carried troops or been chartered by the British Government for any purpose whatsoever.

"In order that there should be no mistake about the ensigns flown by British merchant vessels, the Admiralty ordered after war had been declared that only the red ensign, a square red flag with the union jack in the corner, should be shown at the stern of a merchantman, and the white St. George's ensign by all

war vessels, whether armored or unarmored. These are the only two flags that are hoisted on British ships today, with the exception of the company's house flag, when they are entering port or passing at sea, and the mail flag on the foremast, which every steamship flies coming in to denote that she has mails on board.

"Before the war both the Lusitania and the Mauretania flew the blue ensign of the Royal Naval Reserve, which any British merchant vessel is allowed to do if her commander and officers and two-thirds of the crew belong to the reserve."

NEUTRALS IN THE WAR ZONE.

[German Foreign Office Note.]

[Special to THE NEW YORK TIMES.]

WASHINGTON, May 11.—Secretary Bryan received from Ambassador Gerard at Berlin today the text of an official declaration by the German Government of its policy with respect to American and other neutral ships meeting German submarines in the naval war zone around the British Isles and in the North Sea. This declaration was handed to Mr. Gerard by the German Foreign Office, which explained that it was being issued as a "circular statement" in regard to "mistaken attacks by German submarines on commerce vessels of neutral nations."

First—The Imperial German Government has naturally no intention of causing to be attacked by submarines or aircraft such neutral ships of commerce in the zone of naval warfare, more definitely described in the notice of the German Admiralty staff of Feb. 4 last, as have been guilty of no hostile act. On the contrary, the most definite instructions have repeatedly been issued to German war vessels to avoid attacks on such ships under all circumstances. Even when such ships have contraband of war on board they are dealt with by submarines solely according to the rules of international law applying to prize warfare.

Second—Should a neutral ship nevertheless come to harm through German submarines or aircraft on account of an unfortunate (X) [mistake?] in the

above-mentioned zone of naval warfare, the German Government will unreservedly recognize its responsibility therefor. In such a case it will express its regrets and afford damages without first instituting a prize court action.

Third—It is the custom of the German Government as soon as the sinking of a neutral ship in the above-mentioned zone of naval warfare is ascribed to German war vessels to institute an immediate investigation into the cause. If grounds appear thereby to be given for association of such a hypothesis the German Navy places itself in communication with the interested neutral Government so so that the latter may also institute an investigation. If the German Government is thereby convinced that the ship has been destroyed by Germany's war vessels, it will not delay in carrying out the provisions of Paragraph 2 above. In case the German Government, contrary to the viewpoint of the neutral Government, is not convinced by the result of the investigation, the German Government has already on several occasions declared itself ready to allow the question to be decided by an international investigation commission, according to Chapter 3 of The Hague Convention of Oct. 18, 1907, for the peaceful solution of international disputes.

This circular is understood to have been rather reassuring to high officials of the United States Government, although it does not cover the attitude of the German Government toward the treatment to be accorded to Americans and other neutral noncombatants, men, women, and children, on board vessels flying the flag of England, France, or Russia. The absence of any allusion to the principle involved in the Lusitania case is believed here to mean that the statement was prepared and was ready for promulgation before the destruction of the Lusitania on Friday. Several days usually have been required for messages to come to Washington from Ambassador Gerard, by roundabout cable relay route, and it is believed that this dispatch is no exception in this respect.

DR. DERNBURG'S DEFENSE.

The sinking of the Lusitania as a man-of-war was justified by Dr. Bernhard Dernburg, late German Colonial Secretary and recognized as quasi-official spokesman of the German Imperial Government in the United States, in a statement issued in Cleveland, Ohio, on May 8, 1915. The statement reads:

Great Britain declared the North Sea a war zone in the Winter. No protest was made by the United States or any neutral. Great Britain held up all neutral ships carrying non-contraband goods, detaining them, buying or confiscating their cargoes.

Great Britain constantly changed the contraband lists, so no foodstuffs of any kind have actually reached Germany since the war began. International law says foodstuffs destined for the civil population must pass. It does not recognize any right to starve out a whole people.

As a consequence, and in retaliation, Germany declared the waters around England a war zone, and started a submarine warfare. It became known in February that British ships were flying the American flag as a protection.

Great Britain replied by officially declaring its purpose to starve 120,000,000 Germans and Austrians. The United States very thoughtfully tried to mediate, proposing that foodstuffs should be passed and submarine warfare be stopped.

Germany agreed; England turned the proposal down. Then, in order to protect American passengers, they were warned by public advertisement of the danger of sailing under the flag of a belligerent.

Vessels carrying contraband of war are liable to destruction unless they can be taken to a port of the country that captures them. The right of search need not be exercised if it is certain such ships carry contraband.

Oil is contraband, like war ammunition and all metals. The master of the Gulf-light (an American oil tank steamer sunk recently) swore before customs officials to his cargo of oil for France.

The master of the Lusitania similarly swore to his manifest of cargo of metals and ammunition. Both the Gulfstream and the Lusitania carried contraband when attacked, it is obvious.

The Lusitania's manifest showed she carried for Liverpool 260,000 pounds of brass; 60,000 pounds of copper; 189 cases of military goods; 1,271 cases of ammunition, and for London, 4,200 cases of cartridges.

Vessels of that kind can be seized and be destroyed under The Hague rules without any respect to a war zone. The Lusitania was a British auxiliary cruiser, a man-of-war. On the same day she sailed the Cameronia, another Cunarder, was commandeered in New York Harbor for military service.

The fact is that the Lusitania was a British war vessel under orders of the Admiralty to carry a cargo of contraband of war. The passengers had had full warning, first by the German note to England in February, second by advertisement.

Germany wants to do anything reasonable so as not to make the United States or its citizens suffer in any way. But she cannot do so unless Americans will take necessary precautions to protect themselves from dangers of which they are cognizant.

What Germany has done, she has done by way of retaliation after her offer through President Wilson, regarding submarine warfare, was turned down and after Britain declared the war was directed toward the 120,000,000 innocent noncombatants, women and children.

Americans can do their own thinking when the facts are laid before them. I have really no authority to speak. But

my mission in the United States is to inform your people of the German attitude. The German Ambassador, Count von Bernstorff, can speak only in official phrases. I talk straight out, bluntly.

Dr. Dernburg put much stress on the fact that the Cunard Line officials did not warn American passengers that the ship carried a large store of ammunition and other contraband of war. He continued:

Did they issue a warning? I would like an answer. If that warning was not given, American passengers were being used as a cloak for England's war shipments.

It is not reasonable that such a vessel could not be sunk because there were American passengers on board. They had been warned by Germany of the danger.

England could hire one American to travel to and fro on each of her ships, carry on shipments of arms, and place her men-of-war anywhere, if American passengers can be used as shields.

Asked whether he expected action by the United States because of the Lusitania's sinking, Dr. Dernburg said:

That is a question I cannot discuss. I can only say that any ship flying the American flag and not carrying contraband of war is and will be as safe as a cradle. But any other ship, not so exempt, is as unsafe as a volcano—or as was the Lusitania.

When he was told that the Transylvania, another Cunard liner, sailed from New York on May 7, to cover the same route as the Lusitania, Dr. Dernburg said:

I can only say that the German warnings will reappear henceforth by advertisement. That is significant.

German Press Opinion

Contrasting with the attitude of the German-American press since the issuance of President Wilson's note of May 13 to the German Imperial Government, the comment of the press in Germany has been in accordance with the German official statements put forth prior to the

receipt of the American note. Under date of May 9, 1915, the following dispatch by The Associated Press was received from Berlin:

Commenting on the destruction of the Lusitania, the Berliner Tageblatt says:

With deep emotion we learn of the destruction of the *Lusitania*, in which countless men lost their lives. We lament with sincere hearts their hard fate, but we know we are completely devoid of blame.

We may be sure that through the English telegrams communicated to the world indignation will again be raised against Germany, but we must hope that calm reflection will later pronounce the verdict of condemnation against the British Admiralty.

The many who are now sorrowing may raise complaint against Winston Spencer Churchill, First Lord of the British Admiralty, who, by conscienceless instructions which must bring him the curse of mankind, conjured up this cruel warfare. * * *

The *Lusitania* was a warship on the list of English auxiliary cruisers and carried armament of twelve strongly mounted guns. She was more strongly mounted with guns than any German armored cruiser. As an auxiliary cruiser she must have been prepared for attack.

Count von Reventlow, the naval expert, says, in the Tages Zeitung:

The American Government probably will make the case the basis for diplomatic action, but it could have prevented the loss of American lives by appropriate instructions. It is the American Government's fault, therefore, if it did not take Germany's war zone declarations seriously enough.

The writer declares, further, that Germany had full and trustworthy information that the Lusitania carried a cargo of war material, as she had on previous trips.

The Lokal Anzeiger also assumes that the steamship was carrying munitions of war, and maintains that this and "the fact that she was a fully armed cruiser completely justifies her destruction under the laws of warfare."

The Kreuz Zeitung, after referring to the warning issued by Ambassador von Bernstorff, adds:

If citizens of neutral States were lost with the sunken ship they must bear the full blame.

Some papers further testify the sinking

of the steamer because on a previous occasion she had resorted to the expedient of flying the American flag. Germania, the clerical organ, deprecates probable attempts by Germany's antagonists to make moral capital against her out of the sinking of the Lusitania and the loss of life. The paper says:

We can look forward to such efforts with a clear conscience, for we have proceeded correctly. We can only answer to those who place their sympathies above justice, that war is war.

An editorial article in the Frankfurter Zeitung was quoted in an Amsterdam dispatch to The London Times of May 10, as follows:

The *Lusitania* has been sent to the bottom. That is the announcement which must arouse measureless horror among many thousands.

A giant ship of the British merchant fleet, a vessel of over 31,000 tons, one of the most famous of the fast steamers of the British-American passenger service, a ship full of people, who had little or nothing to do with the war, has been attacked and sunk by a German torpedo. This is the announcement which in a few words indicates a mighty catastrophe to a ship with 2,000 people aboard.

We always feel that it is tragic and all too hard when war inflicts wounds on those who do not carry its weapons.

We lament similarly the fate of the unfortunate villages and towns where war rages and the innocent victims of bombs who, far behind the trenches, and often without our being able to estimate the meaning of this murder, are snatched from the ranks of the unarmed.

Much more terrible is the fate of those who on the high sea, many hundreds in number, suddenly see death before their eyes.

A German war vessel has sunk the ship. It has done its duty.

For the German Navy the sinking of the *Lusitania* means an extraordinary success. Its destruction demolished the last fable with which the people of England consoled themselves; on which hostile shipping relied when it dared to defy the German warnings.

We do not need to seek grounds to justify the destruction of a British ship. She belonged to the enemy and brought us harm. She has fallen to our shots.

The enemy and the whole world were warned that he who ventured to trust himself within her staked his life.

The London Daily Mail of May 16 quotes from Der Tag the following article by Herr von Rath, who is described as a favorite spokesman in the Wilhelmstrasse:

President Wilson is very much troubled by the drowning of so many American citizens, and we Germans sincerely share his feelings, but we see in the Lusitania affair one of the many cruel necessities which the struggle for existence brings with it.

If, as English reports try to make us believe, Mr. Wilson is now meditating revenge, we will not disturb him in this occupation, but would only hope that his demands will be addressed to the right and not the wrong quarters.

The right address is England. On the German side, everything was done to warn American travelers from the impending peril, while British irresponsibility and arrogance nullified the effect of the German admonition.

Mr. Wilson is certainly in a precarious position. After showing himself so weak in the face of the long and ruthless British provocations, he has to play the strong man with Germany. Otherwise he will lose what prestige he has left, and he knows that in the background the pretender to the throne, Mr. Roosevelt, is lurking.

But what are the gallant shouters in the United States thinking about? Should the United States send troops to take part in the fighting in Flanders? The gigantic losses of their Canadian neighbors should not exactly encourage them, from a military standpoint. Moreover, the United States are so weak that they have never even been able to impose their will on Mexico or to do anything to the still more unpleasant Japanese than to clench their fists in their pockets.

Should their superdreadnoughts cross

the Atlantic Ocean? England has not even useful work for her own ironclads in this war. What would American warships do?

How about our Germanic brethren in the United States—the half million German and Austro-Hungarian reservists who are not permitted to take part in the defense of their home lands? Will they stand with folded arms and see their fatherlands attacked?

What the United States has already done to support our enemies is, apart from interference with private property, the worst which she could do to us. We have nothing more to expect or to fear. Therefore, the threats of our erstwhile friend Roosevelt leave us quite cold.

Let the United States also preserve up from warmed-up humanitarian platitudes, for her craven submission to England's will is promoting an outrageous scheme to deliver Germany's women and children to death by starvation.

A wireless dispatch from Berlin to Sayville, L. I., on May 16 reported this outgiving by the Overseas News Agency:

The whole German press, particularly the Cologne Gazette, the Frankfort Gazette, and the Berliner Tageblatt, deeply regret the loss of American lives caused by the sinking of the Lusitania.

The Tages Zeitung and other newspapers state that the responsibility rests with the British Government, which, attempting to starve the peaceful civilian population of a big country, forced Germany in self-defense to declare British waters a war zone; with shipowners, who allowed passengers to embark on an armed steamer carrying war material, and neglected German warnings against entering the war zone, and, finally, with the English press.

Heartfelt sympathy is expressed by the German press and public for the victims of the catastrophe and their relatives.

From The Hague, via London, on May 19 a special cable to THE NEW YORK TIMES reported that, acting apparently under official instructions, several leading German newspapers had on that day joined in a fierce attack on the United

States, making a concerted demand that Germany refuse to yield to the American protest.

Practically all these newspapers repeat the same arguments, declaring that neutrals entering the war zone do so at their own risk, and that the Americans aboard the Lusitania "were shielding contraband goods with their persons." The Berliner Tageblatt said:

The demand of the Washington Government must be rejected. Indeed, the whole note hardly merits serious consideration. Its "firm tone" is only a cloak to hide America's consciousness of her own culpability. If American citizens, in spite of the warnings of the German Admiralty, intrusted themselves on the Lusitania, the blame for the consequences falls on themselves and their Government.

Can the United States affirm that there were no munitions aboard? If not, it has not the shadow of a right to protest.

GERMAN-AMERICAN PRESS COMMENTS.

Under the heading "The President's Note," Herman Ridder, editor of the New Yorker Staats-Zeitung, one of the leading German-American newspapers, said in that publication on May 15:

The attitude assumed by the President, in the note delivered yesterday to the German Government, toward the infringement of our rights on the seas is diplomatically correct and must compel the support of the entire American people.

We have suffered grievously at the hands of more than one of the belligerent nations, but for the moment we are dealing only with Germany. The note recites a series of events which the Government of the United States could not silently pass by, and demands reparation for American lives lost and American property already destroyed and a guarantee that the rights of the United States and its citizens shall be observed in the future. All this the German Government may well grant, frankly and unreservedly and without loss of

honor or prestige. It would be incomprehensible if it did not do so.

The note admits, as most diplomatic documents do, of two interpretations. They will be applied to it variously, as the reader is inclined to pessimism or to optimism. It is a document in which lies the choice of war or peace evenly balanced. I prefer to read into it all the optimism which can be derived from the knowledge that two nations, historically like-minded and bound to one another by strong ties of friendship, seldom go to war over matters which can be settled without resort to the arbitrament of arms. There is no question outstanding today between the United States and Germany which cannot be settled through diplomatic channels. I am inclined all the more to this optimism by the temperament and character of the President of the United for the time being.

I see in the note great possibilities for good. The undersea activities of the German Navy in their effect upon the rights of the United States and its citizens form, properly, the burden of its argument. We are addressing Germany, and it is only over her submarine policy that our interests have clashed with hers. The note takes cognizance, however, of the inter-relation of Germany's submarine policy and the British policy of "starving out Germany." The President has opened an avenue to the full discussion of the rights and obligations of submarines in naval warfare, and when Germany has stated her case it is not only not impossible but it is highly probable that he will be asked to suggest a *modus vivendi* by which the objectionable features of both these policies may be removed.

The situation is basically triangular and it is difficult to see how the settlement of our difficulties with Germany can escape involving at the same time the rectification of Great Britain's methods of dealing with the trade between neutral countries and her adversaries. It is but a step from the position of mediator in a question of this sort to that of mediator in the larger questions which make for war or peace. I

believe that the note contains the hopeful sign that these things may come to pass.

The possibilities are there and the President, I am confident, will overlook no possibility of advancing the cause of an early return of peace to Europe nor leave any unturned stone to free this country of the dangers and inconveniences which have become the concomitants of the European struggle. Out of the troubled waters of our present relations with Germany may thus come a great and, we may hope, a lasting good. Should this happily be the case, the wisdom of the President will have been confirmed and the thankfulness of the nation secured to him. On the other hand, should his pacific hand be forced by those who wax fat and wealthy on strife and the end should be disaster untold to the country, he will still have the consolation of having fought a good battle and of knowing that he was worsted only by the irresistible force of demagoguery in this country or abroad.

The subject with which the note deals is one of the same paramount importance to Germany as it is to this country, and we must wait in patience for Germany's reply; and I, for one, shall wait in the confidence that when it is received it will be found to offer a basis for a friendly solution of the questions which exist between Germany and the United States and, not unlikely, for those further steps which I have intimated.

Under the caption "A Word of Earnest Advice," the evening edition of the New Yorker Staats-Zeitung on May 14 issued the following warning to Germans and German-Americans:

The times are grave—even very grave. * * * A conflict between America and the old Fatherland is threatening. Such a conflict must rend the heart of every German-American who has acquired the rights of citizenship here, who has founded a new career for himself and brought up his children.

It is probably unnecessary to give any advice to the American citizens among our readers in regard to their conduct in this grave time. A series of years must

pass before an immigrant can obtain his citizenship papers; nobody is forced to become a citizen. Of the man who has voluntarily become a citizen of the United States we may therefore expect that he knows the conditions here obtaining, the institutions of the country of his adoption, as well as his rights and duties. But there are thousands upon thousands of our readers who are not citizens, and to them a serious word of advice shall now be addressed. In the grave time of the conflict let efforts be made to avoid every personal conflict. It is not necessarily cowardly to deny one's descent, but it is not necessary, either, to make demonstrations.

Where there is life there is hope. The hope still is entertained that the conflict will be eliminated, that the bond of friendship between Germany and America will not be torn. Through thoughtless Hotspurs, who allow themselves to be carried away by excitement and do not dam up the flood of their eloquence, much mischief can be done. Keeping away from the public places where the excited groups congregate and discuss the burning questions of the day must be urgently recommended. It was for many a sport to participate in these discussions, and with more or less skill, but always energetically to champion the German cause.

The American is in general very liberal in regard to expression of opinion. He likes to hear also the "other side," but it must not be forgotten that in times of conflict the "other side" may be regarded as the "enemy side." What has heretofore sounded harmless may now be interpreted as a criticism made against the United States. But the American as a rule repels a criticism made by strangers against the affairs of his own country. Through heated discussions and unwise demonstrations nothing is at present to be achieved but much can be spoiled.

Grave times!

Calmness is now the first duty of citizenship—for all non-citizens.

But whoever is a citizen—he would be doing well in any event to stay away

from the streets and squares where the noisy ones congregate.

There are very many Germans whose motto here, too, is: "We Germans fear God and nothing else in the world." But whoever bellows that into the ears of hundreds of persons of hostile mind in the public market place is either a fool or—weary of life.

In submarine warfare the Germans may be superior to the British, but in undermining the latter are superior to the former. They have now succeeded in undermining the friendship between Uncle Sam and the Deutsche Michel. Let us hope that the fuse can be extinguished before the explosion follows.

Charles Neumeyer, editor of The Louisville (Ky.) Anzeiger, in a dispatch on May 14 to THE NEW YORK TIMES, said of President Wilson's note:

The American note to Berlin evidences the desire of the President to hold Germany to strict accountability for the loss of American lives in the Lusitania disaster. This proceeding on the part of the American Government is eminently just and proper. If the President had failed to hold Germany to strict accountability he would have failed of his official duty. The President's forceful action cannot be but of salutary effect in this country also. It gives the American people the assurance that the Government at Washington is prepared and ready for the protection of American citizens wherever they may chance to be.

There was a time when the Government did not resort to very vigorous measures in this respect. American citizens while traveling abroad were frequently subject to insult and violence, and the authorities at Washington seemingly paid little heed to complaints. The result was that the American citizen abroad was not held in that respect which emanates from the knowledge that his home Government is prepared to go to the length of its ability, if necessary, to accord him protection.

One or two of the demands formulated against Germany do not meet with our approval. The President demands a ces-

sation of German submarine warfare on merchant vessels, but while the interruption of the starvation plan adopted by England against the civil population is urged upon the latter it will continue. The starvation plan is primarily being waged against the weak and helpless, and is, therefore, responsible. It is also in violation of the spirit if not the letter of international law. If the President can force a demand for the cessation of the submarine warfare, he ought also to have the right to demand the lifting of the starvation blockade. The tragedy was chiefly due to either stupidity or design on the part of the British Admiralty in failing to afford proper protection to the ship. While we do not agree with the President on some points in his note, we repose the fullest confidence in his patriotism, as well as his deliberate judgment as giving assurance that, whatever the outcome, the case of the American people rests in trustworthy hands.

The people should by their action spare him unnecessary embarrassment and rely for a satisfactory solution of the grave questions confronting us on his patriotism and honesty.

A dispatch on May 14 to THE NEW YORK TIMES from Max Burgheim, editor of the Freie Presse of Cincinnati, Ohio, reads:

The part of the note referring to the Lusitania catastrophe had better been directed to London. England, not Germany, is responsible for the destruction of the Lusitania. England, through the violation of the rights of nations and the brutal threat to starve 70,000,000 Germans, has forced Germany to a policy against English commerce of which the Lusitania was a victim. Germany declared to our President her willingness to stop submarine warfare if England would allow the importation of food for the German civil population. England contemptuously cast aside the President's mediation.

It has not yet been proved that submarine warfare is not in keeping with international law. Distinguished authorities on international law have declared that Germany was not only justified but

bound to adopt this method in the hour of need, because it is the only effective defense against England's warfare. Germany cannot cease this warfare unless she wishes to surrender with tied hands

to a ruthless enemy. All we can justly ask of Germany is that neutral ships be not attacked, and that damages be paid in case of loss through mistakes. Germany has already agreed to this.

Falaba, Cushing, Gulflight

CASE OF THE FALABA.

A Washington dispatch to THE NEW YORK TIMES on March 31, 1915, reported that the records of the State Department's Passport Bureau show that a passport was issued on June 1, 1911, to Leon Chester Thrasher, a passenger aboard the British African steamship *Falaba*, which was torpedoed by a German submarine in the "zone of naval warfare" on March 28. The American citizenship of Thrasher, who was drowned, has been established.

[Special Cable to THE NEW YORK TIMES.]

LONDON, Wednesday, March 31.—An American citizen, Leon Chester Thrasher, an engineer, was among the victims of the German submarine that sank the British steamer *Falaba* in St. George's Channel last Sunday with a loss of 111 lives. Mr. Thrasher's name is included in the official list of the missing. For the last year he had been employed on the Gold Coast, British West Africa, and it is presumed he was returning to his post when he met his death at the hands of the German sea raiders.

The Daily Mail says Mr. Thrasher was bound for Secondree, West Africa. Reference to the form which has to be filled out to satisfy the Board of Trade and customs requirements by every passenger embarking at a British port before tickets will be issued shows that Mr. Thrasher was a citizen of the United States. Here are the particulars:

Name, Leon Chester Thrasher; age, last birthday, 31; single; sex, male; profession, engineer; country of residence for last twelve months, Gold Coast Colony, West Africa; country of intended residence for next twelve months, the same; country of which citizen or subject, United States of America; present ad-

dress, 29 Cartwright Gardens, St. Pancras, W. C.

When Mr. Thrasher went on board the *Falaba* he produced an American passport.

The British Official Press Bureau on April 8 issued the following report on the destruction of the *Falaba*:

It is not true that sufficient time was given the passengers and the crew of this vessel to escape. The German submarine closed in on the *Falaba*, ascertained her name, signaled her to stop, and gave those on board five minutes to take to the boats. It would have been nothing short of a miracle if all the passengers and crew of a big liner had been able to take to their boats within the time allotted.

While some of the boats were still on their davits the submarine fired a torpedo at short range. This action made it absolutely certain that there must be great loss of life and it must have been committed knowingly with the intention of producing that result.

The conduct of all on board the *Falaba* appears to have been excellent. There was no avoidable delay in getting out the boats. To accuse the *Falaba*'s crew of negligence under the circumstances could not easily be paralleled.

THE GERMAN DEFENSE.

[By The Associated Press.]

BERLIN, April 13, (via Amsterdam to London, April 14.)—A semi-official account of the sinking of the British steamer *Falaba* by a German submarine on March 28 was made public here today. It follows:

On receiving the signal "Stop, or I fire," the *Falaba* steamed off and sent up rocket signals to summon help, and

was only brought to a standstill after a chase of a quarter of an hour.

Despite the danger of an attack from the steamer or from other vessels hurrying up, the submarine did not immediately fire, but signaled that the steamer must be abandoned within ten minutes. The men of the *Falaba* quickly entered the boats, although the launching took place in an unseamanlike manner. They failed to give assistance, which was possible, to passengers struggling in the water.

From the time of the order to leave the ship until the torpedo was discharged not ten but twenty-three minutes elapsed, prior to which occurred the chase of the steamer, during which period time might have been used to get the boats ready.

The torpedo was fired only when the approach of suspicious-looking vessels, from which an attack was to be expected, compelled the commander of the submarine to take quick action. When the torpedo was discharged nobody was seen on board the ship except the Captain, who bravely stuck to his post.

Afterward some persons became visible who were busy about a boat.

Of the crew of the submarine, the only ones on deck were those serving the cannon or those necessary for signaling. It was impossible for them to engage in rescue work, because the submarine could not take on passengers.

Every word is superfluous in defending our men against malignant accusations. At the judicial proceedings in England no witness dared raise accusations. It is untrue that at any time the submarine displayed the English flag. The submarine throughout the affair showed as much consideration for the *Falaba* as was compatible with safety.

COMMANDER SCHMITZ'S STORY.

[From The New York Times, May 6, 1915.]

J. J. Ryan, the American cotton broker who went to Germany on March 30 and sold 28,000 bales of cotton he had shipped to Bremen and Hamburg, returned yesterday on the Cunard liner Carpathia very well satisfied with the results of his trip. He said:

While I was in Bremen I met Com-

mander Schmitz of the German submarine U-28, which sank the British African liner *Falaba* off the English coast on March 28. He told me that he regretted having been compelled to torpedo the vessel, as she had passengers on board. In explanation, he said:

"I warned the Captain of the *Falaba* to dismantle his wireless apparatus and gave him ten minutes in which to do it and get his passengers off. Instead of acting upon my demand he continued to send messages out to torpedo destroyers, that were less than twenty miles away, to come as quickly as possible to his assistance.

"At the expiration of the ten minutes I gave him a second warning about dismantling his wireless apparatus and waited twenty minutes, and then I torpedoed the ship, as the destroyers were getting close up and I knew they would go to the rescue of the passengers and crew."

I mentioned the fact to the commander that it had been reported by some of the survivors of the liner that while the men and women were struggling for their lives in the icy water his crew were standing on the deck of the submarine laughing. He looked very gravely at me and replied, "That is not true, and is most cruelly unjust to my men. They were crying, not laughing, when the boats were capsized and threw the people into the water."

CASE OF THE CUSHING.

[Special to THE NEW YORK TIMES.]

WASHINGTON, May 1.—Secretary Bryan today received from American Minister Henry van Dyke at The Hague a report on the attack by German aviators on the American steamship *Cushing*, and said tonight that this report would be immediately cabled to Ambassador Gerard at Berlin for his information. Ambassador Gerard will bring the matter to the attention of the German Government. The report from Minister van Dyke was very brief, and read as follows:

The American Consul at Rotterdam reports that the American steamship *Cushing*, Captain Herland, with petro-

leum from New York to Rotterdam, flying the American flag, was attacked by German aeroplanes near the North Hinder Lightship, afternoon April 29. Three bombs dropped, one struck ship, causing damage, but no life lost.

The report of Captain Lars Larsen Herland, master of the American tank steamer Cushing, made upon his arrival in Philadelphia, Penn., on May 19, 1915, is as follows:

The airmen swept in narrow circles over the tanker, trying to get directly over the funnel, with the idea, apparently, of dropping a bomb into it and wrecking the engine room.

When attacked the Cushing was about twenty-five miles from Antwerp and eight miles from the North Hinder Lightship. It was near 7 o'clock in the evening, but the sun had barely touched the horizon, and there was ample light for the pilot of the biplane to see the words, "Cushing, New York, United States of America," painted on each side of the vessel in letters eight feet high, and to note the Stars and Stripes at the mast-head and the taffrail.

When the airship was first noted it was several thousand feet in the air, but dropped as it approached the ship, and soon was only about 500 feet up. Suddenly it swooped down to about 300 feet above the Cushing. Then there was a tremendous explosion, and a wave flooded the stern deck. A second bomb missed the port quarter by a foot or so, and sent another wave over the lower deck.

The biplane swung up into the wind, hung motionless for a second or so, then came the third bomb, which just grazed the starboard rail and shot into the sea.

The airship hung around for a few minutes, then headed toward the Dutch coast. She was flying a white flag, with a black cross in the centre, the pennant of the German air fleet.

CASE OF THE GULFLIGHT.

Official confirmation of the attack on May 1, 1915, by a German submarine on the American oil tank steamer Gulflight off the Scilly Islands came to the State Department at Washington on May 3 in

dispatches from Joseph G. Stephens, the United States Consul at Plymouth, England. Two members of the crew were drowned, the Captain died of heart failure, and thirty-four members of the crew were saved. Following is the sworn statement of Ralph E. Smith, late chief officer and now master of the Gulflight, received from Ambassador Page and published by the State Department at Washington on May 11:

I am Ralph E. Smith, now master of the steamship Gulflight. At the commencement of the voyage I was chief officer. The ship left port at Port Arthur on the 10th day of April, 1915, about 4 P. M., laden with a tank cargo of gasoline and wooden barrels of lubricating oil. The voyage was uneventful.

When about half way across the Atlantic the wireless operator told me there was a British cruiser in our vicinity and that he had heard messages from this ship the whole time since leaving Port Arthur, but she made no direct communication with or to our ship. From the sound of the wireless messages given cut by the British ship, she seemed to maintain the same distance from us until about three days before we reached the mouth of the English Channel.

On the first day of May, about 11 o'clock in the forenoon, we spoke two British patrol vessels named Iago and Filey. We were then about twenty-two miles west of the Bishop Lighthouse. The patrol vessels asked where we were bound. After informing them we were bound for Rouen, they ordered us to follow them to the Bishop. The Filey took up a position a half mile distant on our port bow, the Iago off our starboard quarter close to us. We steered as directed, and at about 12:22, the second officer being on watch, sighted a submarine on our port bow—slightly on the port bow—steaming at right angles to our course. The submarine was in sight for about five minutes, when she submerged about right ahead of us. I saw her, but could not distinguish or see any flag flying on her.

The Gulflight was then steering about true east, steaming about eight miles an

hour, flying a large American ensign, six feet by ten feet. The wind was about south, about eight miles an hour in force. I personally observed our flag was standing out well to the breeze.

Immediately after seeing the submarine I went aft and notified the crew and came back and went on the bridge and heard the Captain make the remark that that must be a British submarine, as the patrol boats took no notice of it.

About 12:50 an explosion took place in the Gulflight on the bluff of the starboard bow, sending vast quantities of water high in the air, coming down on the bridge and shutting everything off from our view. After the water cleared away our ship had sunk by the head so that the sea was washing over the fore-deck, and the ship appeared to be sinking.

Immediately after I went aft to see to the boats. On my way I saw one man overboard on the starboard side. The water at that time was black with oil. The boats were lowered and the crew got into them without delay or damage. After ascertaining there was no one left on board the ship I got in my boat and we were picked up by the patrol vessel Iago and were advised by her crew to leave the scene. We proceeded toward St. Mary's, but the dense fog which then came on prevented us getting into the harbor that night.

About 2:30 in the morning following

I saw Captain Gunter, master of the Gulflight, who had been sleeping in the room of the skipper of the Iago, standing in the room with a queer look in his face. I asked him what his trouble was, and he made no reply. Then he reached for the side of the berth with his hands, but did not take hold. I went in the room, but he fell before I reached him.

He was taken on deck, as the cabin was small and hot. After reaching the deck he seemed to revive and said: "I am cold." After that he had apparently two fainting attacks and then expired in a third one—this being about 3:40.

We arrived at St. Mary's, Scilly, about 10 o'clock on the morning of May 2. The Gulflight was towed to Crow Sound, Scilly, on May 2 by British patrol vessels, and Commander Oliver, senior naval officer of the Port of Scilly, sent for some one to come on board the Gulflight, and I went, and the ship was anchored about 6 P. M.

I again left the ship that evening—she being then in charge of the Admiralty. I visited the ship on Monday. I went out again on Tuesday, but it was too rough to get on board. To the best of my knowledge there was no examination of the vessel made by divers until Wednesday about 3 P. M., when members from the American Embassy were present. The divers at this time made an external examination only of the ship's bottom and left the ship with me at 5:40 P. M.

Aim of Submarine Warfare

[From The London Times, April 30, 1915.]

Dr. Flamm, Professor of Ship Construction at the Technical High School at Charlottenburg, publishes in the *Vossische Zeitung* an extraordinary article on the impending destruction of the British Empire by German submarines. Whatever Professor Flamm's professional opinion may be worth, he is evidently attacking his task with a passionate hatred of England that leaves nothing to be desired.

Professor Flamm begins by explaining how England has been protected for centuries by her insularity. He writes:

This country, whose dishonorable Government produced this terrible world war by the most contemptible means, and solely in selfish greed of gain, has always been able to enjoy the fruits of its unscrupulousness because it was reckoned as unassailable. But everything is subject to change, and that applies today to the security of England's position. Thank God, the time has now come when pre-

cisely its complete encirclement by the sea has become the greatest danger for the existence of the British Nation.

The writer explains that England cannot be self-supporting, and, strangely enough, admits that recognition of this fact justifies British naval policy. He proceeds:

The time, however, has passed in which even the strongest squadron of battleships or cruisers can protect England's frontiers and secure imports from overseas. Technical progress, in the shape of submarines, has put into the hands of all England's enemies the means at last to sever the vital nerve of the much-hated enemy, and to pull him down from his position of ruler of the world, which he has occupied for centuries with ever-increasing ruthlessness and selfishness. What science has once begun she continues, and for every shipbuilder in the whole world there is now no sphere which offers a stronger stimulus to progressive activity than the sphere of the submarines. Here an endless amount of work is being, and will be, done, because the reward which beckons on the horizon is an extraordinarily high one, an extraordinarily profitable one, a reward containing the most ideal blessings for humanity—the destruction of English world supremacy, the liberation of the seas. This exalted and noble aim has today come within reach, and it is German intellect and German work that have paved the way.

It will be noted that Professor Flamm, as other contemporary German writers, believes that submarines, like Shakespeare, are a German invention. He is also, notwithstanding the experience of two and a half months, confident that the German "submarine blockade" will both be successful and become popular with neutrals. Building upon the German myth that Captain Weddigen's submarine, U-29, was destroyed while saving life, Professor Flamm "expects" that the neutrals will stop all traffic with England, "in view of the cowardly and cunning method of fighting of the English."

Professor Flamm then discusses Germany's prospects, as follows:

Anybody who wants to fight England must not attempt it by striving to bring against England larger and more numerous battleships and cruisers. That would be not only unwise but also very costly. He must try another method, which makes England's great sea power completely illusory, and gives it practically no opportunity for activity. This method is the

cutting-off of imports by submarine fleets.

Let it not be said that the attainment of this end requires a very great deal of material. England, as can easily be seen from the map, possesses a fairly limited number of river mouths and ports for rapid development of her great overseas trade. Beginning in the northeast, those on the east coast are mainly the Firth of Forth, the mouths of the Tyne and Humber, and then the Thames; in the south, Portsmouth, Southampton, and Plymouth, with some neighboring harbors; in the west, the Bristol Channel, the Mersey, the Solway, and the Clyde. These are the entries that have to be blocked in order to cut off imports in a way that will produce the full impression. For this purpose 150 of the submarines of today fully suffice, so that the goal is within reach. Moreover, the development of this arm will enormously increase its value, and so, come what may, England must reckon with the fact that her world supremacy cannot much longer exist, and that the strongest navy can make no difference. When once the invisible necktie is round John Bull's neck, his breathing will soon cease, and the task of successfully putting this necktie on him is solely a question of technical progress and of time, which now moves so fast.

Professor Flamm ends with a passage about German submarine bases. It would be more intelligible if he had made up his mind whether Germany is going to take Calais or whether, according to another popular German theory, England is going to annex the north coast of France. He writes:

"The eyes of France also will one day be opened when, having been sufficiently weakened, she is compelled to leave the north coast of France, including Calais, to her friend of today. Precisely this coast which England has seized may be expected now to remain in English possession, for the purpose of better and surer control of the Channel, for there can be no doubt that this control renders, and will render, difficult for the German submarines effective activity in the Irish Sea—an activity which will become all the easier as soon as Calais has been freed of the enemy, or is even in German possession.

"Thus before very long a world fate should befall England. The trees do not grow up to heaven. England, through her criminal Government, has stretched the bow too tight, and so it will snap."

THREE SPEECHES BY PRESIDENT WILSON

In New York at the annual luncheon of The Associated Press on April 20, 1915; at Philadelphia in Convention Hall on May 10, in an address to 4,000 newly naturalized citizens, and again at New York in his speech on the navy, May 17, delivered at the luncheon given for the President by the Mayor's Committee formed for the naval review, Mr. Wilson set forth the principles on which he would meet the crises of the European war as they affect the United States. The texts of the three speeches appear below.

I.

"AMERICA FIRST."

[President Wilson's address on April 20, 1915, to the members of The Associated Press at their annual luncheon in New York:]

I am deeply gratified by the generous reception you have accorded me. It makes me look back with a touch of regret to former occasions when I have stood in this place and enjoyed a greater liberty than is granted me today. There have been times when I stood in this spot and said what I really thought, and I pray God that those days of indulgence may be accorded me again. But I have come here today, of course, somewhat restrained by a sense of responsibility that I cannot escape.

For I take The Associated Press very seriously. I know the enormous part that you play in the affairs not only of this country, but the world. You deal in the raw material of opinion and, if my convictions have any validity, opinion ultimately governs the world.

It is, therefore, of very serious things that I think as I face this body of men. I do not think of you, however, as members of The Associated Press. I do not think of you as men of different parties or of different racial derivations or of different religious denominations, I want to talk to you as to my fellow-citizens of the United States. For there are serious things which as fellow-citizens we ought to consider.

The times behind us, gentlemen, have been difficult enough, the times before us are likely to be more difficult because, whatever may be said about the present condition of the world's affairs, it is clear

that they are drawing rapidly to a climax, and at the climax the test will come, not only of the nations engaged in the present colossal struggle, it will come for them of course, but the test will come to us particularly.

Do you realize that, roughly speaking, we are the only great nation at present disengaged? I am not speaking, of course, with disparagement of the greater of those nations in Europe which are not parties to the present war, but I am thinking of their close neighborhood to it. I am thinking how their lives much more than ours touch the very heart and stuff of the business; whereas, we have rolling between us and those bitter days across the water three thousand miles of cool and silent ocean.

Our atmosphere is not yet charged with those disturbing elements which must be felt and must permeate every nation of Europe. Therefore, is it not likely that the nations of the world will some day turn to us for the cooler assessment of the elements engaged?

I am not now thinking so preposterous a thought as that we should sit in judgment upon them. No nation is fit to sit in judgment upon any other nation, but that we shall some day have to assist in reconstructing the processes of peace. Our resources are untouched; we are more and more becoming by the force of circumstances the mediating nation of the world in respect to its finances. We must make up our minds what are the best things to do and what are the best ways to do them.

We must put our money, our energy, our enthusiasm, our sympathy into these things; and we must have our judgments

prepared and our spirits chastened against the coming of that day. So that I am not speaking in a selfish spirit when I say that our whole duty for the present, at any rate, is summed up in this motto, "America first." Let us think of America before we think of Europe, in order that America may be fit to be Europe's friend when the day of tested friendship comes. The test of friendship is not now sympathy with the one side or the other, but getting ready to help both sides when the struggle is over.

The basis of neutrality, gentlemen, is not indifference; it is not self-interest. The basis of neutrality is sympathy for mankind. It is fairness, it is good-will at bottom. It is impartiality of spirit and of judgment. I wish that all of our fellow-citizens could realize that.

There is in some quarters a disposition to create distempers in this body politic. Men are even uttering slanders against the United States as if to excite her. Men are saying that if we should go to war upon either side there will be a divided America—an abominable libel of ignorance. America is not all of it vocal just now. It is vocal in spots.

But I for one have a complete and abiding faith in that great silent body of Americans who are not standing up and shouting and expressing their opinions just now, but are waiting to find out and support the duty of America. I am just as sure of their solidity and of their loyalty and of their unanimity, if we act justly, as I am that the history of this country has at every crisis and turning point illustrated this great lesson.

We are the mediating nation of the world. I do not mean that we undertake not to mind our own business and to mediate where other people are quarreling. I mean the word in a broader sense. We are compounded of the nations of the world. We mediate their blood, we mediate their traditions, we mediate their sentiments, their tastes, their passions; we are ourselves compounded of those things.

We are, therefore, able to understand all nations; we are able to understand them in the compound, not separately, as partisans, but unitedly, as knowing and

comprehending and embodying them all. It is in that sense that I mean that America is a mediating nation. The opinion of America, the action of America, is ready to turn and free to turn in any direction.

Did you ever reflect upon how almost all other nations, almost every other nation, has through long centuries been headed in one direction? That is not true of the United States. The United States has no racial momentum. It has no history back of it which makes it run all its energies and all its ambitions in one particular direction; and America is particularly free in this, that she has no hampering ambitions as a world power.

If we have been obliged by circumstances, or have considered ourselves to be obliged by circumstances, in the past to take territory which we otherwise would not have thought of taking, I believe I am right in saying that we have considered it our duty to administer that territory, not for ourselves, but for the people living in it, and to put this burden upon our consciences not to think that this thing is ours for our use, but to regard ourselves as trustees of the great business for those to whom it does really belong, trustees ready to hand over the cosmic trust at any time when the business seems to make that possible and feasible. That is what I mean by saying we have no hampering ambitions.

We do not want anything that does not belong to us. Isn't a nation in that position free to serve other nations, and isn't a nation like that ready to form some part of the assessing opinion of the world?

My interest in the neutrality of the United States is not the petty desire to keep out of trouble. To judge by my experience I have never been able to keep out of trouble. I have never looked for it, but I have always found it. I do not want to walk around trouble. If any man wants a scrap—that is, an interesting scrap and worth while—I am his man. I warn him that he is not going to draw me into the scrap for his advertisement, but if he is looking for trouble—that is, the trouble of men in general—and I can help a little, why, then, I am in for it. But I am interested in neutrality because there

is something so much greater to do than fight, because there is something, there is a distinction waiting for this nation that no nation has ever yet got. That is the distinction of absolute self-control and self-mastery.

Whom do you admire most among your friends? The irritable man? The man out of whom you can get a "rise" without trying? The man who will fight at the drop of the hat, whether he knows what the hat is dropped for or not?

Don't you admire and don't you fear, if you have to contest with him, the self-mastered man who watches you with calm eye and comes in only when you have carried the thing so far that you must be disposed of? That is the man you respect. That is the man who you know has at bottom a much more fundamental and terrible courage than the irritable, fighting man.

Now, I covet for America this splendid courage of reserve moral force, and I wanted to point out to you gentlemen simply this: There is news and news. There is what is called news from Turtle Bay, that turns out to be falsehood, at any rate in what it is said to signify, and which if you could get the nation to believe it true might disturb our equilibrium and our self-possession. We ought not to deal in stuff of that kind. We ought not to permit things of that sort to use up the electrical energy of the wires, because its energy is malign, its energy is not of the truth, its energy is of mischief.

It is possible to sift truth. I have known some things to go out on the wires as true when there was only one man or one group of men who could have told the originators of the report whether it was true or not, and they were not asked whether it was true or not for fear it might not be true. That sort of report ought not to go out over the wires.

There is generally, if not always, somebody who knows whether that thing is so or not, and in these days above all other days we ought to take particular pains to resort to the one small group of men or to the one man, if there be but one, who knows whether those things are true or not.

The world ought to know the truth, but

the world ought not at this period of unstable equilibrium to be disturbed by rumor, ought not to be disturbed by imaginative combinations of circumstances, or, rather, by circumstances stated in combination which do not belong in combination. For we are holding—not I, but you and gentlemen engaged like you—the balances in your hand. This unstable equilibrium rests upon scales that are in your hands. For the food of opinion, as I began by saying, is the news of the day. I have known many a man go off at a tangent on information that was not reliable. Indeed, that describes the majority of men. The world is held stable by the man who waits for the next day to find out whether the report was true or not.

We cannot afford, therefore, to let the rumors of irresponsible persons and origins get into the atmosphere of the United States. We are trustees for what I venture to say is the greatest heritage that any nation ever had, the love of justice and righteousness and human liberty. For fundamentally those are the things to which America is addicted and to which she is devoted.

There are groups of selfish men in the United States, there are coteries where sinister things are purposed, but the great heart of the American people is just as sound and true as it ever was. And it is a single heart; it is the heart of America. It is not a heart made up of sections selected out of other countries.

So that what I try to remind myself of every day when I am almost overcome by perplexities, what I try to remember, is what the people at home are thinking about. I try to put myself in the place of the man who does not know all the things that I know and ask myself what he would like the policy of this country to be. Not the talkative man, not the partisan man, not the man that remembers first that he is a Republican or Democrat, or that his parents were Germans or English, but who remembers first that the whole destiny of modern affairs centres largely upon his being an American first of all.

If I permitted myself to be a partisan in this present struggle I would be un-

(Photo © American Press Assn.)

worthy to represent you. If I permitted myself to forget the people who are not partisans I would be unworthy to represent you. I am not saying that I am worthy to represent you, but I do claim this degree of worthiness—that before everything else I love America.

II.

“HUMANITY FIRST.”

[*President Wilson's speech in Convention Hall, Philadelphia, Penn., May 10, 1915, before 4,000 newly naturalized citizens:*]

It warms my heart that you should give me such a reception, but it is not of myself that I wish to think tonight, but of those who have just become citizens of the United States. This is the only country in the world which experiences this constant and repeated rebirth. Other countries depend upon the multiplication of their own native people. This country is constantly drinking strength out of new sources by the voluntary association with it of great bodies of strong men and forward-looking women. And so by the gift of the free will of independent people it is constantly being renewed from generation to generation by the same process by which it was originally created. It is as if humanity had determined to see to it that this great nation, founded for the benefit of humanity, should not lack for the allegiance of the people of the world.

You have just taken an oath of allegiance to the United States. Of allegiance to whom? Of allegiance to no one, unless it be God. Certainly not of allegiance to those who temporarily represent this great Government. You have taken an oath of allegiance to a great ideal, to a great body of principles, to a great hope of the human race. You have said, “We are going to America,” not only to earn a living, not only to seek the things which it was more difficult to obtain where you were born, but to help forward the great enterprises of the human spirit—to let men know that everywhere in the world there are men who will cross strange oceans and go where a speech is spoken which is alien

to them, knowing that, whatever the speech, there is but one longing and utterance of the human heart, and that is for liberty and justice.

And while you bring all countries with you, you come with a purpose of leaving all other countries behind you—bringing what is best of their spirit, but not looking over your shoulders and seeking to perpetuate what you intended to leave in them. I certainly would not be one even to suggest that a man cease to love the home of his birth and the nation of his origin—these things are very sacred and ought not to be put out of our hearts—but it is one thing to love the place where you were born and it is another thing to dedicate yourself to the place to which you go. You cannot dedicate yourself to America unless you become in every respect and with every purpose of your will thorough Americans. You cannot become thorough Americans if you think of yourselves in groups. American does not consist of groups. A man who thinks himself as belonging to a particular national group in America has not yet become an American, and the man who goes among you to trade upon your nationality is no worthy son to live under the Stars and Stripes.

My urgent advice to you would be not only always to think first of America, but always, also, to think first of humanity. You do not love humanity if you seek to divide humanity into jealous camps. Humanity can be welded together only by love, by sympathy, by justice, not by jealousy and hatred. I am sorry for the man who seeks to make personal capital out of the passions of his fellow-men. He has lost the touch and ideal of America, for America was created to unite mankind by those passions which lift and not by the passions which separate and debase.

We came to America, either ourselves or in persons of our ancestors, to better the ideals of men, to make them see finer things than they had seen before, to get rid of things that divide, and to make sure of the things that unite. It was but a historical accident no doubt that this great country was called the “United States,”

and yet I am very thankful that it has the word "united" in its title; and the man who seeks to divide man from man, group from group, interest from interest, in the United States is striking at its very heart.

It is a very interesting circumstance to me, in thinking of those of you who have just sworn allegiance to this great Government, that you were drawn across the ocean by some beckoning finger of hope, by some belief, by some vision of a new kind of justice, by some expectation of a better kind of life.

No doubt you have been disappointed in some of us; some of us are very disappointing. No doubt you have found that justice in the United States goes only with a pure heart and a right purpose, as it does everywhere else in the world. No doubt what you found here didn't seem touched for you, after all, with the complete beauty of the ideal which you had conceived beforehand.

But remember this, if we had grown at all poor in the ideal, you brought some of it with you. A man does not go out to seek the thing that is not in him. A man does not hope for the thing that he does not believe in, and if some of us have forgotten what America believed in, you, at any rate, imported in your own hearts a renewal of the belief. That is the reason that I, for one, make you welcome.

If I have in any degree forgotten what America was intended for, I will thank God if you will remind me.

I was born in America. You dreamed dreams of what America was to be, and I hope you brought the dreams with you. No man that does not see visions will ever realize any high hope or undertake any high enterprise.

Just because you brought dreams with you, America is more likely to realize the dreams such as you brought. You are enriching us if you came expecting us to be better than we are.

See, my friends, what that means. It means that Americans must have a consciousness different from the consciousness of every other nation in the world. I am not saying this with even the slight-

est thought of criticism of other nations. You know how it is with a family. A family gets centred on itself if it is not careful and is less interested in the neighbors than it is in its own members.

So a nation that is not constantly renewed out of new sources is apt to have the narrowness and prejudice of a family. Whereas, America must have this consciousness, that on all sides it touches elbows and touches hearts with all the nations of mankind.

The example of America must be a special example. The example of America must be the example not merely of peace because it will not fight, but of peace because peace is the healing and elevating influence of the world and strife is not.

There is such a thing as a man being too proud to fight. There is such a thing as a nation being so right that it does not need to convince others by force that it is right.

So, if you come into this great nation as you have come, voluntarily seeking something that we have to give, all that we have to give is this: We cannot exempt you from work. No man is exempt from work anywhere in the world. I sometimes think he is fortunate if he has to work only with his hands and not with his head. It is very easy to do what other people give you to do, but it is very difficult to give other people things to do. We cannot exempt you from work; we cannot exempt you from the strife and the heart-breaking burden of the struggle of the day—that is common to mankind everywhere. We cannot exempt you from the loads that you must carry; we can only make them light by the spirit in which they are carried. That is the spirit of hope, it is the spirit of liberty, it is the spirit of justice.

When I was asked, therefore, by the Mayor and the committee that accompanied him to come up from Washington to meet this great company of newly admitted citizens I could not decline the invitation. I ought not to be away from Washington, and yet I feel that it has renewed my spirit as an American.

In Washington men tell you so many things every day that are not so, and I like to come and stand in the presence of a great body of my fellow-citizens, whether they have been my fellow-citizens a long time or a short time, and drink, as it were, out of the common fountains with them and go back feeling that you have so generously given me the sense of your support and of the living vitality in your hearts, of its great ideals which made America the hope of the world.

III.

AMERICA FOR HUMANITY.

[*President Wilson's address to the Mayor's Committee in New York, May 17, 1915, on the occasion of the naval parade and review in the Hudson:*]

Mr. Mayor, Mr. Secretary, Admiral Fletcher, and Gentlemen of the Fleet: This is not an occasion upon which it seems to me that it would be wise for me to make many remarks, but I would deprive myself of a great gratification if I did not express my pleasure in being here, my gratitude for the splendid reception which has been accorded me as the representative of the nation, and my profound interest in the navy of the United States. That is an interest with which I was apparently born, for it began when I was a youngster and has ripened with my knowledge of the affairs and policies of the United States.

I think it is a natural, instinctive judgment of the people of the United States that they express their power appropriately in an efficient navy, and their interest is partly, I believe, because that navy somehow is expected to express their character, not within our own borders, where that character is understood, but outside our borders, where it is hoped we may occasionally touch others with some slight vision of what America stands for.

But before I speak of the navy of the United States I want to take advantage of the first public opportunity I have had to speak of the Secretary of the Navy, to express my confidence and my admiration, and to say that he has my unqualified support, for I have counseled with

him in intimate fashion. I know how sincerely he has it at heart that everything that the navy does and handles should be done and handled as the people of the United States wish them handled—because efficiency is something more than organization. Efficiency runs into every well-considered detail of personnel and method. Efficiency runs to the extent of lifting the ideals of a service above every personal interest. So that when I speak my support of the Secretary of the Navy I am merely speaking my support of what I know every true lover of the navy to desire and to purpose, for the navy of the United States is a body specially trusted with the ideal of America.

I like to image in my thought this ideal. These quiet ships lying in the river have no suggestion of bluster about them—no intimation of aggression. They are commanded by men thoughtful of the duty of citizens as well as the duty of officers—men acquainted with the traditions of the great service to which they belong—men who know by touch with the people of the United States what sort of purposes they ought to entertain and what sort of discretion they ought to exercise, in order to use those engines of force as engines to promote the interests of humanity.

For the interesting and inspiring thing about America, gentlemen, is that she asks nothing for herself except what she has a right to ask for humanity itself. We want no nation's property; we wish to question no nation's honor; we wish to stand selfishly in the way of the development of no nation; we want nothing that we cannot get by our own legitimate enterprise and by the inspiration of our own example, and, standing for these things, it is not pretention on our part to say that we are privileged to stand for what every nation would wish to stand for, and speak for those things which all humanity must desire.

When I think of the flag that those ships carry, the only touch of color about them, the only thing that moves as if it had a settled spirit in it, in their solid structure, it seems to me I see alternate strips of parchment upon which are

written the rights of liberty and justice and strips of blood spilt to vindicate those rights, and then, in the corner, a prediction of the blue serene into which every nation may swim which stands for these great things.

The mission of America is the only thing that a sailor or soldier should think about; he has nothing to do with the formulation of her policy; he is to support her policy, whatever it is—but he is to support her policy in the spirit of herself, and the strength of our policy is that we, who for the time being administer the affairs of this nation, do not originate her spirit; we attempt to embody it; we attempt to realize it in action; we are dominated by it, we do not dictate it.

And so with every man in arms who serves the nation—he stands and waits to do the thing which the nation desires. America sometimes seems perhaps to forget her programs, or, rather, I would say that sometimes those who represent her seem to forget her programs, but the people never forget them. It is as startling as it is touching to see how whenever you touch a principle you touch the hearts of the people of the United States. They listen to your debates of policy, they determine which party they will prefer to power, they choose and prefer as ordinary men; but their real affection, their real force, their real irre-

sistible momentum, is for the ideas which men embody.

I never go on the streets of a great city without feeling that somehow I do not confer elsewhere than on the streets with the great spirit of the people themselves, going about their business, attending to the things which concern them, and yet carrying a treasure at their hearts all the while, ready to be stirred not only as individuals, but as members of a great union of hearts that constitutes a patriotic people.

And so this sight in the river touches me merely as a symbol of that, and it quickens the pulse of every man who realizes these things to have anything to do with them. When a crisis occurs in this country, gentlemen, it is as if you put your hand on the pulse of a dynamo, it is as if the things which you were in connection with were spiritually bred. You had nothing to do with them except, if you listen truly, to speak the things that you hear. These things now brood over the river, this spirit now moves with the men who represent the nation in the navy, these things will move upon the waters in the manoeuvres; no threat lifted against any man, against any nation, against any interest, but just a great, solemn evidence that the force of America is the force of moral principle, that there is not anything else that she loves and that there is not anything else for which she will contend.

Two Ex-Presidents' Views

MR. ROOSEVELT SPEAKS.

[Special to THE NEW YORK TIMES.]

SYRACUSE, N. Y., May 7.—Ex-President Roosevelt, after learning details of the sinking of the Lusitania, made this statement late tonight:

This represents not merely piracy, but piracy on a vaster scale of murder than old-time pirates ever practiced. This is the warfare which destroyed Louvain and Dinant and hundreds of men, women, and children in Belgium. It is a warfare against innocent men, women, and children traveling on the ocean, and our own

fellow-countrymen and countrywomen, who are among the sufferers

It seems inconceivable that we can refrain from taking action in this matter, for we owe it not only to humanity, but to our own national self-respect

On May 9 a Syracuse dispatch to THE NEW YORK TIMES conveyed this statement from Mr. Roosevelt:

On the night of the day that the disaster occurred I called the attention of our people to the fact that the sinking of the Lusitania was not only an act of simple piracy, but that it represented

piracy accompanied by murder on a vaster scale than any old-time pirate had ever practiced before being hanged for his misdeeds.

I called attention to the fact that this was merely the application on the high seas, and at our expense, of the principles which when applied on land had produced the innumerable hideous tragedies that have occurred in Belgium and in Northern France.

I said that not only our duty to humanity at large but our duty to preserve our own national self-respect demanded instant action on our part and forbade all delay.

I can do little more than reiterate what I then said.

When the German decree establishing the war zone was issued, and of course plainly threatened exactly the type of tragedy which has occurred, our Government notified Germany that in the event of any such wrongdoing at the expense of our citizens we would hold the German Government to "a strict accountability."

The use of this phrase, "strict accountability," of course, must mean, and can only mean, that action will be taken by us without an hour's unnecessary delay. It was eminently proper to use the exact phrase that was used, and, having used it, our own self-respect demands that we forthwith abide by it.

On May 11, following the report of President Wilson's speech at Philadelphia, Mr. Roosevelt stated the course which he considered that this country should adopt, reported as follows in a Syracuse dispatch to THE NEW YORK TIMES:

Colonel Roosevelt announced today what action, in his opinion, this country should take toward Germany because of the sinking of the Lusitania. Colonel Roosevelt earnestly said that the time for deliberation was past and that within twenty-four hours this country could, and should, take effective action by declaring that all commerce with Germany forthwith be forbidden and that all commerce of every kind permitted and encouraged

with France, England, and "the rest of the civilized world."

Colonel Roosevelt said that for America to take this step would not mean war, as the firm assertion of our rights could not be so construed, but he added that we would do well to remember that there were things worse than war.

The Colonel has been reading President Wilson's speech carefully, and what seemed to impress him more than anything else was this passage from it:

"There is such a thing as a man being too proud to fight. There is such a thing as a nation being so right that it does not need to convince others by force that it is right."

Asked if he cared to make any comment upon the speech of the President, Mr. Roosevelt said:

"I think that China is entitled to draw all the comfort she can from this statement, and it would be well for the United States to ponder seriously what the effect upon China has been of managing her foreign affairs during the last fifteen years on the theory thus enunciated.

"If the United States is satisfied with occupying some time in the future the precise international position that China now occupies, then the United States can afford to act on this theory. But it cannot act on this theory if it desires to retain or regain the position won for it by the men who fought under Washington and by the men who, in the days of Abraham Lincoln, wore the blue under Grant and the gray under Lee.

"I very earnestly hope that we will act promptly. The proper time for deliberation was prior to sending the message that our Government would hold Germany to a strict accountability if it did the things it has now actually done. The 150 babies drowned on the Lusitania, the hundreds of women drowned with them, scores of these women and children being Americans, and the American ship, the Gulfport, which was torpedoed, offer an eloquent commentary on the actual working of the theory that force is not necessary to assert, and that a policy of blood and iron

can with efficacy be met by a policy of milk and water.

"I see it stated in the press dispatches from Washington that Germany now offers to stop the practice on the high seas, committed in violation of the neutral rights that she is pledged to observe, if we will abandon further neutral rights, which by her treaty she has solemnly pledged herself to see that we exercise without molestation. Such a proposal is not even entitled to an answer. The manufacturing and shipment of arms and ammunition to any belligerent is moral or immoral according to the use to which the arms and munitions are to be put. If they are to be used to prevent the redress of the hideous wrongs inflicted on Belgium, then it is immoral to ship them. If they are to be used for the redress of those wrongs and the restoration of Belgium to her deeply wronged and unoffending people, then it is eminently moral to send them.

"Without twenty-four hours' delay this country could, and should, take effective action by declaring that in view of Germany's murderous offenses against the rights of neutrals, all commerce with Germany shall be forthwith forbidden, and all commerce of every kind permitted and encouraged with France, England, and the rest of the civilized world. This would not be a declaration of war. It would merely prevent munitions of war being sent to a power which by its conduct has shown willingness to use munitions to slaughter American men and women and children. I do not believe the assertion of our rights means war, but we will do well to remember there are things worse than war.

"Let us, as a nation, understand that peace is worthy only when it is the handmaiden of international righteousness and of national self-respect."

MR. TAFT SPEAKS.

[By The Associated Press.]

MILWAUKEE, May 8.—"The news of the sinking of the *Lusitania* as it comes this morning is most distressing," said former President Taft on his arrival from Madison today. "It presents

a situation of the most difficult character, properly awakening great national concern.

"I do not wish to embarrass the President of the Administration by a discussion of the subject at this stage of the information, except to express confidence that the President will follow a wise and patriotic course."

That it is possible for the United States to hold Germany "strictly accountable" for the destruction of American lives on the Lusitania without resort to war is Mr. Taft's opinion, reported in the following dispatch from Philadelphia to THE NEW YORK TIMES on May 11:

"We must bear in mind that if we have a war it is the people, the men and women, fathers and mothers, brothers and sisters, who must pay with lives and money the cost of it, and therefore they should not be hurried into the sacrifices until it is made clear that they wish it and know what they are doing when they wish it."

This was the keynote of a speech by ex-President Taft at the celebration of the fiftieth anniversary of the Union League's occupancy of the historic home which it occupies in this city.

"Is war the only method of making a nation accountable? Let us look into our own history. England connived at the fitting out of armed vessels to prey on our commerce, to attack our navy, and to kill our sailors. We protested, and what did we do then? We held her strictly accountable in the Geneva Conference. Was not our honor as much preserved by this method as it would have been had we declared war?

"I agree that the inhumanity of the circumstances in the case now presses us on, but in the heat of even just indignation is this the best time to act, when action involves such momentous consequences and means untold loss of life and treasure? There are things worse than war, but delay, due to calm deliberation, cannot change the situation or minimize the effect of what we finally conclude to do.

"With the present condition of the

war in Europe, our action, if it is to be extreme, will not lose efficiency by giving time to the people, whose war it will be, to know what they are facing.

"A demand for war that cannot sur-

vive the passion of the first days of public indignation and will not endure the test of delay and deliberation by all the people is not one that should be yielded to."

President Wilson's Note

By Ex-President William H. Taft.

At the dinner of Methodist laymen in New York on May 14, 1915, following the publication of President Wilson's note to Germany, ex-President Taft said:

"Admirable in tone, moderate in the judicial spirit that runs through the entire communication, dignified in the level that the writer takes with respect to international obligations, accurate in its statement of international law, he puts the case of the United States in a way that may well call for our earnest concurrence and confirmation.

Another View

By Beatrice Barry.

"When the torch is near the powder"—when a boat, f'r instance, sinks,
And the "hyphens" raise a loud hurrah and blow themselves to drinks;
When 'bout a hundred neutral lives are snuffed out like a torch,
An' "hyphens" read the news an' smoke, a-settin' on the porch—
Well, it's then the native's kind o' apt to see a little red,
An' it's hardly fair to criticise the burning things he sed.
For since the eagle's not a bird that thrives within a cage,
One kind o' hears with sympathy his screams of baffled rage.

There's something sort o' horrible, that catches at the breath,
To visualize some two score babes most foully done to death;
To see their fright, their struggles—to watch their lips turn blue—
There ain't no use denyin', it will raise the deuce with you.
O yes, God bless the President—he's an awful row to hoe,
An' God grant, too, that peace with honor hand in hand may go,
But let's not call men "rotters," 'cause, while we are standing pat,
They lose their calm serenity, an' can't see things like that!

In the Submarine War Zone

[By The Associated Press.]

LIVERPOOL, May 16.—The passengers on board the American Line steamer Philadelphia, which arrived here today from New York, the steamer docking at 1 P. M., experienced during the voyage much anxiety. On Friday afternoon, out in the Atlantic off the west coast of Ireland, a cruiser appeared and approached the liner. The chief topic of conversation during the voyage had been about the German submarine activities, and the sight of the warship caused some alarm. The cruiser approached near enough to the steamer to exchange signals with her.

A number of passengers spent last night on deck in their chairs with lifebelts beside them in case of danger. The boats of the Philadelphia were ready for use. The steamer kept a course much further out from the Irish coast than the Lusitania was traversing when she was torpedoed.

The port officials subjected the passengers of the Philadelphia to a careful examination to discover if there were any spies on board, but nobody was detained. By reason of this precaution it was more than an hour after the steamer arrived before her passengers began to debark.

American Shipments of Arms

By Count von Bernstorff, German Ambassador at Washington

Count von Bernstorff, the German Ambassador, made public on April 11, 1915, a memorandum addressed to the United States Government on April 4, complaining of its attitude toward the shipment of war munitions to the Allies and the non-shipment of foodstuffs to Germany. After picturing the foreign policy of the United States Government as one of futility, Count von Bernstorff's memorandum says it must be "assumed that the United States Government has accepted England's violations of international law." Its full text appears below, followed by that of the American State Department's reply.

THE different British Orders in Council have altered the universally recognized rules of international law in such a one-sided manner that they arbitrarily suppress the trade of neutral countries with Germany. Already, prior to the last Order in Council, the shipment of conditional contraband, especially foodstuffs, to Germany, was practically impossible. In fact, prior to the protest which the American Government made in London on Dec. 28, 1914, not a single shipment of such goods for Germany has been effected from the United States.

Also, after the lodging of the protest, and as far as is known to the German Embassy, only one such shipment has been attempted by an American skipper. Ship and cargo were immediately seized by the British, and are still detained at a British port. As a pretext for this unwarranted action the British Government referred to a decree of the German Federal Council concerning the wheat trade, although this decree only covered wheat and flour and no other foodstuffs, although imported foodstuffs were especially exempt from this decree, and although the German Government had given all necessary guarantees to the United States Government, and had even proposed a special organization in order to secure these foodstuffs for the exclusive consumption of the civilian population.

The seizure of an American ship under these circumstances was in contradiction with the recognized principles of international law. Nevertheless the United States Government has not yet

obtained the release of the ship, nor has it after eight months of war succeeded in safeguarding the legitimate American trade with Germany. Such a delay, especially when the supply of foodstuffs is concerned, seems equivalent to complete failure. It is therefore to be assumed that the United States Government has accepted England's violations of international law.

Furthermore has to be considered the attitude of the Government of the United States concerning the question of the exportation of war material. The Imperial Embassy hopes to agree with the Government of the United States in assuming that, with regard to the question of neutrality, there is not only the formal side to be considered, but also the spirit in which neutrality is enforced.

Conditions in the present war are different from those in any former wars. For this reason it is not justified to point at the fact that perhaps in former wars Germany furnished belligerents with war material, because in those former cases the question was not whether any war material was to be furnished to the belligerents, but merely which one of the competing countries would furnish it. In the present war, with the exception of the United States, all the countries capable of a noteworthy production of war material are either at war themselves or completing their armaments, and have accordingly prohibited the exportation of war material. Therefore the United States of America is the only country in a position to export war material. This fact ought to give a new meaning to the

idea of neutrality, independent of the formal law.

Instead of that, and in contradiction with the real spirit of neutrality, an enormous new industry of war materials of every kind is being built up in the United States, inasmuch as not only the existing plants are kept busy and enlarged, but also new ones are continually founded.

The international agreements for the protection of the right of neutrals originate in the necessity of protecting the existing industries of the neutral countries. They were never intended to encourage the creation of entirely new industries in neutral States, as, for instance, the new war industry in the United States, which supplies only one party of the belligerents.

In reality the American industry is supplying only Germany's enemies. A fact which is in no way modified by the purely theoretical willingness to furnish Germany as well, if it were possible.

If the American people desire to observe true neutrality, they will find

means to stop the exclusive exportation of arms to one side, or at least to use this export trade as a means to uphold the legitimate trade with Germany, especially the trade in foodstuffs. This spirit of neutrality should appear the more justified to the United States as it has been maintained toward Mexico.

According to the declaration of a Congressman, made in the House Committee for Foreign Relations Dec. 30, 1914, President Wilson is quoted as having said on Feb. 4, 1914, when the embargo on arms for Mexico was lifted:

"We should stand for genuine neutrality, considering the surrounding facts of the case." He then held in that case, because Carranza had no ports, while Huerta had them and was able to import these materials, that "it was our duty as a nation to treat them (Carranza and Huerta) upon an equality if we wished to observe the true spirit of neutrality as compared with a mere paper neutrality."

This conception of "the true spirit of neutrality," if applied to the present case, would lead to an embargo on arms.

The American Reply

The following note, which contains a vigorous rebuke to the German Ambassador for the freedom of his remarks on the course taken by the United States toward the belligerent powers, was made public at Washington on April 21, 1915. It was then reported that the note was finally drafted by President Wilson himself and written by him on his own typewriter at the White House, although it is signed by Mr. Bryan as Secretary of State:

I have given thoughtful consideration to your Excellency's note of the 4th of April, 1915, inclosing a memorandum of the same date, in which your Excellency discusses the action of this Government with regard to trade between the United States and Germany, and the attitude of this Government with regard to the exportation of arms from the United States to the nations now at war with Germany.

I must admit that I am somewhat at a loss how to interpret your Excellency's treatment of these matters. There are many circumstances connected with these important subjects to which I would have expected your Excellency to advert, but of which you make no mention, and there are other circumstances to which you do refer which I would have supposed to be hardly appropriate for discussion between the Government of the United States and the Government of Germany.

I shall take the liberty, therefore, of regarding your Excellency's references to the course, pursued by the Government of the United States, with regard to interferences with trade from this country such as the Government of Great Britain have attempted, as intended merely to illustrate more fully the situation to which you desire to call our at-

tention, and not as an invitation to discuss that course.

Your Excellency's long experience in international affairs will have suggested to you that these relations of the two Governments with one another cannot wisely be made a subject of discussion with a third Government, which cannot be fully informed as to the facts, and which cannot be fully cognizant of the reasons for the course pursued.

I believe, however, that I am justified in assuming that what you desire to call forth is a frank statement of the position of this Government in regard to its obligations as a neutral power.

The general attitude and course of policy of this Government in the maintenance of its neutrality I am particularly anxious that your Excellency should see in their true light. I had hoped that this Government's position in these respects had been made abundantly clear, but I am, of course, perfectly willing to state it again.

This seems to me the more necessary and desirable because, I regret to say, the language, which your Excellency employs in your memorandum, is susceptible of being construed as impugning the good faith of the United States in the performance of its duties as a neutral.

I take it for granted that no such implication was intended, but it is so evident that your Excellency is laboring under certain false impressions that I cannot be too explicit in setting forth the facts as they are, when fully reviewed and comprehended.

In the first place, this Government has at no time and in no manner yielded any one of its rights as a neutral to any one of the present belligerents.

It has acknowledged, as a matter of course, the right of visit and search and the right to apply the rules of contraband of war to articles of commerce. It has, indeed, insisted upon the use of visit and search as an absolutely necessary safeguard against mistaking neutral vessels for vessels owned by any enemy and against mistaking legal cargoes for illegal. It has admitted also the right of blockade if actually exercised and effectively maintained.

These are merely the well-known limitations which war places upon neutral commerce on the high seas. But nothing beyond these has it conceded.

I call your Excellency's attention to this, notwithstanding it is already known to all the world as a consequence of the publication of our correspondence in regard to these matters with several of the belligerent nations, because I cannot assume that you have official cognizance of it.

In the second place, this Government attempted to secure from the German and British Governments mutual concessions with regard to the measures those Governments respectively adopted for the interruption of trade on the high seas. This it did, not of right, but merely as exercising the privileges of a sincere friend of both parties and as indicating its impartial good-will.

The attempt was unsuccessful, but I regret that your Excellency did not deem it worthy of mention in modification of the impressions you expressed. We had hoped that this act on our part had shown our spirit in these times of distressing war, as our diplomatic correspondence had shown our steadfast refusal to acknowledge the right of any belligerent to alter the accepted rules of war at sea in so far as they affect the rights and interests of neutrals.

In the third place, I note with sincere regret that in discussing the sale and exportation of arms by citizens of the United States to the enemies of Germany, your Excellency seems to be under the impression that it was within the choice of the Government of the United States, notwithstanding its professed neutrality and its diligent efforts to maintain it in other particulars, to inhibit this trade, and that its failure to do so manifested an unfair attitude toward Germany.

This Government holds, as I believe your Excellency is aware and as it is constrained to hold in view of the present indisputable doctrines of accepted international law, that any change in its own laws of neutrality during the progress of a war, which would affect

unequally the relations of the United States with the nations at war, would be an unjustifiable departure from the principle of strict neutrality, by which it has consistently sought to direct its actions, and I respectfully submit that none of the circumstances, urged in your Excellency's memorandum, alters the principle involved.

The placing of an embargo on the trade in arms at the present time would constitute such a change and be a direct violation of the neutrality of the United States. It will, I feel assured, be clear to your Excellency that holding this view and considering itself in honor bound by it, it is out of the question for this Government to consider such a course.

I hope that your Excellency will realize the spirit in which I am drafting this reply. The friendship between the peo-

ple of the United States and the people of Germany is so warm and of such long standing, the ties which bind them to one another in amity are so many and so strong, that this Government feels under a special compulsion to speak with perfect frankness, when any occasion arises which seems likely to create any misunderstanding, however slight or temporary, between those who represent the Governments of the two countries.

It will be a matter of gratification to me if I have removed from your Excellency's mind any misapprehension you may have been under regarding either the policy or the spirit and purposes of the Government of the United States.

Its neutrality is founded upon the firm basis of conscience and good-will.

Accept, Excellency, the renewed assurances of my highest consideration.

W. J. BRYAN.

Munitions From Neutrals

[Colloquy in the House of Commons, May 4, 1915.]

Sir E. Grey, in reply to Sir A. Markham, (L., Mansfield,) said: The United States Government have not at any time during the present war supplied any war material of any kind to his Majesty's Government, and I do not suppose that they have supplied any of the belligerents. It has always been a recognized legitimate practice, and wholly consistent with international law, for manufacturers in a neutral country to sell munitions of war to belligerents. They were supplied in this way from Germany to Russia during the Russo-Japanese war, and from Germany to Great Britain during the Boer war, and are no doubt being supplied in the same way from manufacturers in neutral countries to belligerents now.

Mr. MacNeill (N., South Donegal)—Has not the rule always been, before The Hague Conferences at all, that subjects of neutral nations are allowed to supply munitions of war at their own risk?

Sir E. Grey—It is wholly consistent with international law that that practice should go forward, and if there be any question of departure from neutrality I think it will be, not in permitting that practice, but in interfering with it. [Cheers.]

Germany and the Lusitania

By Charles W. Eliot

President Emeritus of Harvard University.

That the sinking of the Lusitania was an act which outraged not only the existing conventions of the civilized world but the moral feelings of present civilized society is the view put forth in his letter to THE NEW YORK TIMES, appearing May 15, 1915, by one of the most distinguished commentators on the war. Dr. Eliot counsels that America's part is to resist such a no-faith policy while keeping its neutral status.

Cambridge, Mass., May 13, 1915.

To the Editor of The New York Times:

THE sinking of a great merchant vessel, carrying 2,500 noncombatant men, women, and children, without giving them any chance to save their lives, was in violation of long-standing conventions among civilized nations, concerning the conduct of naval warfare. The pre-existing conventions gave to a German vessel of war the right to destroy the Lusitania and her cargo, if it were impossible to carry her into port as a prize; but not to drown her passengers and crew. The pre-existing conventions or agreements were, however, entered into by the civilized nations when captures at sea were made by war vessels competent to take a prize into some port, or to take off the passengers and crew of the captured vessel.

The German Government now alleges that submarines are today the only vessels it can employ effectively for attack on British commerce in the declared war zone about the British Isles, since the rest of the German Navy cannot keep the seas in face of the superior British Navy. Germany further alleges that the present British blockade of German ports is conducted in a new way—that is, by vessels which patrol the German coast at a greater distance from the actual harbors than was formerly the international practice; and hence, that Germany is justified in conducting her attack on British commerce in a novel way also. In short, Germany argues that her military necessities compel her to sink enemy commercial vessels without regard to the lives of passengers and

crews, in spite of the fact that she was party to international agreements that no such act should be committed.

The lesson which the sinking of the Lusitania teaches is, therefore, this: Germany thinks it right to disregard on grounds of military necessity existing international conventions with regard to naval warfare, precisely as she disregarded the agreed-upon neutrality of Belgium on the ground of military necessity. As in the case of Belgium she had decided many years beforehand to violate the international neutrality agreement, and had made all her plans for reaching Paris in a few weeks by passing through Belgium, so on the sea she had decided months ago that the necessity of interfering as much as possible with British commerce and industries warranted her total disregard of the existing rules of naval warfare, and has deliberately contrived the sinking of merchant vessels without regard to the lives of the people on board.

Again, when Germany thought it necessary on her quick march toward Paris not only to crush the Belgian Army but to terrify the noncombatant population of Belgium into complete submission by bombarding and burning cities, towns, and villages, by plundering and shooting noncombatants, by imposing heavy fines and ransoms, and by holding noncombatants as hostages for the peaceable behavior of all Belgian citizens, she disregarded all the conventions made by the civilized nations within seventy years for mitigating the horrors of war, and justified her action on the ground that it was a military necessity, since in no other way could she immediately se-

cure the safety of her communications as she rushed on Paris. The civilized world had supposed that each nation would make war only on the public forces and resources of its antagonist; but last August Germany made ferocious war on noncombatants and private property.

The sinking of the *Lusitania* is another demonstration that the present German Government will not abide by any international contracts, treaties, or agreements, if they, at a given moment, would interfere with any military or naval course of action which the Government deems necessary.

These demonstrated policies and purposes of the German Empire raise the fundamental question—how is the civilization of the white race to be carried forward? How are the real welfare of that race and the happiness of the individuals that compose it to be hereafter furthered? Since the revolutions in England, America, and France, it has been supposed that civilization was to be advanced by international agreements or treaties, by the co-operation of the civilized nations in the gradual improvement of these agreements, and by the increasing practical effect given to them by nations acting in co-operation; but now comes the German Empire with its military force, immense in numbers and efficient beyond all former experience through the intelligent use for destructive purposes of the new powers attained by applied science, saying not only in words, but in terrible acts: "We shall not abide by any international contracts or agreements into which we may have previously entered, if at the passing moment they interfere or conflict with the most advantageous immediate use of our military and naval force." If this doctrine shall now prevail in Europe, the foundations of modern civilization and of all friendly and beneficial commerce the world over will be undermined.

The sinking of the *Lusitania*, therefore, makes perfectly clear the nature of the problem with which the three Allies in Europe are now struggling. They are resisting with all the weapons of war a nation which declares that its

promises are good only till it is, in its own judgment, under the military necessity of breaking them.

The neutral nations are looking on at this tremendous conflict between good-faith nations and no-faith nations with intense anxiety and sorrow, but no longer in any doubt as to the nature of the issue. The sinking of the *Lusitania* has removed every doubt; because that was a deliberate act in full sight of the world, and of a nature not to be obscured or confused by conflicting testimonies or questions about possible exaggeration of outrages or about official responsibility for them. The sinking of the *Lusitania* was an act which outraged not only the existing conventions of the civilized world in regard to naval warfare, but the moral feelings of present civilized society.

The neutral nations and some of the belligerent nations feel another strong objection to the present German way of conducting war on land and sea, namely, that it brutalizes the soldier and the sailor to an unprecedented degree. English, French, and Russian soldiers on the one side can contend with German, Austrian, and Turkish soldiers on the other with the utmost fierceness from trenches or in the open, use new and old weapons of destruction, and kill and wound each other with equal ardor and resolution, and yet not be brutalized or degraded in their moral nature, if they fight from love of country or with self-sacrificing loyalty to its spiritual ideals; but neither soldiers nor sailors can attack defenseless noncombatants systematically destroy towns and villages, and put to death captured men, women, and children without falling in their moral nature before the brutes. That he obeyed orders will not save from moral ruin the soldier or sailor who does such deeds. He should have refused to obey such orders and taken the consequences. This is true even of the privates, but more emphatically of the officers. The white race has often been proud of the way in which its soldiers and sailors have fought in many causes—good, bad, and indifferent; because they fought bravely, took defeat resolutely, and showed

humanity after victory. The German method of conducting war omits chivalry, mercy, and humanity, and thereby degrades the German Nation and any other nation which sympathizes with it or supports its methods. It is no answer to the world's objection to the sinking of the *Lusitania* that Great Britain uses its navy to cut off from Germany food and needed supplies for its industries, for that is a recognized and effective method of warfare; whereas the sinking of an occasional merchant ship with its passengers and crew is a method of warfare nowhere effective, and almost universally condemned. If war, with its inevitable stratagems, ambushes, and lies must continue to be the arbiter in international disputes, it is certainly desirable that such magnanimity in war as the conventions of the last century made possible should not be lost because of Germany's behavior in the present European convulsion. It is also desirable to reaffirm with all possible emphasis that fidelity to international agreements is the taproot of human progress.

On the supposition that the people of the United States have learned the lesson of the *Lusitania*, so far as an understanding of the issues at stake in this gigantic war is concerned, can they also get from it any guidance in regard to their own relation to the fateful struggle? Apparently, not yet. With practical unanimity the American people will henceforth heartily desire the success of the Allies, and the decisive defeat of Germany, Austria-Hungary, and Turkey. With practical unanimity they will support whatever action the Administration at Washington shall decide to take in the immediate emergency; but at present they do not feel that they know whether they can best promote the defeat of the Triple Alliance of Germany, Austria-Hungary, and Turkey by remaining neutral or by taking active part in the conflict. Unless a dismemberment of Austria-Hungary is brought about by Italy and Rumania or some

other Balkan State entering the war on the side of the Allies, it now seems as if neither party would acknowledge defeat until exhausted or brought to a sudden moral collapse. Exhaustion in war can best be prevented by maintaining in activity the domestic industries and general productiveness of the nation involved in war and those of the neutral nations which are in position to feed it, and manufacture for it munitions, clothing, and the other supplies that war demands. While remaining strictly neutral, North and South America can be of great service to the Allies. To be sure, as a neutral the United States will be obliged to give some aid to Germany and her allies, such, for example, as harboring the interned commercial fleet of Germany; but this aid will be comparatively insignificant. The services which the American republics can thus render to the cause of liberty and civilization are probably more considerable than any they could render by direct contributions of military or naval force. Kept free from the drain of war, the republics will be better able to supply food, clothing, munitions, and money to the Allies both during the war and after the conclusion of peace.

On the whole, the wisest thing the neutral nations can do, which are remote from the theatres of war, and have no territorial advantages to seek at the coming of peace, is probably to defend vigorously and with the utmost sincerity and frankness all the existing rights of neutrals. By acting thus in the present case they will promote national righteousness and hinder national depravity, discourage, for the future, domination by any single great power in any part of the world, and help the cause of civilization by strengthening the just liberty and independence of many nations—large and small, and of different capacities and experiences—which may reasonably hope, if the Prussian terror can be abolished, to live together in peaceful co-operation for the common good.

Appeals for American Defense

Need of Further Protecting Neutral Rights Set Forth.

By GEORGE W. WICKERSHAM.

Formerly United States Attorney General.

To the Editor of The New York Times:

THE destruction of the Lusitania by the Germans, and the wanton killing of American men, women, and children, without warning, brings sharply before the American people the question of how long the present sexless policy of the conduct of our affairs is to be continued. Germany has apparently decided to run amuck with civilization. It is now for the American people to decide whether this nation has any virility left, or if it is content to sink to the level of China.

A very clear course, it seems to me, is open for us to pursue: We should cancel all diplomatic relations with a country which has declared war upon civilization, recall our Ambassador from Berlin, and hand Count Bernstorff his passports. Congress should be summoned in extra session, and an appropriation of at least \$250,000,000 asked to put us in a condition to protect our rights as a neutral civilized power. At the same time we should invite all neutral nations of the world to join us in a council of civilization to agree upon the steps to be taken to protect the interests of all neutral powers and their citizens from such wanton acts of destruction of life and property as those which Germany has been committing and which have culminated in the destruction of the Lusitania and of so many of her passengers.

Until now the National Administration has been proceeding not only on the basis of "safety first," but of safety first, last, and all the time. The time has arrived when we must remember the truth of what Lowell so well expressed, that

'Tis man's perdition to be safe, when
for the truth he ought to die.

GEORGE W. WICKERSHAM.

BY THE NATIONAL SECURITY
LEAGUE.

[From THE NEW YORK TIMES, May 11, 1915.]

The army, navy, and coast defenses of the United States are declared to be inadequate in an open letter signed by Joseph H. Choate, Alton B. Parker, Henry L. Stimson, and S. Stanwood Menken, which was given out yesterday in support of the plans of the National Security League. This organization, which maintains offices at 31 Pine Street, has embarked on a national campaign for better war defenses, and its appeal for members and supporters is expressed by the catch-phrase, "a first defense army of 1,000,000 workers."

The letter of Messrs. Choate, Parker, Stimson, and Menken contains most of the arguments put forth by the league in asking public support and enrollment. Its text follows:

Careful investigation by our committees who have looked into the question of national defense brings to light the following conditions of affairs:

According to official Government reports, there are barely 30,000 mobile troops in continental United States. These are distributed among fifty-two widely scattered posts, which would make it impossible to mobilize quickly at any given point. Even this small force is short of officers, ammunition, and equipment. Furthermore, it has no organized reserve.

Our National Guard, with negligible exceptions, is far below its paper strength in men, equipment, and efficiency.

Our coast defenses are inadequate, our fortifications insufficiently manned and without adequate organized reserves.

Our navy is neither adequate nor prepared for war. This, our first line of defense, is inadequately manned, short of ammunition, and has no organized reserve of trained men. Our submarine

flotilla exists chiefly upon paper. Fast scout cruisers, battle cruisers, aeroplanes, mine layers, supply ships, and transports are lacking. Target practice has been neglected or altogether omitted.

In view of this condition of affairs, and since there is no assurance that the United States will not again become involved in war, "and since a peaceful policy, even when supported by treaties, is not a sufficient guarantee against war, of which the subjugation of Belgium and the present coercion of China by a foreign power are noteworthy examples; and the United States cannot safely intrust the maintenance of its institutions and nationality to the mere negotiations of peace, and since we are not adequately prepared to maintain our national policies, and since the present defenseless condition of the nation is due to the failure of Congress not only to follow the carefully considered plans of our naval and military advisers, but also to provide any reasonable measure for gradually putting such plans into practice, it is manifest that until a workable plan for a world alliance has been evolved and agreed to by the principal nations, with proper guarantee of good faith, the United States must undertake adequate military preparations for its defense."

In the meantime the National Security League feels impelled to call public attention to our deplorable condition of unpreparedness. At the same time the league issues an appeal for public support in behalf of the following program for better national defense:

1. Legislation correcting present wasteful methods of military appropriations and disbursement.
2. Adoption of a definite military policy.
3. A stronger, better balanced navy.
4. An effective mobile army.
5. Larger and better equipped National Guard.
6. The creation of an organized reserve for each branch of our military service.

All those interested in the work of the league are invited to send their names and contributions to the National

Security League, 31 Pine Street, New York City.

[The letter is addressed to "present and former members of the Cabinet, to members of Congress, to Governors of our States and Territories, to Mayors of all American cities, to Chambers of Commerce and Boards of Trade, to merchants' associations, to colleges and universities, to university clubs and alumni associations, to all patriotic organizations, to all women's clubs, and to all American citizens."

"Until a satisfactory plan of disarmament has been worked out and agreed upon by the nations of the world," says a statement, "the United States must be adequately prepared to defend itself against invasion. A military equipment sufficient for this purpose can be had without recourse to militarism. The league was formed as a preparation not for war, but against war."]

BY THE NAVY LEAGUE.

[From THE NEW YORK TIMES, May 12, 1915.]

The Navy League of the United States, of which General Horace Porter is President, and which includes in its membership Herbert L. Satterlee, George von L. Meyer, Beekman Winthrop, J. Pierpont Morgan, Governor Emmet O'Neal of Alabama, Senator James D. Phelan of California, Cardinal Gibbons, Theodore Roosevelt, Elihu Root, Edward T. Stotesbury, Benjamin Ide Wheeler, Joseph H. Choate, George B. Cortelyou, C. Oliver Iselin, Seth Low, Myron T. Herrick, Alton B. Parker, and scores of other men prominent in the public and business life of the country, through its Executive Committee adopted a resolution yesterday calling upon President Wilson to call Congress in extra session to authorize a bond issue of \$500,000,000, which sum, it is stated, is "needed to provide this country with adequate means of naval defense."

The resolution, which was adopted at a session at which members of the Executive Committee consulted by long-distance telephone, some of them being in Washington and others in New York at the Union League Club, read:

"In view of the crisis in our foreign

relations, we, as representatives of the Navy League of the United States, express our emphatic belief that Congress should be immediately assembled and that measures should be taken at once to strengthen our national defense. Our most pacific country should, because of its supreme love of peace, possess preponderant naval strength and adequate military strength. A large bond issue of, if necessary, \$500,000,000 should be authorized at once. These bonds would be rapidly absorbed by the American people for such a purpose. Equipped with a

mighty fleet, American life and American rights would be scrupulously respected by all belligerents. In such case there would be no thought of our entering into war.

"GENERAL HORACE PORTER,
President;

"ROBERT M. THOMPSON,
Chairman Executive Committee;

The Drowned Sailor

By MAURICE HEWLETT.

[From "Sing Songs of the War."]

LAST night I saw my true love stand
All shadowy by my bed.
He had my locket in his hand;
I knew that he was dead.

"Sweetheart, why stand you there so fast,
Why stand you there so grave?"
"I think," said he, "this hour's the last
That you and I can have.

"You gave me this from your fair breast,
It's never left me yet;
And now it dares not seek the nest
Because it is so wet.

"The cold gray sea has covered it,
Deep in the sand it lies;
While over me the long weeds flit
And veil my staring eyes.

"And there are German sailors laid
Beside me in the deep;
We have no need of gun nor blade,
United in our sleep."

"Dear heart, dear heart, come to my bed,
My arms are warm and sweet!"
"Alack for you, my love," he said,
"My limbs would wet the sheet.

"Cold is the bed that I lie on
And deep beneath the swell;
No voice is left to make my moan
And bid my love farewell."

Now I am widow that was wife—
Would God that they could prove
What law should rule, without the strife
That's robbed me of my love!

War With Poisonous Gases

The Gap at Ypres Made by German Chlorine Vapor Bombs

Reports by the Official "Eyewitness"

and

Dr. J. S. Haldane, F. R. S.

Dr. John Scott Haldane, F. R. S., who has conducted the investigation for the British War Office, is a brother of Lord Haldane. He is a graduate in medicine of Edinburgh University and an M. A. of Oxford and an LL. D. of Birmingham. For many years he has been engaged in scientific investigation, and has contributed largely to the elucidation of the causes of death in colliery and mine explosions. He is the author of a work on the physiology of respiration and air analysis.

Professor Baker, F. R. S., who is carrying out chemical investigations into the nature of the gases, is Professor of Chemistry in the Imperial College of Science and Technology, London. He was a Scholar in Natural Science at Balliol. He has conducted important experiments into the nature of gases.

Sir Wilmot Herringham, M. D. Oxon., is a physician to St. Bartholomew's Hospital and Vice Chancellor of the London University.

Lieutenant McNee, M. B., M. Ch. Glasgow, a Carnegie Research Fellow, is assistant to the Professor of Pathology in Glasgow University and has conducted many investigations of an important character in pathology and chemical pathology.

General Headquarters,

British Expeditionary Force,

April 27, 1915.

To Earl Kitchener, Secretary of State for War.

My Lord: I have the honor to report that, as requested by you yesterday morn-

ing, I proceeded to France to investigate the nature and effects of the asphyxiating gas employed in the recent fighting by the German troops. After reporting myself at General Headquarters I proceeded to Bailleul with Sir Wilmot Herringham, Consulting Physician to the British Force, and examined with him several men from Canadian battalions who were at the No. 2 Casualty Clearing Station, suffering from the effects of the gas.

These men were lying struggling for breath and blue in the face. On examining the blood with the spectroscope and by other means, I ascertained that the blueness was not due to the presence of any abnormal pigment. There was nothing to account for the blueness (cyanosis) and struggle for air but the one fact that they were suffering from acute bronchitis, such as is caused by inhalation of an irritant gas. Their statements were that when in the trenches they had been overwhelmed by an irritant gas produced in front of the German trenches and carried toward them by a gentle breeze.

One of them died shortly after our arrival. A post-mortem examination was conducted in our presence by Lieutenant McNee, a pathologist by profession, of Glasgow University. The examination showed that death was due to acute bronchitis and its secondary effects. There was no doubt that the bronchitis and accompanying slow asphyxiation were due to the irritant gas.

Lieutenant McNee had also examined

yesterday the body of a Canadian Sergeant, who had died in the clearing station from the effects of the gas. In this case, also, very acute bronchitis and oedema of the lungs caused death by asphyxiation.

A deposition by Captain Bertram, Eighth Canadian Battalion, was carefully taken down by Lieutenant McNee. Captain Bertram was then in the clearing station, suffering from the effects of the gas and from a wound. From a support trench, about 600 yards from the German lines, he had observed the gas. He saw, first of all, a white smoke arising from the German trenches to a height of about three feet. Then in front of the white smoke appeared a greenish cloud, which drifted along the ground to our trenches, not rising more than about seven feet from the ground when it reached our first trenches. Men in these trenches were obliged to leave, and a number of them were killed by the effects of the gas. We made a counter-attack about fifteen minutes after the gas came over, and saw twenty-four men lying dead from the effects of the gas on a small stretch of road leading from the advanced trenches to the supports. He was himself much affected by the gas still present, and felt as if he could not breathe.

The symptoms and the other facts so far ascertained point to the use by the German troops of chlorine or bromine for purposes of asphyxiation.

There are also facts pointing to the use in German shells of other irritant substances, though in some cases at least these agents are not of the same brutally barbarous character as the gas used in the attack on the Canadians. The effects are not those of any of the ordinary products of combustion of explosives. On this point the symptoms described left not the slightest doubt in my mind.

Professor H. B. Baker, F. R. S., who accompanied me, is making further inquiries from the chemical side.

I am, my Lord, your obedient servant,
J. S. HALDANE.

The following announcement was is-

sued by the British War Office on April 29, 1915:

Thanks to the magnificent response already made to the appeal in the press for respirators for the troops, the War Office is in a position to announce that no further respirators need be made.

THE "EYEWITNESS" STORY.

The following descriptive account was communicated by the British Official Eyewitness present with General Headquarters, supplementing his continuous narrative of the movements of the British force and the French armies in immediate touch with it:

April 27, 1915.

Since the last summary there has been a sudden development in the situation on our front, and very heavy fighting has taken place to the north and northeast of Ypres, which can be said to have assumed the importance of a second battle for that town. With the aid of a method of warfare up to now never employed by nations sufficiently civilized to consider themselves bound by international agreements solemnly ratified by themselves, and favored by the atmospheric conditions, the Germans have put into effect an attack which they had evidently contemplated and prepared for some time.

Before the battle began our line in this quarter ran from the cross-roads at Broodseinde, east of Zonnebeke on the Ypres-Moorslede Road to the cross-roads half a mile north of St. Julien, on the Ypres-Poelcapelle Road, roughly following the crest of what is known as the Grafenstafel Ridge. The French prolonged the line west of the Ypres-Poelcapelle Road, whence their trenches ran around the north of Langemarck to Steenstraate on the Yperlee Canal. The area covered by the initial attack is that between the canal and the Ypres-Poelcapelle Road, though it was afterwards extended to the west of the canal and to the east of the road.

An effort on the part of the Germans in this direction was not unexpected, since movements of troops and transport behind their front line had been detected for some days. Its peculiar and novel

nature, however, was a surprise which was largely responsible for the measure of success achieved. Taking advantage of the fact that at this season of the year the wind not infrequently blows from the north, they secretly brought up apparatus for emitting asphyxiating vapor or gas, and distributed it along the section of their front line opposite that of our allies, west of Langemarck, which faced almost due north. Their plan was to make a sudden onslaught southwestward, which, if successful, might enable them to gain the crossings on the canal south of Bixschoote and place them well behind the British left in a position to threaten Ypres.

The attack was originally fixed for Tuesday, the 20th, but since all chances of success depended on the action of the asphyxiating vapor it was postponed, the weather being unfavorable. On Thursday, the 22d, the wind blew steadily from the north, and that afternoon, all being ready, the Germans put their plan into execution. Since then events have moved so rapidly and the situation has moved so frequently that it is difficult to give a consecutive and clear story of what happened, but the following account represents as nearly as can be the general course of events. The details of the gas apparatus employed by them are given separately, as also those of the asphyxiating grenades, bombs, and shells of which they have been throwing hundreds.

At some time between 4 and 5 P. M. the Germans started operations by releasing gases with the result that a cloud of poisonous vapor rolled swiftly before the wind from their trenches toward those of the French west of Langemarck, held by a portion of the French Colonial Division. Allowing sufficient time for the fumes to take full effect on the troops facing them, the Germans charged forward over the practically unresisting enemy in their immediate front, and, penetrating through the gap thus created, pressed on silently and swiftly to the south and west. By their sudden irruption they were able to overrun and surprise a large proportion of the French

troops billeted behind the front line in this area and to bring some of the French guns as well as our own under a hot rifle fire at close range.

The first intimation that all was not well to the north was conveyed to our troops holding the left of the British line between 5 and 6 P. M. by the withdrawal of some of the French Colonials and the sight of the wall of vapor following them. Our flank being thus exposed the troops were ordered to retire on St. Julien, with their left parallel to but to the west of the highroad. The splendid resistance of these troops, who saved the situation, has already been mentioned by the Commander in Chief.

Meanwhile, apparently waiting till their infantry had penetrated well behind the Allies' line, the Germans had opened a hot artillery fire upon the various tactical points to the north of Ypres, the bombardment being carried out with ordinary high-explosive shell and shrapnel of various calibres and also with projectiles containing asphyxiating gas. About this period our men in reserve near Ypres, seeing the shells bursting, had gathered in groups, discussing the situation and questioning some scattered bodies of Turcos who had appeared; suddenly a staff officer rode up shouting "Stand to your arms," and in a few minutes the troops had fallen in and were marching northward to the scene of the fight.

Nothing more impressive can be imagined than the sight of our men falling in quietly in perfect order on their alarm posts amid the scene of wild confusion caused by the panic-stricken refugees who swarmed along the roads.

In the meantime, to the north and northeast of the town, a confused fight was taking place, which gave proof not only of great gallantry and steadiness on the part of the troops referred to above, but of remarkable presence of mind on the part of their leaders. Behind the wall of vapor, which had swept across fields, through woods, and over hedges, came the German firing line, the men's mouths and noses, it is stated, pro-

tected by pads soaked in a solution of bicarbonate of soda. Closely following them again came the supports. These troops, hurrying forward with their formation somewhat broken up by the obstacles encountered in their path, looked like a huge mob bearing down upon the town. A battery of 4.7-inch guns a little beyond the left of our line was surprised and overwhelmed by them in a moment. Further to the rear and in a more easterly direction were several field batteries, and before they could come into action the Germans were within a few hundred yards. Not a gun, however, was lost.

One battery, taken in flank, swung around, fired on the enemy at point-blank range, and checked the rush. Another opened fire with the guns pointing in almost opposite directions, the enemy being on three sides of them. It was under the very heavy cannonade opened about this time by the Germans, and threatened by the advance of vastly superior numbers, that our infantry on our left steadily, and without any sign of confusion, slowly retired to St. Julien, fighting every step.

Help was not long in arriving, for some of our reserves near Ypres had stood to arms as soon as they were aware of the fact that the French line had been forced, and the officers on their own initiative, without waiting for orders, led them forward to meet the advancing enemy, who, by this time, were barely two miles from the town. These battalions attacked the Germans with the bayonet, and then ensued a *mêlée*, in which our men more than held their own, both sides losing very heavily.

One German battalion seems to have been especially severely handled, the Colonel being captured among several other prisoners. Other reinforcements were thrown in as they came up, and, when night fell, the fighting continued by moonlight, our troops driving back the enemy by repeated bayonet charges, in the course of which our heavy guns were recaptured.

By then the situation was somewhat restored in the area immediately north of Ypres. Further to the west, however, the enemy had forced their way

over the canal, occupying Steenstraate and the crossing at Het Sast, about three-quarters of a mile south of the former place, and had established themselves at various points on the west bank. All night long the shelling continued, and about 1:30 A. M. two heavy attacks were made on our line in the neighborhood of Broodseinde, east of Zonnebeke. These were both repulsed. The bombardment of Ypres itself and its neighborhood had by now redoubled in intensity and a part of the town was in flames.

In the early morning of Friday, the 23d, we delivered a strong counter-attack northward in co-operation with the French. Our advance progressed for some little distance, reaching the edge of the wood about half a mile west of St. Julien and penetrating it. Here our men got into the Germans with the bayonet, and the latter suffered heavily. The losses were also severe on our side, for the advance had to be carried out across the open. But in spite of this nothing could exceed the dash with which it was conducted. One man—and his case is typical of the spirit shown by the troops—who had had his rifle smashed by a bullet, continued to fight with an intrenching tool. Even many of the wounded made their way out of the fight with some article of German equipment as a memento.

About 11 A. M., not being able to progress further, our troops dug themselves in, the line then running from St. Julien practically due west for about a mile, whence it curved southwestward before turning north to the canal near Boesinghe. Broadly speaking, on the section of the front then occupied by us the result of the operations had been to remove to some extent the wedge which the Germans had driven into the allied line, and the immediate danger was over. During the afternoon our counter-attack made further progress south of Pilkem, thus straightening the line still more. Along the canal the fighting raged fiercely, our allies making some progress here and there. During the night, however, the Germans captured Lizerne, a

village on the main road from Ypres to Steenstraete.

When the morning of the 24th came the situation remained much the same, but the enemy, who had thrown several bridges across the canal, continued to gain ground to the west. On our front the Germans, under cover of their gas, made a further attack between 3 and 4 A. M. to the east of St. Julien and forced back a portion of our line. Nothing else in particular occurred until about mid-day, when large bodies of the enemy were seen advancing down the Ypres-Poelcapelle road toward St. Julien. Soon after a very strong attack developed against that village and the section of the line east of it. Under the pressure of these fresh masses our troops were compelled to fall back, contesting every inch of ground and making repeated counter-attacks; but until late at night a gallant handful, some 200 to 300 strong, held out in St. Julien. During the night the line was re-established north of the hamlet of Fortuin, about 700 yards further to the rear. All this time the fighting along the canal continued, the enemy forcing their way across near Boesinghe, and holding Het Sast, Steenstraete, and Lizerne strongly. The French counter-attacked in the afternoon, captured fifty prisoners, and made some further progress toward Pilkem. The Germans, however, were still holding the west bank firmly, although the Belgian artillery had broken the bridge behind them at Steenstraete.

On the morning of Sunday, the fourth day of the battle, we made a strong counter-attack on St. Julien, which gained some ground but was checked in front of the village. To the west of it we reached a point a few hundred yards south of the wood which had been the objective on the 23d and which we had had to relinquish subsequently. In the afternoon the Germans made repeated assaults in great strength on our line near Broodseinde. These were backed up by a tremendous artillery bombardment and the throwing of asphyxiating bombs; but all were beaten off with great slaughter to the enemy, and forty-five prisoners fell

into our hands. When night came the situation remained unchanged.

This determined offensive on the part of the enemy, although it has menaced Ypres itself, has not so far the appearance of a great effort to break through the line and capture the Channel ports, such as that made in October. Its initial success was gained by the surprise rendered possible by the use of a device which Germany pledged herself not to employ. The only result upon our troops has been to fill them with an even greater determination to punish the enemy and to make him pay tenfold for every act of "frightfulness" he has perpetrated.

Along the rest of the British front nothing of special importance has occurred.

WHAT THE GERMANS SAY.

The comments of the German newspapers on the advance of the imperial army north of Ypres readily admitted and justified the use of asphyxiating gases. The leading Prussian military organ, the Kreuz Zeitung, said:

The moral success of our victory is quite upon a level with its strategic value. It has again been proved that in the west also we are at any time in a position to take the offensive, and that, notwithstanding their most violent efforts, it is impossible for the English and the French to throw back or to break through our battle line.

In another article the Kreuz Zeitung said:

When the French report says that we used a large number of asphyxiating bombs, our enemies may infer from this that they always are making a mistake when by their behavior they cause us to have recourse to new technical weapons.

Dealing with the same subject in a leading article, the Frankfurter Zeitung declared:

It is quite possible that our bombs and shells made it impossible for the enemy to remain in his trenches and artillery positions, and it is even probable that missiles which emit poisonous gases have actually been used by us, since the German leaders have made it plain that, as

an answer to the treacherous missiles which have been used by the English and the French for many weeks past, we, too, shall employ gas bombs or whatever they are called. The German leaders pointed out that considerably more effective materials were to be expected from German chemistry, and they were right.

But, however destructive these bombs and shells may have been, do the English and the other people think that it makes a serious difference whether hundreds of guns and howitzers throw hundreds of thousands of shells on a single tiny spot in order to destroy and break to atoms everything living there, and to make the German trenches into a terrible hell as was the case at Neuve Chapelle, or whether we throw a few shells which spread death in the air? These shells are not more deadly than the poison of English explosives, but they take effect over a wider area, produce a rapid end, and spare the torn bodies the tortures and pains of death.

The Frankfurter Zeitung then compared the results achieved as follows:

The shells of Neuve Chapelle cost the Germans a trench and a village, but on the edge of the ruin the German ring remained firm and strong. How was it at Ypres? The enemy was thrown back on a front of more than five and a half miles. Along this whole front we gained two miles. These figures would signify little in comparison with the distance to the sea, but our next goal is Ypres, and on the north we are now only a few kilometers from this stronghold.

The Cologne Gazette referred to Sir John French's reports as follows:

It is delightful to read the complaints about the use of shells containing asphyxiating gases. This sounds particularly well out of the mouth of the Commander in Chief of a nation which for centuries past has trodden every provision of international law under foot.

The Canadians at Ypres

[From the Canadian Record Officer.]

The full narrative of the part played by the Canadians at Ypres is given in a communication from the Record Officer now serving with the Canadian Division at the front and published in the British press on May 1, 1915. The division was commanded by a distinguished English General, but these "amateur soldiers of Canada," as the narrator describes them, were officered largely by lawyers, college professors, and business men who before the war were neither disciplined nor trained. Many striking deeds of heroism and self-sacrifice were performed in the course of their brilliant charge and dogged resistance, which, in the words of Sir John French, "saved the situation" in the face of overwhelming odds.

ON April 22 the Canadian Division held a line of, roughly, 5,000 yards, extending in a north-westerly direction from the Ypres-Roulers Railway to the Ypres-

Poelcapelle road, and connecting at its terminus with the French troops. The division consisted of three infantry brigades, in addition to the artillery brigades. Of the infantry brigades the First was in reserve, the Second was on the right, and the Third established contact with the Allies at the point indicated above.

The day was a peaceful one, warm and sunny, and except that the previous day had witnessed a further bombardment of the stricken town of Ypres, everything seemed quiet in front of the Canadian line. At 5 o'clock in the afternoon a plan, carefully prepared, was put into execution against our French allies on the left. Asphyxiating gas of great intensity was projected into their trenches, probably by means of force pumps and pipes laid out under the parapets. The fumes, aided by a favorable wind, floated backward, poisoning and disabling over

an extended area those who fell under their effect.

The result was that the French were compelled to give ground for a considerable distance. The glory which the French Army has won in this war would make it impertinent to labor the compelling nature of the poisonous discharges under which the trenches were lost. The French did, as every one knew they would do, all that stout soldiers could do, and the Canadian Division, officers and men, look forward to many occasions in the future in which they will stand side by side with the brave armies of France.

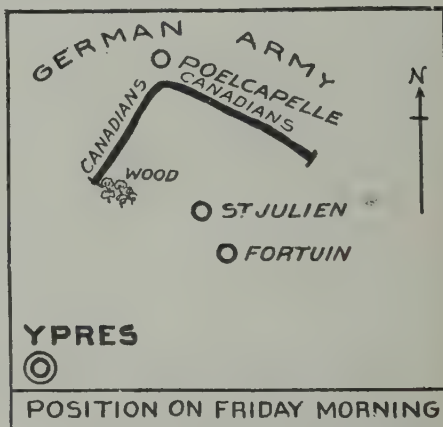

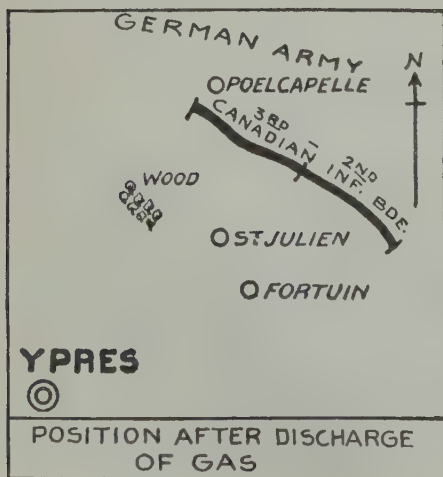

The immediate consequences of this

enforced withdrawal were, of course, extremely grave. The Third Brigade of the Canadian Division was without any left, or, in other words, its left was in the air. Rough diagrams may make the position clear.

It became imperatively necessary greatly to extend the Canadian lines to the left rear. It was not, of course, practicable to move the First Brigade from reserve at a moment's notice, and the line, extending from 5,000 to 9,000 yards, was naturally not the line that had been held by the Allies at 5 o'clock, and a gap still existed on its left. The new line, of which our recent point of contact with the French formed the apex, ran quite roughly as follows:

Contrast this with:

As shown above, it became necessary for Brig. Gen. Turner, commanding the Third Brigade, to throw back his left flank southward to protect his rear. In the course of the confusion which followed upon the readjustments of position, the enemy, who had advanced rapidly after his initial successes, took four British 4.7 guns in a small wood to the west of the village of St. Julien, two miles in the rear of the original French trenches.

The story of the second battle of Ypres is the story of how the Canadian Division, enormously outnumbered—for they had in front of them at least four divisions, supported by immensely heavy artillery—with a gap still existing, though reduced, in their lines, and with dispositions made hurriedly under the

stimulus of critical danger, fought through the day and through the night, and then through another day and night; fought under their officers until, as happened to so many, those perished gloriously, and then fought from the impulsion of sheer valor because they came from fighting stock.

The enemy, of course, was aware—whether fully or not may perhaps be doubted—of the advantage his breach in the line had given him, and immediately began to push a formidable series of attacks upon the whole of the newly-formed Canadian salient. If it is possible to distinguish when the attack was everywhere so fierce, it developed with particular intensity at this moment upon the apex of the newly formed line, running in the direction of St. Julien.

It has already been stated that four British guns were taken in a wood comparatively early in the evening of the 22d. In the course of that night, and under the heaviest machine-gun fire, this wood was assaulted by the Canadian Scottish, Sixteenth Battalion of the Third Brigade, and the Tenth Battalion of the Second Brigade, which was intercepted for this purpose on its way to a reserve trench. The battalions were respectively commanded by Lieut. Col. Leckie and Lieut. Col. Boyle, and after a most fierce struggle in the light of a misty moon they took the position at the point of the bayonet. At midnight the Second Battalion, under Colonel Watson, and the Toronto Regiment, Queen's Own, Third Battalion, under Lieut. Col. Rennie, both of the First Brigade, brought up much-needed reinforcement, and though not actually engaged in the assault were in reserve.

All through the following days and nights these battalions shared the fortunes and misfortunes of the Third Brigade. An officer who took part in the attack describes how the men about him fell under the fire of the machine guns, which, in his phrase, played upon them "like a watering pot." He added quite simply, "I wrote my own life off." But the line never wavered. When one man fell another took his place, and with a

final shout the survivors of the two battalions flung themselves into the wood. The German garrison was completely demoralized, and the impetuous advance of the Canadians did not cease until they reached the far side of the wood and intrenched themselves there in the position so dearly gained. They had, however, the disappointment of finding that the guns had been blown up by the enemy, and later on in the same night a most formidable concentration of artillery fire, sweeping the wood as a tropical storm sweeps the leaves from a forest, made it impossible for them to hold the position for which they had sacrificed so much.

The fighting continued without intermission all through the night, and, to those who observed the indications that the attack was being pushed with ever-growing strength, it hardly seemed possible that the Canadians, fighting in positions so difficult to defend and so little the subject of deliberate choice, could maintain their resistance for any long period. At 6 A. M. on Friday it became apparent that the left was becoming more and more involved, and a powerful German attempt to outflank it developed rapidly. The consequences, if it had been broken or outflanked, need not be insisted upon. They were not merely local.

It was therefore decided, formidable as the attempt undoubtedly was, to try and give relief by a counter-attack upon the first line of German trenches, now far, far advanced from those originally occupied by the French. This was carried out by the Ontario First and Fourth Battalions of the First Brigade, under Brig. Gen. Mercer, acting in combination with a British brigade.

It is safe to say that the youngest private in the rank, as he set his teeth for the advance, knew the task in front of him, and the youngest subaltern knew all that rested upon its success. It did not seem that any human being could live in the shower of shot and shell which began to play upon the advancing troops. They suffered terrible casualties. For a short time every other man seemed to

fall, but the attack was pressed ever closer and closer.

The Fourth Canadian Battalion at one moment came under a particularly withering fire. For a moment—not more—it wavered. Its most gallant commanding officer, Lieut. Col. Burchill, carrying, after an old fashion, a light cane, coolly and cheerfully rallied his men and, at the very moment when his example had infected them, fell dead at the head of his battalion. With a hoarse cry of anger they sprang forward, (for, indeed, they loved him,) as if to avenge his death. The astonishing attack which followed—pushed home in the face of direct frontal fire made in broad daylight by battalions whose names should live for ever in the memories of soldiers—was carried to the first line of German trenches. After a hand-to-hand struggle the last German who resisted was bayoneted, and the trench was won.

The measure of this success may be taken when it is pointed out that this trench represented in the German advance the apex in the breach which the enemy had made in the original line of the Allies, and that it was two and a half miles south of that line. This charge, made by men who looked death indifferently in the face, (for no man who took part in it could think that he was likely to live,) saved, and that was much, the Canadian left. But it did more. Up to the point where the assailants conquered, or died, it secured and maintained during the most critical moment of all the integrity of the allied line. For the trench was not only taken, it was held thereafter against all comers, and in the teeth of every conceivable projectile, until the night of Sunday, the 25th, when all that remained of the war-broken but victorious battalions was relieved by fresh troops.

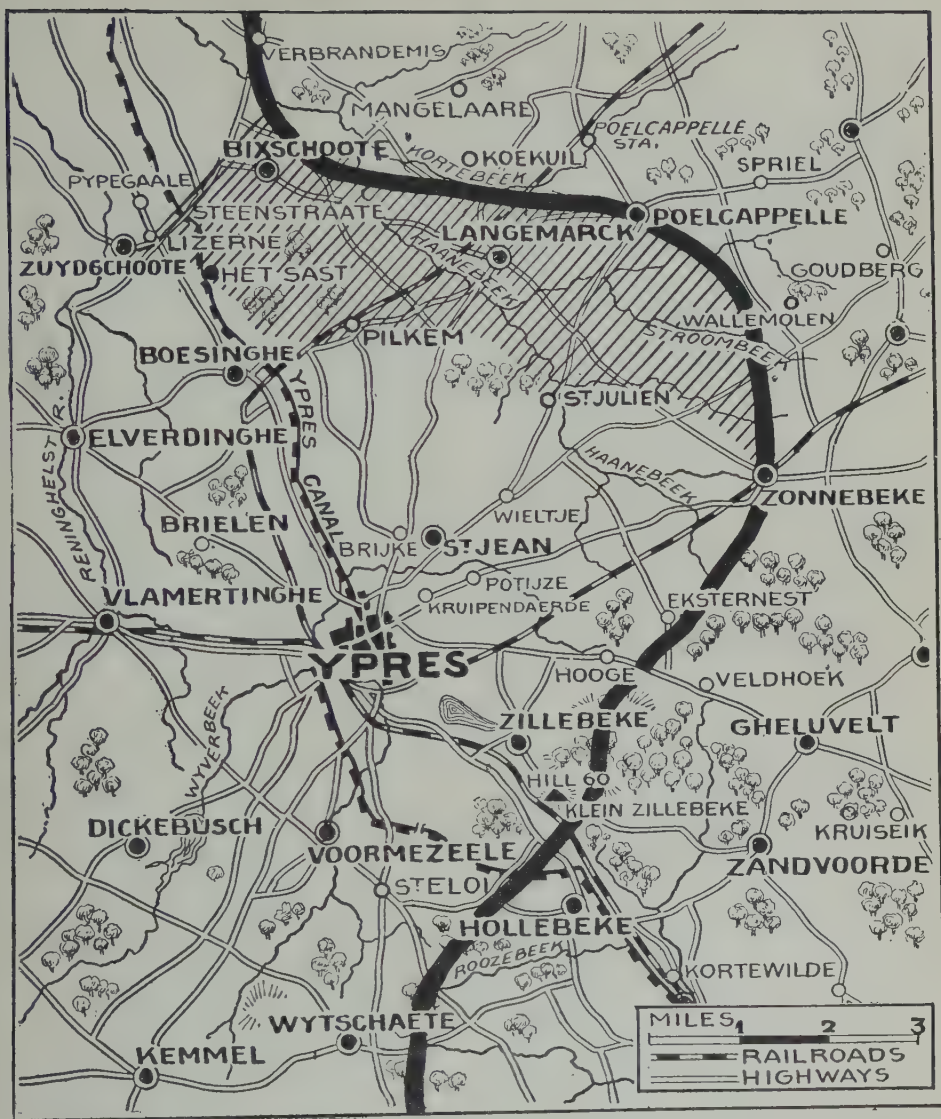

It is necessary now to return to the fortunes of the Third Brigade, commanded by Brig. Gen. Turner, which, as we have seen, at 5 o'clock on Thursday was holding the Canadian left, and after the first attack assumed the defense of the new Canadian salient, at the same time sparing all the men it could to form an extemporized line be-

tween the wood and St. Julien. This brigade also was at the first moment of the German offensive, made the object of an attack by the discharge of poisonous gas. The discharge was followed by two enemy assaults. Although the fumes were extremely poisonous, they were not, perhaps having regard to the wind, so disabling as on the French lines, (which ran almost east to west,) and the brigade, though affected by the fumes, stoutly beat back the two German assaults.

Encouraged by this success, it rose to the supreme effort required by the assault on the wood, which has already been described. At 4 o'clock on the morning of Friday, the 23d, a fresh emission of gas was made both upon the Second Brigade, which held the line running northeast, and upon the Third Brigade, which, as has been fully explained, had continued the line up to the pivotal point, as defined above, and had then spread down in a southeasterly direction. It is, perhaps, worth mentioning that two privates of the Forty-eighth Highlanders who found their way into the trenches commanded by Colonel Lipsett, Ninetieth Winnipeg Rifles, Eighth Battalion, perished in the fumes, and it was noticed that their faces became blue immediately after dissolution.

The Royal Highlanders of Montreal, Thirteenth Battalion, and the Forty-eighth Highlanders, Fifteenth Battalion, were more especially affected by the discharge. The Royal Highlanders, though considerably shaken, remained immovable upon their ground. The Forty-eighth Highlanders, which, no doubt, received a more poisonous discharge, was for the moment dismayed, and, indeed, their trench, according to the testimony of very hardened soldiers, became intolerable. The battalion retired from the trench, but for a very short distance, and for an equally short time. In a few moments they were again their own men. They advanced upon and occupied the trenches which they had momentarily abandoned.

In the course of the same night the Third Brigade, which had already displayed a resource, a gallantry, and a

The German rush across the Yser-Ypres Canal was checked at Lizerne and opposite Boesinghe. The shaded area on the map marks the scene of the battle. Within this area are Steenstraete, Het Sast, Pilkem, St. Julien, and Langemarck, all of which the Germans claimed to have captured.

tenacity for which no eulogy could be excessive, was exposed (and with it the whole allied case) to a peril still more formidable.

It has been explained, and, indeed, the fundamental situation made the peril clear, that several German divisions were attempting to crush or drive back this devoted brigade, and in any event to use their enormous numerical superiority to sweep around and overwhelm its left wing. At some point in the line which cannot be precisely determined the last attempt partially succeeded, and in the course of this critical struggle German troops in considerable though not in overwhelming numbers swung past the unsupported left of the brigade, and, slipping in between the wood and St. Julien, added to the torturing anxieties of the long-drawn struggle by the appearance, and indeed for the moment the reality, of isolation from the brigade base.

In the exertions made by the Third Brigade during this supreme crisis it is almost impossible to single out one battalion without injustice to others, but though the efforts of the Royal Highlanders of Montreal, Thirteenth Battalion, were only equal to those of the other battalions who did such heroic service, it so happened by chance that the fate of some of its officers attracted special attention.

Major Norsworth, already almost disabled by a bullet wound, was bayoneted and killed while he was rallying his men with easy cheerfulness. The case of Captain McCuaig, of the same battalion, was not less glorious, although his death can claim no witness. This most gallant officer was seriously wounded, in a hurriedly constructed trench, at a moment when it would have been possible to remove him to safety. He absolutely refused to move and continued in the discharge of his duty.

But the situation grew constantly worse, and peremptory orders were received for an immediate withdrawal. Those who were compelled to obey them were most insistent to carry with them, at whatever risk to their own mobility

and safety, an officer to whom they were devotedly attached. But he, knowing, it may be, better than they, the exertions which still lay in front of them, and unwilling to inflict upon them the disabilities of a maimed man, very resolutely refused, and asked of them one thing only, that there should be given to him, as he lay alone in the trench, two loaded Colt revolvers to add to his own, which lay in his right hand as he made his last request. And so, with three revolvers ready to his hand for use, a very brave officer waited to sell his life, wounded and racked with pain, in an abandoned trench.

On Friday afternoon the left of the Canadian line was strengthened by important reinforcements of British troops amounting to seven battalions. From this time forward the Canadians also continued to receive further assistance on the left from a series of French counter-attacks pushed in a northeasterly direction from the canal bank.

But the artillery fire of the enemy continually grew in intensity, and it became more and more evident that the Canadian salient could no longer be maintained against the overwhelming superiority of numbers by which it was assailed. Slowly, stubbornly, and contesting every yard, the defenders gave ground until the salient gradually receded from the apex, near the point where it had originally aligned with the French, and fell back upon St. Julien.

Soon it became evident that even St. Julien, exposed to fire from right and left, was no longer tenable in the face of overwhelming numerical superiority. The Third Brigade was therefore ordered to retreat further south, selling every yard of ground as dearly as it had done since 5 o'clock on Thursday. But it was found impossible, without hazarding far larger forces, to disentangle the detachment of the Royal Highlanders of Montreal, Thirteenth Battalion, and of the Royal Montreal Regiment, Fourteenth Battalion. The brigade was ordered, and not a moment too soon, to move back. It left these units with hearts as heavy as those with which his comrades had said

farewell to Captain McCuaig. The German tide rolled, indeed, over the deserted village, but for several hours after the enemy had become master of the village the sullen and persistent rifle fire which survived showed that they were not yet master of the Canadian rearguard. If they died, they died worthily of Canada.

The enforced retirement of the Third Brigade (and to have stayed longer would have been madness) reproduced for the Second Brigade, commanded by Brig. Gen. Curry, in a singularly exact fashion, the position of the Third Brigade itself at the moment of the withdrawal of the French. The Second Brigade, it must be remembered, had retained the whole line of trenches, roughly 2,500 yards, which it was holding at 5 o'clock on Thursday afternoon, supported by the incomparable exertions of the Third Brigade, and by the highly hazardous deployment in which necessity had involved that brigade. The Second Brigade had maintained its lines.

It now devolved upon General Curry, commanding this brigade, to reproduce the tactical manoeuvres with which, earlier in the fight, the Third Brigade had adapted itself to the flank movement of overwhelming numerical superiority. He flung his left flank around south, and his record is, that in the very crisis of this immense struggle he held his line of trenches from Thursday at 5 o'clock till Sunday afternoon. And on Sunday afternoon he had not abandoned his trenches. There were none left. They had been obliterated by artillery. He withdrew his undefeated troops from the fragments of his field fortifications, and the hearts of his men were as completely unbroken as the parapets of his trenches were completely broken. In such a brigade it is invidious to single out any battalion for special praise, but it is, perhaps, necessary to the story to point out that Lieut. Col. Lipsett, commanding the Ninetieth Winnipeg Rifles, Eighth Battalion of the Second Brigade, held the extreme left of the brigade position at the most critical moment.

The battalion was expelled from the trenches early on Friday morning by an

emission of poisonous gas, but, recovering in three-quarters of an hour, it counter-attacked, retook the trenches it had abandoned, and bayoneted the enemy. And after the Third Brigade had been forced to retire Lieut. Col. Lipsett held his position, though his left was in the air, until two British regiments filled up the gap on Saturday night.

The individual fortunes of these two brigades have brought us to the events of Sunday afternoon, but it is necessary, to make the story complete, to recur for a moment to the events of the morning. After a very formidable attack the enemy succeeded in capturing the village of St. Julien, which has so often been referred to in describing the fortunes of the Canadian left. This success opened up a new and formidable line of advance, but by this time further reinforcements had arrived. Here, again, it became evident that the tactical necessities of the situation dictated an offensive movement as the surest method of arresting further progress.

General Alderson, who was in command of the reinforcements, accordingly directed that an advance should be made by a British brigade which had been brought up in support. The attack was thrust through the Canadian left and centre, and as the troops making it swept on, many of them going to certain death, they paused an instant, and, with deep-throated cheers for Canada, gave the first indication to the division of the warm admiration which their exertions had excited in the British Army.

The advance was indeed costly, but it could not be gainsaid. The story is one of which the brigade may be proud, but it does not belong to the special account of the fortunes of the Canadian contingent. It is sufficient for our purpose to notice that the attack succeeded in its object, and the German advance along the line, momentarily threatened, was arrested.

We had reached, in describing the events of the afternoon, the points at which the trenches of the Second Brigade had been completely destroyed. This brigade, the Third Brigade, and the

considerable reinforcements which this time filled the gap between the two brigades were gradually driven fighting every yard upon a line running, roughly, from Fortuin, south of St. Julien, in a northeasterly direction toward Passchendaele. Here the two brigades were relieved by two British brigades, after exertions as glorious, as fruitful, and, alas! as costly as soldiers have ever been called upon to make.

Monday morning broke bright and clear and found the Canadians behind the firing line. This day, too, was to bring its anxieties. The attack was still pressed, and it became necessary to ask Brig. Gen. Curry whether he could once more call upon his shrunken brigade. "The men are tired," this indomitable soldier replied, "but they are ready and glad to go again to the trenches." And so once more, a hero leading heroes, the General marched back the men of the Second Brigade, reduced to a quarter of its original strength, to the very apex of the line as it existed at that moment.

This position he held all day Monday; on Tuesday he was still occupying the reserve trenches, and on Wednesday was relieved and retired to billets in the rear.

Such, in the most general outline, is the story of a great and glorious feat of arms. A story told so soon after the event, while rendering bare justice to units whose doings fell under the eyes of particular observers, must do less than justice to others who played their part—and all did—as gloriously as those whose special activities it is possible, even at this stage, to describe. But the friends of men who fought in other battalions may be content in the knowledge that they, too, shall learn, when time allows the complete correlation of diaries, the exact part which each unit played in these unforgettable days. It is rather accident than special distinction which had made it possible to select individual battalions for mention.

It would not be right to close even this account without a word of tribute to the auxiliary services. The signalers were always cool and resourceful. The telegraph and telephone wires being con-

stantly cut, many belonging to this service rendered up their lives in the discharge of their duty, carrying out repairs with the cost complete calmness in exposed positions. The dispatch carriers, as usual, behaved with the greatest bravery. Theirs is a lonely life, and very often a lonely death. One cycle messenger lay upon the ground, badly wounded. He stopped a passing officer and delivered his message, together with some verbal instructions. These were coherently given, but he swooned almost before the words were out of his mouth.

The artillery never flagged in the sleepless struggle in which so much depended upon its exertions. Not a Canadian gun was lost in the long battle of retreat. And the nature of the position renders such a record very remarkable. One battery of four guns found itself in such a situation that it was compelled to turn two of its guns directly about and fire upon the enemy in positions almost diametrically opposite.

It is not possible in this account to attempt a description of the services rendered by the Canadian Engineers or the Medical Corps. Their members rivaled in coolness, endurance, and valor the Canadian infantry, whose comrades they were, and it is hoped in separate communications to do justice to both these brilliant services.

No attempt has been made in this description to explain the recent operations except in so far as they spring from, or are connected with, the fortunes of the Canadian Division. It is certain that the exertions of the troops who reinforced and later relieved the Canadians were not less glorious, but the long, drawn-out struggle is a lesson to the whole empire. "Arise, O Israel!" The empire is engaged in a struggle, without quarter and without compromise, against an enemy still superbly organized, still immensely powerful, still confident that its strength is the mate of its necessities. To arms, then, and still to arms! In Great Britain, in Canada, in Australia there is need, and there is need now, of a community organized alike in military and industrial co-operation.

That our countrymen in Canada, even

while their hearts are still bleeding, will answer every call which is made upon them, we well know.

The graveyard of Canada in Flanders is large; it is very large. Those who lie there have left their mortal remains on

alien soil. To Canada they have bequeathed their memories and their glory.

On Fame's eternal camping ground

Their silent tents are spread,

And Glory guards with solemn round

The bivouac of the dead.

Vapor Warfare Resumed

SIR JOHN FRENCH'S REPORT.

The British Press Bureau authorized the publication of the following report, dated May 3, by Field Marshal Sir John French on the employment by the Germans of poisonous gases as weapons of warfare:

THE gases employed have been ejected from pipes laid into the trenches, and also produced by the explosion of shells specially manufactured for the purpose. The German troops who attacked under cover of these gases were provided with specially designed respirators which were issued in sealed patent covers.

This all points to long and methodical preparation on a large scale. A week before the Germans first used this method they announced in their official *communiqué* that we were making use of asphyxiating gases. At the time there appeared to be no reason for this astounding falsehood, but now, of course, it is obvious that it was part of the scheme. It is a further proof of the deliberate nature of the introduction by the Germans of a new and illegal weapon, and shows that they recognized its illegality, and were anxious to forestall neutral and possibly domestic criticism.

Since the enemy has made use of this method of covering his advance with a cloud of poisoned air, he has repeated it both in offense and defense whenever the wind has been favorable. The effect of this poison is not merely disabling or even painlessly fatal as suggested in the German press. Those of its victims who do not succumb on the field and who can be brought into hospital suffer acutely, and in a large proportion of cases die a

painful and lingering death. Those who survive are in little better case, as the injury to their lungs appears to be of a permanent character, and reduces them to a condition which points to their being invalids for life.

These facts must be well known to the German scientists who devised this new weapon and to the military authorities who have sanctioned its use. I am of opinion that the enemy has definitely decided to use these gases as a normal procedure, and that protests will be useless.

THE "EYEWITNESS" STORY.

The following descriptive account, communicated by the British Eyewitness present with General Headquarters, continues and supplements the narrative published on April 29 of the movements of the British force and the French armies in immediate touch with it:

April 30, 1915.

As will have been gathered from the last summary, assaults accompanied with gas were not made on every position of the front held by the British to the north of Ypres at the same time. At one point it was not until the early morning of Saturday, April 24, that the Germans brought this method into operation against a section of our line not far from our left flank.

Late on Thursday afternoon the men here saw portions of the French retiring some distance to the west, and observed the cloud of vapor rolling along the ground southward behind them. Our position was then shelled with high explosives until 8 P. M. On Friday also it was bombarded for some hours, the Germans firing poison shells for one hour. Their infantry, who were in-

trenched about 120 yards away, evidently expected some result from their use of the latter, for they put their heads above the parapets, as if to see what the effect had been on our men, and at intervals opened rapid rifle fire. The wind, however, was strong and dissipated the fumes quickly, our troops did not suffer seriously from their noxious effect, and the enemy did not attempt any advance.

On Saturday morning, just about dawn, an airship appeared in the sky to the east of our line at this point, and dropped four red stars, which floated downward slowly for some distance before they died out. When our men, whose eyes had not unnaturally been fixed on this display of pyrotechnics, again turned to their front it was to find the German trenches rendered invisible by a wall of greenish-yellow vapor, similar to that observed on the Thursday afternoon, which was bearing down on them on the breeze. Through this the Germans started shooting. During Saturday they employed stupefying gas on several occasions in this quarter, but did not press on very quickly. One reason for this, given by a German prisoner, is that many of the enemy's infantry were so affected by the fumes that they could not advance.

To continue the narrative from the night of Sunday, April 25. At 12:30 A. M., in face of repeated attacks, our infantry fell back from a part of the Grafenstafel Ridge, northwest of Zonnebeke, and the line then ran for some distance along the south bank of the little Haanebeek stream. The situation along the Yperlee Canal remained practically unchanged.

When the morning of the 26th dawned the Germans, who had been seen massing in St. Julien, and to the east of the village on the previous evening, made several assaults, which grew more and more fierce as the hours passed, but reinforcements were sent up and the position was secured. Further east, however, our line was pierced near Broodseinde, and a small body of the enemy established themselves in a portion of our trenches. In the afternoon a strong, combined counter-attack was delivered by the

French and British along the whole front from Steenstraete to the east of St. Julien, accompanied by a violent bombardment. This moment, so far as can be judged at present, marked the turning point of the battle, for, although it effected no great change in the situation, is caused a definite check to the enemy's offensive, relieved the pressure, and gained a certain amount of ground.

During this counter-attack the guns concentrated by both sides on this comparatively narrow front poured in a great volume of fire. From the right came the roar of the British batteries, from the left the rolling thunder of the *soixante-quinze*, and every now and then above the turmoil rose a dull boom as a huge howitzer shell burst in the vicinity of Ypres. On the right our infantry stormed the German trenches close to St. Julien, and in the evening gained the southern outskirts of the village. In the centre they captured the trenches a little to the south of the Bois des Cuisiniers, west of St. Julien, and still further west more trenches were taken. This represented an advance of some 600 or 700 yards, but the gain in ground could not at all points be maintained. Opposite St. Julien we fell back from the village to a position just south of the place, and in front of the Bois des Cuisiniers and on the left of the line a similar retirement took place, the enemy making extensive use of his gas cylinders and of machine guns placed in farms at or other points of vantage. None the less, the situation at nightfall was more satisfactory than it had been. We were holding our own well all along the line and had made progress at some points. On the right the enemy's attacks on the front of the Grafenstafel Ridge had all been repulsed.

In the meantime the French had achieved some success, having retaken Lizerne and also the trenches round Het Sast, captured some 250 prisoners, and made progress all along the west bank of the canal. Heavy as our losses were during the day, there is little doubt that the enemy suffered terribly. Both sides were attacking at different points, the fighting was conducted very largely in

the open, and the close formations of the Germans on several occasions presented excellent targets to our artillery, which did not fail to seize its opportunities.

Nothing in particular occurred during the night.

The morning of the 27th found our troops occupying the following positions: North of Zonnebeke the right of the line still held the eastern end of the Grafenstafel Ridge, but from here it bent southwestward behind the Haanebeek stream, which it followed to a point about half a mile east of St. Julien. Thence it curved back again to the Vamheule Farm, on the Ypres-Poelcappelle road, running from here in a slight southerly curve to a point a little west of the Ypres-Langemarck road, where it joined the French. In the last mentioned quarter of the field it followed generally the line of a low ridge running from west to east. On the French front the Germans had been cleared from the west bank of the canal, except at one point, Steenstraate, where they continued to hold the bridgehead.

About 1 P. M. a counter-attack was made by us all along the line between the canal and the Ypres-Poelcappelle road, and for about an hour we continued to make progress. Then the right and centre were checked. A little later the left was also held up, and the situation remained very much as it had been on the previous day. The Germans were doubtless much encouraged by their initial success, and their previous boldness in attack was now matched by the stubborn manner in which they clung on to their positions. In the evening the French stormed some trenches east of the canal, but were again checked by the enemy's gas cylinders.

The night passed quietly, and was spent by us in reorganizing and consolidating our positions. The enemy did not interfere. This is not surprising, in view of the fact that by Tuesday evening they had been fighting for over five days. Their state of exhaustion is confirmed by the statements of the prisoners captured by the French, who also report-

ed that the German losses had been very heavy.

On Wednesday, the 28th, there was a complete lull on this sector of our line, and the shelling was less severe. Some fighting, however, occurred along the canal, the French taking over 100 prisoners.

Nothing of any importance has occurred on other parts of the front. On the 27th, at the Railway Triangle opposite Guinchy, the south side of the embankment held by the Germans was blown up by our miners. On the 28th a hostile aeroplane was forced to descend by our anti-aircraft guns. On coming down in rear of the German lines, it was at once fired upon and destroyed by our field artillery. Another hostile machine was brought down by rifle fire near Zonnebeke.

Splendid work has been done during the past few days by our airmen, who have kept all the area behind the hostile lines under close observation. On the 26th they bombed the stations of Staden, Thielt, Courtrai, Roubaix, and other places, and located an armored train near Langemarck, which was subsequently shelled and forced to retire. There have been several successful conflicts in the air, on one occasion a pilot in a single seater chasing a German machine to Roulers, and forcing it to land.

The raid on Courtrai unfortunately cost the nation a very gallant life, but it will live as one of the most heroic episodes of the war. The airman started on the enterprise alone in a biplane. On arrival at Courtrai he glided down to a height of 300 feet and dropped a large bomb on the railway junction. While he did this he was the target of hundreds of rifles, of machine guns, and of anti-aircraft armament, and was severely wounded in the thigh. Though he might have saved his life by at once coming down in the enemy's lines, he decided to save his machine at all costs, and made for the British lines. Descending to a height of only 100 feet in order to increase his speed, he continued to fly and was again wounded, this time mortally. He still flew on, however, and without coming down at

the nearest of our aerodromes went all the way back to his own base, where he executed a perfect landing and made his report. He died in hospital not long afterward.*

The outstanding feature of the action of the past week has been the steadiness of our troops on the extreme left; but of the deeds of individual gallantry and devotion which have been performed it would be impossible to narrate one-hundredth part. At one place in this quarter a machine gun was stationed in the angle of a trench when the German rush took place. One man after another of the detachment was shot, but the gun still continued in action, though five bodies lay around it. When the sixth man took the place of his fallen comrades, of whom one was his brother, the Germans were still pressing on. He waited until they were only a few yards away, and then poured a stream of bullets on to the advancing ranks, which broke and fell back, leaving rows of dead. He was then wounded himself.

Under the hot fire to which our batteries were subjected in the early part of the engagement telephone wires were repeatedly cut. The wire connecting one battery with its observing officer was severed on nine separate occasions, and on each occasion repaired by a Sergeant, who did the work out in the open under a perfect hail of shells.

On May 5 the following account of the British Official Eyewitness, continuing the report of April 30, was published:

About 5 P. M. a dense cloud of suffocating vapors was launched from their trenches along the whole front held by the French right and by our left from the Ypres-Langemarck road to a considerable distance east of St. Julien. The

fumes did not carry much beyond our front trenches. But these were to a great extent rendered untenable, and a retirement from them was ordered.

No sooner had this started than the enemy opened a violent bombardment with asphyxiating shells and shrapnel on our trenches and on our infantry as they were withdrawing. Meanwhile our guns had not been idle. From a distance, perhaps owing to some peculiarity of the light, the gas on this occasion looked like a great reddish cloud, and the moment it was seen our batteries poured a concentrated fire on the German trenches.

Curious situations then arose between us and the enemy. The poison belt, the upper part shredding into thick wreaths of vapor as it was shaken by the wind, and the lower and denser part sinking into all inequalities of the ground, rolled slowly down the trenches. Shells would rend it for a moment, but it only settled down again as thickly as before.

Nevertheless, the German infantry faced it, and they faced a hail of shrapnel as well. In some cases where the gas had not reached our lines our troops held firm and shot through the cloud at the advancing Germans. In other cases the men holding the front line managed to move to the flank, where they were more or less beyond the affected area. Here they waited until the enemy came on and then bayoneted them when they reached our trenches.

On the extreme left our supports waited until the wall of vapor reached our trenches, when they charged through it and met the advancing Germans with the bayonet as they swarmed over the parapets.

South of St. Julien the denseness of the vapor compelled us to evacuate trenches, but reinforcements arrived who charged the enemy before they could establish themselves in position. In every case the assaults failed completely. Large numbers were mown down by our artillery. Men were seen falling and others scattering and running back to their own lines. Many who reached the gas cloud could not make their way through it, and in all probability a great number of the wounded perished from the fumes.

*The obituary columns of The Times of April 30 contained the following notice under "Died of Wounds":

RHODES-MOORHOUSE.—On Tuesday, the 27th April, of wounds received while dropping bombs on Courtrai the day before, WILLIAM BARNARD RHODES RHODES-MOORHOUSE, Second Lieutenant, Royal Flying Corps, aged 27, dear elder son of Mr. and Mrs. Edward Moorhouse of Parnham House, Dorset, and most loved husband of Linda Rhodes-Moorhouse.

It is to that extent, from a military standpoint, a sign of weakness. Another sign of weakness is the adoption of illegal methods of fighting, such as spreading poisonous gas. It is a confession by the Germans that they have lost their former great superiority in artillery and are, in any cost, seeking another technical advantage over their enemy as a substitute.

Nevertheless, this spirit, this determination on the part of our enemies to stick at nothing must not be underestimated. Though it may not pay the Germans in the long run, it renders it all the more obvious that they are a foe that can be overcome only by the force of overwhelming numbers of men and guns.

Further to the east a similar attack was made about 7 P. M. which seems to have been attended with even less success, and the assaulting infantry was at once beaten back by our artillery fire.

It was not long before all our trenches were reoccupied and the whole line re-established in its original position. The attack on the French met with the same result.

The Eyewitness then relates incidents showing the steadiness of the Indian troops, who, he says, "advanced under a murderous fire, their war cry swelling louder and louder above the din."

Prisoners captured in the recent fighting, the narrative continues, stated that one German corps lost 80 per cent. of its men in the first week; that the losses from our artillery fire, even during days when no attacks were taking place, had been very heavy and that many of their own men had suffered from the effects of the gas.

The writer concludes as follows:

In regard to the recent fighting on our left, the German offensive, effected in the first instance by surprise, resulted in a considerable gain of ground for the enemy. Between all the earlier German efforts, the only difference was that on this latest occasion the attempt was carried out with the aid of poisonous gases.

There is no reason why we should not expect similar tactics in the future. They do not mean that the Allies have lost the initiative in the Western theatre,

nor that they are likely to lose it. They do mean, however, and the fact has been repeatedly pointed out, that the enemy's defensive is an active one, that his confidence is still unshaken and that he still is able to strike in some strength where he sees the chance or where mere local advantage can be secured.

The true idea of the meaning of the operations of the Allies can be gained only by bearing in mind that it is their primary object to bring about the exhaustion of the enemy's resources in men.

In the form now assumed by this struggle—a war of attrition—the Germans are bound ultimately to lose, and it is the consciousness of this fact that inspires their present policy. This is to achieve as early as possible some success of sufficient magnitude to influence the neutrals, to discourage the Allies, to make them weary of the struggle and to induce the belief among the people ignorant of war that nothing has been gained by the past efforts of the Allies because the Germans have not yet been driven back. It is being undertaken with a political rather than a strategical object.

The official British Eyewitness, under date of May 11, 1915, gives an account of the German attempts on the previous Saturday and Sunday to break the British lines around Ypres, and of the beginning of the Anglo-French offensive north of Arras. He said:

The calm that prevailed Thursday and Friday proved to be only the lull before the storm. Early Saturday morning it became apparent that the Germans were preparing an attack in strength against our line running east and northeast from Ypres, for they were concentrating under cover of a violent artillery fire, and at about 10 o'clock the battle began in earnest.

At that hour the Germans attacked our line from the Ypres-Poelcappelle road to within a short distance of the Menin highroad, it being evidently their intention while engaging us closely on the whole of this sector to break our front in the vicinity of the Ypres-Roulers Railway, to the north and to the south

of which their strongest and most determined assaults were delivered.

Under this pressure our front was penetrated at some points around Frezenberg, and at 4:30 o'clock in the afternoon we made a counter-attack between the Zonnebeke road and the railway in order to recover the lost ground. Our offensive was conducted most gallantly, but was checked before long by the fire of machine guns.

Meanwhile, the enemy launched another attack through the woods south of the Menin road, and at the same time threatened our left to the north of Ypres with fresh masses. Most desperate fighting ensued, the German infantry coming on again and again and gradually forcing our troops back, though only for a short distance, in spite of repeated counter-attacks.

During the night the fighting continued to rage with ever-increasing fury. It is impossible to say at exactly what hour our line was broken at different points, but it is certain that at one time the enemy's infantry poured through along the Poelcappelle road, and even got as far as Wieltje at 9 P. M.

There was also a considerable gap in our front about Frezenberg, where hostile detachments had penetrated. At both points counter-attacks were organized without delay. To the east of the salient the Germans first were driven back to Frezenberg, but there they made a firm stand, and under pressure of fresh reinforcements we fell back again toward Verlorenhoek.

Northeast of the salient a counter-attack carried out by us about 1 A. M. was more successful. Our troops swept the enemy out of Wieltje at the bayonet's point, leaving the village strewn with German dead and, pushing on, regained most of the ground to the north of that point. And so the fight surged to and fro throughout the night. All around the scene of the conflict the sky was lit up by the flashes of the guns and the light of blazing villages and farms, while against this background of smoke and flame, looking out in the murky light over the crumbling ruins of

the old town, rose the battered wreck of the cathedral town and the spires of Cloth Hall.

When Sunday dawned there came a short respite, and the firing for a time died down. The comparative lull enabled us to reorganize and consolidate our position on the new line we had taken up and to obtain some rest after the fatigue and strain of the night. It did not last long, however, and in the afternoon the climax of the battle was reached, for, under the cover of intense artillery fire, the Germans launched no less than five separate assaults against the east of the salient.

To the north and northeast their attacks were not at first pressed so hard as on the south of the Menin road, where the fighting was especially fierce. In the latter direction masses of infantry were hurled on with absolute desperation and were beaten off with corresponding slaughter.

At one point, north of the town, 500 of the enemy advanced from the wood, and it is affirmed by those present that not a single man of them escaped.

On the eastern face, at 6:30 P. M., an endeavor was made to storm the grounds of the Château Hooge, a little north of the Menin road, but the force attempting it broke and fell back under the hail of shrapnel poured upon them by our guns. It was on this side, where they had to face the concentrated fire of guns, Maxims and rifles again and again in their efforts to break their way through, that the Germans incurred their heaviest losses, and the ground was literally heaped with dead.

They evidently, for the time being at least, were unable to renew their efforts, and as night came on the fury of their offensive gradually slackened, the hours of darkness passing in quietness.

During the day our troops saw some of the enemy busily employed in stripping the British dead in our abandoned trenches, east of the Hooge Château, and several Germans afterward were noticed dressed in khaki.

So far as the Ypres region is concerned, this for us was a most successful

day. Our line, which on the northeast of the salient had, after the previous day's fighting, been reconstituted a short distance behind the original front, remained intact. Our losses were comparatively slight, and, owing to the targets presented by the enemy, the action resolved itself on our part into pure killing.

The reason for this very determined effort to crush our left on the part of the Germans is not far to seek. It is probable that for some days previously they had been in possession of information which led them to suppose that we intended to apply pressure on the right of our line, and that their great attack upon Ypres on the 7th, 8th, and 9th was undertaken with a view to diverting us from our purpose.

In this the Germans were true to their principles, for they rightly hold that the best manner of meeting an expected hostile offensive is to forestall it by attacking in some other quarter. In this instance their leaders acted with the utmost determination and energy and their soldiers fought with the greatest courage.

The failure of their effort was due to the splendid endurance of our troops, who held the line around the salient under a fire which again and again blotted out whole lengths of the defenses and killed the defenders by scores. Time after time along those parts of the front selected for assault were parapets destroyed, and time after time did the thinning band of survivors build them up again and await the next onset as steadily as before.

Here, in May, in defense of the same historic town, have our incomparable infantry repeated the great deeds their comrades performed half a year ago and beaten back most desperate onslaughts of hostile hordes backed by terrific artillery support.

The services rendered by our troops in this quarter cannot at present be estimated, for their full significance will only be realized in the light of future events. But so far their devotion has indirectly contributed in no small measure to the striking success already achieved by our allies.

Further south, in the meantime, on Sunday another struggle had been in progress on that portion of the front covered by the right of our line and the left of the French, for when the firing around Ypres was temporarily subsiding during the early hours of the morning another and even more tremendous cannonade was suddenly started by the artillery of the Allies some twenty miles to the south.

The morning was calm, bright, and clear, and opposite our right, as the sun rose, the scene in front of our line was the most peaceful imaginable. Away to the right were Guinchy, with its brickfields and the ruins of Givenchy. To the north of them lay low ground, where, hidden by trees and hedgerows, ran the opposing lines that were about to become the scene of the conflict, and beyond, in the distance, rose the long ridge of Aubers, the villages crowning it standing out clear cut against the sky.

At 5 o'clock the bombardment began, slowly at first and then growing in volume until the whole air quivered with the rush of the larger shells and the earth shook with the concussion of guns. In a few minutes the whole distant landscape disappeared in smoke and dust, which hung for a while in the still air and then drifted slowly across the line of battle.

Shortly before 6 o'clock our infantry advanced along our front between the Bois Grenier and Festubert. On the left, north of Fromelles, we stormed the German first line trenches. Hand-to-hand fighting went on for some time with bayonet, rifle, and hand grenade, but we continued to hold on to this position throughout the day and caused the enemy very heavy loss, for not only were many Germans killed in the bombardment, but their repeated efforts to drive us from the captured positions proved most costly.

On the right, to the north of Festubert, our advance met with considerable opposition and was not pressed.

Meanwhile, the French, after a prolonged bombardment, had taken the German positions north of Arras on a front of nearly five miles, and had pushed for-

ward from two to three miles, capturing 2,000 prisoners and six guns. This remarkable success was gained by our allies in the course of a few hours.

As may be supposed from the nature of the fighting which has been in progress, our losses have been heavy. On other parts of the front our action was confined to that of the artillery, but this proved most effective later, all the communications of the enemy being subjected to so heavy and accurate a fire that in some quarters all movement by daylight within range of our lines was rendered impracticable. At one place opposite our centre a convoy of ammunition was hit by a shell, which knocked out six motor lorries and caused two to blow up. Opposite our centre we fired two mines, which did considerable damage to the enemy's defenses.

During the day also our aeroplanes at-

tacked several points of importance. One of our airmen, who was sent to bomb the canal bridge near Don, was wounded on his way there, but continued and fulfilled his mission. Near Wytschaete, one of our aviators pursued a German aeroplane and fired a whole belt from his machine gun at it. The Taube suddenly swerved, righted itself for a second, and then descended from a height of several thousand feet straight to the ground.

On the other hand, a British machine unfortunately was brought down over Lille by the enemy's anti-aircraft guns, but it is hoped that the aviator escaped.

In regard to the German allegation, that the British used gas in their attacks on Hill 60, the Eyewitness says:

No asphyxiating gases have been employed by us at any time, nor have they yet been brought into play by us.

To Certain German Professors of Chemics

[From Punch, May 5, 1915.]

WHEN you observed how brightly other tutors
 Inspired the yearning heart of Youth;
 How from their lips, like Pilsen's foaming pewters,
 It sucked the fount of German Truth;
 There, in your Kaiserlich laboratory,
 "We, too," you said, "will find a task to do,
 And so contribute something to the glory
 Of God and William Two.

"Bring forth the stink-pots. Such a foul aroma
 By arts divine shall be evoked
 As will to leeward cause a state of coma
 And leave the enemy blind and choked;
 By gifts of culture we will work such ravages
 With our superbly patriotic smells
 As would confound with shame those half-baked savages,
 The poisoners of wells."

Good! You have more than matched the rival pastors
 That tute a credulous Fatherland;
 And we admit that you are proved our masters
 When there is dirty work in hand;
 But in your lore I notice one hiatus:
 Your Kaiser's scutcheon with its hideous blot—
 You've no corrosive in your apparatus
 Can out that damnéd spot!

O. S.

Seven Days of War East and West

Fighting of the Second Week in May on French and Russian Fronts.

[By a Military Expert of THE NEW YORK TIMES.]

THE sinking of the *Lusitania* has, for the week ended May 15, so completely absorbed the attention of the press and the interest of the public that the military operations themselves have not received the notice that otherwise would have been awarded them. The sinking of this ship, with the delicate diplomatic situation between Germany and the United States which the act brought about, is not a military or naval operation as such, and comments on it have no place in this column. At the same time there is an indirect effect of the drowning of hundreds of British citizens which will have a very direct bearing on Britain's military strength and policy.

The British public is notably hard to stir, are slow to act, and almost always underrate their adversary. In almost every war, from 1775 down to and including the South African war, England, with a self-assurance that could only be based on ignorance of true conditions, has started with only a small force, and it has been only when this force has been defeated and used up that the realization of the true needs of the situation has dawned. Then, and then only, has recruiting been possible at a pace commensurate with the necessity.

In the Boer war, for example, every one in England, official and civilian, believed that 30,000 men would be more than enough to defeat the South African burghers. Yet ten times 30,000 British soldiers were operating in the Transvaal and Orange Free State before the war ended.

In the present conflict Lord Kitchener himself admits that there are many times the number of British soldiers in France than was thought would be necessary when war was declared. And

even up to May 6 the British public was not thoroughly aroused. Many of the peasants in the back counties hardly believed the war was a reality. Recruiting was slow, there was but little enthusiasm, and Lord Haldane's thinly veiled hint that a draft might soon become necessary was almost unnoticed.

But the sinking of the *Lusitania* has brought the war home to England as nothing else has or could have done, and all England is aflame with a bitterness against Germany which is already increasing the flow of recruits and cannot but add to the fighting efficiency of the men now at the front. The effect will be far-reaching throughout the British Empire, and will do much to solve the problem which faced the organizers of Great Britain's forces of how to get sufficient volunteers to swell the volume of the French expeditionary force and to replace the casualties.

To turn to the direct military operations in the various theatres of war, no week since last Fall has witnessed more important activities or offensive movements conducted on such a scale. On both western and eastern fronts truly momentous actions involving great numbers of men have been under way, and though not yet concluded, have advanced so far as to give a reasonable basis for estimating the results.

ON THE WESTERN FRONT.

On the western front the principal scenes of action have been the front from Nieuport to Arras, the Champagne district, and the southern side of the German wedge from its apex at St. Mihiel to Pont-à-Mousson. On the northern part of the Allies' line from Ypres to Nieuport the Germans have been the aggressors. They have selected as the principal points of attack the Belgian line

back of the Yser just south of Nieuport and the point of juncture of the British with the Belgian lines.

Both attacks have the same general object—the bending back of the line between these two points with a view, for the future, of Dunkirk and Calais. The attack along the Yser has not been pushed to any extent, and what advantage there is rests with the Belgians. In fact, the Belgians have advanced somewhat and have been able to throw a bridge across the Yser near St. George, just east of Nieuport, on the Nieuport-Bruges road.

Around Ypres the fighting has been more than usually fierce and desperate. Blow after blow has been struck, first by one side, then by the other. Both German and British have admittedly suffered enormous losses, but the positions of their respective lines are almost unchanged from those occupied a week ago. The German gains of last week in the vicinity of Steenstraete produced in the British lines around Ypres a sharp salient, and it is against the sides of this salient that the Germans have been hurling their forces.

The town of Ypres is now in complete ruins, and, although it would normally be of importance because of the fact that it is the point of crossing of a number of roads, this importance is destroyed by the fact that it is entirely dominated by the German artillery. As long as this state of affairs exists the town has practically no strategic value. All that the Germans can accomplish if they take Ypres will have been a flattening out of the British salient.

Germany cannot be content with occasional bending of the Allies' line. The process is too slow and too costly. Germany has almost, if not quite, reached her maximum strength, and the losses she now suffers will be difficult to replace. Viewing the situation entirely from the German standpoint, success can only mean breaking through and attacking the two exposed flanks at the point pierced. This would force a retreat, as in the case of the Russian lines along the Dunajec, which will be

taken up later on. No other form of action can be decisive, though it might permit a little more of Belgian or French territory to change hands. This would, of course, in case the war were declared a draw, give Germany an additional advantage in the discussion of terms of peace, especially if the rule of *uti posseditis* were applied as a basis from which to begin negotiations. But this contingency is too remote for present consideration.

As to the probability of German success around Ypres, it seems to grow less as time passes. After the first rush was over and the British lines had time to re-form Germany has accomplished nothing. Moreover, it is certain that in back of the short twenty-five miles of line held by the British troops there is a reserve of almost a half million men. No other portion of the battle line in either theatre has such great latent strength ready to be thrown in when the critical moment comes. Just why it has not been used so far is a mystery, the solution of which can be found only in the brain of Sir John French. But it is known to be in France and is there for a purpose.

From Loos to Arras the French have undertaken the most ambitious and the most successful offensive movement made in the west since Winter set in. The entire French line along this front of twenty-five miles, taking the Germans by surprise, has gone forward a distance varying from one-half to two and a half miles. The attack was launched at an extremely opportune moment. The Germans were, in the first place, extremely busy in the north at Ypres, and were making every effort to drive that attack home. The probabilities were, therefore, that the line in front of the Arras-Loos position was none too strong, and that such reserves as could be spared had been sent north. Then, again, it would tend to divert attention from the Ypres line, and so relieve somewhat the pressure on the British lines at that point.

The objective of the French attack seems to have been the town of Lens, which is the centre of the coal district

of France. Loos, which is about three miles north of Lens, has been one of the centres of fighting. This indicates how close the French are to their objective. Lens is an important railroad centre, and is the point of junction of many roads which radiate in all directions. As yet the French advance is not sufficient to denote anything, but another step in the "nibbling" process by means of which the French have kept the Germans occupied for some months.

In the German angle, from Etain to St. Mihiel to Pont-à-Mousson, the French achieved what will probably prove to be the greatest local success of the past week. That is, the complete occupation of the Le Prêtre woods. Sooner or later the continual French encroachments on the German area of occupation must cause the straightening out of this line and the retirement of the Germans to the supporting forts of Metz. The object of all the French moves against this angle has been the town of Thiancourt, on the German supply line from Metz. The capture of the last German line of trenches in the Prêtre Forest brings the French within six miles of this town. When the French reach the northern edge of this forest, and they must be very close to it now, it will be a simple matter to drop shells into Thiancourt and seriously endanger every train that comes in.

On the rest of the western front there have been a number of isolated actions, notably in the Champagne district, in the Argonne Forest and north of Flirey, between St. Mihiel and Pont-à-Mousson. They have been of no particular advantage, however, and seem to have had no definite purpose beyond making additions to the casualty lists.

Considering the results of the week's operations in the west, therefore, it is safe to say that the advantage lies with the Allies. That part of the line which has been thrown on the defensive has more than held its own, while the French offense has resulted in a considerable advance over a wide front. If we may draw any comparison at all from this, it must be that the German line is not

nearly so impenetrable as the British, and that when the Allies think the attempt will justify the losses that will be inevitably sustained, the German line can be broken even though the rupture may be quickly healed.

IN THE EASTERN THEATRE.

In the eastern theatre interest still centres in the battles in Galicia. In Western Galicia, between the Dunajec and the San, the Russian forces are steadily giving way before the attacks of the Germanic allies. Their retreat, which, during the past week, has been rapid, has been well protected by heavy rear guard actions, which have temporarily delayed the pursuing Austrians at various points. At the same time, however, but little respite was given to the Russians.

German and Austrian reports as to the number of prisoners and amount of booty will bear scrutiny, and, taken into consideration with recent disturbances in Italy, may safely be discounted. The surrender of such large bodies of troops, even in the Russian Army, cannot be forced when the lines of retreat are open or when sufficient notice is given that such lines are dangerously menaced. It is only when troops are surrounded or when a large hostile force is thrust in between units, as happened some months ago with the Tenth Russian Army in the Masurian Lakes district, that such surrenders occur.

This does not apply, of course, to the wounded, and in the present case the Russians, through the enforced rapidity of their retreat, must necessarily in many instances have left their wounded on the field of battle to fall into the hands of the pursuing enemy. Certainly the Russian losses were heavy. Equally certain is it that the battle for the Carpathian passes is now history.

This is evident from a brief review of the Russian position on the Carpathian front, with particular reference to the necessary lines of communications and an outline of the present Russian position, as accurately as it can at present be determined. It must be stated at this point, however, that this position is a

matter of doubt, as reports from Vienna and from Petrograd are greatly at variance as to what has been accomplished.

It was noted last week that the Russian line formed a huge crescent, the longer arc of which (and this was the Carpathian front) extended from Bartfeld north, then east along the Carpathian crests, north of Uzsok to a point on the Stryi River. This line is over 100 miles long. It was dependent for supplies on five roads, three of which were fairly good dirt roads, the other two railroads; of the latter one runs through Uzsok, and is so far east that only a small section of the line was reached by it.

The main line, however, has been supplied from the remaining four, all of which turn off either from the one lateral railroad from Przemyśl to Jasło or from the dirt road between Jasło and Sanok, and run south to the various passes. As this latter road simply loops the railroad between these two points, the entire Russian Carpathian line may be considered to have been supplied by the lateral railroad from Sanok to Jasło. In proportion to the number of troops that had to be fed and supplied, these lines were only too few, and the marvel is that Russia was able to keep up the necessary flow of food and ammunition throughout her effort against the Carpathian passes. The possession of all of these roads was the *sine qua non* of Russian success. The loss of any one of them would affect so many miles of her line that the whole line would have felt the influence.

The Austrian troops are said to have reached the lower San, but no particular point is mentioned. Nothing is said about the upper San or the stretch of Galicia between the two. It may, therefore, be assumed that the Russian left is on the Vistula, near the confluence of the San, and that the general line runs from there south, probably through Rzeszów along the valley of the Wistok River, occupying the wooded hills east of that river, and bending eastward slightly toward the upper San. This means that all of the lines of communi-

cation that supplied the Carpathian front except the line through Uzsok Pass are now in Austrian hands.

Russia still clings tenaciously to Uzsok, however, doubtless having under consideration the possibility that Italy may enter the war, and that another advance against the Carpathians may then be made. In such a contingency the Russian losses in the various engagements around Uzsok would not have been in vain.

Russia has answered the Austrian drive from the west by a vigorous offense against the defenses of Bukovina Province. The Austrian forces east of the San River are divided—one part which has been extremely active against the Russians being on the east bank of the Stryi, and the other, which has been quiescently defensive, along the Bistritza, the latter line running almost due east and west. This latter force the Russians struck, using large bodies of Cossack cavalry in a flanking movement from the north. The Austrian retreat has been more precipitate, and the losses greater in proportion than in the Russian retreat from the Dunajec.

If in addition the Rumanians came across Transylvania and caught the Austrians in the rear the defeat would almost offset that of the Russians in the west. Rumania's advent into the war is, however, still a matter of doubt, and any conclusions predicated on that assumption are entirely speculative.

The two known facts in regard to the Galician situation are that in Western Galicia the Russian Dunajec line is retreating, uncovering and therefore involving in its retreat the troops in the Carpathians, and in Eastern Galicia the Russians seem to have the greater measure of success. Of the two, however, the operations in Western Galicia are of infinitely greater importance. Eventually the Russian retreat will probably reach the general line of the San River north of Jarasław, where there will be an opportunity to re-form on a much shorter line, and after recuperation of men and supplies preparations for a new offense may be begun.

Operation on the Russian Front

This map records the action for the week ended May 15. In the extreme north, in the Russian Baltic Province of Courland, the Germans still held the port of Libau, (1,) and a fierce battle was in progress south of Shavli, (2,) where the Russians stopped the raid toward Mitau.

In South Poland and West Galicia the changes brought about by the great Austro-German drive of 1,500,000 men from Cracow are shown by the heavy dotted and solid lines. The dotted line shows the approximate position of the German battle front when the drive began and the solid line its approximate position according to latest advices from Berlin and Vienna, Jaroslaw (3) being the latest important position reported captured.

In extreme Eastern Galicia the situation was reversed, the dotted line showing roughly the position of the Russian line when the counter-drive by the Czar's forces was launched and the solid line its position, so far as was ascertainable, on May 15.

Their defeat, however, has been a severe blow, and has cost Russia a terrible price in men and in guns, the latter of which she could less afford to lose. On the other hand, they have inflicted terrible punishment on the victors, so that

the victory partakes of a Pyrrhian character.

In the meantime operations in the Dardanelles are being pressed, but are not reported with sufficient definiteness to give an idea as to the probable result.

Austro-German Success

By Major E. Moraht.

Major E. Moraht, the military expert of the Berliner Tageblatt, discussed the operations on the eastern war front as follows in the Tageblatt of April 30:

Austria-Hungary, through its latest decision to create a supplementary Landsturm service law, has given notice that it desires under any circumstances to be able to wage the war for a longer time, if conditions should compel it to do so. Thus are contradicted all the reports spread by ill-informed correspondents of foreign newspapers, who sought to create the impression that Austria-Hungary was tired and had not the energy to face the situation such as it is. Furthermore, the acceptance of the supplementary Landsturm service gave testimony, in the Hungarian Parliament, of the unanimity in which the Hungarian Nation unites as soon as it is a question of furthering the armed preparedness of the army.

The Landsturm law heretofore had two defects—it included in its scope only the once-trained men liable to Landsturm service up to the age of 42 years, and restricted the use of certain Landsturm troops to certain areas. Hereafter it will be possible to use the men capable of bearing arms up to the fiftieth year, though, to be sure, only in case the younger classes have in general already been exhausted. It will also be possible to draw Hungarian formations and Austrian Landsturm troops in such a manner that the area available will offer no more difficulties. Even though the new law will presumably hold good only during the present war, the impression created by the decision of the Austro-Hungarian Government on the enemy and

on neutrals cannot be a slight one. We in Germany can only congratulate the peoples of our ally, so willing to make sacrifices, upon this resolve, and no one among us will be able to deny recognition thereof, the less because we ourselves, according to human calculations, will not have to adopt such an extension of Landsturm service.

Our northeastern army has again been heard of. After a considerable time the situation has again changed, and that, too, in our favor. The battles northeast and east of Suwalki have again revived and have given into our hands the Russian trenches along a front of twenty kilometers. Between Kovno and Grodno, both situated on the Niemen, we must note in our battle line the towns of Mariampol, Kalwarya, and the territory east of Suwalki. This front has opposed to it the two Russian fortresses mentioned and between them the bridge-heads at Olita and Sereje. Owing to the brevity of the latest report, it cannot be told whether our attack found an end in the Russian positions. It may be that the attack went further and won territory at least twenty kilometers wide toward the Niemen. Moreover, we have learned that the Russians still held on north of Praszysz, where on April 27 they lost prisoners and machine guns.

No answer is given by the sparse reports from the eastern army to the question of the entire foreign press: "Where has Hindenburg been keeping himself?" Wishes and speculations may thus busy themselves as much as they like with the answering of that question. In the Rus-

sian version of the war situation there is reference to advance guard skirmishes in the territory of Memel, a brief interruption of the quiet southeast of Augustowa and before Ossowicz. The Russians are clearly worried by the possibility of an undertaking of the navy against the Russian Baltic coast.

The territory of the fighting in the Carpathians still claims the chief interest—especially because everywhere where the general position and the weather conditions and topographical conditions permitted the Austro-Hungarian-German offensive has begun. As has been emphasized on previous occasions, the eagerness for undertaking actions on the part of our allies had never subsided at any point, in spite of the strenuous rigors of a stationary warfare. As early as April 14 an advance enlivened the territory northwest of the Uzok Pass. The position on the heights of Tucholka has been won. The heights west and east of the Laborcz valley are in the hands of the Austro-German allies, and each day furnishes new proofs of the forward pressure. Of especial importance is the capture of Russian points of support southeast of Koziowa, east of the Orawa valley. The advance takes its course against the Galician town of Stryi. The progress which the Austro-German southern army made has so far been moving in the same direction, and one can understand why the Russians instituted the fiercest counter-attacks in order to force the allied troops to halt in this territory. The counter-attacks, however, ended with a collapse of the Russians, and the resultant pursuit was so vigorous that twenty-six more trenches were wrested from the foe. Daily our front is being advanced in a northeasterly direction, and there is little prospect for the Russians of being able to oppose successful resistance to our pressure. For it is not a matter of the success of a single fighting group that has been shoving forward like a wedge from the great line of attack, but of a strategic offensive led as a unit, and everywhere winning territory, the time for which seems to have arrived.

It is an important fact that the eastern group of the Austro-Hungarian army will clearly not be shattered. At Zaleszczyki a stand is being maintained, and at Boyan on the Pruth the Austrian mortars have driven the Russians out of their next-to-the-last positions before the Bessarabian frontier.

The speech of the Hungarian Minister of Defense of the Realm, Baron Hazai, who a few days ago discussed the military situation of the recent past in exhaustive fashion, is very interesting in many respects. It doubtless aimed to set in the right light the bravery of the Austro-Hungarian Army, for there have been persons who took little or no note of the achievements of that army. The Minister selected examples from the warfare of the eighteenth century, the time of the lukewarm campaigns, and the warfare of the nineteenth century, the era of logical and energetical battles. From this period of mobile wars, that were carried on under the principle of energy, he came to the preparations for the present war and estimated the number of soldiers which the belligerent parties had drawn to the colors at between 25,000,000 and 26,000,000 men. More than half of these are to be regarded as warriors, while the rest are doing service as reserves for the army or in the lines of support and communication, outside the fighting zone. The highest number of fighters on a single theatre of the war included from six to seven million fighters on both sides. The long trench warfare, the Minister rightly pointed out, demands greater energy than was ever demanded at any time of the troops, and a loss of from 10 per cent. to 15 per cent. of the fighting force today no longer keeps back the leaders from executing far-going decisions. Today the fronts clash, not in one-day or several day battles, but for weeks and months at a time, so that many of the fighters even now have already taken part in 100 battles. These instructive and appreciative words from an authoritative station throw a bright light upon the strength of the nations which are sacrificing their forces in a sense of duty

to their fatherland. But the lesson which the homeland should draw from such unprecedented self-sacrifice consists of this—always to stand as a firm pro-

TECTIVE wall behind the army, never to deny it recognition and encouraging approval, and to dissipate its cares for the present and for the future.

The Campaign in the Carpathians

Russian Victory Succeeded by Reverses and Defeat.

THE VICTORY IN APRIL.

[By the Correspondent of The London Times.]

Petrograd, April 18.

A dispatch from the Headquarters Staff of the Commander in Chief says:

At the beginning of March, (Old Style,) in the principal chain of the Carpathians, we only held the region of the Dukla Pass, where our lines formed an exterior angle. All the other passes—Lupkow and further east—were in the hands of the enemy.

In view of this situation, our armies were assigned the further task of developing, before the season of bad roads due to melting snows began, our positions in the Carpathians which dominated the outlets into the Hungarian plain. About the period indicated great Austrian forces, which had been concentrated for the purpose of relieving Przemyśl, were in position between the Lupkow and Uzsok Passes.

It was for this sector that our grand attack was planned. Our troops had to carry out a frontal attack under very difficult conditions of terrain. To facilitate their attack, therefore, an auxiliary attack was decided upon on a front in the direction of Bartfeld as far as the Lupkow. This secondary attack was opened on March 19 and was completely developed.

On the 23rd and 28th of March our troops had already begun their principal attack in the direction of Baligrod, enveloping the enemy positions from the west of the Lupkow Pass and on the east near the source of the San.

The enemy opposed the most desperate resistance to the offensive of our troops.

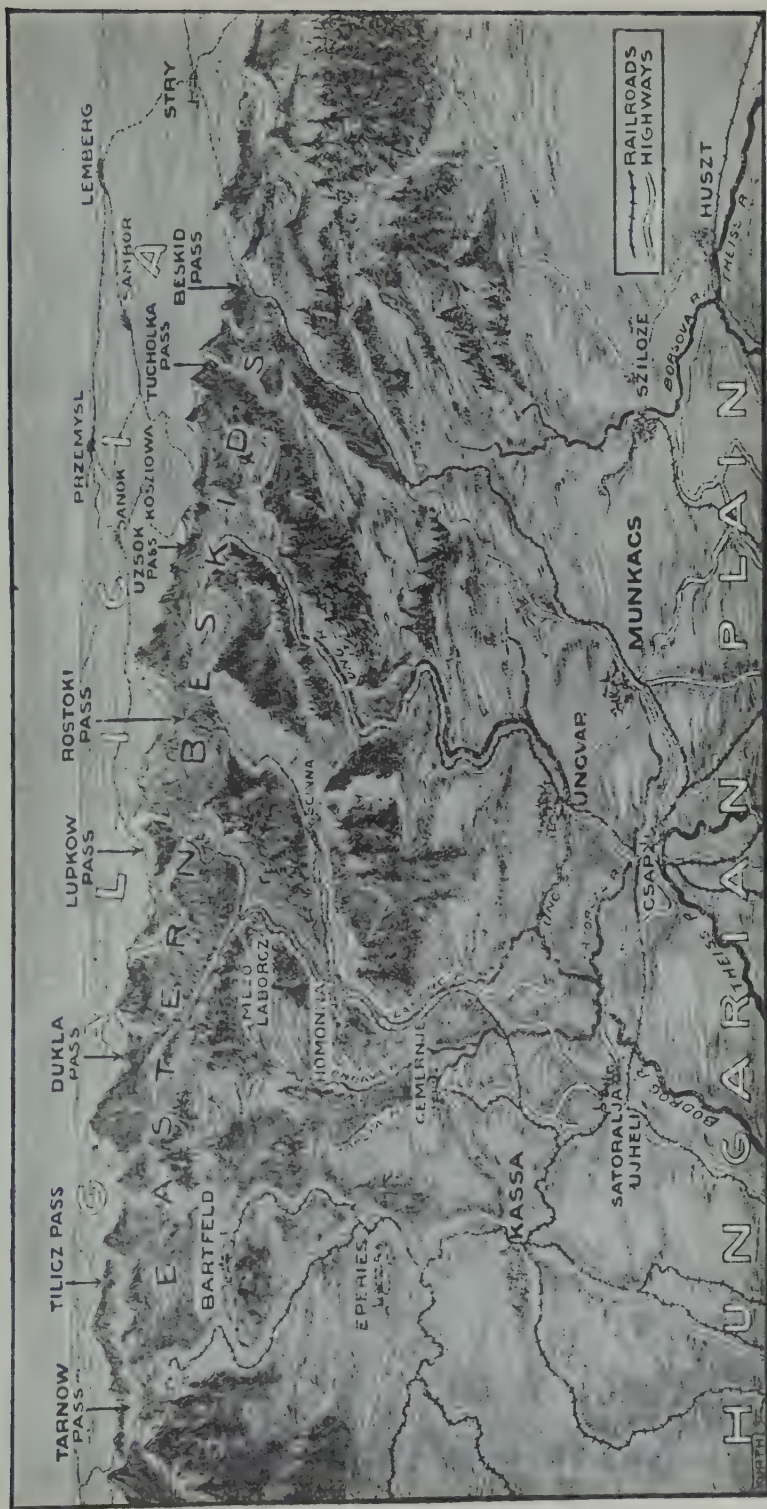

They had brought up every available man on the front from the direction of Bartfeld as far as the Uzsok Pass, including even German troops and numerous cavalrymen fighting on foot. His effectives on this front exceeded 300 battalions. Moreover, our troops had to overcome great natural difficulties at every step.

Nevertheless, from April 5—that is, eighteen days after the beginning of our offensive—the valor of our troops enabled us to accomplish the task that had been set, and we captured the principal chain of the Carpathians on the front, Reghetoff-Volosate, 110 versts (about 70 miles) long. The fighting latterly was in the nature of actions in detail with the object of consolidating the successes we had won.

To sum up: On the whole Carpathian front, between March 19 and April 12, the enemy, having suffered enormous losses, left in our hands, in prisoners only, at least 70,000 men, including about 900 officers. Further, we captured more than thirty guns and 200 machine guns.

On April 16 the actions in the Carpathians were concentrated in the direction of Rostoki. The enemy, notwithstanding the enormous losses he had suffered, delivered, in the course of that day, no fewer than sixteen attacks in great strength. These attacks, all of which were absolutely barren of result, were made against the heights which we had occupied further to the east of Telepovce.

Our troops, during the night of the 16th-17th, after a desperate fight, stormed and captured a height to the southeast of the village of Polen, where we took many prisoners. Three enemy

counter-attacks on this height were repulsed.

In other sectors all along our front there is no change.

THE GRAND DUKE'S STRATEGY.

Petrograd, April 19.

Today's record of the brilliant feats of the Russian Army in the Carpathians during the past month, contained in the survey of the Grand Duke, presents only one aspect—the discomfiture of the Austro-German forces. The *Neue Freie Presse* gives some indication of the other aspect.

In a recent issue it stated that "the fortnight's battle around the Lupkow and Uzsok Passes has been one of the most obstinate in history. The Russians succeeded in forcing the Austrians out of their positions. The difficulties of the Austro-Hungarian Army are complicated by the weather and the lack of ammunition and food." The question naturally suggests itself, why did these difficulties not equally disturb the Russian operations? On our side the difficulties of transport were, if anything, greater. The enemy was backed by numerous railways, with supplies close at hand, and was fighting on his native soil, and these advantages undoubtedly compensated for the greater difficulties of commissariat for the larger numbers of Austro-Germans. But from the avowal of the *Neue Freie Presse* it is suggested here that the Austrians were disorganized. The causes of this disorganization are attributed by military observers to the mixing up of German with Austrian units, rendering the task of command and supply very difficult.

The Grand Duke is fully prepared to take the field as soon as the allied commanders decide that the time for a general action has come. Never has the spirit of the Russian Army been firmer.

The critics this morning comment on the official communiqué detailing a gigantic task brilliantly fulfilled by the Carpathian army during March. Our position in the region of the Dukla Pass early last month exposed us to pressure from two sides, and might have involved the necessity of evacuating the main range. Our army thus required to extend

its positions commanding the outlets to the Hungarian plain, before the Spring thaws, in face of a large hostile concentration between Lupkow and Uzsok. The chief attack was directed against the latter section, and an auxiliary attack against the Bartfeld-Lupkow section. The auxiliary attack began on March 19 against the Austro-German left flank and reached its full development four days later. Mistaking the auxiliary for the principal attack, the enemy began an advance from the Bukowina, hoping to divert us from Uzsok, but, instead, the larger portion of our army assailed the enemy's flanks while a smaller body advanced against Rostoki, surmounting the immense difficulties of mountain warfare in Springtime.

By means of the envelopment of both his flanks the enemy was, by April 5, dislodged from the main range on the entire seventy-mile front from Regetow to Wolosate. Convinced that we were directing our chief efforts against his flanks, the enemy now strove to break our resistance in the Rostoki⁴ direction, but, after sixteen futile attacks, he was obliged to cede the commanding height of Telepovec, our occupation of which will probably compel him to evacuate his positions at Polen and Smolnik and withdraw to the valley of the Cziroka, a tributary of the Laborecz.

DEFEAT IN EARLY MAY.

[By The Associated Press.]

VIENNA, May 13, (via Amsterdam to London, May 14.)—An official statement issued here tonight after recalling that in November and December at Lodz and Limanowa the Austro-Germans compelled the Russians to draw back on a front to the extent of 400 kilometers, (about 249 miles,) thereby stopping the Russian advance into Germany, continues:

From January to the middle of April the Russians vainly exerted themselves to break through to Hungary, but they completely failed with heavy losses. Thereupon the time had come to crush the enemy in a common attack with a full force of the combined troops of both empires.

Governor of Belgium
(Photo from Paul Thompson.)

A victory at Tarnow and Gorlice freed West Galicia from the enemy and caused the Russian fronts on the Nida and in the Carpathians to give way. In a ten days' battle the victorious troops beat the Russian Third and Eighth Armies to annihilation, and quickly covered the ground from the Dunajec and Beskids to the San River—130 kilometers (nearly 81 miles) of territory.

From May 2 to 12 the prisoners taken numbered 143,500, while 100 guns and 350 machine guns were captured, besides the booty already mentioned. We suppressed small detachments of the enemy scattered in the woods in the Carpathians.

Near Odvzechowa the entire staff of the Russian Forty-eighth Division of Infantry, including General Korniloff, surrendered. The best indication of the confusion of the Russian Army is the fact that our Ninth Corps captured in the last few days Russians of fifty-one various regiments. The quantity of captured Russian war material is piled up and has not yet been enumerated.

North of the Vistula the Austro-Hungarian troops are advancing across Stopnica. The German troops have captured Kielce.

East of Uzsok Pass the German and Hungarian troops took several Russian positions on the heights and advanced to the south of Turka, capturing 4,000 prisoners. An attack is proceeding here and in the direction of Skole.

In Southeast Galicia strong hostile troops are attacking across Horodenka.

BERLIN, (via London,) May 13.—The German War Office announced today that

in the recent fighting in Galicia and Russian Poland 143,500 Russians had been captured. It also stated that 69 cannon and 255 machine guns had been taken from the Russians, and that the victorious Austrian and German forces, continuing their advance eastward in Galicia, were approaching the fortress of Przemyśl. The statement follows:

The army under General von Mackensen in the course of its pursuit of the Russians reached yesterday the neighborhood of Subiecko, on the lower Wisloka, and Kolbuezowa, northeast of Debica. Under the pressure of this advance the Russians also retreated from their positions north of the Vistula. In this section the troops under General von Woyrech, closely following the enemy, penetrated as far as the region northwest of Kielce.

In the Carpathians Austro-Hungarian and German troops under General von Linsingen conquered the hills east of the upper Stryi and took 3,650 men prisoners, as well as capturing six machine guns.

At the present moment, while the armies under General von Mackensen are approaching the Przemyśl fortress and the lower San, it is possible to form an approximate idea of the booty taken. In the battles of Tarnow and Gorlice, and in the battles during the pursuit of these armies, we have so far taken 103,500 Russian prisoners, 69 cannon, and 255 machine guns. In these figures the booty taken by the allied troops fighting in the Carpathians and north of the Vistula is not included. This amounts to a further 40,000 prisoners.

Mr. Rockefeller and Serbia

[Special Cable to THE NEW YORK TIMES.]

LONDON, Thursday, May 13.—A Paris dispatch to the Exchange Telegraph Company, quoting the *Cri de Paris*, says:

"John D. Rockefeller has just sent 35,000,000 francs (\$5,000,000) to Prince Alexis of Serbia, President of the Serbian Red Cross Society.

"Prince Alexis married last year an American woman, Mrs. Hugo Pratt, whose father loaned years ago £2,000 to Rockefeller when the oil king started in business."

Italy in the War

Her Move Against Austro-Hungary

Last Phase of Italian Neutrality and Causes of the Struggle

DECLARATION OF WAR.

[By The Associated Press.]

VIENNA, May 23, (via Amsterdam and London, May 24.)—*The Duke of Avarna, Italian Ambassador to Austria, presented this afternoon to Baron von Barian, the Austro-Hungarian Foreign Minister, the following declaration of war:*

Vienna, May 23, 1915.

Comformably with the order of his Majesty the King, his august sovereign, the undersigned Ambassador of Italy has the honor to deliver to his Excellency, the Foreign Minister of Austria-Hungary, the following communication:

"Declaration has been made, as from the fourth of this month, to the Imperial and Royal Government of the grave motives for which Italy, confident in her good right, proclaimed annulled and henceforth without effect her treaty of alliance with Austria-Hungary, which was violated by the Imperial and Royal Government, and resumed her liberty of action in this respect.

"The Government of the King, firmly resolved to provide by all means at its disposal for safeguarding Italian rights and interests, cannot fail in its duty to take against every existing and future menace measures which events impose upon it for the fulfillment of national aspirations.

"His Majesty the King declares that he considers himself from tomorrow in a state of war with Austria-Hungary."

The undersigned has the honor to make known at the same time to his Excellency, the Foreign Minister, that passports will be placed this very day at the disposal of the Imperial and Royal Ambassador at Rome, and he will be

obliged to his Excellency if he will kindly have his passports handed to him.

Avarna.

FRANCIS JOSEPH'S DEFIANCE.

[By The Associated Press.]

LONDON, May 24, 5:45 A. M.—*A Reuter dispatch from Amsterdam says the Vienna Zeitung publishes the following autograph letter from Emperor Francis Joseph to Count Karl Stuerghk:*

Dear Count Stuerghk: I request you to make public the attached manifesto to my troops:

"VIENNA, May 23.—Francis Joseph to his troops:

"The King of Italy has declared war on me. Perfidy whose like history does not know was committed by the Kingdom of Italy against both allies. After an alliance of more than thirty years' duration, during which it was able to increase its territorial possessions and develop itself to an unthought of flourishing condition, Italy abandoned us in our hour of danger and went over with flying colors into the camp of our enemies.

"We did not menace Italy; did not curtail her authority; did not attack her honor or interests. We always responded loyally to the duties of our alliance and afforded her our protection when she took the field. We have done more. When Italy directed covetous glances across our frontier we, in order to maintain peace and our alliance relation, were resolved on great and painful sacrifices which particularly grieved our paternal heart. But the covetousness of Italy, which believed the moment should be used, was not to be appeased, so fate must be accommodated.

"My armies have victoriously with-

stood mighty armies in the north in ten months of this gigantic conflict in most loyal comradeship of arms with our illustrious ally. A new and treacherous enemy in the south is to you no new enemy. Great memories of Novara, Mortaro, and Lissa, which constituted the pride of my youth; the spirit of Radetzky, Archduke Albrecht, and Tegetthoff, which continues to live in my land and sea forces, guarantee that in the south also we shall successfully defend the frontiers of the monarchy.

"I salute my battle-tried troops, who are inured to victory. I rely on them and their leaders. I rely on my people for whose unexampled spirit of sacrifice my most paternal thanks are due. I pray the Almighty to bless our colors and take under His gracious protection our just cause."

ITALY'S CABINET EMPOWERED.

[By The Associated Press.]

ROME, May 20.—Amid tremendous enthusiasm the Chamber of Deputies late today adopted, by a vote of 407 to 74, the bill conferring upon the Government full power to make war.

The bill is composed of a single article and reads as follows:

The Government is authorized in case of war and during the duration of war to make decisions with due authority of law, in every respect required, for the defense of the State, the guarantee of public order, and urgent economic national necessities. The provisions contained in Articles 243 to 251 of the Military Code continue in force. The Government is authorized also to have recourse until Dec. 31, 1915, to monthly provisional appropriations for balancing the budget. This law shall come into force the day it is passed.

All members of the Cabinet maintain absolute silence regarding what step will follow the action of the Chamber. Former Ministers and other men prominent in public affairs declare, however, that the action of Parliament virtually was a declaration of war.

When the Chamber reassembled this afternoon after its long recess there were present 482 Deputies out of 500, the absentees remaining away on account of illness. The Deputies especially applauded

were those who wore military uniforms and who had asked permission for leave from their military duties to be present at the sitting.

All the tribunes were filled to overflowing. No representatives of Germany, Austria, or Turkey were to be seen in the diplomatic tribune. The first envoy to arrive was Thomas Nelson Page, the American Ambassador, who was accompanied by his staff. M. Barrère, Sir J. Bennell Rodd, and Michel de Giers, the French, British, and Russian Ambassadors, respectively, appeared a few minutes later and all were greeted with applause, which was shared by the Belgian, Greek, and Rumanian Ministers. George B. McClellan, former Mayor of New York, occupied a seat in the President's tribune.

A few minutes before the session began the poet, Gabriele d'Annunzio, one of the strongest advocates of war, appeared in the rear of the public tribune, which was so crowded that it seemed impossible to squeeze in anybody else. But the moment the people saw him they lifted him shoulder high and passed him over their heads to the first row. The entire Chamber and all those occupying the other tribunes rose and applauded for five minutes, crying, "Viva d'Annunzio!" Later thousands sent him their cards, and in return received his autograph, bearing the date of this eventful day.

Signor Marcora, President of the Chamber, took his place at 3 o'clock. All the members of the House and everybody in the galleries stood up to acclaim the old follower of Garibaldi.

Premier Salandra, followed by all the members of the Cabinet, entered shortly afterward. It was a solemn moment. Then a delirium of cries broke out. "Viva Salandra!" roared the Deputies, and the cheering lasted for five minutes. Premier Salandra appeared to be much moved by the demonstration.

After the formalities of the opening Premier Salandra arose and said:

"Gentlemen: I have the honor to present to you a bill to meet the eventual expenditures of a national war"—

an announcement that was greeted by further prolonged applause.

The Premier began an exposition of the situation of Italy before the opening of hostilities in Europe. He declared that Italy had submitted to every humiliation from Austria-Hungary for the love of peace. By her ultimatum to Serbia Austria had annulled the equilibrium of the Balkans and prejudiced Italian interests there.

Notwithstanding this evident violation of the treaty of the Triple Alliance, Italy endeavored during long months to avoid a conflict, but these efforts were bound to have a limit in time and dignity. "This is why the Government felt itself forced to present its denunciation of the Triple Alliance on May 4," said Premier Salandra, who had difficulty in quieting the wild cheering that ensued. When he had succeeded in so doing he continued, amid frequent enthusiastic interruptions:

Italy must be united at this moment, when her destinies are being decided. We have confidence in our august chief, who is preparing to lead the army toward a glorious future. Let us gather around this well-beloved sovereign.

Since Italy's resurrection as a State she has asserted herself in the world of nations as a factor of moderation, concord, and peace, and she can proudly proclaim that she has accomplished this mission with a firmness which has not wavered before even the most painful sacrifices.

In the last period, extending over thirty years, she maintained her system of alliances and friendships chiefly with the object of thus assuring the European equilibrium, and, at the same time, peace. In view of the nobility of this aim Italy not only subordinated her most sacred aspiration, but has also been forced to look on, with sorrow, at the methodical attempts to suppress specifically the Italian characteristics which nature and history imprinted on those regions.

The ultimatum which the Austro-Hungarian Empire addressed last July to Serbia annulled at one blow the effects of a long-sustained effort by violating the pact which bound us to that State, violated the pact, in form, for it omitted to conclude a preliminary agreement with us or even give us notification, and violated it also in substance, for it sought to disturb, to our detriment, the delicate system of territorial possessions and

spheres of influence which had been set up in the Balkan Peninsula.

But, more than any particular point, it was the whole spirit of the treaty which was wronged, and even suppressed, for by unloosing in the world a most terrible war, in direct contravention of our interests and sentiments, the balance which the Triple Alliance should have helped to assure was destroyed and the problem of Italy's national integrity was virtually and irresistibly revived.

Nevertheless, for long months, the Government has patiently striven to find a compromise, with the object of restoring to the agreement the reason for being which it had lost. These negotiations were, however, limited not only by time, but by our national dignity. Beyond these limits the interests both of our honor and of our country would have been compromised.

Signor Salandra was interrupted time and time again by rounds of applause from all sides, and the climax was reached when he made a reference to the army and navy. Then the cries seemed interminable, and those on the floor of the House and in the galleries turned to the Military Tribune, from which the officers answered by waving their hands and handkerchiefs. At the end of the Premier's speech there were deafening "vivas" for the King, war, and Italy.

Only thirty-four Intransigent Socialists refused to join in the cheers, even in the cry "Viva Italia!" and they were hooted and hissed.

After the presentation of the bill conferring full powers upon the Government the President of the Chamber submitted the question whether a committee of eighteen members should be elected. Out of the 421 Deputies who voted 367 cast their ballot in the affirmative. The other 54 were against. The opposition was composed of Socialists and some adherents of ex-Premier Giolitti.

Foreign Minister Sonnino then rose, and, taking a copy of the "Green Book" from his pocket, said: "I have the honor to present to the Chamber a book containing an account of all the pour-parlers with Austria from the 9th of September to the 4th of May." He handed the book to Signor Macora.

The Chamber then adjourned until 5 o'clock, when the committee reported in favor of the bill, and it was adopted.

Italy and the Austrian Frontier

The shaded portions on the Austrian frontier represent the provinces of "Italia Irredenta," which Italy would win back.

ITALY'S JUSTIFICATION.

The first complete official statement of the difficulties between Italy and Austria-Hungary, which forced the Italian declaration of war against the Dual Monarchy, was made public in Washington on May 25 by Count V. Macchi di Cellere, the Italian Ambassador. It took the form of a carefully prepared telegraphic statement to the Ambassador from Signor Sonnino, the Italian Minister of Foreign Affairs, with instructions that it be delivered in the form of a note to the Government of the United States. After presenting the communication to Secretary Bryan, Count Cellere made public the following translation of its full text:

The Triple Alliance was essentially defensive and designed solely to preserve the status quo, or, in other words, the equilibrium, in Europe. That these were its only objects and purposes is established by the letter and spirit of the treaty as well as by the intentions clearly described and set forth in official acts of the Ministers who created the alliance and confirmed and renewed it in the interest of peace, which always has inspired Italian policy.

The treaty, as long as its intents and purposes had been loyally interpreted and regarded and as long as it had not been used as a pretext for aggression against others, greatly contributed to the elimination and settlement of causes of conflict, and for many years assured to Europe the inestimable benefits of peace.

But Austria-Hungary severed the treaty by her own hands. She rejected the response of Serbia, which gave to her all the satisfaction she could legitimately claim. She refused to listen to the conciliatory proposals presented by Italy in conjunction with other powers in the effort to spare Europe from a vast conflict certain to drench the Continent with blood and to reduce it to ruin beyond the conception of human imagination, and finally she provoked that conflict.

Article I. of the treaty embodied the usual and necessary obligation of such pacts—the pledge to exchange views

upon any fact and economic questions of a general nature that might arise pursuant to its terms. None of the contracting parties had the right to undertake, without a previous agreement, any step the consequence of which might impose a duty upon the other signatories arising out of the Alliance, or which would in any way whatsoever encroach upon their vital interests. This article was violated by Austria-Hungary when she sent to Serbia her note dated July 23, 1914, an action taken without the previous assent of Italy.

Thus, Austria-Hungary violated beyond doubt one of the fundamental provisions of the treaty. The obligation of Austria-Hungary to come to a previous understanding with Italy was the greater because her obstinate policy against Serbia gave rise to a situation which directly tended to the provocation of a European war.

As far back as the beginning of July, 1914, the Italian Government, preoccupied by the prevailing feeling in Vienna, caused to be laid before the Austro-Hungarian Government a number of suggestions advising moderation, and warning [it of the impending danger of a European outbreak. The course adopted by Austria-Hungary against Serbia constituted, moreover, a direct encroachment upon the general interests of Italy, both political and economical, in the Balkan Peninsula. Austria-Hungary could not for a moment imagine that Italy could remain indifferent while Serbian independence was being trodden upon.

On a number of occasions theretofore Italy gave Austria to understand, in friendly but clear terms, that the independence of Serbia was considered by Italy as essential to Balkan equilibrium. Austria-Hungary was further advised that Italy could never permit that equilibrium to be disturbed to her prejudice. This warning had been conveyed not only by her diplomats in private conversations with responsible Austro-Hungarian officials, but was proclaimed publicly by Italian statesmen on the floors of Parliament.

Therefore when Austria-Hungary ignored the usual practices and menaced Serbia by sending her an ultimatum without in any way notifying the Italian Government of what she proposed to do, indeed leaving that Government to learn of her action through the press rather than through the usual channels of diplomacy, when Austria-Hungary took this unprecedented course she not only severed her alliance with Italy but committed an act inimical to Italy's interests.

The Italian Government had obtained trustworthy information that the complete program laid down by Austria-Hungary with reference to the Balkans was prompted by a desire to decrease Italy's economical and political influence in that section, and tended directly and indirectly to the subservience of Serbia to Austria-Hungary, the political and territorial isolation of Montenegro, and the isolation and political decadence of Rumania.

This attempted diminution of the influence of Italy in the Balkans would have been brought about by the Austro-Hungarian program, even though Austria-Hungary had no intention of making further territorial acquisitions. Furthermore, attention should be called to the fact that the Austro-Hungarian Government had assumed the solemn obligation of prior consultation of Italy as required by the special provisions of Article VII. of the treaty of the Triple Alliance, which, in addition to the obligation of previous agreements, recognized the right of compensation to the other contracting parties in case one should occupy temporarily or permanently any section of the Balkans.

To this end, the Italian Government approached the Austro-Hungarian Government immediately upon the inauguration of Austro-Hungarian hostilities against Serbia, and succeeded in obtaining reluctant acquiescence in the Italian representations. Conversations were initiated immediately after July 23, for the purpose of giving a new lease of life to the treaty which had been violated and thereby annulled by the act of Austria-Hungary.

This object could be attained only by the conclusion of new agreements. The conversations were renewed, with additional propositions as the basis, in December, 1914. The Italian Ambassador at Vienna at that time received instructions to inform Count Berchtold, the Austro-Hungarian Minister for Foreign Affairs, that the Italian Government considered it necessary to proceed without delay to an exchange of views and consequently to concrete negotiations with the Austro-Hungarian Government concerning the complex situation arising out of the conflict which that Government had provoked.

Count Berchtold at first refused. He declared that the time had not arrived for negotiations. Subsequently, upon our rejoinder, in which the German Government united, Count Berchtold agreed to exchange views as suggested. We promptly declared, as one of our fundamental objects, that the compensation on which the agreement should be based should relate to territories at the time under the dominion of Austria-Hungary.

The discussion continued for months, from the first days of December to March, and it was not until the end of March that Baron Burian offered a zone of territory comprised within a line extending from the existing boundary to a point just north of the City of Trent.

In exchange for this proposed cession the Austro-Hungarian Government demanded a number of pledges, including among them an assurance of entire liberty of action in the Balkans. Note should be made of the fact that the cession of the territory around Trent was not intended to be immediately effective as we demanded, but was to be made only upon the termination of the European war. We replied that the offer was not acceptable, and then presented the minimum concessions which could meet in part our national aspirations and strengthen in an equitable manner our strategic position in the Adriatic.

These demands comprised: The extension of the boundary in Trentino, a new boundary on the Isonzo, special provision for Trieste, the cession of certain islands

of the Curzolari Archipelago, the abandonment of Austrian claims in Albania, and the recognition of our possession of Avlona and the islands of the Aegean Sea, which we occupied during our war with Turkey.

At first our demands were categorically rejected. It was not until another month of conversation that Austria-Hungary was induced to increase the zone of territory she was prepared to cede in the Trentino and then only as far as Mezzo Lombardo, thereby excluding the territory inhabited by people of the Italian race, such as the Valle del Noce, Val di Fasso, and Val di Ampezzo. Such a proposal would have given to Italy a boundary of no strategical value. In addition the Austro-Hungarian Government maintained its determination not to make the cession effective before the end of the war.

The repeated refusals of Austria-Hungary were expressly confirmed in a conversation between Baron Burian and the Italian Ambassador at Vienna on April 29. While admitting the possibility of recognizing some of our interests in Avlona and granting the above-mentioned territorial cession in the Trentino, the Austro-Hungarian Government persisted in its opposition to all our other demands, especially those regarding the boundary of the Isonzo, Trieste, and the islands.

The attitude assumed by Austria-Hungary from the beginning of December until the end of April made it evident that she was attempting to temporize without coming to a conclusion. Under such circumstances Italy was confronted by the danger of losing forever the opportunity of realizing her aspirations based upon tradition, nationality, and her desire for a safe position in the Adriatic, while other contingencies in the European conflict menaced her principal interests in other seas.

Hence Italy faced the necessity and duty of recovering that liberty of action to which she was entitled and of seeking protection for her interests, apart from the negotiations which had been dragging uselessly along for five months and without reference to the Treaty of Al-

liance which had virtually failed as a result of its annulment by the action of Austria-Hungary in July, 1914.

It would not be out of place to observe that the alliance having terminated and there existing no longer any reason for the Italian people to be bound by it, though they had loyally stood by it for so many years because of their desire for peace, there naturally revived in the public mind the grievances against Austria-Hungary which for so many years had been voluntarily repressed.

While the Treaty of Alliance contained no formal agreement for the use of the Italian language or the maintenance of Italian tradition and Italian civilization in the Italian provinces of Austria, nevertheless if the alliance was to be effective in preserving peace and harmony it was indisputably clear that Austria-Hungary, as our ally, should have taken into account the moral obligation of respecting what constituted some of the most vital interests of Italy.

Instead, the constant policy of the Austro-Hungarian Government was to destroy Italian nationality and Italian civilization all along the coast of the Adriatic. A brief statement of the facts and of the tendencies well known to all will suffice.

Substitution of officials of the Italian race by officials of other nationalities; artificial immigration of hundreds of families of a different nationality; replacement of Italian by other labor; exclusion from Trieste by the decree of Prince Hohenlohe of employes who were subjects of Italy; denationalization of the judicial administration; refusal of Austria to permit an Italian university in Trieste, which formed the subject of diplomatic negotiations; denationalization of navigation companies; encouragement of other nationalities to the detriment of the Italian, and, finally, the methodical and unjustifiable expulsion of Italians in ever-increasing numbers.

This deliberate and persistent policy of the Austro-Hungarian Government with reference to the Italian population was not only due to internal conditions brought about by the competition of the different nationalities within its terri-

tory, but was inspired in great part by a deep sentiment of hostility and aversion toward Italy, which prevailed particularly in the quarters closest to the Austro-Hungarian Government and influenced decisively its course of action.

Of the many instances which could be cited it is enough to say that in 1911, while Italy was engaged in war with Turkey, the Austro-Hungarian General Staff prepared a campaign against us, and the military party prosecuted energetically a political intrigue designed to drag in other responsible elements of Austria. The mobilization of an army upon our frontier left us in no doubt of our neighbor's sentiment and intentions.

The crisis was settled pacifically through the influence, so far as known, of outside factors; but since that time we have been constantly under apprehension of a sudden attack whenever the party opposed to us should get the upper hand in Vienna. All of this was known in Italy, and it was only the sincere desire for peace prevailing among the Italian people which prevented a rupture.

After the European war broke out, Italy sought to come to an understanding with Austria-Hungary with a view to a settlement satisfactory to both parties which might avert existing and future trouble. Her efforts were in vain, notwithstanding the efforts of Germany, which for months endeavored to induce Austria-Hungary to comply with Italy's suggestions, thereby recognizing the propriety and legitimacy of the Italian attitude. Therefore Italy found herself

compelled by the force of events to seek other solutions.

Inasmuch as the Treaty of Alliance with Austria-Hungary had ceased virtually to exist and served only to prolong a state of continual friction and mutual suspicion, the Italian Ambassador at Vienna was instructed to declare to the Austro-Hungarian Government that the Italian Government considered itself free from the ties arising out of the Treaty of the Triple Alliance in so far as Austria-Hungary was concerned. This communication was delivered in Vienna on May 4.

Subsequently to this declaration, and after we had been obliged to take steps for the protection of our interests, the Austro-Hungarian Government submitted new concessions, which, however, were deemed insufficient and by no means met our minimum demands. These offers could not be considered under the circumstances.

The Italian Government, taking into consideration what has been stated above, and supported by the vote of Parliament and the solemn manifestation of the country, came to the decision that any further delay would be inadvisable. Therefore, on this day (May 23) it was declared in the name of the King to the Austro-Hungarian Ambassador at Rome that, beginning tomorrow, May, 24, it will consider itself in a state of war with Austria-Hungary. Orders to this effect were also telegraphed yesterday to the Italian Ambassador at Vienna.

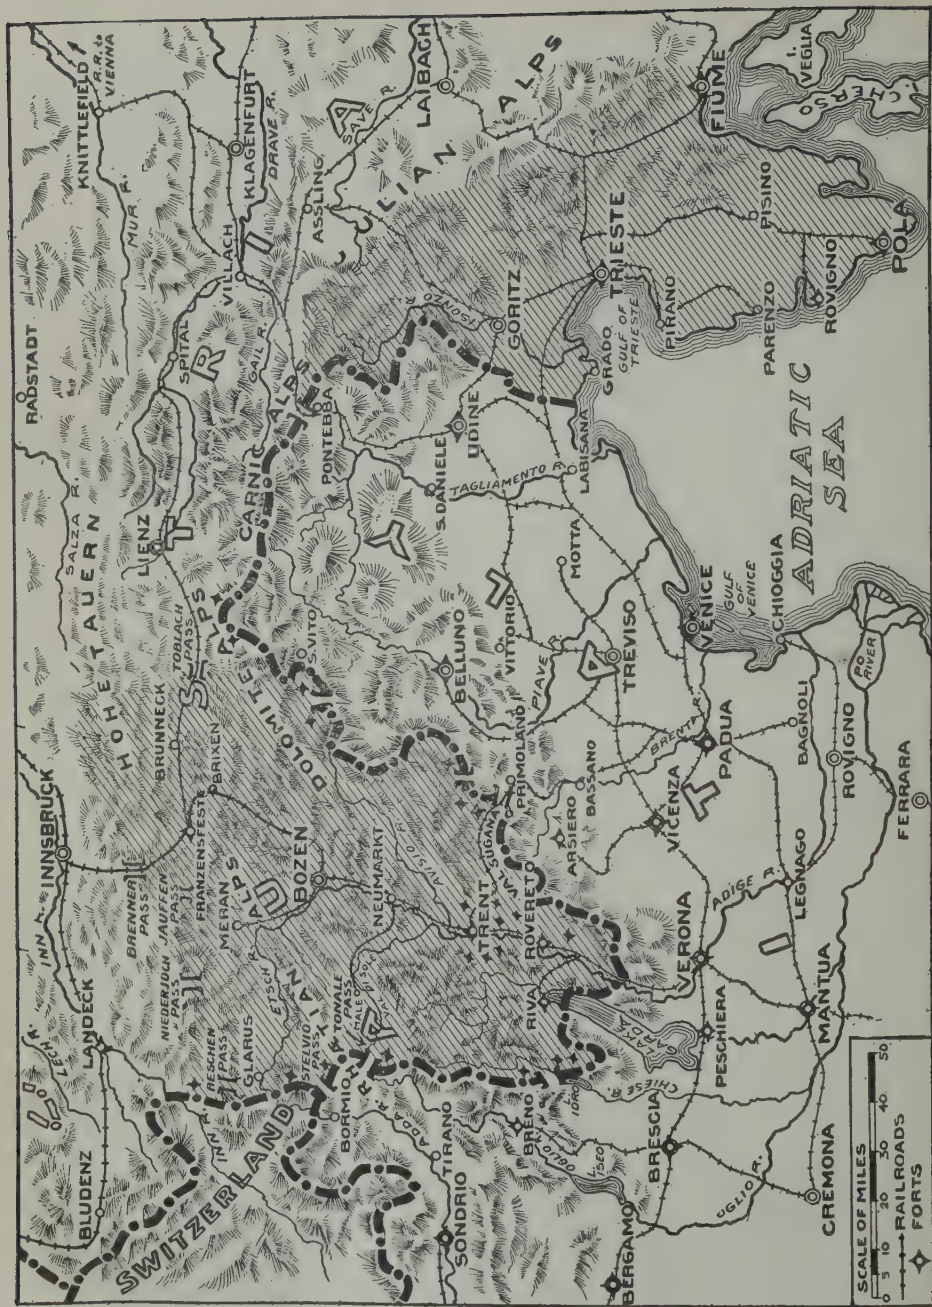

German Hatred of Italy

[By The Associated Press.]

AMSTERDAM, May 23.—The Frankfurter Zeitung today prints a telegram received from Vienna saying:

"The exasperation and contempt which Italy's treacherous surprise attack and her hypocritical justification arouse here (Vienna) are quite indescribable.

"Neither Serbia nor Russia, despite a long and costly war, is hated. Italy, however, or rather those Italian would-be politicians and business men who offer violence to the majority of peaceful Italian people, are so unutterably hated with the most profound honesty that this war can be terrible."

Detail map of the frontier between Italy and Austria. The shaded portion shows territory demanded by Italy.

ITALY'S NEUTRALITY—THE LAST PHASE

The attitude of the Italian press since the character of its papers were defined in the May number of *THE CURRENT HISTORY* is here recorded. Since May 17, when the King, on account of the heated pro-intervention demonstrations held all over Italy, declined to accept the resignation of the Salandra Ministry, the Giolittian organ, the *Stampa*, of Turin, has dropped something of its feverish neutralistic propaganda, the Giolittian color has gradually faded from the *Giornale d'Italia* and the *Tribuna*, while ex-Premier Giolitti himself has left Rome, declaring that he had been misunderstood in having his declaration that Italy could obtain what she desired without fighting construed into meaning that he desired peace at all costs.

It is understood that in the middle of April Austria-Hungary became convinced that neutralistic sentiments might prevail in the peninsula, and consequently became less active in her negotiations with the Salandra Government. Thereupon Italy resumed negotiations with the Entente powers, and on April 14 acknowledged that Serbia should have an opening on the Adriatic Sea. This caused the Austro-Italian negotiations to be heatedly resumed, and on May 18 the German Imperial Chancellor read to the Reichstag the eleven Austro-Hungarian proposals. The text of these proposals, together with the Italian counter-proposals and the Italian exchange of claims in the Adriatic with the Entente powers, will be found outlined in the Italian official statement cabled by Minister Sonnino to the Italian Ambassador at Washington, presented on Page 494.

It must be borne in mind that the press comments are based upon an imperfect knowledge of the ultimate proposals and claims, and that the Italian attitude for rejecting the Austro-Hungarian proposals obviously rests on these grounds:

1. They are inadequate and might be rendered nought in case of the victory of the Entente powers.
2. They do not give Italy a defensive frontier in the north and east.
3. They do not materially improve Italy's commercial and military condition in the Adriatic.
4. They make no mention of Dalmatia and the Dalmatian Archipelago, with their deep harbors and natural fortifications—a curious contrast to the lowland harbors of the Italian coast opposite.

The Italian demands take into account the possible victory of the Entente powers.

In the circumstances, it is best to begin with an extract from a German paper, as there seems to be an impression abroad that Germany has not appreciated Italy's reasons for not joining with her allies at the beginning of the war and has conducted a propaganda discrediting her willingness to remain neutral provided the Austro-Hungarian concessions proved sufficient and were sufficiently guaranteed.

THE GERMAN VIEW.

*From the Frankfurter Zeitung of
March 3.*

Article VII. of the Austro-German-Italian Treaty, the terms of which have never before been made public, not only provides for the right of compensation in case one party to the contract enriches itself territorially in the Balkans, but also forbids either Austria or Italy to undertake anything in the Balkans without the consent of the other. * * *

In the Tripoli war, when the energetic Duca degli Abruzzi made his advance in the Adriatic against Prevesa and wished to force the Porte to yield through a serious action in the Dardanelles, and

when Italy wished to extend her occupation of the Aegean Islands, which lie as advance posts before the Dardanelles, she was obliged to forego her aims, and did loyally forego them, because Austria at that time did not yet desire a movement on the then still quiescent Balkan Peninsula. According to the Italian view, Austria, in determining to liquidate her matured account with Serbia without coming to an agreement in the matter with Italy, canceled the treaty in an important and essential part, irrespective of the assurance that she contemplated merely punishment of Serbia and not the acquisition of territory in the Balkans. The Italian policy con-

sidered itself from that moment free from every obligation, even if the speech of Premier Salandra in December could not be interpreted as a formal denunciation of the Dreibund. * * *

We have today good grounds for assuming that much as we must reckon with the fact that the country is determined to go to war if nothing is granted to it, just so little would it support a Government bent on making war because it does not receive anything.

It will be as impossible to solve the Trentino question from the point of view of abstract right as to solve any other iridescent question in that way. The Trentino question, which was long a question of national, historical, and ethnological idealism, has now become a real question of power. The European war and its developments have placed Italy in a position to use her power in order to expand. This is not unusual in history. * * *

But it should be carefully noted that only to an Italy remaining within the Triple Alliance can compensation be given, and, of course, only on the basis of complete reciprocity—(zug um zug-leistung gegen leistung). To demand anything whatsoever Italy has no right. On the other hand, the ignoble exploitation of the needs of an ally fighting for her existence would correspond neither with the generosity of the Italian nature nor with her real interests.

The honest path for Italy, who finds herself unable to enter the war on the side of her allies in accordance with the spirit of the Alliance, is to preserve unconditional neutrality. A simple discussion between the leading statesmen of all the three powers will banish every shade of misunderstanding and clear the situation. Italy will spare her strength for the great task on the other side of the Mediterranean and for her correct and sensible attitude will receive, under the guarantee of her friend, (Germany,) the promise of the fulfillment of her comprehensible desire. Any other policy would be foolish and criminal.

ITALY AND ENGLAND.

From the Giornale d'Italia, March 26.

It is known in London, we believe, that Italy is firmly resolved to assure her own future in whatever manner seems best. A seafaring, agricultural, industrial, mercantile, emigrant people like the Italian must for its very existence conquer its own place in the sun, cannot endure hegemonies of any kind, cannot suggest exclusions, oppressions, or prohibitions of any kind, but must defend at any cost its own liberty, not only political, but economic and maritime. Italy is resolved to defend à outrance that sum total of her rights in which the whole future is inclosed. A people does not spend for nothing in a few months \$300,000,000 to complete its military preparations and does not intrust for nothing, with a great example of concord, the most ample powers to the Government.

From the Messaggero, April 1.

As Prince von Bülow's negotiations have apparently failed, Italy naturally addresses herself to England. There is, however, this difficulty: England has already made arrangements with France and Russia for the solution of the questions of the Dardanelles and Asia Minor, whereas Italy wishes to have her say in these questions before giving her assistance to the Triple Entente. Moreover, there are Greek aspirations in the Levant and Serbian in the Adriatic to be reconciled with those of Italy. Consequently the situation is not easy.

From the Stampa, April 11.

Not only must Italy have her natural frontiers on the east restored, not only must she have her legitimate supremacy in the Adriatic assured, not only must she safeguard her interests in the Eastern Mediterranean and in the eventual partition of the Turkish Empire, but she must also see assured in the Western Mediterranean a greater guarantee for the safety of herself and her possessions and wider liberty of action than that of which she has recently had painful experience. These things must be guaran-

teed by an alliance with either Russia or with England. * * *

Before having solved this difficulty any decision in favor of war would be a leap in the dark, an act of inconceivable political blindness. It would be, to adopt a rough, but inevitable, term, a veritable betrayal.

From the Giornale d'Italia of April 12, in criticising the foregoing.

We absolutely fail to understand the motive which induced the Piedmontese journal to print matter so calculated to confuse public opinion. Indeed, the care with which our contemporary seeks to embarrass Italian diplomatic action seems somewhat strange and cannot escape the blame of all those who think it necessary not to hamper the liberty of action conceded to the Government almost unanimously by Parliament and by the people. * * *

It seems almost as though the Piedmontese journal had no thought but to put insoluble problems to the Government, in the face of public opinion, so as to try to prejudice its action in advance. The Stampa's program practically means that to the diplomatic rupture with the Central Empires would be added another diplomatic rupture with the Triple Entente, thus insuring the isolation which the Stampa professes to fear so much.

From the Corriere della Sera, April 12.

The article in the Stampa, which appears ultra-nationalist, is in reality purely neutralist. Italian aspirations must be kept within reasonable bounds. What would happen to Italy if demands were put forward which the Entente could not entertain? Quite apart from questions of direct interest and gain, other factors must be taken into account. There is the danger to Italy in case of the success of her late allies, which would mean the prostration of France, the annexation of Belgium to Germany, the arrival of Austria at Saloniki, British naval hegemony replaced by German, the revival of Turkey, and the consequent ambition to resume possession of lost territories.

ADRIATIC PROBLEM.

From the Politika of Belgrade, March 30.

Italy is claiming not only Italian territories which are under Austro-Hungarian domination, but also a very considerable part of the most purely southern Slav regions. Italy will have to realize one simple fact. Until this war Serbia was closed in on all sides by Austria-Hungary. She therefore asked that Europe should secure for her from Austria-Hungary at least a free outlet to the Adriatic, the price of which she had already paid in blood.

The two Balkan wars were waged primarily for the same thing, since they were wars of liberation. Today it is no longer a question of the economic independence of Serbia, since Austria-Hungary is passing from the scene, but it is a matter of the liberation and of the union into a single State of our race as a whole. This is the idea which at this moment governs the masses of our people, and the numberless graves of our fallen heroes testify to the sacrifice which we have made for the sake of this idea. Whoever, therefore, opposes our national union is an enemy of our race.

Deeply as it would pain Serbia to uproot out of her heart the sympathy which she feels for Italy, she will none the less do so without fail if ever it should become manifest that Italy's present policy signifies that she desires not only to consolidate her legitimate interests, but also to encroach upon the Balkans by attacking Serbia.

From the Giornale d'Italia, April 4.

No one in Italy has ever said or thought that in the event of a bouleversement in the Adriatic and the Balkans there should be denied to Serbia or any Slav State which might arise from the ruins of Austria-Hungary a wide outlet to the Adriatic. But, on the other hand, no one in Italy could ever permit that the reversion of Austria's strategic maritime position should fall into any hands but ours.

There are political and military considerations which are above any question of nationality whatever. It should be enough to cite the example of an

England which holds a Spanish Gibraltar and an Italian Malta, besides a Greek Cyprus and the Egyptian Suez Canal. It should be enough to recall the claim made by all the press of Petrograd to establish Russia at Constantinople and on the banks of the Bosphorus and the Dardanelles, in spite of all the principles of nationality, Balkan or Turk.

Let the Serbians, in case of an Adriatic and Balkan upset, have an ample outlet to the Adriatic, but do not let them aspire to conquer a predominance in that sea. The Italian people is not, and can not be at this moment, either phil or phobe regarding any other people. The existence, or at least the future, of all the nations is at stake today, and whoever desires the friendship of Italy must begin by loyally recognizing her rights and interests.

From the Giornale d'Italia of April 19.

We reject altogether the idea that Italy would be satisfied with the western portion of Istria, leaving the rest of the Eastern Adriatic shore to the Croats and Serbians. While Italy would certainly gain by the possession of Trieste and Pola, the strategic position in the Adriatic would still be exceedingly disadvantageous, especially as the Slav claim advanced by certain Russian newspapers, (that Croatia become an autonomous State and divide Dalmatia with Serbia,) includes the right to maintain fortified naval bases on the eastern shore.

This would merely mean exchanging Austrian strategical predominance for Slavonic, and, consequently, Russian predominance nearly as threatening to Italian interests.

The principal objective of Italy in the Adriatic is the solution once for all of the politico-strategic question of a sea which is commanded in the military sense from the eastern shore, and such a problem can be solved only by one method—by eliminating from the Adriatic every other war fleet. Otherwise the existing most difficult situation in the Adriatic will be perpetuated and in time inevitably aggravated.

From the Messaggero of April 21.

We understand that an Italian-Russian accord has been practically concluded. This accord refers both to the war, on which Italy will shortly embark, as well as to the peace which will be finally signed. The French and British Governments have taken an active part in facilitating this accord, as it deals with other questions besides that of the Adriatic.

From Idea Nazionale, May 10.

Italy desires war:

1. In order to obtain Trent, Trieste, and Dalmatia. The country desires it. A nation which has the opportunity to free its land should do so as a matter of imperative necessity. If the Government and the institutions will not make war, they render themselves guilty of high treason toward the country.

2. We desire war in order to conquer for ourselves a good strategic frontier in the north and east in place of the treacherous one which we now have. When a nation can assure the protection of its domain it ought to do so, otherwise its future will have less. It is a necessary duty. There is no other alternative but this—either complete the work or betray what has already been done.

3. We desire war because today in the Adriatic, the Balkan Peninsula, the Mediterranean, and Asia Italy should have all the advantages it is possible for her to have and without which her political, economic, and moral power would diminish in proportion as that of others augmented. To this has the Hon. Salandra borne witness. If we should avoid war we desire less than his words most sacredly proclaimed to the nation in Parliament. If we would be a great power we must accept certain obligations; one of them is war in order to keep us a great power. If we do not want to be a great power any longer, we deliberately and vilely betray ourselves.

The foregoing are the three reasons for entering the war—reasons which are tangible, material, and comprehensive.

From the Giornale d'Italia, May 12.

Italy is determined to realize her national aspirations, cost what it may. For

this reason the Government has hastened its preparations for war which, when completed, caused Austria to offer compensations, thus tacitly acknowledging the claims of Italy.

When the Austro-Italian negotiations were begun Signor Giolitti most unfortunately obstructed their successful issue by his inopportune letter declaring that war was unnecessary. Nevertheless, owing to the firmness of the Government and the determination to resort to war, the conversations were resumed. However, Austria, aside from offering insufficient concessions, assumed a waiting policy and sought secretly to conclude a secret peace with Russia. Thereupon the

Italian Government opened negotiations with the Allies, which had the effect of increasing the offers of Austria.

During the ultimate, delicate phase of the conversations, when those who advocate neutrality are causing great injury to the interests of the country and also helping its enemies, the Government, reposing in the support of the people, is determined to expose the intrigues and conspiracies intended to favor the Austrians and Germans.

Hence the Government will, if necessary, make an appeal to Parliament. Meanwhile, it will conserve its power and righteously defend the interests of the country.

ANNUNCIATION

By Ernst Lissauer.

Ernst Lissauer, the author of the famous "Song of Hate Against England," has written a second poem entitled "Bread," and directed against the British policy of cutting off Germany's food supply. The poem was published in the Bonner Zeitung and reprinted in the Frankfurter Zeitung of March 26, 1915. Following is a translation:

WITH arms they cannot overpower us,
 With hunger they would fain devour us;
 Foe beside foe in an iron ring.
 Has want crossed our borders, or hunger, or dearth?
 Listen: I chant the tidings of Spring:
 Our soil is our ally in this great thing;
 Already new bread is growing in the earth.

ADMONITION:

Save the food and guard and hoard!
 Bread is a sword.

PRAYER:

The peasants have sown the seed again.
 Now gather and pray the prayer of the grain:
 Earth of our land,
 With arms they cannot overpower us,
 With hunger they would fain devour us,
 Arise thou in thy harvest wrath!
 Thick grow thy grass, rich the reaper's path!
 Dearest soil of earth
 Our prayer hear:
 Show them of little worth,
 Shame them with blade and ear.

DARDANELLES

THE DARDANELLES

ALLIES' SECOND CAMPAIGN WITH FLEETS AND LAND FORCES.

The first campaign to force the passage of the Dardanelles by fleet operations alone was suddenly halted on March 19, 1915, when floating mines carried by the swift currents destroyed and sank three battleships. An appraisal of the real difficulties attendant upon reducing the forts and batteries lining the European and Asiatic shores, which determined the Allies upon their present joint operations by land and sea, is found in the subjoined dispatch, presented in part from E. Ashmead-Bartlett, appearing in The London Daily Telegraph of April 26. It is followed by full press reports from the Dardanelles describing the difficult landing and establishment of the Allied troops on the Gallipoli Peninsula.

Eastern Mediterranean, April 12.

THE days of the Turk in Europe are numbered, but no one will deny that he is dying hard and game.

It came as a disagreeable shock to many to read on the morning of March 19 that two British battleships and one French had been sunk in the Dardanelles, while several others had been hit and damaged.

We were told that the outer forts had been completely destroyed and that the work of mine sweeping had made excellent progress. This news was given in perfect good faith and was also quite true, but we built up on it too great a structure of hope, but few realizing the immense difficulties the fleet has had to face—obstacles which do not really commence until the Narrows are approached. The combined advance of the allied fleet up the Dardanelles on March 18 was not an attempt to pass the Narrows. It was merely intended as a great demonstration against the forts, in order that the destroyers and sweepers might clear the minefield under cover of the guns of the ships.

This work was carried out in the most gallant manner and was perfectly successful, but unfortunately the further advance had to be abandoned, owing to the sudden and unexpected disasters to three vessels inflicted by drifting mines. But the price paid cannot be considered too high when one remembers the issues at stake and the vast bearing they may have on the future of the war. The Turks have always believed the Dardanelles to be impregnable, and this belief

has been accepted as the truth by most lay minds until the navy started to put the issue to the test. Then, for some unknown reason, here came a quite unjustifiable wave of optimism, which swept over the country until the eyes of the public were opened by the events of March 18.

In the old days of sailing ships the Dardanelles were a most formidable obstacle which no Admiral would have faced with confidence.

It was almost impossible to overcome the obstacles in the early days of the nineteenth century. The difficulties and dangers of the passage have been increased tenfold now by long-range weapons, torpedoes, and mines. Nevertheless, the navy is of opinion that the Narrows can be forced, in spite of these obstacles, and this opinion has been strengthened and confirmed by the great trial of March 18. It might mean the loss of ships, but if the occasion justified the sacrifice the fleet would not hesitate to make the attempt.

But, unless there is a powerful army ready to occupy the Gallipoli Peninsula the moment the fleet passed into the Sea of Marmora or made its way to Constantinople, the strait would immediately be closed behind it, and, supposing the Turks, backed up by German officers and German intrigues, decided to continue the war, it would have to fight its way out and again clear the minefield. It has long been an accepted axiom of naval warfare that ships are of no use against forts, or that they fight at such a disadvantage that it is

not worth while employing them for such a purpose.

This axiom must now be modified, after the experience which the fleet has gained in the present operations against the Dardanelles. Any fort built of stone

or concrete, however strong, can be put out of action by direct fire from guns, if only a clear view of it can be obtained, or provided aeroplanes are available to "spot" for the gunners, to signal back results, and correct the fire.

The Landing at Gallipoli

The following series of dispatches sent by a special correspondent of The London Times at the Dardanelles describes the first phase of the operations resulting in the landing of the allied troops on the Gallipoli Peninsula:

Dardanelles, April 24.

The great venture has at last been launched, and the entire fleet of warships and transports is now steaming toward the shores of Gallipoli.

Yesterday the weather showed signs of moderating, and about 5 o'clock in the afternoon the first of the transports slowly made its way through the maze of shipping toward the entrance of Mudros Bay. Immediately the patent apathy which has gradually overwhelmed every one changed to the utmost enthusiasm, and as the huge liners steamed through the fleet, their decks yellow with khaki, the crews of the warships cheered them on to victory, while the bands played them out with an unending variety of popular airs. The soldiers in the transports answered this last salutation from the navy with deafening cheers, and no more inspiring spectacle has ever been seen than this great expedition setting forth for better or for worse.

It required splendid organization and skilled leadership to get this huge fleet clear of the bay without confusion or accidents, but not one has occurred, and the majority are now safely on the high seas steaming toward their respective destinations.

The whole of the fleet and the transports have been divided up into five divisions, and there will be three main landings. The Twenty-ninth Division will

disembark off the point of the Gallipoli Peninsula near Sedd-el-Bahr, where its operations can be covered both from the Gulf of Saros and from the Dardanelles by the fire of the covering warships. The Australian and New Zealand contingent will disembark north of Gaba Tepe. Further north the Naval Division will make a demonstration.

The difficulties and dangers of the enterprise are enormous and are recognized by all.

Never before has the attempt been made to land so large a force in the face of an enemy who has innumerable guns, many thousands of trained infantry, and who has had months of warning in which to prepare his positions. Nevertheless, there is a great feeling of confidence throughout all ranks, and the men are delighted that at length the delays are over and the real work is about to begin.

Last night the transports were merely taking up their positions, and the real exit of the armada from Mudros commenced this afternoon at about 2 o'clock. The weather, which was threatening at an early hour, has now become perfectly calm, and if it only lasts the conditions will be ideal for a rapid disembarkation.

Throughout the morning transports steamed out to take up their respective positions in the open sea. The same enthusiastic scenes were witnessed as yesterday. The covering forces will be put ashore from certain battleships, while others will sweep the enemy's positions with their guns and endeavor to prevent them from shelling the troops while disembarking. It is generally

considered that the critical period of the operations will be the first twenty-four hours, and the success or failure of the whole enterprise will depend on whether these covering parties are able to obtain a firm foothold and seize the positions which have been assigned to them. Every detail has been worked out and rehearsed, and every officer and man should now know the peculiar rôle which has been assigned to him.

The navy will have entire charge of the landing of these thousands of men. Beach parties will go ashore with the first of the troops, and officers from the ships will direct the movements of all the boats as they bring the troops ashore.

This battleship belongs to a division which will consist of the Australians, who are to land near Gaba Tepe. We are one of the landing ships, and this afternoon received on board 500 officers and men of the Australian contingent, who are to form part of the covering force. They are a magnificent body of men, and full of enthusiasm for the honorable and dangerous rôle given to them.

At 2 o'clock the flagship of this division took up her position at the head of the line. We passed down through the long line of slowly moving transports amid tremendous cheering, and were played out of the bay by the French warships. No sight could have been finer than this spectacle of long lines of warships and transports, each making for its special rendezvous without any delay or confusion.

At 4 o'clock this afternoon the ship's company and the troops were assembled on the quarterdeck to hear the Captain read out Admiral de Roebeck's proclamation to the combined forces. This was followed by a last service before battle, in which the chaplain uttered a prayer for victory and called for the Divine blessing on the expedition, while the whole of the ship's company and troops on board stood with uncovered and bowed heads. We are steaming slowly through this momentous night toward the coast and are due at our rendezvous at 3 A. M. tomorrow,

(Sunday,) a day which has so often brought victory to the British flag.

THE SECOND DISPATCH.

Dardanelles, April 25.

Slowly through the night of April 24 our squadron, which was to land the covering force of the Australian contingent just north of Gaba Tepe, steamed toward its destination. The troops on board were the guests of the crews, and our generous sailors entertained them royally. At dusk all lights were extinguished, and very shortly afterward the troops retired for a last rest before their ordeal at dawn.

At 1 A. M. the ships arrived off their appointed rendezvous, five miles from the landing place, and stopped. The soldiers were aroused from their slumbers and were served with a last hot meal. A visit to the mess decks showed these Australians, the majority of whom were about to go into action for the first time under the most trying circumstances, possessed at 1 o'clock in the morning courage to be cheerful, quiet, and confident. There was no sign of nerves or undue excitement such as one might very reasonably have expected.

At 1:20 A. M. the signal was given from the flagship to lower the boats, which had been left swinging from the davits throughout the night. Our steam pinnaces were also lowered to take them in tow. The troops fell in in their assigned places on the quarterdeck, and the last rays of the waning moon lit up a scene which will ever be memorable in our history.

On the quarterdeck, backed by the great 12-inch guns, this splendid body of colonial troops were drawn up in serried ranks, fully equipped, and receiving their last instructions from their officers who, six months ago, like their men, were leading a peaceful civilian life in Australia and New Zealand 5,000 miles away. Now at the call of the empire they were about to disembark on a strange unknown shore, in a strange land, and attack an enemy of a different race. By the side of the soldiers the beach parties of our splendid bluejackets and marines were marshaled, arrayed in

old white uniforms dyed khaki color and carrying the old rifle and old equipment.

These men were to take charge of the boats, steer them ashore, and row them to the beach when they were finally cast off by the towing pinnaces. Each boat was in charge of a young midshipman, many of whom have come straight from Dartmouth after a couple of terms and now found themselves called upon to play a most difficult and dangerous rôle like men. Commanders, Lieutenants, and special beach officers had charge of the whole of the towing parties and went ashore with the troops.

At 2:05 A. M. the signal was given for the troops to embark in the boats which were lying alongside, and this was carried out with great rapidity, in absolute silence, and without a hitch or an accident of any kind. Each one of the three ships which had embarked troops transferred them to four small boats apiece towed by a steam pinnace, and in this manner the men of the covering force were conveyed to the shore. More of the Australian Brigade were carried in destroyers, which were to go close in shore and land them from boats as soon as those towed by the pinnaces had reached the beach.

At 3 A. M. it was quite dark and all was ready for the start. The tows were cast off by the battleships and the ladders taken in and the decks cleared for action, the crews going to general quarters. Then we steamed slowly toward the shore, each of the battleships being closely followed by her tows, which looked exactly like huge snakes gliding relentlessly after their prey. I do not suppose the suppressed excitement of this last half hour will ever be forgotten by those who were present. No one could tell at the last minute what would happen. Would the enemy be surprised or would he be ready on the alert to pour a terrible fire on the boats as they approached the beach?

The whole operation had been timed to allow the pinnaces and boats to reach the beach just before daybreak so that the Turks, if they had been forewarned, would not be able to see to fire before

the Australians had obtained a firm footing and, it was hoped, good cover on the foreshore.

Exactly at 4:10 A. M. the three battleships in line abreast four cables apart arrived about 2,500 yards from the shore, which was just discernible in the gloom. The engines were stopped, guns were manned, and the powerful searchlights made ready for use if required. The tows, which up to this time had followed astern, were ordered to advance to the shore. The battleships took up positions somewhat further out on either flank, for to them was assigned the duty of supporting the attack with their guns as soon as light allowed.

Very slowly the snakes of boats steamed past the battleships, the gunwales almost flush with the water, so crowded were they with khaki figures. Then each lot edged in toward one another so as to reach the beach four cables apart. So anxious were we on board the battleships that it seemed as if the loads were too heavy for the pinnaces, or that some mysterious power was holding them back, and that they would never reach the shore before daybreak, and thus lose the chance of a surprise.

The distance between the battleships and the boats did not seem to diminish, but only for the reason that we steamed very slowly in after them until the water gradually shallowed. Every eye and every glass was fixed on that grim-looking line of hills in our front, so shapeless, yet so menacing, in the gloom.

At 4:50 A. M. the enemy suddenly showed an alarm light, which flashed for ten minutes and then disappeared. The next three minutes after its first appearance passed in breathless anxiety. We could just discern the dull outline of the boats which appeared to be almost on the beach. Just previously to this seven destroyers conveying the other men of the brigade glided noiselessly through the intervals between the battleships and followed the boats in shore.

At 4:53 A. M. there suddenly came a very sharp burst of rifle fire from the beach, and we knew our men were at last at grips with the enemy. This fire

lasted only for a few minutes and then was drowned by a faint British cheer wafted to us over the waters. How comforting and inspiring was the sound at such a moment! It seemed like a message sent to tell us that the first position had been won and a firm hold obtained on the beach.

At 5:03 A. M. the fire intensified, and we could tell from the sound that our men were firing. It lasted until 5:28 and then died down somewhat. No one on board knew what was happening, although dawn was gradually breaking, because we were looking due east into the sun slowly rising behind the hills, which are almost flush with the foreshore, and there was also a haze. Astern at 5:26 we saw the outline of some of the transports, gradually growing bigger and bigger as they approached the coast. They were bringing up the remainder of the Austrians and New Zealanders.

The first authentic news we received came with the return of our boats. A steam pinnace came alongside with two recumbent forms on her deck and a small figure, pale but cheerful, and waving his hand astern. They were one of our midshipmen, just 16 years of age, shot through the stomach, but regarding his injury more as a fitting consummation to a glorious holiday ashore than a wound, and a chief stoker and petty officer, all three wounded by that first burst of musketry which caused many casualties in the boats just as they reached the beach.

From them we learned what had happened in those first wild moments. All the tows had almost reached the beach, when a party of Turks intrenched almost on the shore opened up a terrible fusillade from rifles and also from a Maxim. Fortunately most of the bullets went high, but, nevertheless, many men were hit as they sat huddled together 40 or 50 in a boat.

It was a trying moment, but the Australian volunteers rose as a man to the occasion. They waited neither for orders nor for the boats to reach the beach, but, springing out into the sea, they waded ashore and, forming some sort of a rough line, rushed straight on the

flashes of the enemy's rifles. Their magazines were not even charged. So they just went in with cold steel, and I believe I am right in saying that the first Ottoman Turk since the last Crusade received an Anglo-Saxon bayonet in him at five minutes after 5 A. M. on April 25. It was over in a minute. The Turks in this first trench were bayoneted or ran away, and a Maxim gun was captured.

Then the Australians found themselves facing an almost perpendicular cliff of loose sandstone, covered with thick shrubbery, and somewhere half way up the enemy had a second trench strongly held, from which they poured a terrible fire on the troops below and the boats pulling back to the destroyers for the second landing party.

Here was a tough proposition to tackle in the darkness, but these colonials are practical above all else, and they went about it in a practical way. They stopped a few moments to pull themselves together and to get rid of their packs, which no troops should carry in an attack, and then charged their magazines. Then this race of athletes proceeded to scale the cliffs without responding to the enemy's fire. They lost some men, but did not worry, and in less than a quarter of an hour the Turks were out of their second position, either bayoneted or in full flight.

THE THIRD DISPATCH.

Dardanelles, April 26.

After the events I have previously described, the light gradually became better and we could see from the London what was happening on the beach. It was then discovered that the boats had landed rather further north of Gaba Tepe than was originally intended, at a point where the sandstone cliffs rise very sharply from the water's edge. As a matter of fact, this error probably turned out a blessing in disguise, because there was no glacis down which the enemy's infantry could fire, and the numerous bluffs, ridges, and broken ground afford good cover to troops once they have passed the forty or fifty yards of flat, sandy beach.

This ridge, under which the landing was made, stretches due north from Gaba Tepe and culminates in the height of Coja Chemen, which rises 950 feet above the sea level. The whole forms part of a confused triangle of hills, valleys, ridges, and bluffs which stretches right across the Gallipoli Peninsula to the Bay of Bassi Liman above the Narrows. The triangle is cut in two by the valley through which flows the stream known as Bokali Deresi.

It is indeed a formidable and forbidding land. To the the sea it presents a steep front, broken up into innumerable ridges, bluffs, valleys, and sand pits, which rise to a height of several hundred feet. The surface is either a kind of bare and very soft yellow sandstone, which crumbles when you tread on it, or else it is covered with very thick shrubbery about six feet in height.

It is, in fact, an ideal country for irregular warfare, such as the Australians and New Zealanders were soon to find to their cost. You cannot see a yard in front of you, and so broken is the ground that the enemy's snipers were able to lie concealed within a few yards of the lines of infantry without it being possible to locate them. On the other hand, the Australians and New Zealanders have proved themselves adepts at this form of warfare, which requires the display of great endurance in climbing over the cliffs and offers scope for a display of that individuality which you find highly developed in these colonial volunteers. To organize anything like a regular attack on such ground is almost impossible, as the officers cannot see their men, who, the moment they move forward in open order, are lost among the thick scrub.

In the early part of the day very heavy casualties were suffered in the boats which conveyed the troops from the destroyers, tugs, and transports to the beach. As soon as it became light, the enemy's sharpshooters, hidden everywhere, simply concentrated their fire on the boats. Then they got close in. At least three boats, having broken away from their tows, drifted down the coast,

under no control, and were sniped at the whole way, steadily losing men.

All praise is due to the splendid conduct of the officers, midshipmen, and men who formed the beach parties and whose duty it was to pass backward and forward under a terrible fusillade which it was impossible to check in the early part of the day.

The work of disembarking went on mechanically under this fire at almost point-blank range. You saw the crowded boats cast off from the pinnaces, tugs, and destroyers, and laboriously pulled ashore by six or eight seamen. The moment it reached the beach the troops jumped out and doubled for cover to the foot of the bluffs, over some forty yards of beach. But the gallant crews of the boats had then to pull them out under a dropping fire from a hundred points where the enemy's marksmen lay hidden amid the sand and shrubs.

Throughout the whole of April 25 the landing of troops, stores, and munitions had to be carried out under these conditions, but the gallant sailors never failed their equally gallant comrades ashore. Every one, from the youngest midshipman, straight from Dartmouth and under fire for the first time, to the senior officers in charge, did their duty nobly.

When it became light the covering warships endeavored to support the troops on shore by a heavy fire from their secondary armament, but at this time, the positions of the enemy being unknown, the support was necessarily more moral than real. When the sun was fully risen and the haze had disappeared we could see that the Australians had actually established themselves on the top of the ridge and were evidently trying to work their way northward along it. At 8:45 the fire from the hills became intense and lasted for about half an hour, when it gradually died down, but only for a short time. Then it reopened and lasted without cessation throughout the remainder of the day. The fighting was so confused and took place among such broken ground that it is extremely difficult to follow exactly what did happen throughout the morning and afternoon of April

25. The rôle assigned to the covering force was splendidly carried out up to a certain point, and a firm footing was obtained on the crest of the ridge which allowed the disembarkation of the remainder of the force to go on uninterruptedly, except for the never-ceasing sniping.

But then the Australians, whose blood was up, instead of intrenching themselves and waiting developments, pushed northward and eastward inland in search of fresh enemies to tackle with the bayonet. The ground is so broken and ill-defined that it was very difficult to select a position to intrench, especially as, after the troops imagined they had cleared a section, they were continually being sniped from all sides. Therefore, they preferred to continue the advance.

It is impossible for any army to defend a long beach in any force, especially when you do not know exactly where an attack will be made, and when your troops will come under the fire of the guns of warships. The Turks, therefore, only had a comparatively weak force actually holding the beach, and they seemed to have relied on the difficult nature of the ground and their scattered snipers to delay the advance until they would bring up reinforcements from the interior. Some of the Australians who had pushed inland were counter-attacked and almost outflanked by these on-coming reserves and had to fall back after suffering very heavy casualties.

It was then the turn of the Turks to counter-attack, and this they continued to do throughout the afternoon, but the Australians never yielded a foot of ground on the main ridge, and reinforcements were continually poured up from the beach as fresh troops were disembarked from the transports. The enemy's artillery fire, however, presented a very difficult problem. As soon as the light became good the Turks enfiladed the beach with two field guns from Gaba Tepe and with two others from the north. This shrapnel fire was incessant and deadly. In vain did the warships endeavor to put them out of action with their secondary armament. For some hours they could not be accurately lo-

cated, or else were so well protected that our shells failed to do them any harm. The majority of the heavy casualties suffered during the day were from shrapnel, which swept the beach and the ridge on which the Australians and New Zealanders had established themselves.

Later in the day the two guns to the north were silenced or forced to withdraw to a fresh position, from which they could no longer enfilade the beach, and a cruiser, moving in close to the shore, so plastered Gaba Tepe with a hail of shell that the guns there were also silenced and have not attempted to reply since.

As the enemy brought up reinforcements toward dusk his attacks became more and more vigorous, and he was supported by a powerful artillery inland, which the ships' guns were powerless to deal with. The pressure on the Australians and New Zealanders became heavier, and the line they were occupying had to be contracted for the night. General Birwood and his staff went ashore in the afternoon and devoted all their energies to securing the position, so as to hold firmly to it until the following morning, when it was hoped to get some field guns in position to deal with the enemy's artillery.

Some idea of the difficulty to be faced may be gathered when it is remembered that every round of ammunition, all water, and all supplies had to be landed on a narrow beach and then carried up pathless hills, valleys, and bluffs, several hundred feet high, to the firing line. The whole of this mass of troops, concentrated on a very small area, and unable to reply, were exposed to a relentless and incessant shrapnel fire, which swept every yard of the ground, although fortunately a great deal of it was badly aimed or burst too high. The reserves were engaged in road making and carrying supplies to the crests and in answering the calls for more ammunition.

A serious problem was getting away the wounded from the shore, where it was impossible to keep them. All those who were unable to hobble to the beach had to be carried down from the hills

on stretchers, then hastily dressed, and carried to the boats. The boat and beach parties never stopped working throughout the entire day and night.

The courage displayed by these wounded Australians will never be forgotten. Hastily dressed and placed in trawlers, lighters, and ships' boats, they were towed to the ships. I saw some lighters full of bad cases. As they passed the battleship, some of those on board recognized her as the ship they had left that morning, whereupon, in spite of their sufferings and discomforts, they set up a cheer, which was answered by a deafening shout of encouragement from our crew.

I have, in fact, never seen the like of these, wounded Australians in war before, for as they were towed among the ships, while accommodation was being found for them, although many were shot to bits and without hope of recovery, their cheers resounded through the night, and you could just see, amid a mass of suffering humanity, arms being waved in greeting to the crews of the warships. They were happy, because they knew they had been tried for the first time in the war and had not been found wanting. They had been told to occupy the heights and hold on, and this they had done for fifteen mortal hours under an incessant shell fire, without the moral and material support of a single gun ashore, and subjected the whole time to the violent counter-attacks of a brave enemy, led by skilled leaders, while his snipers, hidden in caves and thickets and among the dense scrub, made a deliberate practice of picking off every officer who endeavored to give a word of command or to lead his men forward.

No finer feat of arms has been performed during the war than this sudden landing in the dark, this storming of the heights, and, above all, the holding on to the position thus won while reinforcements were being poured from the transports. These raw colonial troops, in those desperate hours, proved themselves worthy to fight side by side with

the heroes of Mons and the Aisne, Ypres, and Neuve Chapelle.

THE FOURTH DISPATCH.

Dardanelles, April 27.

Throughout the night of the 25th and the early morning of the 26th there was continual fighting, as the Turks made repeated attacks to endeavor to drive the Australians and New Zealanders from their positions. On several occasions parties of the colonials made local counter-attacks and drove the enemy off with the bayonet, which the Turks will never face.

On the morning of the 26th it became known that the enemy had been very largely reinforced during the night and was preparing for a big assault from the northeast. This movement began about 9:30 A. M. From the ships we could see large numbers of the enemy creeping along the top of the hills endeavoring to approach our positions under cover and then to annoy our troops with their incessant sniping. He had also brought up more guns during the night, and plastered the whole position once again with shrapnel.

The rifle and machine-gun fire became heavy and unceasing. But the enemy were not going to be allowed to have matters all their own way with their artillery. Seven warships had moved in close to the shore, while the Queen Elizabeth, further out, acted as a kind of chaperrone to the lot. Each covered a section of the line, and when the signal was given opened up a bombardment of the heights and valleys beyond which can only be described as terrific.

Turkish infantry moved forward to the attack. They were met by every kind of shell which our warships carry, from 15-inch shrapnel from the Queen Elizabeth, each one of which contains 20,000 bullets, to 12-inch, 6-inch, and 12-pounders.

The noise, smoke, and concussion produced was unlike anything you can even imagine until you have seen it. The hills in front looked as if they had suddenly been transformed into smoking volcanoes, the common shell throwing up

great chunks of ground and masses of black smoke, while the shrapnel formed a white canopy above. Sections of ground were covered by each ship all around our front trenches, and, the ranges being known, the shooting was excellent. Nevertheless, a great deal of the fire was, of necessity, indirect, and the ground affords such splendid cover that the Turks continued their advance in a most gallant manner, while their artillery not only plastered our positions on shore with shrapnel, but actually tried to drive the ships off the coast by firing at them, and their desperate snipers, in place of a better target, tried to pick off officers and men on the decks and bridges. We picked up many bullets on the deck afterward.

Some Turkish warship started to fire over the peninsula. The *Triumph* dropped two 10-inch shells within a few yards of her, whereupon she retired up the strait to a safer position, from which she occasionally dropped a few shells into space, but so far has done no damage.

The scene at the height of this engagement was sombre, magnificent, and unique. The day was perfectly clear, and you could see right down the coast as far as Sedd-ul-Bahr. There the warships of the first division were blazing away at Aki Baba and the hills around it, covering their summits with a great white cloud of bursting shells. Further out the giant forms of the transports which accompanied that division loomed up through the slight mist. Almost opposite Gaba Tepe a cruiser close in shore was covering the low ground with her guns and occasionally dropping shells right over into the straight on the far side. Opposite the hills in possession of the Australian and New Zealand troops an incessant fire was kept up from the ships. Beyond lay our transports, which had moved further out to avoid the Turkish warships' shells and those of some battery which fires persistently.

Beyond all, the *Queen Elizabeth*, with her eight huge, monstrous 15-inch guns, all pointed shoreward, seemed to threaten immediate annihilation to any enemy

who dared even to aim at the squadron under her charge.

On shore the rifle and machine-gun fire was incessant, and at times rose into a perfect storm as the Turks pressed forward their attack. The hills were ablaze with shells from the ships and the enemy's shrapnel, while on the beach masses of troops were waiting to take their places in the trenches, and the beach parties worked incessantly at landing stores, material, and ammunition.

This great attack lasted some two hours, and during this time we received encouraging messages from the beach. "Thanks for your assistance. Your guns are inflicting awful losses on the enemy." The Turks must, in fact, have suffered terribly from this concentrated fire from so many guns and from the infantry in the trenches.

The end came amid a flash of bayonets and a sudden charge of the colonials, before which the Turks broke and fled amid a perfect tornado of shells from the ships. They fell back sullen and checked, but not yet defeated, but for the remainder of the day no big attack was pressed home, and the colonials gained some ground by local counter-attacks, which enlarged and consolidated the position they were holding.

The Turks kept up their incessant shrapnel fire throughout the day, but the colonials were now dug in and could not be shaken by it in their trenches, while the reserves had also prepared shelter trenches and dug-outs on the slopes.

Some prisoners were captured, including an officer, who said that the Turks were becoming demoralized by the fire of the guns, and that the Germans now had difficulty in getting them forward to the attack. We are well intrenched, and they will probably do likewise, and we shall see a repetition of the siege warfare out here.

THE FIFTH DISPATCH.

Dardanelles, April 30.

While Australians and New Zealanders were fighting so gallantly against heavy odds north of Gaba Tepe, British

troops crowned themselves with equal laurels at the southern end of the Gallipoli Peninsula. A firm footing now has been obtained. The line stretches across the southern end of the entire peninsula, with both flanks secured by the fire of warships. The army holds many convenient landing places immune from the enemy's guns.

The problems British landing parties faced differed from those the Australians solved further north. Here the cliffs are not high and irregular, but rise about fifty feet from the water's edge, with stretches of beach at intervals. Five of these beaches were selected for disembarkation under the cover of warships. It was hoped the Turkish trenches would be rendered untenable and the barbed wire entanglements cut by the fire of the ships, but these expectations were not realized.

For example, the landing place between Gaba Tepe and Cape Helles was the scene of a desperate struggle which raged all day. The Turks held barbed wire protected trenches in force and their snipers covered the foreshore. After hours of bombardment the troops were taken ashore at daybreak. Part of the force scaled the cliffs and obtained a precarious footing on the edge of the cliffs, but boats which landed along the beach were confronted with a solid hedge of barbed wire and exposed to a terrible cross-fire. Every effort was made to cut the wire, but almost all those who landed here were shot down. Later the troops on the cliffs succeeded in driving back the Turks and clearing the beach.

The most terrible of all landings, however, was on the beach between Cape Helles and the Seddul Bahr. Here the broken valley runs inland enfiladed by hills on either flank, on which were built strong forts, which defended the entrance to the strait until they were knocked out by our guns. Although the guns and emplacements were shattered the bombproofs and ammunition chambers remained intact, and, running back, formed a perfect network of trenches and entanglements right around the semicircular valley. The Turks had

mounted pompoms on the Cape Helles side and had the usual snipers concealed everywhere. The foreshore and valley also were protected by trenches and wire, rendering the position most formidable.

One novel expedient was running a liner full of troops deliberately ashore, thus allowing them to approach close in under cover without being exposed in open boats. Great doors had been cut in her sides to permit rapid disembarkation, and she was well provided with Maxims to sweep the shore while the troops were landing. Owing to her going ashore further east than was intended, however, it became necessary to bring up a lighter to facilitate the landing. The Turks directed a perfect tornado of rifle, Maxim, and pompom fire on 200 men who made a dash down the gangway. Only a few survived to gain shelter. All the others were killed on the gangway. Disembarkation, therefore, which meant almost certain death, was postponed until later in the morning, when another attempt also failed.

Then, while the liner, carrying 2,000 men, packed in like sardines, with the officers huddled on the protected bridge, lay all day on shore, with a hail of bullets rattling against her protected sides, the battleships Albion, Cornwallis, and Queen Elizabeth furiously bombarded Seddul Bahr and the encircling hills. Meanwhile the Turks on the Asiatic side tried to destroy the liner by howitzer fire, which was kept under only by the bombardment from covering ships in the strait. In spite of this covering fire, the vessel was pierced by four big shells, and it was decided to postpone any further movement until night, when the troops got ashore almost without the Turks firing a shot, as a result, perhaps, of troops landed on other beaches having pushed along and destroyed some Turkish positions.

END OF THE THIRD WEEK.

[Special Cable to THE NEW YORK TIMES.]

IMBROS, (via Dedeaghat, Turkey,) May 15, (Dispatch to The London Daily Chronicle.)—Operations in the Dardanelles have now been in full swing for

just three weeks, and a glance from the mountaintop here at the far-spread region over which the war has been and is being waged shows instantly the material progress which has been made in that time.

When I first looked down on the fascinating and unique vision presented to my eyes from this point of vantage it was a sight truly marvelous. A fleet of transports stood at the entrance to the strait, and to the north of Gaba Tepe the warships were hammering away at the mouth of the Dardanelles, and at several points along the western coast of the peninsula one could see at different points on the land that severe battles were being fought. The heavy clouds of war hung over all, lit up grimly by the vivid flashes of the guns. At times the din was tremendous and went on night and day without cessation. Column after column of dense smoke betokened the falling of forts, and gradually the white puffs from our guns like long rollers on a broken coast advanced up the peninsula from the south and inland from the Gaba Tepe region.

Aeroplanes and dirigibles were always busy. Destroyers and huge transports churned up foam, and submarines left their faint trace on the wide extent of bluest ocean. The scene was one of war in all its picturesqueness and horror, for one could easily imagine awful scenes taking place under the far cloud of smoke and dust. It was war in all its force seen so for the first time.

Today the scene is strangely altered. Nearly all the transports have gone up the western coast of the peninsula, but a few battleships stand on sentry-go, as it were. All resistance in the region directly opposite has been fought down. The smoke coming from over the ridge in front shows that our warships have advanced far up to Kilid Bahr, while comparatively few ships stand at the entrance of the strait. From the inside the Asiatic coast is being bombarded, but the picturesque features of the scene have gone. It is a change which marks triumphant progress. The Turk is being slowly but surely pushed back, dying gamely.

Two days of thick mist were followed by a forty-eight hours' armistice granted to the Turks on Tuesday and Wednesday. It was impossible to see anything of the operations. Behind the veil of mist the fighting went sternly on and the big guns boomed incessantly. Wednesday night they were particularly active. Seldom in the past three weeks has the night sky been so brilliantly illuminated by the flashes of cannon. Serious work is evidently being done or completed. It was not until Thursday afternoon that the weather conditions made it possible to see the result of the warfare behind the screen of mist, and, as I have said, the whole aspect of the now familiar scene appears greatly changed when the coast of the peninsula is deserted by vessels, save for the few transports standing further out to sea than usual and half a dozen ships of war.

The peninsula beyond Gaba Tepe had apparently been cleared of the enemy. The tide of the struggle had passed away. On Thursday, too, I could see our guns flashing from a hill, firing probably at points northward or across the strait. Further north our artillery also appeared to be placed on a high ridge this side of Maidos. What a magic sight the southern part of the peninsula must present, where even at this distance the evidence of the havoc of three weeks' daily shell and lead is not hidden!

The point of the peninsula has become brown under the trampling of men and guns. Krithia lies a complete and pathetic ruin, and Tree Hill is scarred with trench and shell holes as far as I can see.

On Thursday the point of greatest activity was in the strait opposite the conquered portion of the peninsula. It stood out somewhat dim in the haze of battle, but the smoke and flash of the Allies' guns and the Turks' answering could be picked out without great difficulty. Added to this the air was still; the dull thud of the field guns at work there was different from the resounding boom of the naval guns, and the whirr of the machine guns could be plainly heard.

Hard work by land and water is going on along the front stretching away to the left from Erenkeui on the Asiatic side,

and the difficulties of obtaining a substantial footing in that mountainous region had evidently been overcome. It was apparent that the enemy was putting up a stiff fight, and at times he must have run his batteries close to the water's edge.

Early in the afternoon the Turkish gunners managed to explode several shells on the land near Morto Bay on the European side. A little later they made the earth and stones of Tree Hill fly up in the air by a few well-placed shells, but such advances on the part of the enemy were brief. The warships in the strait instantly turned their guns on the daring batteries, and such diversions by the enemy were only of brief duration. Toward sunset a battleship was seen to send two shells against the cliff edge south of Suvla Bay.

Yesterday the thick smoke of battle still hung over all activities on the Asiatic side of the waterway. Nearly all the transports had gone, and most of the warships were engaged in the entrance and further up to near Kilid Bahr. Only one battleship that I could see was firing from off the western coast of the peninsula, standing well out off shore near Krithia. It was evidently firing

long-range shells against the foe on the further side of the Dardanelles.

The land actions had another point of interest yesterday. In the afternoon very heavy fighting could be noticed far along the Sari Bair, (about sixteen miles north of the tip of the peninsula,) where the Australians are. Every now and again waves of smoke blotted out that part of the landscape. It would clear occasionally to show the hillsides dotted over with puffs of white. Often against the gray background spurts of flame would herald the thunder of heavily engaged artillery. Rifle fire at times, too, could be heard.

The supposition is that our forces in that region, who are forcing their way across the peninsula, must be near the completion of their task.

From what I have said it will be gathered, I think, that very substantial progress has been made since operations began three weeks ago. As one looks at the mountainous and rugged nature of the country beyond the strait it is evident that the enemy has there favorable ground for defensive fighting. That region now appears to be the main point of his struggle.

I learn that the Turkish losses amount to over 80,000, and that 50,000 wounded have been sent to Constantinople.

"War Babies"

[From *The Suffragette* of London, edited by Christabel Pankhurst, in its issue of May 7, 1915.]

"The children who are coming into the world must be welcomed, and must be provided with greater, not smaller, advantages, because they are legally fatherless.

"Why should not these children be brought up under model conditions, so that they may be the equal in knowledge and general cultivation of any in the land?

"Every one of them must become a valuable asset to the nation. But that can only be if they are reared in a generous way. They are everybody's children, and have a claim on the community as a whole. The problem of the illegitimate child has been shirked since the beginning of time. Now it has to be faced!"

—From *The Suffragette* of April 23.

The Women's Social and Political Union, in order to help in solving this problem, has in view the adoption of a number of "war babies," who will be reared under model conditions, and provided with a good general education followed by a training adapted to the natural ability and special gifts of each individual child.

The children will be brought up together in a home in which they will receive that loving care which is necessary for their happiness and full development.

Fuller details of the scheme will be given at a meeting to be addressed by Mrs. Pankhurst on Thursday afternoon, June 3, at the London Palladium. In the meantime those wishing to give their financial or other support are asked to write to Mrs. Pankhurst at Lincoln's Inn House, Kingsway, London, W. C.

The German stickle-backs worry the "Ruler of the Seas."

What Is Our Duty?

By Mrs. Emmeline Pankhurst

The position of the British suffragettes, who suspended their militant program and are zealously supporting the cause of the Allies, is stated in this speech by Mrs. Pankhurst, delivered in the Sun Hall, Liverpool, and reported in *The Suffragette* of April 23, 1915.

I THINK that throughout our agitation for the franchise for political emancipation, on platforms and on other places—even in prisons—we have talked about rights, and fought for rights; at the same time we have always coupled with the claim for rights clear statements as to duty. We have never lost sight of the fact that to possess rights puts upon human beings grave responsibilities and serious duties. We have fought for rights because, in order to perform your duty and fulfill your responsibilities properly, in time of peace, you must have certain citizen rights. When the State is in danger, when the very liberties in your possession are imperiled, is, above all, the time to think of duty. And so, when the war broke out, some of us who, convalescing after our fights, decided that one of the duties of the Women's Social and Political Union in war time was to talk to men about their duty to the nation—the duty of fighting to preserve the independence of our country, to preserve what our forefathers had won for us, and to protect the nation from foreign invasion.

There are people who say, "What right have women to talk to men about fighting for their country, since women are not, according to the custom of civilization, called upon to fight?" That used to be said to us in times of peace.

Certainly women have the right to say to men, "Are you going to fight to defend your country and redeem your promise to women?"

Men have said to women, not only that they fight to defend their country, but that they protect women from all the dangers and difficulties of life, and they are proud to be in the position to do it. Why, then, we say to those men, "You

are indeed now put to the test. The men of Belgium, the men of France, the men of Serbia, however willing they were to protect women from the things that are most horrible—and more horrible to women than death itself—have not been able to do it."

It is only by an accident, or a series of accidents, for which no man here has the right to take credit, that British women on British soil are not now enduring the horrors endured by the women of France, the women of Belgium, and the women of Serbia. The least that men can do is that every man of fighting age should prepare himself to redeem his word to women, and to make ready to do his best, to save the mothers, the wives, and the daughters of Great Britain from outrage too horrible even to think of.

We have the right to say to the men, "Fight for your country, defend the shores of this land of ours. Fight for your homes, for the women, and for the children." We have the right if that was the only reason, but in these days, when women are taking larger views of their duty to the State, we go further than that; we claim the right to hold recruiting meetings and ask men to fight for bigger reasons than are advanced ordinarily. We say to men, "In this war there are issues at stake bigger even than the safety of your homes and your own country. Your honor as a nation is at stake."

We have our duties in this war. First of all, this duty begins at home—this duty to our home, because I always feel that if we are not ready to do our duty to those nearest to us we are not fit to do our duty far away. And so the first duty is to ourselves and to our homes. Then there is the duty to protect those

recognized the importance of testing it severely, and so far as the conditions permit we have followed the principles which are recognized in the courts of England, the British overseas dominions, and the United States. We have also (as already noted) set aside the testimony of any witnesses who did not favorably impress the lawyers who took their depositions, and have rejected hearsay evidence except in cases where hearsay furnished an undersigned confirmation of facts with regard to which we already possessed direct testimony from some other source, or explained in a natural way facts imperfectly narrated or otherwise perplexing.*

It is natural to ask whether much of the evidence given, especially by the Belgian witnesses, may not be due to excitement and overstrained emotions, and whether, apart from deliberate falsehood, persons who mean to speak the truth may not in a more or less hysterical condition have been imagining themselves to have seen the things which they say that they saw. Both the lawyers who took the depositions, and we when we came to examine them, fully recognized this possibility. The lawyers, as already observed, took pains to test each witness and either rejected, or appended a note of distrust to, the testimony of those who failed to impress them favorably. We have carried the sifting still further by also omitting from the depositions those in which we found something that seemed too exceptional to be accepted on the faith of one witness only, or too little supported by other evidence pointing to like facts. Many depositions

have thus been omitted on which, though they are probably true, we think it safer not to place reliance.

Notwithstanding these precautions, we began the inquiry with doubts whether a positive result would be attained. But the further we went and the more evidence we examined so much the more was our skepticism reduced. There might be some exaggeration in one witness, possible delusion in another, inaccuracies in a third. When, however, we found that things which had at first seemed improbable were testified to by many witnesses coming from different places, having had no communication with one another, and knowing nothing of one another's statements, the points in which they all agreed became more and more evidently true. And when this concurrence of testimony, this convergence upon what were substantially the same broad facts, showed itself in hundreds of depositions, the truth of those broad facts stood out beyond question. The force of the evidence is cumulative. Its worth can be estimated only by perusing the testimony as a whole. If any further confirmation had been needed, we found it in the diaries in which German officers and private soldiers have recorded incidents just such as those to which the Belgian witnesses depose.

The experienced lawyers who took the depositions tell us that they passed from the same stage of doubt into the same stage of conviction. They also began their work in a skeptical spirit, expecting to find much of the evidence colored by passion, or prompted by an excited fancy. But they were impressed by the general moderation and matter-of-fact level-headedness of the witnesses. We have interrogated them, particularly regarding some of the most startling and shocking incidents which appear in the evidence laid before us, and where they expressed a doubt we have excluded the evidence, admitting it as regards the cases in which they stated that the witnesses seemed to them to be speaking the truth, and that they themselves believed the incidents referred to have happened. It is for this reason that we

*For instance, the dead body of a man is found lying on the doorstep, or a woman is seen who has the appearance of having been outraged. So far the facts are proved by the direct evidence of the person by whom they have been seen. Information is sought for by him as to the circumstances under which the death or outrages took place. The bystanders who saw the circumstances, but who are not now accessible, relate what they saw, and this is reported by the witness to the examiner and is placed on record in the depositions. We have had no hesitation in taking such evidence into consideration.

have inserted among the depositions printed in the appendix several cases which we might otherwise have deemed scarcely credible.

The committee has conducted its investigations and come to its conclusions independently of the reports issued by the French and Belgian commissions, but it has no reason to doubt that those conclusions are in substantial accord with the conclusions that have been reached by these two commissions.

ARRANGEMENT OF THE REPORT.

As respects the framework and arrangement of the report, it has been deemed desirable to present first of all what may be called a general historical account of the events which happened, and the conditions which prevailed in the parts of Belgium which lay along the line of the German march, and thereafter to set forth the evidence which bears upon particular classes of offenses against the usages of civilized warfare, evidence which shows to what extent the provisions of The Hague Convention have been disregarded.

This method, no doubt, involves a cer-

tain amount of overlapping, for some of the offenses belonging to the latter part of the report will have been already referred to in the earlier part which deals with the invasion of Belgium. But the importance of presenting a connected narrative of events seems to outweigh the disadvantage of occasional repetition.

The report will therefore be found to consist of two parts, viz. :

(1) An analysis and summary of the evidence regarding the conduct of the German troops in Belgium toward the civilian population of that country during the first few weeks of the invasion.

(2) An examination of the evidence relating to breaches of the rules and usages of war and acts of inhumanity, committed by German soldiers or groups of soldiers, during the first four months of the war, whether in Belgium or in France.

This second part has again been subdivided into two sections:

a. Offenses committed against noncombatant civilians during the conduct of the war generally.

b. Offenses committed against combatants, whether in Belgium or in France.

PART I.

THE CONDUCT OF THE GERMAN TROOPS IN BELGIUM.

Although the neutrality of Belgium had been guaranteed by a treaty signed in 1839 to which France, Prussia, and Great Britain were parties, and although, apart altogether from any duties imposed by treaty, no belligerent nation has any right to claim a passage for its army across the territory of a neutral State, the position which Belgium held between the German Empire and France had obliged her to consider the possibility that in the event of a war between these two powers her neutrality might not be respected. In 1911 the Belgian Minister at Berlin had requested an assurance from Germany that she would observe the Treaty of 1839; and the Chancellor of the empire had declared that Germany had no intention of violating Belgian neutrality. Again in 1913 the German Secretary of State at a

meeting of a Budget Committee of the Reichstag had declared that "Belgian neutrality is provided for by international conventions and Germany is determined to respect those conventions." Finally, on July 31, 1914, when the danger of war between Germany and France seemed imminent, Herr von Below, the German Minister in Brussels, being interrogated by the Belgian Foreign Department, replied that he knew of the assurances given by the German Chancellor in 1911, and that he "was certain that the sentiments expressed at that time had not changed." Nevertheless on Aug. 2 the same Minister presented a note to the Belgian Government demanding a passage through Belgium for the German Army on pain of an instant declaration of war. Startled as they were by the suddenness with which

this terrific war cloud had risen on the eastern horizon, the leaders of the nation rallied around the King in his resolution to refuse the demand and to prepare for resistance. They were aware of the danger which would confront the civilian population of the country if it were tempted to take part in the work of national defense. Orders were accordingly issued by the Civil Governors of provinces, and by the Burgomasters of towns, that the civilian inhabitants were to take no part in hostilities and to offer no provocation to the invaders. That no excuse might be furnished for severities, the populations of many important towns were instructed to surrender all firearms into the hands of the local officials.¹

This happened on Aug. 2. On the evening of Aug. 3 the German troops crossed the frontier. The storm burst so suddenly that neither party had time to adjust its mind to the situation. The Germans seem to have expected an easy passage. The Belgian population, never dreaming of an attack, were startled and stupefied.

LIEGE AND DISTRICT.

On Aug. 4 the roads converging upon Liège from northeast, east, and south were covered with German Death's Head Hussars and Uhlans pressing forward to seize the passage over the Meuse. From the very beginning of the operations the civilian population of the villages lying upon the line of the German advance were made to experience the extreme horrors of war. "On the 4th of August," says one witness, "at Herve," (a village not far from the frontier,) "I saw at about 2 o'clock in the afternoon, near the station, five Uhlans; these were the first German troops I had seen. They were followed by a German officer and some soldiers in a motor car. The men in the car called out to a couple of young fellows who were standing about thirty yards away. The young men, being afraid, ran off and then the Germans

fired and killed one of them named D." The murder of this innocent fugitive civilian was a prelude to the burning and pillage of Herve and of other villages in the neighborhood, to the indiscriminate shooting of civilians of both sexes, and to the organized military execution of batches of selected males. Thus at Herve some fifty men escaping from the burning houses were seized, taken outside the town and shot. At Melen, a hamlet west of Herve, forty men were shot. In one household alone the father and mother (names given) were shot, the daughter died after being repeatedly outraged, and the son was wounded. Nor were children exempt. "About Aug. 4," says one witness, "near Vottem, we were pursuing some Uhlans. I saw a man, woman, and a girl about nine, who had been killed. They were on the threshold of a house, one on the top of the other, as if they had been shot down, one after the other, as they tried to escape."

The burning of the villages in this neighborhood and the wholesale slaughter of civilians, such as occurred at Herve, Micheroux, and Soumagne, appear to be connected with the exasperation caused by the resistance of Fort Fléron, whose guns barred the main road from Aix la Chapelle to Liège. Enraged by the losses which they had sustained, suspicious of the temper of the civilian population, and probably thinking that by exceptional severities at the outset they could cow the spirit of the Belgian Nation, the German officers and men speedily accustomed themselves to the slaughter of civilians. How rapidly the process was effected is illustrated by an entry in the diary of Kurt Hoffman, a one-year's man in the First Jägers, who on Aug. 5 was in front of Fort Fléron. He illustrates his story by a sketch map. "The position," he says, "was dangerous. As suspicious civilians were hanging about—houses 1, 2, 3, 4, 5, were cleared, the owners arrested, (and shot the following day.) Suddenly village A was fired at. Out of it bursts our baggage train, and the Fourth Company of the Twenty-seventh Regiment who had lost their way and been shelled by our

¹ Copies of typical proclamations have been printed in *L'Allemagne et la Belgique*, Documents Annexés, xxxvi.

own artillery. From the point D. P., (shown in diary,) I shoot a civilian with rifle at 400 meters slap through the head, as we afterward ascertained." Within a few hours, Hoffman, while in house 3, was himself under fire from his own comrades and narrowly escaped being killed. A German, ignorant that house 3 had been occupied, reported, as was the fact, that he had been fired upon from that house. He had been challenged by the field patrol, and failed to give the countersign. Hoffman continues:

"Ten minutes later, people approach who are talking excitedly—apparently Germans. I call out 'Halt, who's there?' Suddenly rapid fire is opened upon us, which I can only escape by quickly jumping on one side—with bullets and fragments of wall and pieces of glass flying around me. I call out 'Halt, here Field Patrol.' Then it stops, and there appears Lieutenant Römer with three platoons. A man has reported that he had been shot at out of our house; no wonder, if he does not give the countersign."

The entry, though dated Aug. 5, was evidently written on the 6th or later, because the writer refers to the suspicious civilians as having been shot on that day. Hoffman does not indicate of what offense these civilians were guilty, and there is no positive evidence to connect their slaughter with the report made by the German who had been fired on by his comrades. They were "suspicious" and that was enough.

The systematic execution of civilians, which in some cases, as the diary just cited shows, was founded on a genuine mistake, was given a wide extension through the Province of Liège. In Soumagne and Micheroux very many civilians were summarily shot. In a field belonging to a man named E. fifty-six or fifty-seven were put to death. A German officer said: "You have shot at us." One of the villagers asked to be allowed to speak, and said: "If you think these people fired kill me, but let them go." The answer was three volleys. The survivors were bayoneted. Their corpses were seen in the field that night by another witness. One at least had been mutilated. These were not the only

victims in Soumagne. The eyewitness of the massacre saw, on his way home, twenty bodies, one that of a young girl of thirteen. Another witness saw nineteen corpses in a meadow.

At Blegny Trembleur, on the 6th, some civilians were captured by German soldiers, who took steps to put them to death forthwith, but were restrained by the arrival of an officer. The prisoners subsequently were taken off to Battice and five were shot in a field. No reason was assigned for their murder.

In the meantime house burners were at work. On the 6th, Battice was destroyed in part. From the 8th to the 10th over 300 houses were burned at Herve, while mounted men shot into doors and windows to prevent the escape of the inhabitants.

At Heure le Romain on or about the 15th of August all the male inhabitants, including some bedridden old men, were imprisoned in the church. The Burgomaster's brother and the priest were bayoneted.

On or about the 14th and 15th the village of Visé was completely destroyed. Officers directed the incendiaries, who worked methodically with benzine. Antiques and china were removed from the houses, before their destruction, by officers, who guarded the plunder, revolver in hand. The house of a witness, which contained valuables of this kind, was protected for a time by a notice posted on the door by officers. This notice has been produced to the committee. After the removal of the valuables this house also was burned.

German soldiers had arrived on the 15th at Blegny Trembleur and seized a quantity of wine. On the 16th prisoners were taken; four, including the priest and the Burgomaster, were shot. On the same day 200 (so-called) hostages were seized at Flémalle and marched off. There they were told that unless Fort Flémalle surrendered by noon they would be shot. It did surrender and they were released.

Entries in a German diary show that on the 19th the German soldiers gave themselves up to debauchery in the

streets of Liège, and on the night of the 20th (Thursday) a massacre took place in the streets, beginning near the Café Carpentier, at which there is said to have been a dinner attended by Russian and other students. A proclamation issued by General Kolewe on the following day gave the German version of the affair, which was that his troops had been fired on by Russian students. The diary states that in the night the inhabitants of Liège became mutinous and that fifty persons were shot. The Belgian witnesses vehemently deny that there had been any provocation given, some stating that many German soldiers were drunk, others giving evidence which indicates that the affair was planned beforehand. It is stated that at 5 o'clock in the evening, long before the shooting, a citizen was warned by a friendly German soldier not to go out that night.

Though the cause of the massacre is in dispute, the results are known with certainty. The Rue des Pitteurs and houses in the Place de l'Université and the Quai des Pêcheurs were systematically fired with benzine, and many inhabitants were burned alive in their houses, their efforts to escape being prevented by rifle fire. Twenty people were shot, while trying to escape, before the eyes of one of the witnesses. The Liège Fire Brigade turned out but was not allowed to extinguish the fire. Its carts, however, were usefully employed in removing heaps of civilian corpses to the Town Hall. The fire burned on through the night and the murders continued on the following day, the 21st. Thirty-two civilians were killed on that day in the Place de l'Université alone, and a witness states that this was followed by the rape in open day of fifteen or twenty women on tables in the square itself.

No depositions are before us which deal with events in the City of Liège after this date. Outrages, however, continued in various places in the province.

For example, on or about the 21st of August, at Pepinster two witnesses were seized as hostages and were threatened, together with five others, that, unless they could discover a civilian who was al-

leged to have shot a soldier in the leg, they would be shot themselves. They escaped their fate because one of the hostages convinced the officer that the alleged shooting, if it took place at all, took place in the Commune of Cornesse and not that of Pepinster, whereupon the Burgomaster of Cornesse, who was old and very deaf, was shot forthwith.

The outrages on the civilian population were not confined to the villages mentioned above, but appear to have been general throughout this district from the very outbreak of the war.

An entry in one of the diaries says:

"We crossed the Belgian frontier on 15th August, 1914, at 11:50 in the forenoon, and then we went steadily along the main road till we got into Belgium. Hardly were we there when we had a horrible sight. Houses were burned down, the inhabitants chased away and some of them shot. Not one of the hundreds of houses were spared. Everything was plundered and burned. Hardly had we passed through this large village before the next village was burned, and so it went on continuously. On the 16th August, 1914, the large village of Baruchon was burned down. On the same day we crossed the bridge over the Meuse at 11:50 in the morning. We then arrived at the town of Wandre. Here the houses were spared, but everything was examined. At last we were out of the town and everything went in ruins. In one house a whole collection of weapons was found. The inhabitants without exception were shot. This shooting was heart-breaking, as they all knelt down and prayed, but that was no ground for mercy. A few shots rang out and they fell back into the green grass and slept for ever." ["Die Einwohner wurden samt und sonders herausgeholt und erschossen: aber dieses Erschiessen war direkt herzerreisend wie sie alle knieen und beteten, aber dies half kein Erbarmen. Ein paar Schüsse krackten und die fielen rücklings in das grüne Gras und erschliefen für immer."]

VALLEYS OF MEUSE AND SAMBRE.

While the First Army, under the command of General Alexander von Kluck, was mastering the passages of the Meuse between Visé and Namur, and carrying out the scheme of devastation which has already been described, detachments of the Second German Army, under General von Bülow, were proceeding up the

Meuse valley toward Namur. On Wednesday, Aug. 12, the town of Huy, which stands half way between Namur and Liège, was seized. On Aug. 20 German guns opened fire on Namur itself. Three days later the city was evacuated by its defenders, and the Germans proceeded along the valley of the Sambre through Tamines and Charleroi to Mons. Meanwhile a force under General von Hausen had advanced upon Dinant, by Laroche, Marche, and Achène, and on Aug. 15 made an unsuccessful assault upon that town. A few days later the attack was renewed and with success, and, Dinant captured, von Hausen's army streamed into France by Bouvines and Rethel, firing and looting the villages and shooting the inhabitants as they passed through.

The evidence with regard to the Province of Namur is less voluminous than that relating to the north of Belgium. This is largely due to the fact that the testimony of soldiers is seldom available, as the towns and villages once occupied by the Germans were seldom reoccupied by the opposing troops, and the number of refugees who have reached England from the Namur district is comparatively small.

ANDENNE.

Andenne is a small town on the Meuse between Liège and Namur, lying opposite the village of Seilles, (with which it is connected by a bridge over the river,) and was one of the earlier places reached on the German advance up the Meuse. In order to understand the story of the massacre which occurred there on Thursday, Aug. 20, the following facts should be borne in mind: The German advance was hotly contested by Belgian and French troops. From daybreak onward on the 19th of August the Eighth Belgian Regiment of the Line were fighting with the German troops on the left bank of the Meuse on the heights of Seilles. At 8 A. M. on the 19th the Belgians found further resistance impossible in the district, and retired under shelter of the forts of Namur. As they retired they blew up Andenne Bridge. The first Germans arrived at Andenne at about 10 A. M., when ten or twelve Uhlans rode

into the town. They went to the bridge and found it was destroyed. They then retired, but returned about half an hour afterward. Soon after that several thousand Germans entered the town and made arrangements to spend the night there. Thus, on the evening of the 19th of August, a large body of German troops were in possession of the town, which they had entered without any resistance on the part of the allied armies or of the civilian population.

About 4:30 on the next afternoon shots were fired from the left bank of the Meuse and replied to by the Germans in Andenne. The village of Andenne had been isolated from the district on the left bank of the Meuse by the destruction of the bridge, and there is nothing to suggest that the firing on the left came from the inhabitants of Andenne. Almost immediately, however, the slaughter of these inhabitants began, and continued for over two hours and intermittently during the night. Machine guns were brought into play. The German troops were said to be for the most part drunk, and they certainly murdered and ravaged unchecked. A reference to the German diaries in the appendix will give some idea of the extent to which the army gave itself up to drink through the month of August.

When the fire slackened about 7 o'clock, many of the townspeople fled in the direction of the quarries; others remained in their houses. At this moment the whole of the district around the station was on fire and houses were flaming over a distance of two kilometers in the direction of the hamlet of Tramaika. The little farms which rise one above the other on the high ground of the right bank were also burning.

At 6 o'clock on the following morning, the 21st, the Germans began to drag the inhabitants from their houses. Men, women, and children were driven into the square, where the sexes were separated. Three men were then shot, and a fourth was bayoneted. A German Colonel was present whose intention in the first place appeared to be to shoot all the men. A young German girl who had been staying in the neighborhood interceded with

him, and after some parleying, some of the prisoners were picked out, taken to the banks of the Meuse and there shot. The Colonel accused the population of firing on the soldiers, but there is no reason to think that any of them had done so, and no inquiry appears to have been made.

About 400 people lost their lives in this massacre, some on the banks of the Meuse, where they were shot according to orders given, and some in the cellars of the houses where they had taken refuge. Eight men belonging to one family were murdered. Another man was placed close to a machine gun which was fired through him. His wife brought his body home on a wheelbarrow. The Germans broke into her house and ransacked it, and piled up all the eatables in a heap on the floor and relieved themselves upon it.

A hairdresser was murdered in his kitchen where he was sitting with a child on each knee. A paralytic was murdered in his garden. After this came the general sack of the town. Many of the inhabitants who escaped the massacre were kept as prisoners and compelled to clear the houses of corpses and bury them in trenches. These prisoners were subsequently used as a shelter and protection for a pontoon bridge which the Germans had built across the river, and were so used to prevent the Belgian forts from firing upon it.

A few days later the Germans celebrated a *Fête Nocturne* in the square. Hot wine, looted in the town, was drunk, and the women were compelled to give three cheers for the Kaiser and to sing "Deutschland über Alles."

NAMUR DISTRICT.

The fight around Namur was accompanied by sporadic outrages. Near Marchovelette wounded men were murdered in a farm by German soldiers. The farm was set on fire. A German cavalryman rode away holding in front of him one of the farmer's daughters crying and disheveled.

At Temploux, on the 23d of August, a professor of modern languages at the College of Namur was shot at his front

door by a German officer. Before he died he asked the officer the reason for this brutality, and the officer replied that he had lost his temper because some civilians had fired upon the Germans as they entered the village. This allegation was not proved. The Belgian Army was still operating in the district, and it may well be that it was from them that the shots in question proceeded. After the murder the house was burned.

On the 24th and 25th of August massacres were carried out at Surice, in which many persons belonging to the professional classes, as well as others, were killed.

Namur was entered on the 24th of August. The troops signalized their entry by firing on a crowd of 150 unarmed, unresisting civilians, ten alone of whom escaped.

A witness of good standing who was in Namur describes how the town was set on fire systematically in six different places. As the inhabitants fled from the burning houses they were shot by the German troops. Not less than 140 houses were burned.

On the 25th the hospital at Namur was set on fire with inflammable pastilles, the pretext being that soldiers in the hospital had fired upon the Germans.

At Denée, on the 28th of August, a Belgian soldier who had been taken prisoner saw three civilian fellow-prisoners shot. One was a cripple and another an old man of eighty who was paralyzed. It was alleged by two German soldiers that these men had shot at them with rifles. Neither of them had a rifle, nor had they anything in their pockets. The witness actually saw the Germans search them and nothing was found.

CHARLEROI DISTRICT.

In Tamines, a large village on the Meuse between Namur and Charleroi, the advance guard of the German Army appeared in the first fortnight in August, and in this as well as in other villages in the district, it is proved that a large number of civilians, among them aged people, women, and children, were deliberately killed by the soldiers. One witness describes how she saw a Belgian

boy of fifteen shot on the village green at Tamines, and a day or two later on the same green a little girl and her two brothers, (name given,) who were looking at the German soldiers, were killed before her eyes for no apparent reason.

The principal massacre at Tamines took place about Aug. 23. A witness describes how he saw the public square littered with corpses, and after a search found those of his wife and child, a little girl of seven.

Another witness, who lived near Tamines, went there on Aug. 27, and says: "It is absolutely destroyed and a mass of ruins."

At Morlanwelz, about this time, the British Army, together with some French cavalry, were compelled to retire before the German troops. The latter took the Burgomaster and his man servant prisoner and shot them both in front of the Hôtel de Ville at Péronne, (Belgium,) where the bodies were left in the street for forty-eight hours. They burned the Hôtel de Ville and sixty-two houses. The usual accusation of firing by civilians was made. It is strenuously denied by the witness, who declares that three or four days before the arrival of the Germans, circulars had been distributed to every house and placards had been posted in the town ordering the deposit of all firearms at the Hôtel de Ville and that this order had been complied with.

At Monceau-sur-Sambre, on the 21st of August, a young man of eighteen was shot in his garden. His father and brother were seized in their house and shot in the courtyard of a neighboring country house. The son was shot first. The father was compelled to stand close to the feet of his son's corpse and to fix his eyes upon him while he himself was shot. The corpse of the young man shot in the garden was carried into the house and put on a bed. The next morning the Germans asked where the corpse was. When they found it was in the house, they fetched straw, packed it around the bed on which the corpse was lying, and set fire to it and burned the house down. A great many houses were burned in Monceau.

A vivid picture of the events at Mon-

igny-sur-Sambre has been given by a witness of high standing who had exceptional opportunities of observation. In the early morning of Saturday, Aug. 22, Uhlans reached Montigny. The French Army was about four kilometers away, but on a hill near the village were a detachment of French, about 150 to 200 strong, lying in ambush. At about 1:30 o'clock the main body of the German Army began to arrive. Marching with them were two groups of so-called hostages, about 400 in all. Of these, 300 were surrounded with a rope held by the front, rear, and outside men. The French troops in ambush opened fire, and immediately the Germans commenced to destroy the town. Incendiaries with a distinctive badge on their arm went down the main street throwing handfuls of inflammatory and explosive pastilles into the houses. These pastilles were carried by them in bags, and in this way about 130 houses were destroyed in the main street. By 10:30 P. M. some 200 more hostages had been collected. These were drawn from Montigny itself, and on that night about fifty men, women, and children were placed on the bridge over the Sambre and kept there all night. The bridge was similarly guarded for a day or two, apparently either from a fear that it was mined or in the belief that these men, women, and children would afford some protection to the Germans in the event of the French attempting to storm the bridge. At one period of the German occupation of Montigny, eight nuns of the Order of Ste. Marie were captives on the bridge. House burning was accompanied by murder, and on the Monday morning twenty-seven civilians from one parish alone were seen lying dead in the hospital.

Other outrages committed at Jumet, Bouffoulx, Charleroi, Marchiennes-au-Pont, Couillet, and Maubeuge are described in the depositions given in the appendix.

DINANT.

A clear statement of the outrages at Dinant, which many travelers will recall as a singularly picturesque town on the

Meuse, is given by one witness, who says that the Germans began burning houses in the Rue St. Jacques on the 21st of August, and that every house in the street was burned. On the following day an engagement took place between the French and the Germans, and the witness spent the whole day in the cellar of a bank with his wife and children. On the morning of the 23d, about 5 o'clock, firing ceased, and almost immediately afterward a party of Germans came to the house. They rang the bell and began to batter at the door and windows. The witness's wife went to the door and two or three Germans came in. The family were ordered out into the street. There they found another family, and the two families were driven with their hands above their heads along the Rue Grande. All the houses in the street were burning. The party was eventually put into a forge where there were a number of other prisoners, about a hundred in all, and were kept there from 11 A. M. till 2 P. M. They were then taken to the prison. There they were assembled in a courtyard and searched. No arms were found. They were then passed through into the prison itself and put into cells. The witness and his wife were separated from each other. During the next hour the witness heard rifle shots continually, and noticed in the corner of a courtyard leading off the row of cells the body of a young man with a mantle thrown over it. He recognized the mantle as having belonged to his wife. The witness's daughter was allowed to go out to see what had happened to her mother, and the witness himself was allowed to go across the courtyard half an hour afterward for the same purpose. He found his wife lying on the floor in a room. She had bullet wounds in four places, but was alive and told her husband to return to the children, and he did so. About 5 o'clock in the evening he saw the Germans bringing out all the young and middle-aged men from the cells, and ranging their prisoners, to the number of forty, in three rows in the middle of the courtyard. About twenty Germans were drawn up opposite, but before any-

thing was done there was a tremendous fusillade from some point near the prison and the civilians were hurried back to their cells. Half an hour later the same forty men were brought back into the courtyard. Almost immediately there was a second fusillade like the first and and they were driven back to the cells again. About 7 o'clock the witness and other prisoners were brought out of their cells and marched out of the prison. They went between two lines of troops to Roche Bayard, about a kilometer away. An hour later the women and children were separated and the prisoners were brought back to Dinant, passing the prison on their way. Just outside the prison the witness saw three lines of bodies which he recognized as being those of neighbors. They were nearly all dead, but he noticed movement in some of them. There were about 120 bodies. The prisoners were then taken up to the top of the hill outside Dinant and compelled to stay there till 8 o'clock in the morning. On the following day they were put into cattle trucks and taken thence to Coblenz. For three months they remained prisoners in Germany.

Unarmed civilians were killed in masses at other places near the prison. About ninety bodies were seen lying on the top of one another in a grass square opposite the convent. They included many relatives of a witness whose deposition will be found in the appendix. This witness asked a German officer why her husband had been shot, and he told her that it was because two of her sons had been in the civil guard and had shot at the Germans. As a matter of fact one of her sons was at that time in Liège and the other in Brussels. It is stated that, besides the ninety corpses referred to above, sixty corpses of civilians were recovered from a hole in the brewery yard and that forty-eight bodies of women and children were found in a garden. The town was systematically set on fire by hand grenades.

Another witness saw a little girl of seven, one of whose legs was broken and the other injured by a bayonet.

We have no reason to believe that the civilian population of Dinant gave any

provocation, or that any other defense can be put forward to justify the treatment inflicted upon its citizens.

As regards this town and the advance of the German Army from Dinant to Rethel on the Aisne, a graphic account is given in the diary of a Saxon officer.¹ This diary confirms what is clear from the evidence as a whole, both as regards these and other districts, that civilians were constantly taken as prisoners, often dragged from their homes, and shot under the direction of the authorities without any charge being made against them. An event of the kind is thus referred to in a diary entry:

"Apparently 200 men were shot. There must have been some innocent men among them. In future we shall have to hold an inquiry as to their guilt instead of shooting them"

The shooting of inhabitants, women and children as well as men, went on after the Germans had passed Dinant on their way into France. The houses and villages were pillaged and property wantonly destroyed.

AERSCHOT, MALINES, VILVORDE, AND LOUVAIN QUADRANGLE.

About Aug. 9 a powerful screen of cavalry masking the general advance of the First and Second German Armies was thrown forward into the provinces of Brabant and Limburg. The progress of the invaders was contested at several points, probably near Tirlemont on the Louvain road, and at Diest, Haelen, and Schaffen, on the Aerschot road, by detachments of the main Belgian Army, which was drawn up upon the line of the Dyle. In their preliminary skirmishes the Belgians more than once gained advantages, but after the fall on Aug. 15 of the last of the Liège forts the great line of railway which runs through Liège

toward Brussels and Antwerp in one direction and toward Namur and the French frontier in another fell into the hands of the Germans. From this moment the advance of the main army was swift and irresistible. On Aug. 19 Louvain and Aerschot were occupied by the Germans, the former without resistance, the latter after a struggle which resulted early in the day in the retirement of the Belgian Army upon Antwerp. On Aug. 20 the invaders made their entry into Brussels.

The quadrangle of territory bounded by the towns of Aerschot, Malines, Vilvorde, and Louvain is a rich agricultural tract, studded with small villages and comprising two considerable cities, Louvain and Malines. This district on Aug. 19 passed into the hands of the Germans, and owing perhaps to its proximity to Antwerp, then the seat of the Belgian Government and headquarters of the Belgian Army, it became from that date a scene of chronic outrage, with respect to which the committee has received a great mass of evidence.

The witnesses to these occurrences are for the most part imperfectly educated persons who cannot give accurate dates, so it is impossible in some cases to fix the dates of particular crimes; and the total number of outrages is so great that we cannot refer to all of them in the body of the report or give all the depositions relating to them in the appendix. The main events, however, are abundantly clear, and group themselves naturally around three dates—Aug. 19, Aug. 25, and Sept. 11.

The arrival of the Germans in the district on Aug. 19 was marked by systematic massacres and other outrages at Aerschot itself, Gelrode, and some other villages.

On Aug. 25 the Belgians, rallying out of the defenses of Antwerp, attacked the German positions at Malines, drove the enemy from the town, and reoccupied many of the villages, such as Sempst, Hofstade, and Eppegheem, in the neighborhood. And, just as numerous

¹ A copy of this diary was given by the French military authorities to the British Headquarters Staff in France, and the latter have communicated it to the committee. It will be found in Appendix B after the German diaries shown to us by the British War Office.

outrages against the civilian population had been the immediate consequence of the temporary repulse of the German vanguard from Fort Fléron, so a large body of depositions testify to the fact that a sudden outburst of cruelty was the response of the German Army to the Belgian victory at Malines. The advance of the German Army to the Dyle had been accompanied by reprehensible, and, indeed, (in certain cases,) terrible outrages, but these had been, it would appear, isolated acts, some of which are attributed by witnesses to indignation at the check at Haelen, while others may have been the consequence of drunkenness. But the battle of Malines had results of a different order. In the first place, it was the occasion of numerous murders committed by the German Army in retreating through the villages of Sempst, Hofstade, Eppeghem, Elewyt, and elsewhere. In the second place, it led, as it will be shown later, to the massacres, plunderings, and burnings at Louvain, the signal for which was provided by shots exchanged between the German Army retreating after its repulse at Malines and some members of the German garrison of Louvain who mistook their fellow-countrymen for Belgians. Lastly, the encounter at Malines seems to have stung the Germans into establishing a reign of terror in so much of the district comprised in the quadrangle as remained in their power. Many houses were destroyed and their contents stolen. Hundreds of prisoners were locked up in various churches and were in some instances marched about from one village to another. Some of these were finally conducted to Louvain and linked up with the bands of prisoners taken in Louvain itself, and sent to Germany and elsewhere.

On Sept. 11, when the Germans were driven out of Aerschot across the River Démer by a successful sortie from Antwerp, murders of civilians were taking place in the villages which the Belgian Army then recaptured from the Germans. These crimes bear a strong resemblance to those committed in Hofstade and other villages after the battle of Malines.

AERSCHOT AND DISTRICT.

Period I., (Aug. 19 and following days.)

AERSCHOT.

The German Army entered Aerschot quite early in the morning. Workmen going to their work were seized and taken as hostages.

The Germans, apparently already irritated, proceeded to make a search for the priests and threatened to burn the convent if the priests should happen to be found there. One priest was accused of inciting the inhabitants to fire on the troops, and when he denied it the Burgomaster was blamed by the officer. The priest then showed the officer the notices on the walls, signed by the Burgomaster, warning the inhabitants not to intervene in hostilities.

It appears that they accused the priest of having fired at the Germans from the tower of the church. This is important, because it is one of the not infrequent cases in which the Germans ascribed firing from a church to priests, whereas in fact this firing came from Belgian soldiers, and also because it seems to show that the Germans from the moment of their arrival in Aerschot were seeking to pick a quarrel with the inhabitants, and this goes far to explain their subsequent conduct. Hostages were collected until 200 men, some of whom were invalids, were gathered together.

M. Tielmans, the Burgomaster, was then ordered by some German officers to address the crowd and to tell them to hand in any weapons which they might have in their possession at the Town Hall, and to warn them that any one who was found with weapons would be killed. As a matter of fact, the arms in the possession of civilians had already been collected at the beginning of the war. The Burgomaster's speech resulted in the delivery of one gun, which had been used for pigeon shooting. The hostages were then released. Throughout the day the town was looted by the soldiers. Many shop windows were broken, and the contents of the shop fronts ransacked.

A shot was fired about 7 o'clock in the evening, by which time many of

the soldiers were drunk. The Germans were not of one mind as to the direction from which the shot proceeded. Some said it came from a jeweler's shop, and some said it came from other houses. No one was hit by this shot, but thereafter German soldiers began to fire in various directions at people in the streets.

It is said that a German General or Colonel was killed at the Burgomaster's house. As far as the committee have been able to ascertain, the identity of the officer has never been revealed. The German version of the story is that he was killed by the 15-year-old son of the Burgomaster. The committee, however, is satisfied by the evidence of several independent witnesses that some German officers were standing at the window of the Burgomaster's house, that a large body of German troops was in the square, that some of these soldiers were drunk and let off their rifles, that in the volley one of the officers standing at the window of the Burgomaster's house fell, that at the time of the accident the wife and son of the Burgomaster had gone to take refuge in the cellar, and that neither the Burgomaster nor his son were in the least degree responsible for the occurrence which served as the pretext for their subsequent execution, and for the firing and sack of the town.*

The houses were set on fire with spe-

cial apparatus, while people were dragged from their houses, already burning, and some were shot in the streets.

Many civilians were marched to a field on the road to Louvain and kept there all night. Meanwhile many of the inhabitants were collected in the square. By this time very many of the troops were drunk.

On the following day a number of the civilians were shot under the orders of an officer, together with the Burgomaster, his brother, and his son. Of this incident, which is spoken to by many witnesses, a clear account is given:

"German soldiers came and took hold of me and every other man they could see, and eventually there were about sixty of us, including some of 80, (i. e., years of age,) and they made us accompany them * * * all the prisoners had to walk with their hands above their heads. We were then stopped and made to stand in a line, and an officer, a big fat man who had a bluish uniform * * * came along the line and picked out the Burgomaster, his brother, and his son, and some men who had been employed under the Red Cross. In all, ten men were picked out * * * the remainder were made to turn their backs upon the ten. I then heard some shots fired, and I and the other men turned around and we saw all the ten men, including the Burgomaster, were lying on the ground."

This incident is spoken to by other witnesses also. Some of their depositions appear in the appendix.

*This account agrees substantially with that given in a letter written by Mme. Tielmans, the Burgomaster's wife, which is printed in the fifth report of the Belgian Commission. The letter is as follows:

This is how it happened. About 4 in the afternoon my husband was giving cigars to the sentinels stationed at the door. I saw that the General and his aides de camp were looking at us from the balcony and told him to come indoors. Just then I looked toward the Grand Place, where more than 2,000 Germans were encamped, and distinctly saw two columns of smoke followed by a fusillade. The Germans were firing on the houses and forcing their way into them. My husband, children, servant, and myself had just time to dash into the staircase leading to the cellar. The Germans were even firing into the passages of the houses. After a few minutes of indescribable horror, one of the General's aides de camp came down and said: "The General is dead. Where is the Burgomaster?" My husband said to me, "This will be serious for me." As he went forward I said to the aide de camp: "You can see for yourself, Sir, that my

husband did not fire." "That makes no difference," he said. "He is responsible." My husband was taken off. My son, who was at my side, took us into another cellar. The same aide de camp came and dragged him out and made him walk in front of him, kicking him as he went. The poor boy could hardly walk. That morning when they came to the town the Germans had fired through the windows of the houses, and a bullet had come into the room where my son was, and he had been wounded in the calf by the ricochet. After my husband and son had gone I was dragged all through the house by Germans, with their revolvers leveled at my head. I was compelled to see their dead General. Then my daughter and I were thrown into the street without cloaks or anything. We were massed in the Grand Place, surrounded by a cordon of soldiers, and compelled to witness the destruction of our beloved town. And then, by the hideous light of the fire, I saw them for the last time, about 1 in the morning, my husband and my boy tied together. My brother-in-law was behind them. They were being led out to execution.

GELRODE.

On the same day at Gelrode, a small village close to Aerschot, twenty-five civilians were imprisoned in the church. Seven were taken out by fifteen German soldiers in charge of an officer just outside. One of the seven tried to run away, whereupon all the six who remained behind alive were shot. This was on the night of Aug. 19. No provocation whatever had been given. The men in question had been searched, and no arms had been found upon them. Here, as at Aerschot, precautions had been taken previously to secure the delivery up of all arms in the hands of civilians.

Some of the survivors were compelled to dig graves for the seven. At a later date the corpses were disinterred and reburied in consecrated ground. The marks of the bullets in the brick wall against which the six were shot were then still plainly visible. On the same day a woman was shot by some German soldiers as she was walking home. This was done at a distance of 100 yards and for no apparent reason.

An account of a murder by an officer at Campenhout is given in a later part of this report, and depositions relating to Rotselaer, Tremeloo, and Wespelaar will be found in the appendix.

The committee is specially impressed by the character of the outrages committed in the smaller villages. Many of these are exceptionally shocking and cannot be regarded as contemplated or prescribed by the responsible commanders of the troops by whom they were committed. The inference, however, which we draw from these occurrences is that when once troops have been encouraged in a career of terrorism the more savage and brutal natures, of whom there are some in every large army, are liable to run to wild excess, more particularly in those regions where they are least subject to observation and control.

AERSCHOT AND DISTRICT.

Period II., (Aug. 25.)

Immediately after the battle of Malines, which resulted in the evacuation

by the Germans of the district of Malines, Sempst, Hofstade, and Eppegheem, a long series of murders were committed either just before or during the retreat of the army. Many of the inhabitants who were unarmed, including women and young children, were killed—some of them under revolting circumstances.

Evidence given goes to show that the death of these villagers was due not to accident, but to deliberate purpose. The wounds were generally stabs or cuts, and for the most part appear to have been inflicted with the bayonet.

MALINES.

In Malines itself many bodies were seen. One witness saw a German soldier cut a woman's breasts after he had murdered her, and saw many other dead bodies of women in the streets.

HOFSTADE.

In Hofstade a number of houses had been set on fire and many corpses were seen, some in houses, some in back yards, and some in the streets.

Several examples are given below.

Two witnesses speak to having seen the body of a young man pierced by bayonet thrusts with the wrists cut also.

On a side road the corpse of a civilian was seen on his doorstep with a bayonet wound in his stomach, and by his side the dead body of a boy of 5 or 6 with his hands nearly severed.

The corpses of a woman and boy were seen at the blacksmith's. They had been killed with the bayonet.

In a café a young man, also killed with the bayonet, was holding his hands together as if in the attitude of supplication.

Two young women were lying in the back yard of the house. One had her breasts cut off, the other had been stabbed.

A young man had been hacked with the bayonet until his entrails protruded. He also had his hands joined in the attitude of prayer.

In the garden of a house in the main street bodies of two women were ob-

served, and in another house the body of a boy of 16 with two bayonet wounds in the chest.

SEMPST.

In Sempst a similar condition of affairs existed. Houses were burning and in some of them were the charred remains of civilians.

In a bicycle shop a witness saw the burned corpse of a man. Other witnesses speak to this incident.

Another civilian, unarmed, was shot as he was running away. As will be remembered, all the arms had been given up some time before by order of the Burgomaster.

The corpse of a man with his legs cut off, who was partly bound, was seen by another witness, who also saw a girl of 17 dressed only in a chemise, and in great distress. She alleged that she herself and other girls had been dragged into a field, stripped naked, and violated, and that some of them had been killed with the bayonet.

WEERDE.—At Weerde four corpses of civilians were lying in the road. It was said that these men had fired upon the German soldiers; but this is denied. The arms had been given up long before.

Two children were killed in a village, apparently Weerde, quite wantonly as they were standing in the road with their mother. They were 3 or 4 years old and were killed with the bayonet.

A small farm burning close by formed a convenient means of getting rid of the bodies. They were thrown into the flames from the bayonets. It is right to add that no commissioned officer was present at the time.

EPPEGHEM.—At Eppeghem on Aug. 25 a pregnant woman who had been wounded with a bayonet was discovered in the convent. She was dying. On the road six dead bodies of laborers were seen.

ELEWYT.—At Elewyt a man's naked body was tied up to a ring in the wall in the back yard of a house. He was dead, and his corpse was mutilated in a manner too horrible to record. A woman's naked body was also found in a stable abutting on the same back yard.

VILVORDE.—At Vilvorde corpses of civilians were also found. These villages are all on the line from Malines to Brussels.

BOORT MEERBEEK. — At Boort Meerbeek a German soldier was seen to fire three times at a little girl 5 years old. Having failed to hit her, he subsequently bayoneted her. He was killed with the butt end of a rifle by a Belgian soldier who had seen him commit this murder from a distance.

HERENT.—At Herent the charred body of a civilian was found in a butcher's shop, and in a handcart twenty yards away was the dead body of a laborer.

Two eyewitnesses relate that a German soldier shot a civilian and stabbed him with a bayonet as he lay. He then made one of these witnesses, a civilian prisoner, smell the blood on the bayonet.

HAECHT.—At Haecht the bodies of ten civilians were seen lying in a row by a brewery wall.

In a laborer's house, which had been broken up, the mutilated corpse of a woman of 30 to 35 was discovered.

A child of 3 with its stomach cut open by a bayonet was lying near a house.

WERCHTER. — At Werchter the corpses of a man and woman and four younger persons were found in one house. It is stated that they had been murdered because one of the latter, a girl, would not allow the Germans to outrage her.

This catalogue of crimes does not by any means represent the sum total of the depositions relating to this district laid before the committee. The above are given merely as examples of acts which the evidence shows to have taken place in numbers that might have seemed scarcely credible.

In the rest of the district, that is to say, Aerschot and the other villages from which the Germans had not been driven, the effect of the battle was to cause a recrudescence of murder, arson, pillage, and cruelty, which had to some extent died down after Aug. 20 or 21.

In Aerschot itself fresh prisoners seem to have been taken and added to those who were already in the church, since it would appear that prisoners were kept to some extent in the church during the

whole of the German occupation of Aerschot. The second occasion on which large numbers of prisoners were put there was shortly after the battle of Malines, and it was then that the priest of Gelrode was brought to Aerschot Church, treated abominably, and finally murdered.

One witness describes the scene graphically:

"The whole of the prisoners—men, women, and children—were placed in the church. Nobody was allowed to go outside the church to obey the calls of nature; the church had to be used for that purpose. We were afterward allowed to go outside the church for this purpose, and then I saw the clergyman of Gelrode standing by the wall of the church with his hands above his head, being guarded by soldiers."

The actual details of the murder of the priest are as follows: The priest was struck several times by the soldiers on the head. He was pushed up against the wall of the church. He asked in Flemish to be allowed to stand with his face to the wall, and tried to turn around. The Germans stopped him and then turned him with his face to the wall, with his hands above his head. An hour later the same witness saw the priest still standing there. He was then led away by the Germans a distance of about fifty yards. There, with his face against the wall of a house, he was shot by five soldiers.

Other murders of which we have evidence appear in the appendix.

Some of the prisoners in the church at Aerschot were actually kept there until the arrival of the Belgian Army on Sept. 11, when they were released. Others were marched to Louvain and eventually merged with other prisoners, both from Louvain itself and the surrounding districts, and taken to Germany and elsewhere.

It is said by one witness that about 1,500 were marched to Louvain and that the journey took six hours.

The journey to Louvain is thus described by a witness: We were all marched off to Louvain, walking. There were some very old people, among others a man 90 years of age. The very old people were drawn in carts and barrows

by the younger men. There was an officer with a bicycle, who shouted, as people fell out by the side of the road, "Shoot them!"

AERSCHOT AND DISTRICT.

Period III., (September.)

It is unnecessary to describe with much particularity the events of the period beginning about Sept. 10. The Belgian soldiers, who had recaptured the place, found corpses of civilians who must have been murdered in Aerschot itself, just as they found them in Sempst and the other villages on Aug. 25. Some of these bodies were found in wells and some had been burned alive in their houses.

The prisoners released by the Belgian Army from the church were almost starved.

HAECHT.—At Haecht several children had been murdered, one of 2 or 3 years of age was found nailed to the door of a farmhouse by its hands and feet—a crime which seems almost incredible, but the evidence for which we feel bound to accept. In the garden of this house was the body of a girl who had been shot in the forehead.

CAPELLE-AU-BOIS.—At Capelle-au-Bois two children were murdered in a cart and their corpses were seen by many witnesses at different stages of the cart's journey.

EPPEGHEM.—At Eppeghem the dead body of a child of 2 was seen pinned to the ground with a German lance. Same witness saw a mutilated woman alive near Weerde on the same day.

TREMELOO.—Belgian soldiers on patrol duty found a young girl naked on the ground, covered with scratches. She complained of having been violated. On the same day an old woman was seen kneeling by the body of her husband, and she told them that the Germans had shot him as he was trying to escape from the house.

LOUVAIN AND DISTRICT.

The events spoken to as having occurred in and around Louvain between the 19th and the 25th of August deserve close attention.

For six days the Germans were in peaceful occupation of the city. No houses were set on fire—no citizens killed. There was a certain amount of looting of empty houses, but otherwise discipline was effectively maintained. The condition of Louvain during these days was one of relative peace and quietude, presenting a striking contrast to the previous and contemporaneous conduct of the German Army elsewhere.

On the evening of Aug. 25 a sudden change takes place. The Germans, on that day repulsed by the Belgians, had retreated to and reoccupied Louvain. Immediately the devastation of that city and the holocaust of its population commences. The inference is irresistible that the army as a whole wreaked its vengeance on the civil population and the buildings of the city in revenge for the setback which the Belgian arms had inflicted on them. A subsidiary cause alleged was the assertion, often made before, that civilians had fired upon the German Army.

The depositions which relate to Louvain are numerous, and are believed by the committee to present a true and fairly complete picture of the events of the 25th and 26th of August and subsequent days. We find no grounds for thinking that the inhabitants fired upon the German Army on the evening of the 25th of August. Eyewitnesses worthy of credence detail exactly when, where, and how the firing commenced. Such firing was by Germans on Germans. No impartial tribunal could, in our opinion, come to any other conclusion.

On the evening of the 25th firing could be heard in the direction of Herent, some three kilometers from Louvain. An alarm was sounded in the city. There was disorder and confusion, and at 8 o'clock horses attached to baggage wagons stampeded in the street and rifle fire commenced. This was in the Rue de la Station and came from the German police guard, (21 in number,) who, seeing the troops arrive in disorder, thought it was the enemy. Then the corps of incendiaries got to work. They had broad belts with the words "Gott mit uns"

and their equipment consisted of a hatchet, a syringe, a small shovel, and a revolver. Fires blazed up in the direction of the Law Courts, St. Martin's Barracks, and later in the Place de la Station. Meanwhile an incessant fusillade was kept up on the windows of the houses. In their efforts to escape the flames the inhabitants climbed the walls.

"My mother and servants," says a witness, "had to do the same and took refuge at Monsieur A.'s, whose cellars are vaulted and afforded a better protection than mine. A little later we withdrew to Monsieur A.'s stables, where about thirty people who had got there by climbing the walls were to be found. Some of these poor wretches had to climb twenty walls. A ring came at the bell. We opened the door. Several civilians flung themselves under the porch. The Germans were firing upon them from the street. Every moment new fires were lighting up, accompanied by explosions. In the middle of the night I heard a knock at the outer door of the stable which led into a little street, and heard a woman's voice crying for help. *I opened the door, and just as I was going to let her in a rifle shot fired from the street by a German soldier rang out and the woman fell dead at my feet. About 9 in the morning things got quieter, and we took the opportunity of venturing into the street. A German who was carrying a silver pyx and a number of boxes of cigars told us we were to go to the station, where trains would be waiting for us. When we got to the Place de la Station we saw in the square seven or eight dead bodies of murdered civilians. Not a single house in the place was standing. A whole row of houses behind the station at Blauwput was burned. After being driven hither and thither interminably by officers, who treated us roughly and insulted us throughout, we were divided."

The prisoners were then distributed between different bodies of troops and marched in the direction of Herent. Seventy-seven inhabitants of Louvain, including a number of people of good position, (the names of several are given,) were thus taken to Herent.

"We found the village of Herent in flames, so much so that we had to quicken up to prevent ourselves from being suffocated and burned up by the flames in the middle of the road. Half-burned corpses of civilians were lying in front of the houses. During a halt soldiers stole cattle and slaughtered them where

they stood. Firing started on our left. We were told it was the civilians firing, and that we were going to be shot. The truth is that it was the Germans themselves who were firing to frighten us. There was not a single civilian in the neighborhood. Shortly afterward we proceeded on our march to Malines. We were insulted and threatened. * * * The officers were worse than the men. We got to Campenhout about 7 P. M., and were locked into the church with all the male population of the village. Some priests had joined our numbers. We had had nothing to eat or drink since the evening of the day before. A few compassionate soldiers gave us water to drink, but no official took the trouble to see that we were fed."

Next day, Thursday, the 27th, a safe conduct to return to Louvain was given, but the prisoners had hardly started, when they were stopped and taken before a Brigade General and handed to another escort. Some were grossly ill-treated. They were accused of being soldiers' out of uniform, and were told they could not go to Louvain, "as the town was going to be razed to the ground." Other prisoners were added, even women and children, until there were more than 200. They were then taken toward Malines, released, and told to go to that town together, and that those who separated would be fired on. Other witnesses corroborate the events described by the witness.

A woman employed by an old gentleman living in the Rue de la Station tells the story of her master's death:

"We had supper as usual about 8, but two German officers, (who were staying in the house,) did not come in to supper that evening. My master went to bed at 8:15, and so did his son. The servants went to bed at 9:30. Soon after I got to my bedroom I saw out of my room flames from some burning house near by. I roused my master and his son. As they came down the stairs they were seized by German soldiers and both were tied up and led out, my master being tied with a rope and his son with a chain. They were dragged outside. I did not actually see what happened outside, but heard subsequently that my master was bayoneted and shot, and that his son was shot. I heard shots from the kitchen, where I was, and was present at the burial of my master and his son thirteen days later. German soldiers came back

into the house and poured some inflammable liquid over the floors and set fire to it. I escaped by another staircase to that which my master and his son had descended."

On the 26th, (Wednesday,) in the City of Louvain, massacre, fire, and destruction went on. The university, with its library, the Church of St. Peter, and many houses were set on fire and burned to the ground. Citizens were shot and others taken prisoners and compelled to go with the troops. Soldiers went through the streets saying "Man hat geschossen."* One soldier was seen going along shooting in the air.

Many of the people hid in cellars, but the soldiers shot down through the gratings. Some citizens were shot on opening the doors, others in endeavoring to escape. Among other persons whose houses were burned was an old man of 90 lying dangerously ill, who was taken out on his mattress and left lying in his garden all night. He died shortly after in the hospital to which a friend took him the following morning.

On Thursday, the 27th, orders were given that every one should leave the city, which was to be razed to the ground. Some citizens, including a canon of the cathedral, with his aged mother, were ordered to go to the station and afterward to take the road to Tirlemont. Among the number were about twenty priests from Louvain. They were insulted and threatened, but ultimately allowed to go free and make their way as best they could, women and sick persons among them, to Tirlemont. Other groups of prisoners from Louvain were on the same day taken by other routes, some early in the morning, through various villages in the direction of Malines, with hands tightly bound by a long cord. More prisoners were afterward added, and all made to stay the night in the church at Campenhout. Next day, the 28th, this group, then consisting of about 1,000 men, women and children, was taken back to Louvain. The houses along the road were burning and many dead bodies of civilians, men and women, were

*"They have been shooting."

seen on the way. Some of the principal streets in Louvain had by that time been burned out. The prisoners were placed in a large building on the cavalry exercise ground— "One woman went mad, some children died, others were born." On the 29th the prisoners were marched along the Malines road, and at Herent the women and children and men over 40 were allowed to go; the others were taken to Boort Meerbeek, 15 kilometers from Malines, and told to march straight to Malines or be shot. At 11 P. M. they reached the fort of Waelhem and were at first fired on by the sentries, but on calling out they were Belgians were allowed to pass. These prisoners were practically without food from early morning on the 26th until midnight on the 29th. Of the corpses seen on the road, some had their hands tied behind their backs, others were burned, some had been killed by blows, and some corpses were those of children who had been shot.

Another witness, a man of independent means, was arrested at noon by the soldiers of the One Hundred and Sixty-fifth Regiment and taken to the Place de la Station. He was grossly ill-treated on the way and robbed by an officer of his purse and keys. His hands were tied behind his back. His wife was kept a prisoner at the other side of the station. He was then made to march with about 500 other prisoners until midnight, slept in the rain that night, and next day, having had no food since leaving Louvain, was taken to the church in Rotselaer, where there were then about 1,500 prisoners confined, including some infants. No food was given, only some water. Next day they were taken through Wespelaer and back to Louvain. On the way from Rotselaer to Wespelaer fifty bodies were seen, some naked and carbonized and unrecognizable. When they arrived at Louvain the Fish Market, the Place Marguerite, the cathedral, and many other buildings were on fire. In the evening about 100 men, women, and children were put in horse trucks from which the dung had not been removed, and at 6 the next morning left for Cologne.

The wife of this witness was also taken prisoner with her husband and her maid, but was separated from him, and she saw other ladies made to walk before the soldiers with their hands above their heads. One, an old lady of 85, (name given,) was dragged from her cellar and taken with them to the station. They were kept there all night, but set free in the morning, Thursday, but shortly afterward sent to Tirlemont on foot. A number of corpses were seen on the way. The prisoners, of whom there are said to have been thousands, were not allowed even to have water to drink, although there were streams on the way from which the soldiers drank. Witness was given some milk at a farm, but as she raised it to her lips it was taken away from her.

A priest was taken on Friday morning, Aug. 28, and placed at the head of a number of refugees from Wygmael. He was led through Louvain, abused and ill-treated, and placed with some thousands of other people in the riding school in the Rue du Manège. The glass roof broke in the night from the heat of burning buildings around. Next day the prisoners were marched through the country with an armed guard. Burned farms and burned corpses were seen on the way. The prisoners were finally separated into three groups, and the younger men marched through Herent and Bueken to Campenhout, and ultimately reached the Belgian lines about midnight on Saturday, Aug. 29. All the houses in Herent, a village of about 5,000 inhabitants, had been burned.

The massacre of civilians at Louvain was not confined to its citizens. Large crowds of people were brought into Louvain from the surrounding districts, not only from Aerschot and Gelrode as above mentioned, but also from other places. For example, a witness describes how many women and children were taken in carts to Louvain, and there placed in a stable. Of the hundreds of people thus taken from the various villages and brought to Louvain as prisoners, some were massacred there, others were forced to march along with citizens of

Louvain through various places, some being ultimately sent on the 29th to the Belgian lines at Malines, others were taken in trucks to Cologne as described below, others were released. An account of the massacre of some of these unfortunate civilian prisoners given by two witnesses may be quoted:

"We were all placed in Station Street, Louvain, and the German soldiers fired upon us. I saw the corpses of some women in the street. I fell down, and a woman who had been shot fell on top of me. I did not dare to look at the dead bodies in the street, there were so many of them. All of them had been shot by the German soldiers. One woman whom I saw lying dead in the street was a Miss J., about 35. I also saw the body of A. M., (a woman.) She had been shot. I saw an officer pull her corpse underneath a wagon."

Another witness, who was taken from Aerschot, also describes the occurrence:

"I was afterward taken with a large number of other civilians and placed in the church at Louvain. Then we were taken to Station Street, Louvain. There were about 1,500 civilians of both sexes, and we had been marched from Aerschot to Louvain. When we were in Station Street I felt that something was about to happen, and I tried to shelter in a doorway. The German soldiers then fired a mitrailleuse and their rifles upon the people, and the people fell on all sides. Two men next to me were killed. I afterward saw some one give a signal, and the firing ceased. I then ran away with a married woman named B., (whose maiden name was A. M.,) aged 29, who belonged to Aerschot, but we were again captured. She was shot by the side of me, and I saw her fall. Several other people were shot at the same time. I again ran away, and in my flight saw children falling out of their mothers' arms. I cannot say whether they were shot, or whether they fell from their mothers' arms in the great panic which ensued. I, however, saw children bleeding."

JOURNEY TO COLOGNE.

The greatest number of prisoners from Louvain, however, were assembled at the station and taken by trains to Cologne. Several witnesses describe their sufferings and the ill-treatment they received on the journey. One of the first trains started in the afternoon. It consisted of cattle trucks, about 100 being in each

truck. It took three days to get to Cologne. The prisoners had nothing to eat but a few biscuits each, and they were not allowed to get out for water and none was given. On a wagon the words "Civilians who shot at the soldiers at Louvain" were written. Some were marched through Cologne afterward for the people to see. Ropes were put about the necks of some and they were told they would be hanged. An order then came that they were to be shot instead of hanged. A firing squad was prepared, and five or six prisoners were put up, but were not shot. After being kept a week at Cologne some of these prisoners were taken back—this time only thirty or forty in a truck—and allowed to go free on arriving at Limburg. Several witnesses who were taken in other trains to Cologne describe their experiences in detail. Some of the trucks were abominably filthy. Prisoners were not allowed to leave to obey the calls of nature; one man who quitted the truck for the purpose was killed by a bayonet. Describing what happened to another body of prisoners, a witness says that they were made to cross Station Street, where the houses were burning, and taken to the station, placed in horse trucks, crowded together, men, women, and children, in each wagon. They were kept at the station during the night, and the following day left for Cologne. For two days and a half they were without food, and then they received a loaf of bread among ten persons, and some water. The prisoners were afterward taken back to Belgium. They were, in all, eight days in the train, crowded and almost without food. Two of the men went mad. The women and children were separated from the men at Brussels. The men were taken to a suburb and then to the villages of Herent, Vilvorde, and Sempst, and afterward set at liberty.

This taking of the inhabitants, including some of the influential citizens, in groups and marching them to various places, and in particular the sending of them to Malines and the dispatch of great numbers to Cologne, must evidently have been done under the direction of

the higher military authorities. The ill-treatment of the prisoners was under the eyes and often by the direction or with the sanction of officers, and officers themselves took part in it.

The object of taking many hundreds of prisoners to Cologne and back into Belgium is at first sight difficult to understand. Possibly it is to be regarded as part of the policy of punishment for Belgian resistance and general terrorization of the inhabitants—possibly as a desire to show these people to the population of a German city and thus to confirm the belief that the Belgians had shot at their troops.

Whatever may have been the case when the burning began on the evening of the 25th, it appears clear that the subsequent destruction and outrages were done with a set purpose. It was not until the 26th that the library, and other university buildings, the Church of St. Peter and many houses were set on fire. It is to be noticed that cases occur in the depositions in which humane acts by individual officers and soldiers are mentioned, or in which officers are said to have expressed regret at being obliged to carry out orders for cruel action against the civilians. Similarly, we find entries in diaries which reveal a genuine pity for the population and disgust at the conduct of the army. It appears that a German non-commissioned officer stated definitely that he "was acting under orders and executing them with great unwillingness." A commissioned officer on being asked at Louvain by a witness—a highly educated man—about the horrible acts committed by the soldiers, said he "was merely executing orders," and that he himself would be shot if he did not execute them. Others gave less credible excuses, one stating that the inhabitants of Louvain had burned the city themselves because they did not wish to supply food and quarters for the German Army. It was to the discipline rather than the want of discipline in the army that these outrages, which we are obliged to describe as systematic, were due, and the special official notices posted on certain houses that they were not to be destroyed show the fate which had been

decreed for the others which were not so marked.

We are driven to the conclusion that the harrying of the villages in the district, the burning of a large part of Louvain, the massacres there, the marching out of the prisoners, and the transport to Cologne, (all done without inquiry as to whether the particular persons seized or killed had committed any wrongful act,) were due to a calculated policy carried out scientifically and deliberately, not merely with the sanction but under the direction of higher military authorities, and were not due to any provocation or resistance by the civilian population.

TERMONDE.

To understand the depositions describing what happened at Termonde it is necessary to remember that the German Army occupied the town on two occasions, the first, from Friday, Sept. 4, to Sunday, Sept. 6, and again later in the month, about the 16th. The civilians had delivered up their arms a fortnight before the arrival of the Germans.

Early in the month, probably about the 4th, a witness saw two civilians murdered by Uhlans. Another witness saw their dead bodies, which remained in the street for ten days. Two hundred civilians were utilized as a screen by the German troops about this date.

On the 5th the town was partially burned. One witness was taken prisoner in the street by some German soldiers, together with several other civilians. At about 12 o'clock some of the tallest and strongest men among the prisoners were picked out to go around the streets with paraffin. Three or four carts containing paraffin tanks were brought up, and a syringe was used to put paraffin on to the houses, which were then fired. The process of destruction began with the houses of rich people, and afterward the houses of the poorer classes were treated in the same manner. German soldiers had previously told this witness that if the Burgomaster of Termonde, who was out of town, did not return by 12 o'clock that day the town would be set on fire. The firing of the town

was in consequence of his failure to return. The prisoners were afterward taken to a factory and searched for weapons. They were subsequently provided with passports enabling them to go anywhere in the town, but not outside. The witness in question managed to effect his escape by swimming across the river.

Another witness describes how the tower of the Church of Termonde St. Gilles was utilized by the Belgian troops for offensive purposes. They had in fact mounted a machine gun there. This witness was subsequently taken prisoner in a cellar in Termonde in which he had taken refuge with other people. All the men were taken from the cellar and the women were left behind. About seventy prisoners in all were taken; one, a brewer, who could not walk fast enough, was wounded with a bayonet. He fell down and was compelled to get up and follow the soldiers. The prisoners had to hold up their hands, and if they dopped their hands they were struck on the back with the butt end of rifles. They were taken to Lebbeke, where there were in all 300 prisoners, and there they were locked up in the church for three days and with scarcely any food.

A witness living at Baesrode was taken prisoner with 250 others and kept all night in a field. The prisoners were released on the following morning. This witness saw three corpses of civilians, and says that the Germans on Sunday, the 6th, plundered and destroyed the houses of those who had fled. The Germans left on the following day, taking about thirty men with them, one a man of 72 years of age.

Later in the month civilians were again used as a screen, and there is evidence of other acts of outrage.

ALOST.

Alost was the scene of fighting between the Belgian and German Armies during the whole of the latter part of the month of September. In connection with the fighting numerous cruelties appear to have been perpetrated by the German troops.

On Saturday, Sept. 11, a weaver was

bayoneted in the street. Another civilian was shot dead at his door on the same night. On the following day the witness was taken prisoner together with thirty others. The money of the prisoners was confiscated, and they were subsequently used as a screen for the German troops who were at that moment engaged in a conflict with the Belgian Army in the town itself. The Germans burned a number of houses at this time. Corpses of 14 civilians were seen in the streets on this occasion.

A well-educated witness, who visited the Wetteren Hospital shortly after this date, saw the dead bodies of a number of civilians belonging to Alost, and other civilians wounded. One of these stated that he took refuge in the house of his sister-in-law; that the Germans dragged the people out of the house, which was on fire, seized him, threw him on the ground, and hit him on the head with the butt end of a rifle, and ran him through the thigh with a bayonet. They then placed him with seventeen or eighteen others in front of the German troops, threatening them with revolvers. They said that they were going to make the people of Alost pay for the losses sustained by the Germans. At this hospital was an old woman of 80 completely transfixed by a bayonet.

Other crimes on noncombatants at Alost belong to the end of the month of September. Many witnesses speak to the murder of harmless civilians.

In Binnenstraat the Germans broke open the windows of the houses and threw fluid inside, and the houses burst into flames. Some of the inhabitants were burned to death.

The civilians were utilized on Saturday, Sept. 26, as a screen. During their retreat the Germans fired twelve houses in Rue des Trois Clefs, and three civilians, whose names are given, were shot dead in that street after the firing of the houses. On the following day a heap of nine dead civilians were lying in the Rue de l'Argent.

Similar outrages occurred at Erpe, a village a few miles from Alost, about the same date. The village was deliberately

burned. The houses were plundered and some civilians were murdered.

Civilians were apparently used as a screen at Erpe, but they were prisoners taken from Alost and not dwellers in that village.

DIARIES OF GERMAN SOLDIERS.

This disregard for the lives of civilians is strikingly shown in extracts from German soldiers' diaries, of which the following are representative examples.

Barthel, who was a Sergeant and standard bearer of the Second Company of the First Guards Regiment of Foot, and who during the campaign received the Iron Cross, says, under date Aug. 10, 1914:

"A transport of 300 Belgians came through Duisburg in the morning. Of these, eighty, including the Oberburgomaster, were shot according to martial law."

Matbern of the Fourth Company of Jägers, No. 11, from Marburg, states that at a village between Birnal and Dinant on Sunday, Aug. 23, the Pioneers and Infantry Regiment One Hundred and Seventy-eight were fired upon by the inhabitants. He gives no particulars beyond this. He continues:

"About 220 inhabitants were shot, and the village was burned. Artillery is continuously shooting—the village lies in a large ravine. Just now, 6 o'clock in the afternoon, the crossing of the Meuse begins near Dinant. All villages, châteaux and houses are burned down during the night. It is a beautiful sight to see the fires all around us in the distance."

Bombardier Wetzel of the Second Mounted Battery, First Kurhessian Field Artillery Regiment, No. 11, records an incident which happened in French territory near Lille on Oct. 11: "We had no fight, but we caught about twenty men and shot them." By this time killing not in a fight would seem to have passed into a habit.

Diary No. 32 gives an accurate picture of what took place in Louvain:

"What a sad scene—all the houses surrounding the railway station completely destroyed—only some foundation walls still standing. On the station square captured guns. At the end of a main street there is the Council Hall

which has been completely preserved with all its beautiful turrets; a sharp contrast: 180 inhabitants are stated to have been shot after they had dug their own graves."

The last and most important entry is that contained in Diary No. 19. This is a blue book interleaved with blotting paper, and contains no name and address; there is, however, one circumstance which makes it possible to speak with certainty as to the regiment of the writer. He gives the names of First Lieutenant von Oppen, Count Eulenburg, Captain von Roeder, First Lieutenant von Bock und Polach, Second Lieutenant Count Hardenberg, and Lieutenant Engelbrecht. A perusal of the Prussian Army list of June, 1914, shows that all these officers, with the exception of Lieutenant Engelbrecht, belonged to the First Regiment of Foot Guards. On Aug. 24, 1914, the writer was in Ermeton. The exact translation of the extract, grim in its brevity, is as follows:

"24.8.14. We took about 1,000 prisoners: at least 500 were shot. The village was burned because inhabitants had also shot. Two civilians were shot at once."

We may now sum up and endeavor to explain the character and significance of the wrongful acts done by the German Army in Belgium.

If a line is drawn on a map from the Belgian frontier to Liège and continued to Charleroi, and a second line drawn from Liège to Malines, a sort of figure resembling an irregular Y will be formed. It is along this Y that most of the systematic (as opposed to isolated) outrages were committed. If the period from Aug. 4 to Aug. 30 is taken it will be found to cover most of these organized outrages. Termonde and Alost extend, it is true, beyond the Y lines, and they belong to the month of September. Murder, rape, arson, and pillage began from the moment when the German Army crossed the frontier. For the first fortnight of the war the towns and villages near Liège were the chief sufferers. From Aug. 19 to the end of the month, outrages spread in the directions of Charleroi and Malines and reach their period of greatest intensity. There is a

certain significance in the fact that the outrages around Liège coincide with the unexpected resistance of the Belgian Army in that district, and that the slaughter which reigned from Aug. 19 to the end of the month is contemporaneous with the period when the German Army's need for a quick passage through Belgium at all costs was deemed imperative.

Here let a distinction be drawn between two classes of outrages.

Individual acts of brutality—ill-treatment of civilians, rape, plunder, and the like—were very widely committed. These are more numerous and more shocking than would be expected in warfare between civilized powers, but they differ rather in extent than in kind from what has happened in previous though not recent wars.

In all wars many shocking and outrageous acts must be expected, for in every large army there must be a proportion of men of criminal instincts whose worst passions are unloosed by the immunity which the conditions of warfare afford. Drunkenness, moreover, may turn even a soldier who has no criminal habits into a brute, who may commit outrages at which he would himself be shocked in his sober moments, and there is evidence that intoxication was extremely prevalent among the German Army, both in Belgium and in France, for plenty of wine was to be found in the villages and country houses which were pillaged. Many of the worst outrages appear to have been perpetrated by men under the influence of drink. Unfortunately, little seems to have been done to repress this source of danger.

In the present war, however—and this is the gravest charge against the German Army—the evidence shows that the killing of noncombatants was carried out to an extent for which no previous war between nations claiming to be civilized, (for such cases as the atrocities perpetrated by the Turks on the Bulgarian Christians in 1876, and on the Armenian Christians in 1895 and 1896, do not belong to that category,) furnishes any

precedent. That this killing was done as part of a deliberate plan is clear from the facts hereinbefore set forth regarding Louvain, Aerschot, Dinant, and other towns. The killing was done under orders in each place. It began at a certain fixed date, and stopped, (with some few exceptions,) at another fixed date. Some of the officers who carried out the work did it reluctantly, and said they were obeying directions from their chiefs. The same remarks apply to the destruction of property. House burning was part of the program; and villages, even large parts of a city, were given to the flames as part of the terrorizing policy.

Citizens of neutral States who visited Belgium in December and January report that the German authorities do not deny that noncombatants were systematically killed in large numbers during the first weeks of the invasion, and this, so far as we know, has never been officially denied. If it were denied, the flight and continued voluntary exile of thousands of Belgian refugees would go far to contradict a denial, for there is no historical parallel in modern times for the flight of a large part of a nation before an invader.

The German Government have, however, sought to justify their severities on the grounds of military necessity, and have excused them as retaliation for cases in which civilians fired on German troops. There may have been cases in which such firing occurred, but no proof has ever been given, or, to our knowledge, attempted to be given, of such cases, nor of the stories of shocking outrages perpetrated by Belgian men and women on German soldiers.

The inherent improbability of the German contention is shown by the fact that after the first few days of the invasion every possible precaution had been taken by the Belgian authorities, by way of placards and handbills, to warn the civilian population not to intervene in hostilities. Throughout Belgium steps had been taken to secure the handing over of all firearms in the possession of civilians before the German Army arrived. These steps were sometimes taken

by the police and sometimes by the military authorities.

The invaders appear to have proceeded upon the theory that any chance shot coming from an unexpected place was fired by civilians. One favorite form of this allegation was that priests had fired from the church tower. In many instances the soldiers of the allied armies used church towers and private houses as cover for their operations. At Aerschot, where the Belgian soldiers were stationed in the church tower and fired upon the Germans as they advanced, it was at once alleged by the Germans when they entered the town, and with difficulty disproved, that the firing had come from civilians. Thus one elementary error creeps at once into the German argument, for they were likely to confound, and did in some instances certainly confound, legitimate military operations with the hostile intervention of civilians.

Troops belonging to the same army often fire by mistake upon each other. That the German Army was no exception to this rule is proved not only by many Belgian witnesses, but by the most irrefragable kind of evidence—the admission of German soldiers themselves, recorded in their war diaries. Thus Otto Clepp, Second Company of the Reserve, says, under date of Aug. 22: "Three A. M. Two infantry regiments shot at each other—9 dead and 50 wounded—fault not yet ascertained." In this connection the diaries of Kurt Hoffman and a soldier of the 112th Regiment, (Diary No. 14,) will repay study. In such cases the obvious interest of the soldier is to conceal his mistake, and a convenient method of doing so is to raise the cry of "francs-tireurs!"

Doubtless the German soldiers often believed that the civilian population, naturally hostile, had, in fact, attacked them. This attitude of mind may have been fostered by the German authorities themselves before the troops passed the frontier, and thereafter stories of alleged atrocities committed by Belgians upon Germans, such as the myth referred to in one of the diaries relating to Liège,

were circulated among the troops and roused their anger.

The diary of Barthel, when still in Germany on Aug. 10, shows that he believed that the Oberburgomaster of Liège had murdered a Surgeon General. The fact is that no violence was inflicted on the inhabitants at Liège until the 19th, and no one who studies these pages can have any doubt that Liège would immediately have been given over to murder and destruction if any such incident had occurred.

Letters written to their homes which have been found on the bodies of dead Germans bear witness, in a way that now sounds pathetic, to the kindness with which they were received by the civil population. Their evident surprise at this reception was due to the stories which had been dinned into their ears of soldiers with their eyes gouged out, treacherous murders, and poisoned food—stories which may have been encouraged by the higher military authorities in order to impress the mind of the troops, as well as for the sake of justifying the measures which they took to terrify the civil population. If there is any truth in such stories, no attempt has been made to establish it. For instance, the Chancellor of the German Empire, in a communication made to the press on Sept. 2 and printed in the *Nord Deutsche Allgemeine Zeitung* of Sept. 21, said as follows:

"Belgian girls gouged out the eyes of the German wounded. Officials of Belgian cities have invited our officers to dinner and shot and killed them across the table. Contrary to all international law, the whole civilian population of Belgium was called out and, after having at first shown friendliness, carried on in the rear of our troops terrible warfare with concealed weapons. Belgian women cut the throats of soldiers whom they had quartered in their homes while they were sleeping."

No evidence whatever seems to have been adduced to prove these tales, and though there may be cases in which individual Belgians fired on the Germans, the statement that "the whole civilian population of Belgium was called out" is utterly opposed to the fact.

An invading army may be entitled to

shoot at sight a civilian caught red-handed, or any one who, though not caught redhanded, is proved guilty on inquiry. But this was not the practice followed by the German troops. They do not seem to have made any inquiry. They seized the civilians of the villages indiscriminately and killed them, or such as they selected from among them, without the least regard to guilt or innocence. The mere cry, "*Civilisten haben geschossen!*" was enough to hand over a whole village or district, and even outlying places, to ruthless slaughter.

We gladly record the instances where the evidence shows that humanity had not wholly disappeared from some members of the German Army, and that they realized that the responsible heads of that organization were employing them not in war, but in butchery: "I am merely executing orders, and I should be shot if I did not execute them," said an officer to a witness at Louvain. At Brussels another officer says: "I have not done one-hundredth part of what we have been ordered to do by the high German military authorities."

As we have already observed, it would be unjust to charge upon the German Army generally acts of cruelty which, whether due to drunkenness or not, were done by men of brutal instincts and unbridled passions. Such crimes were sometimes punished by the officers. They were in some cases offset by acts of humanity and kindness. But when an army is directed or permitted to kill noncombatants on a large scale the ferocity of the worst natures springs into fuller life, and both lust and the thirst of blood become more widespread and more formidable. Had less license been allowed to the soldiers and had they not been set to work to slaughter civilians there would have been fewer of those painful cases in which a depraved and morbid cruelty appears.

Two classes of murders in particular require special mention because one of them is almost new and the other altogether unprecedented. The former is the seizure of peaceful citizens as so-called hostages, to be kept as a pledge for the conduct of the civil population or as a

means to secure some military advantage or to compel the payment of a contribution, the hostages being shot if the condition imposed by the arbitrary will of the invader is not fulfilled. Such hostage taking, with the penalty of death attached, has now and then happened, the most notable case being the shooting of the Archbishop of Paris and some of his clergy by the Communards of Paris in 1871, but it is opposed both to the rules of war and to every principle of justice and humanity. The latter kind of murder is the killing of the innocent inhabitants of a village because shots have been fired, or are alleged to have been fired, on the troops by some one in the village. For this practice no previous example and no justification have been or can be pleaded. Soldiers suppressing an insurrection may have sometimes slain civilians mingled with insurgents, and Napoleon's forces in Spain are said to have now and then killed promiscuously when trying to clear guerrillas out of a village. But in Belgium large bodies of men, sometimes including the Burgo-master and the priest, were seized, marched by officers to a spot chosen for the purpose, and there shot in cold blood, without any attempt at trial or even inquiry, under the pretense of inflicting punishment upon the village, though these unhappy victims were not even charged with having themselves committed any wrongful act, and though, in some cases at least, the village authorities had done all in their power to prevent any molestation of the invading force. Such acts are no part of war, for innocence is entitled to respect even in war. They are mere murders, just as the drowning of the innocent passengers and crews on a merchant ship is murder and not an act of war.

That these acts should have been perpetrated on the peaceful population of an unoffending country which was not at war with its invaders, but merely defending its own neutrality, guaranteed by the invading power, may excite amazement and even incredulity. It was with amazement and almost with incredulity that the committee first read the depositions relating to such acts. But when

the evidence regarding Liège was followed by that regarding Aerschot, Louvain, Andenne, Dinant, and the other towns and villages, the cumulative effect of such a mass of concurrent testimony became irresistible, and we were driven to the conclusion that the things described had really happened. The question then arose, how they could have happened. Not from mere military license, for the discipline of the German Army is proverbially stringent, and its obedience implicit. Not from any special ferocity of the troops, for whoever has traveled among the German peasantry knows that they are as kindly and good-natured as any people in Europe, and those who can recall the war of 1870 will remember that no charges resembling those proved by these depositions were then established. The excesses recently committed in Belgium were, moreover, too widespread and too uniform in their character to be mere sporadic outbursts of passion or rapacity.

The explanation seems to be that these excesses were committed—in some cases ordered, in others allowed—on a system and in pursuance of a set purpose. That purpose was to strike terror into the civil population and dishearten the Belgian troops, so as to crush down resistance and extinguish the very spirit of self-defense. The pretext that civilians had fired upon the invading troops was used to justify not merely the shooting of individual francs-tireurs, but the murder of large numbers of innocent civilians, an act absolutely forbidden by the rules of civilized warfare.*

In the minds of Prussian officers war seems to have become a sort of sacred mission, one of the highest functions of the omnipotent State, which is itself as much an army as a State. Ordinary morality and the ordinary sentiment of pity vanish in its presence, superseded by a new standard, which justifies to the soldier every means that can conduce to success, however shocking to a natural sense of justice and humanity, however

revolting to his own feelings. The spirit of war is deified. Obedience to the State and its war lord leaves no room for any other duty or feeling. Cruelty becomes legitimate when it promises victory. Proclaimed by the heads of the army, this doctrine would seem to have permeated the officers and affected even the private soldiers, leading them to justify the killing of noncombatants as an act of war, and so : customing them to slaughter that even women and children become at last the victims. It cannot be supposed to be a national doctrine, for it neither springs from nor reflects the mind and feelings of the German people as they have heretofore been known to other nations. It is a specifically military doctrine, the outcome of a theory held by a ruling caste who have brooded and thought, written and talked, and dreamed about war until they have fallen under its obsession and been hypnotized by its spirit.

The doctrine is plainly set forth in the German Official Monograph on the usages of war on land, issued under the direction of the German Staff. This book is pervaded throughout by the view that whatever military needs suggest becomes thereby lawful, and upon this principle, as the diaries show, the German officers acted.*

If this explanation be the true one, the mystery is solved, and that which seemed scarcely credible becomes more intelligible, though not less pernicious. This is not the only case that history records in which a false theory, disguising itself as loyalty to a State or to a Church, has perverted the conception of duty and become a source of danger to the world.

PART II.

Having thus narrated the offenses committed in Belgium, which it has been proper to consider as a whole, we now turn to another branch of the subject, the breaches of the usages of war which

* As to this, see, in appendix, the Rules of The Hague Convention of 1907, to which Germany was a signatory.

"Kriegsbrauch im Landkriege," Berlin, 1902, in Vol. VI., in the series entitled "Kriegsgeschichtliche Einzelschriften," published in 1905. A translation of this monograph, by Professor J. H. Morgan, has recently been published.

appear in the conduct of the German Army generally.

This branch has been considered under the following heads:

First.—The treatment of noncombatants, whether in Belgium or in France, including—

(a) The killing of noncombatants in France;

(b) The treatment of women and children;

(c) The using of innocent noncombatants as a screen or shield in the conduct of military operations;

(d) Looting, burning, and the wanton destruction of property.

Second.—Offenses committed in the course of ordinary military operations, which violate the usages of war and the provisions of The Hague Convention.

This division includes:

(a) *Killing of wounded or prisoners;*

(b) *Firing on hospitals or on the Red Cross ambulances and stretcher bearers;*

(c) *Abuse of the Red Cross or of the white flag.*

TREATMENT OF THE CIVILIAN POPULATION.

(a) Killing of Noncombatants.

The killing of civilians in Belgium has been already described sufficiently. Outrages on the civilian population of the invaded districts, the burning of villages, the shooting of innocent inhabitants, and the taking of hostages, pillage, and destruction continued as the German armies passed into France. The diary of the Saxon officer above referred to describes acts of this kind committed by the German soldiers in advancing to the Aisne at the end of August and after they had passed the French frontier, as well as when they were in Belgian territory.

A proclamation, (a specimen of which was produced to the committee,) issued at Rheims and placarded over the town, affords a clear illustration of the methods adopted by the German Higher Command. The population of Rheims is warned that on the slightest disturbance part or the whole of the city will be burned to the ground and all the hos-

tages taken from the city (a long list of whom is given in the proclamation) immediately shot.

The evidence, however, submitted to the committee with regard to the conduct of the German Army in France is not nearly so full as that with regard to Belgium. There is no body of civilian refugees in England, and the French witnesses have generally laid their evidence before their own Government. The evidence forwarded to us consists principally of the statements of British officers and soldiers who took part in the retreat after the battle of Mons and in the subsequent advance, following the Germans from the Marne. The area covered is relatively small, and it is from French reports that any complete account of what occurred in the invaded districts in France as a whole must be obtained.

Naturally, soldiers in a foreign country, with which they were unacquainted, cannot be expected always to give accurately the names of villages through which they passed on their marches, but this does not prevent their evidence from being definite as to what they actually saw in the farms and houses where the German troops had recently been. Many shocking outrages are recorded. Three examples may here suffice; others are given in the appendix. A Sergeant who had been through the retreat from Mons and then taken part in the advance from the Marne, and who had been engaged in driving out some German troops from a village, states that his troop halted outside a bakery just inside the village. It was a private house where baking was done, "not like our bakeries here." Two or three women were standing at the door. The women motioned them to come into the house, as did also three civilian Frenchmen who were there. They took them into a garden at the back of the house. At the end of the garden was the bakery. They saw two old men between 60 and 70 years of age and one old woman lying close to each other in the garden. All three had the scalps cut right through and the brains were hanging out. They were still bleeding. Apparently they had only

just been killed. The three French civilians belonged to this same house. One of them spoke a few words of English. He gave them to understand that these three had been killed by the Germans because they had refused to bake bread for them.

Another witness states that two German soldiers took hold of a young civilian named D. and bound his hands behind his back, and struck him in the face with their fists. They then tied his hands in front and fastened the cord to the tail of the horse. The horse dragged him for about fifty yards, and then the Germans loosened his hands and left him. The whole of his face was cut and torn, and his arms and legs were bruised. On the following day one of his sisters, whose husband was a soldier, came to their house with her four children. His brother, who was also married and who lived in a village near Valenciennes, went to fetch the bread for his sister. On the way back to their house he met a patrol of Uhlans, who took him to the market place at Valenciennes, and then shot him. About twelve other civilians were also shot in the market place. The Uhlans then burned nineteen houses in the village, and afterward burned the corpses of the civilians, including that of his brother. His father and his uncle afterward went to see the dead body of his brother, but the German soldiers refused to allow them to pass.

A lance corporal in the Rifles, who was on patrol duty with five privates during the retirement of the Germans after the Marne, states that they entered a house in a small village and took ten Uhlans prisoners, and then searched the house and found two women and two children. One was dead, but the body not yet cold. The left arm had been cut off just below the elbow. The floor was covered with blood. The woman's clothing was disarranged. The other woman was alive but unconscious. Her right leg had been cut off above the knee. There were two little children, a boy about 4 or 5 and a girl of about 6 or 7. The boy's left hand was cut off at the wrist and the girl's right

hand at the same place. They were both quite dead. The same witness states that he saw several women and children lying dead in various other places, but says he could not say whether this might not have been accidentally caused in legitimate fighting.

The evidence before us proves that in the parts of France referred to murder of unoffending civilians and other acts of cruelty, including aggravated cases of rape, carried out under threat of death, and sometimes actually followed by murder of the victim, were committed by some of the German troops.

(b) The Treatment of Women and Children.

The evidence shows that the German authorities, when carrying out a policy of systematic arson and plunder in selected districts, usually drew some distinction between the adult male population on the one hand and the women and children on the other. It was a frequent practice to set apart the adult males of the condemned district with a view to the execution of a suitable number—preferably of the younger and more vigorous—and to reserve the women and children for milder treatment. The depositions, however, present many instances of calculated cruelty, often going the length of murder, toward the women and children of the condemned area. We have already referred to the case of Aerschot, where the women and children were herded in a church which had recently been used as a stable, detained for forty-eight hours with no food other than coarse bread, and denied the common decencies of life. At Dinant sixty women and children were confined in the cellar of a convent from Sunday morning till the following Friday, (Aug. 23,) sleeping on the ground, for there were no beds, with nothing to drink during the whole period, and given no food until the Wednesday, "when somebody threw into the cellar two sticks of macaroni and a carrot for each prisoner." In other cases the women and children were marched for long distances along roads, (e. g., march of

women from Louvain to Tirlemont, Aug. 28,) the laggards pricked on by the attendant Uhlans. A lady complains of having been brutally kicked by privates. Others were struck with the butt end of rifles. At Louvain, at Liège, at Aerschot, at Malines, at Montigny, at Andenne, and elsewhere, there is evidence that the troops were not restrained from drunkenness, and drunken soldiers cannot be trusted to observe the rules or decencies of war, least of all when they are called upon to execute a preordained plan of arson and pillage. From the very first women were not safe. At Liège women and children were chased about the streets by soldiers. A witness gives a story, very circumstantial in its details, of how women were publicly raped in the market place of the city, five young German officers assisting. At Aerschot men and women were deliberately shot when coming out of burning houses. At Liège, Louvain, Sempst, and Malines women were burned to death, either because they were surprised and stupefied by the fumes of the conflagration or because they were prevented from escaping by German soldiers. Witnesses recount how a great crowd of men, women, and children from Aerschot were marched to Louvain, and then suddenly exposed to a fire from a mitrail-leuse and rifles. "We were all placed," recounts a sufferer, "in Station Street, Louvain, and the German soldiers fired on us. I saw the corpses of some women in the street. I fell down, and a woman who had been shot fell on top of me." Women and children suddenly turned out into the streets, and, compelled to witness the destruction by fire of their homes, provided a sad spectacle to such as were sober enough to see. A humane German officer, witnessing the ruin of Aerschot, exclaims in disgust: "I am a father myself, and I cannot bear this. It is not war, but butchery." Officers as well as men succumbed to the temptation of drink, with results which may be illustrated by an incident which occurred at Campenhout. In this village there was a certain well-to-do merchant (name given) who had a good cellar of champagne. On the afternoon of the

14th or 15th of August three German cavalry officers entered the house and demanded champagne. Having drunk ten bottles and invited five or six officers and three or four private soldiers to join them, they continued their carouse, and then called for the master and mistress of the house.

"Immediately my mistress came in," says the valet de chambre, "one of the officers who was sitting on the floor got up, and, putting a revolver to my mistress' temple, shot her dead. The officer was obviously drunk. The other officers continued to drink and sing, and they did not pay great attention to the killing of my mistress. The officer who shot my mistress then told my master to dig a grave and bury my mistress. My master and the officer went into the garden, the officer threatening my master with a pistol. My master was then forced to dig the grave and to bury the body of my mistress in it. I cannot say for what reason they killed my mistress. The officer who did it was singing all the time."

In the evidence before us there are cases tending to show that aggravated crimes against women were sometimes severely punished. One witness reports that a young girl who was being pursued by a drunken soldier at Louvain appealed to a German officer, and that the offender was then and there shot. Another describes how an officer of the Thirty-second Regiment of the Line was led out to execution for the violation of two young girls, but reprieved at the request or with the consent of the girls' mother. These instances are sufficient to show that the maltreatment of women was no part of the military scheme of the invaders, however much it may appear to have been the inevitable result of the system of terror deliberately adopted in certain regions. Indeed, so much is avowed. "I asked the commander why we had been spared," says a lady in Louvain, who deposes to having suffered much brutal treatment during the sack. He said: "We will not hurt you any more. Stay in Louvain. All is finished." It was Saturday, Aug. 29, and the reign of terror was over.

Apart from the crimes committed in special areas and belonging to a scheme of systematic reprisals for the alleged

shooting by civilians, there is evidence of offenses committed against women and children by individual soldiers, or by small groups of soldiers, both in the advance through Belgium and France as in the retreat from the Marne. Indeed, the discipline appears to have been loose during the retreat, and there is evidence as to the burning of villages and the murder and violation of their female inhabitants during this episode of the war.

In this tale of horrors hideous forms of mutilation occur with some frequency in the depositions, two of which may be connected in some instances with a perverted form of sexual instinct.

A third form of mutilation, the cutting of one or both hands, is frequently said to have taken place. In some cases where this form of mutilation is alleged to have occurred it may be the consequence of a cavalry charge up a village street, hacking and slashing at everything in the way; in others the victim may possibly have held a weapon; in others the motive may have been the theft of rings.

We find many well-established cases of the slaughter (often accompanied by mutilation) of whole families, including not infrequently that of quite small children. In two cases it seems to be clear that preparations were made to burn a family alive. These crimes were committed over a period of many weeks and simultaneously in many places, and the authorities must have known, or ought to have known, that cruelties of this character were being perpetrated; nor can any one doubt that they could have been stopped by swift and decisive action on the part of the heads of the German Army.

The use of women and even children as a screen for the protection of the German troops is referred to in a later part of this report. From the number of troops concerned, it must have been commanded or acquiesced in by officers, and in some cases the presence and connivance of officers is proved.

The cases of violation, sometimes under threat of death, are numerous and clearly proved. We referred here to

comparatively few out of the many that have been placed in the appendix, because the circumstances are in most instances much the same. They were often accompanied with cruelty, and the slaughter of women after violation is more than once credibly attested.

It is quite possible that in some cases where the body of a Belgian or a French woman is reported as lying on the roadside pierced with bayonet wounds or hanging naked from a tree, or else as lying gashed and mutilated in a cottage kitchen or bedroom, the woman in question gave some provocation. She may by act or word have irritated her assailant, and in certain instances evidence has been supplied both as to the provocation offered and as to the retribution inflicted.

(1) "Just before we got to Melen," says a witness who had fallen into the hands of the Germans on Aug. 5, "I saw a woman with a child in her arms standing on the side of the road on our left-hand side watching the soldiers go by. Her name was G., aged about 63, and a neighbor of mine. The officer asked the woman for some water in good French. She went inside her son's cottage to get some and brought it immediately he had stopped. The officer went into the cottage garden and drank the water. The woman then said, when she saw the prisoners, 'Instead of giving you water you deserve to be shot.' The officer shouted to us, 'March.' We went on, and immediately I saw the officer draw his revolver and shoot the woman and child. One shot killed both."

Two old men and one old woman refused to bake bread for the Germans. They were butchered.

Aug. 23—I went with two friends (names given) to see what we could see. About three hours out of Malines we were taken prisoners by a German patrol—an officer and six men—and marched off into a little wood of saplings, where there was a house. The officer spoke Flemish. He knocked at the door; the peasant did not come. The officer ordered the soldiers to break down the door, which two of them did. The peasant came and asked what they were doing. The officer said he did not come quickly enough and that they had "trained up" plenty of others. His hands were tied behind his back, and he was

shot at once without a moment's delay. The wife came out with a little sucking child. She put the child down and sprang at the Germans like a lioness. She clawed their faces. One of the Germans took a rifle and struck her a tremendous blow with the butt on the head. Another took his bayonet and fixed it and thrust it through the child. He then put his rifle on his shoulder with the child upon it; its little arms stretched out once or twice. The officers ordered the houses to be set on fire, and straw was obtained and it was done. The man and his wife and the child were thrown on the top of the straw. There were about forty other peasant prisoners there also, and the officer said: "I am doing this as a lesson and example to you. When a German tells you to do something next time you must move more quickly." The regiment of Germans was a regiment of Hussars, with crossbones and a death's head on the cap.

Can any one think that such acts as these, committed by women in the circumstances created by the invasion of Belgium, were deserving of the extreme form of vengeance attested by these and other depositions?

In considering the question of provocation it is pertinent to take into account the numerous cases in which old women and very small children have been shot, bayoneted, and even mutilated. Whatever excuse may be offered by the Germans for the killing of grown-up women, there can be no possible defense for the murder of children, and if it can be shown that infants and small children were not infrequently bayoneted and shot it is a fair inference that many of the offenses against women require no explanation more recondite than the unbridled violence of brutal or drunken criminals.

It is clearly shown that many offenses were committed against infants and quite young children. On one occasion children were even roped together and used as a military screen against the enemy; on another three soldiers went into action carrying small children to protect themselves from flank fire. A shocking case of the murder of a baby by a drunken soldier at Malines is thus

recorded by one eyewitness and confirmed by another:

"One day when the Germans were not actually bombarding the town I left my house to go to my mother's house in High Street. My husband was with me. I saw eight German soldiers, and they were drunk. They were singing and making a lot of noise and dancing about. As the German soldiers came along the street I saw a small child, whether boy or girl I could not see, come out of a house. The child was about two years of age. The child came into the middle of the street so as to be in the way of the soldiers. The soldiers were walking in twos. The first line of two passed the child. One of the second line, the man on the left, stepped aside and drove his bayonet with both hands into the child's stomach, lifting the child into the air on his bayonet and carrying it away on his bayonet, he and his comrades still singing. The child screamed when the soldier struck it with his bayonet, but not afterward."

These, no doubt, were for the most part the acts of drunken soldiers, but an incident has been recorded which discloses the fact that even sober and highly placed officers were not always disposed to place a high value on child life. Thus the General, wishing to be conducted to the Town Hall at Lebbeke, remarked in French to his guide, who was accompanied by a small boy: "If you do not show me the right way I will shoot you and your boy." There was no need to carry the threat into execution, but that the threat should have been made is significant.

We cannot tell whether these acts of cruelty to children were part of the scheme for inducing submission by inspiring terror. In Louvain, where the system of terrorizing was carried to the furthest limit, outrages on children were uncommon. The same, however, cannot be said of some of the smaller villages which were subjected to the system. In Hofstade and Sempst, in Haecht, Rotselaer, and Wespelaar, many children were murdered. Nor can it be said of the village of Tamines, where three small children (whose names are given by an eye witness of the crime)

were slaughtered on the green for no apparent motive. It is difficult to imagine the motives which may have prompted such acts. Whether or no Belgian civilians fired on German soldiers, young children at any rate did not fire. The number and character of these murders constitute the most distressing feature connected with the conduct of the war so far as it is revealed in the depositions submitted to the committee.

(c) The Use of Civilians as Screens.

We have before us a considerable body of evidence with reference to the practice of the Germans of using civilians and sometimes military prisoners as screens from behind which they could fire upon the Belgian troops, in the hope that the Belgians would not return the fire for fear of killing or wounding their own fellow-countrymen.

In some cases this evidence refers to places where fighting was actually going on in the streets of a town or village, and to these cases we attach little importance. It might well happen when terrified civilians were rushing about to seek safety that groups of them might be used as a screen by either side of the combatants without any intention of inhumanity or of any breach of the rules of civilized warfare. But, setting aside these doubtful cases, there remains evidence which satisfies us that on so many occasions as to justify its being described as a practice the German soldiers, under the eyes and by the direction of their officers, were guilty of this act.

Thus, for instance, outside Fort Fléron, near Liège, men and children were marched in front of the Germans to prevent the Belgian soldiers from firing.

The progress of the Germans through Mons was marked by many incidents of this character. Thus, on Aug. 22 half a dozen Belgian colliers returning from work were marching in front of some German troops who were pursuing the English, and in the opinion of the witnesses they must have been placed there intentionally. An English officer describes how he caused a barricade to be erected in a main thoroughfare leading

out of Mons when the Germans, in order to reach a crossroad in the rear, fetched civilians out of the houses on each side of the main road and compelled them to hold up white flags and act as cover.

Another British officer who saw this incident is convinced that the Germans were acting deliberately for the purpose of protecting themselves from the fire of the British troops. Apart from this protection the Germans could not have advanced, as the street was straight and commanded by the British rifle fire at a range of 700 or 800 yards. Several British soldiers also speak to this incident, and their story is confirmed by a Flemish witness in a side street.

On Aug. 24 men, women, and children were actually pushed into the front of the German position outside Mons. The witness speaks of 16 to 20 women, about a dozen children, and half a dozen men being there.

Seven or eight women and five or six very young children were utilized in this way by some Uhlans between Landrécies and Guise.

A Belgian soldier saw an incident of this character during the retreat from Namur.

At the battle of Malines 60 or 80 Belgian civilians, among whom were some women, were driven before the German troops. Another witness saw a similar incident near Malines, but a much larger number of civilians was involved, and a priest was in front with a white flag.

In another instance, related by a Belgian soldier, the civilians were tied by the wrists in groups.

At Eppegheem, where the Germans were driven back by the Belgian sortie from Antwerp, civilians were used as a cover for the German retreat.

Near Malines, early in September, about 10 children, roped together, were driven in front of a German force.

At Londerzeel 30 or 40 civilians, men, women, and children, were placed at the head of a German column.

One witness from Termonde was made to stand in front of the Germans, together with others, all with their hands above their heads. Those who allowed

their hands to drop were at once prodded with the bayonet. Again, at Termonde, about Sept. 10, a number of civilians were shot by the Belgian soldiers, who were compelled to fire at the Germans, taking the risk of killing their own countrymen.

At Tournai 400 Belgian civilians, men, women, and children, were placed in front of the Germans, who then engaged the French.

The operations outside Antwerp were not free from incidents of this character. Near Willebroeck some civilians, including a number of children, a woman, and one old man, were driven in front of the German troops. German officers were present, and one woman who refused to advance was stabbed twice with the bayonet, and a little child who ran up to her as she fell had half its head blown away by a shot from a rifle.

Other incidents of the same kind are reported from Nazareth and Ypres. The British troops were compelled to fire, in some cases at the risk of killing civilians.

At Ypres the Germans drove women in front of them by pricking them with bayonets. The wounds were afterward seen by the witness.

(d) Looting, Burning, and Destruction of Property.

There is an overwhelming mass of evidence of the deliberate destruction of private property by the German soldiers. The destruction in most cases was effected by fire, and the German troops, as will be seen from earlier passages in the report, had been provided beforehand with appliances for rapidly setting fire to houses. Among the appliances enumerated by witnesses are syringes for squirting petrol, guns for throwing small inflammable bombs, and small pellets made of inflammable material. Specimens of the last mentioned have been shown to members of the committee. Besides burning houses, the Germans frequently smashed furniture and pictures; they also broke in doors and windows. Frequently, too, they defiled houses by relieving the wants of nature upon the floor. They also appear to have perpetrated the same vileness upon piled up

heaps of provisions so as to destroy what they could not themselves consume. They also on numerous occasions threw corpses into wells, or left in them the bodies of persons murdered by drowning.

In addition to these acts of destruction the German troops, both in Belgium and France, are proved to have been guilty of persistent looting. In the majority of cases the looting took place from houses, but there is also evidence that German soldiers and even officers robbed their prisoners, both civil and military, of sums of money and other portable possessions. It was apparently well known throughout the German Army that towns and villages would be burned whenever it appeared that any civilians had fired upon the German troops, and there is reason to suspect that this known intention of the German military authorities in some cases explains the sequence of events which led up to the burning and sacking of a town or village. The soldiers, knowing that they would have an opportunity of plunder if the place was condemned, had a motive for arranging some incident which would provide the necessary excuse for condemnation. More than one witness alleges that shots coming from the window of a house were fired by German soldiers who had forced their way into the house for the purpose of thus creating an alarm. It is also alleged that German soldiers on some occasions merely fired their rifles in the air in a side street and then reported to their officers that they had been fired at. On the report that firing had taken place orders were given for wholesale destruction, and houses were destroyed in streets and districts where there was no allegation that firing had taken place, as well as in those where the charge arose. That the destruction could have been limited is proved by the care taken to preserve particular houses whose occupants had made themselves in one way or another agreeable to the conquerors. These houses were marked in chalk, ordering them to be spared, and spared they were.

The above statements have reference to the burning of towns and villages. In addition, the German troops in numerous

instances have set fire to farmhouses and farm buildings. Here, however, the plea of military necessity can more safely be alleged. A farmhouse may afford convenient shelter to an enemy, and where such use is probable it may be urged that the destruction of the buildings is justifiable. It is clearly, however, the duty of the soldiers who destroy the buildings to give reasonable warning to the occupants so that they may escape. Doubtless this was in many cases done by the German commanders, but there is testimony that in some cases the burning of the farmhouse was accompanied by the murder of the inhabitants.

The same fact stands out clearly in the more extensive burning of houses in towns and villages. In some cases, indeed, as a prelude to the burning, inhabitants were cleared out of their houses and driven along the streets, often with much accompanying brutality—some to a place of execution, others to prolonged detention in a church or other public buildings. In other cases witnesses assert that they saw German soldiers forcing back into the flames men, women, and children who were trying to escape from the burning houses. There is also evidence that soldiers deliberately shot down civilians as they fled from the fire.

The general conclusion is that the burning and destruction of property which took place was only in a very small minority of cases justified by military necessity, and that even then the destruction was seldom accompanied by that care for the lives of noncombatants which has hitherto been expected from a military commander belonging to a civilized nation. On the contrary, it is plain that in many cases German officers and soldiers deliberately added to the sufferings of the unfortunate people whose property they were destroying.

OFFENSES AGAINST COMBATANTS.

(a) *The Killing of the Wounded and of Prisoners.*

In dealing with the treatment of the wounded and of prisoners and the cases in which the former appear to have been killed when helpless, and the latter at,

or after, the moment of capture, we are met by some peculiar difficulties, because such acts may not in all cases be deliberate and cold-blooded violations of the usages of war. Soldiers who are advancing over a spot where the wounded have fallen may conceivably think that some of these lying prostrate are shamming dead, or, at any rate, are so slightly wounded as to be able to attack or to fire from behind when the advancing force has passed, and thus they may be led into killing those whom they would otherwise have spared. There will also be instances in which men intoxicated with the frenzy of battle slay even those whom on reflection they might have seen to be incapable of further harming them. The same kind of fury may vent itself on persons who are already surrendering, and even a soldier who is usually self-controlled or humane may, in the heat of the moment, go on killing, especially in a general mêlée, those who were offering to surrender. This is most likely to happen when such a soldier has been incensed by an act of treachery or is stirred to revenge by the death of a comrade to whom he is attached. Some cases of this kind appear in the evidence. Such things happen in all wars as isolated instances, and the circumstances may be pleaded in extenuation of acts otherwise shocking. We have made due allowance for these considerations and have rejected those cases in which there is a reasonable doubt as to whether those who killed the wounded knew that the latter were completely disabled. Nevertheless, after making all allowances, there remain certain instances in which it is clear that quarter was refused to persons desiring to surrender when it ought to have been given, or that persons already so wounded as to be incapable of fighting further were wantonly shot or bayoneted.

The cases to which references are given all present features generally similar, and in several of them men who had been left wounded in the trenches when a trench was carried by the enemy were found, when their comrades subsequently retook the trench, to have been slaughtered, although evidently helpless, or else.

they would have escaped with the rest of the retreating force. For instance, a witness says:

"About Sept. 20 our regiment took part in an engagement with the Germans. After we had retired into our trenches, a few minutes after we got back into them, the Germans retired into their trenches. The distance between the trenches of the opposing forces was about 400 yards. I should say about fifty or sixty of our men had been left lying on the field from our trenches. After we got back to them I distinctly saw German soldiers come out of their trenches, go over the spots where our men were lying, and bayonet them. Some of our men were lying nearly half way between the trenches."

Another says:

"The Germans advanced over the trenches of the headquarters trench, where I had been on guard for three days. When the Germans reached our wounded I saw their officer using his sword to cut them down."

Another witness says:

"Outside Ypres we were in trenches and were attacked, and had to retire until reinforced by other companies of the Royal Fusiliers. Then we took the trenches and found the wounded, between twenty and thirty, lying in the trenches with bayonet wounds, and some shot. Most of them, say three-quarters, had their throats cut."

In one case, given very circumstantially, a witness tells how a party of wounded British soldiers were left in a chalk pit, all very badly hurt, and quite unable to make resistance. One of them, an officer, held up his handkerchief as a white flag, and this

"attracted the attention of a party of about eight Germans. The Germans came to the edge of the pit. It was getting dusk, but the light was still good, and everything clearly discernible. One of them, who appeared to be carrying no arms and who, at any rate, had no rifle, came a few feet down the slope into the chalk pit, within eight or ten yards of some of the wounded men."

He looked at the men, laughed, and said something in German to the Germans who were waiting on the edge of the pit. Immediately one of them fired at the officer, then three or four of these ten soldiers were shot, then another officer, and the witness, and the rest of them.

"After an interval of some time I sat up and found that I was the only man of the ten who were living when the Germans came into the pit remaining alive and that all the rest were dead."

Another witness describes a painful case in which five soldiers, two Belgians and three French, were tied to trees by German soldiers apparently drunk, who stuck knives in their faces, pricked them with their bayonets, and ultimately shot them.

We have no evidence to show whether and in what cases orders proceeded from the officer in command to give no quarter, but there are some instances in which persons obviously desiring to surrender were, nevertheless, killed.

(b) *Firing on Hospitals or on the Red Cross Ambulances or Stretcher Bearers.*

This subject may conveniently be divided into three subdivisions, namely, firing on—

(1) Hospital buildings and other Red Cross establishments.

(2) Ambulances.

(3) Stretcher bearers.

Under the first and second categories there is obvious difficulty in proving intention, especially under the conditions of modern long-range artillery fire. A commanding officer's duty is to give strict orders to respect hospitals, ambulances, &c., and also to place Red Cross units as far away as possible from any legitimate line of fire. But with all care some accidents must happen, and many reported cases will be ambiguous. At the same time, when military observers have formed a distinct opinion that buildings and persons under the recognizable protection of the Red Cross were willfully fired upon, such opinions cannot be disregarded.

Between thirty and forty of the depositions submitted related to this offense. This number does not in itself seem so great as to be inconsistent with the possibility of accident.

In one case a Red Cross dépôt was shelled on most days throughout the week. This is hardly reconcilable with the enemy's gunners having taken any care to avoid it.

There are other cases of conspicuous

hospitals being shelled, in the witnesses' opinion, purposely.

In one of these the witness, a Sergeant Major, makes a suggestion which appears plausible, namely, that the German gunners use any conspicuous building as a mark to verify their ranges rather than for the purpose of destruction. It would be quite according to the modern system of what German writers call *Kriegsräson* to hold that the convenience of range-finding is a sufficient military necessity to justify disregarding any immunity conferred on a building by the Red Cross or otherwise. In any case, artillery fire on a hospital at such a moderate range as about 1,000 yards can hardly be thought accidental.

(2) As to firing on ambulances, the evidence is more explicit.

In one case the witness is quite clear that the ambulances were aimed at.

In another case of firing at an ambulance train the range was quite short.

In another a Belgian Red Cross party is stated to have been ambushed.

On the whole we do not find proof of a general or systematic firing on hospitals or ambulances; but it is not possible to believe that much care was taken to avoid this.

(3) As to firing on stretcher bearers in the course of trench warfare, the testimony is abundant, and the facts do not seem explicable by accident. It may be that sometimes the bearers were suspected of seeing too much; and it is plain from the general military policy of the German armies that very slight suspicion would be acted on in case of doubt.

(c) *Abuse of the Red Cross and of the White Flag.*

THE RED CROSS.

Cases of the Red Cross being abused are much more definite.

There are several accounts of fire being opened, sometimes at very short range, by machine guns which had been disguised in a German Red Cross ambulance or car. This was aggravated in one case near Tirlémont by the German soldiers wearing Belgian uniforms.

Witness speaks also of a stretcher

party with the Red Cross being used to cover an attack and of a German Red Cross man working a machine gun.

There is also a well-attested case of a Red Cross motor car being used to carry ammunition under command of officers.

Unless all these statements are willfully false, which the committee sees no reason to believe, these acts must have been deliberate, and it does not seem possible that a Red Cross car could be equipped with a machine gun by soldiers acting without orders. There is also one case of firing from a cottage where the Red Cross flag was flying, and this could not be accidental.

On the whole, there is distinct evidence of the Red Cross having been deliberately misused for offensive purposes, and seemingly under orders, on some, though not many, occasions.

ABUSE OF THE WHITE FLAG.

Cases of this kind are numerous. It is possible that a small group of men may show a white flag without authority from any proper officer, in which case their action is, of course, not binding on the rest of the platoon or other unit. But this will not apply to the case of a whole unit advancing as if to surrender, or letting the other side advance to receive the pretended surrender, and then opening fire. Under this head we find many depositions by British soldiers and several by officers. In some cases the firing was from a machine gun brought up under cover of the white flag.

The depositions taken by Professor Morgan in France strongly corroborate the evidence collected in this country.

The case numbered h 70 may be noted as very clearly stated. The Germans, who had "put up a white flag on a lance and ceased fire," and thereby induced a company to advance in order to take them prisoners, "dropped the white flag and opened fire at a distance of 100 yards." This was near Nesle, on Sept. 6, 1914. It seems clearly proved that in some divisions at least of the German Army this practice is very common. The incidents as reported cannot

be explained by unauthorized surrenders of small groups.

There is, in our opinion, sufficient evidence that these offenses have been frequent, deliberate, and in many cases committed by whole units under orders. All the acts mentioned in this part of the report are in contravention of The Hague Convention, signed by the great powers, including France, Germany, Great Britain, and the United States, in 1907, as may be seen by a reference to Appendix D, in which the provisions of that convention relating to the conduct of war on land are set forth.

CONCLUSIONS.

From the foregoing pages it will be seen that the committee have come to a definite conclusion upon each of the heads under which the evidence has been classified.

It is proved—

(i.) That there were in many parts of Belgium deliberate and systematically organized massacres of the civil population, accompanied by many isolated murders and other outrages.

(ii.) That in the conduct of the war generally innocent civilians, both men and women, were murdered in large numbers, women violated, and children murdered.

(iii.) That looting, house burning, and the wanton destruction of property were ordered and countenanced by the officers of the German Army, that elaborate provision had been made for systematic incendiarism at the very outbreak of the war, and that the burnings and destruction were frequent where no military necessity could be alleged, being in-

deed part of a system of general terrorization.

(iv.) That the rules and usages of war were frequently broken, particularly by the using of civilians, including women and children, as a shield for advancing forces exposed to fire, to a less degree by killing the wounded and prisoners, and in the frequent abuse of the Red Cross and the white flag.

Sensible as they are of the gravity of these conclusions the committee conceive that they would be doing less than their duty if they failed to record them as fully established by the evidence. Murder, lust, and pillage prevailed over many parts of Belgium on a scale unparalleled in any war between civilized nations during the last three centuries.

Our function is ended when we have stated what the evidence establishes, but we may be permitted to express our belief that these disclosures will not have been made in vain if they touch and rouse the conscience of mankind, and we venture to hope that as soon as the present war is over the nations of the world in council will consider what means can be provided and sanctions devised to prevent the recurrence of such horrors as our generation is now witnessing.

We are, &c.,

SCRIABIN'S LAST WORDS.

[From The London Times, May 1, 1915.]

M. Brianchaninov, an intimate friend of Scriabin, telegraphed the news of the composer's death to a friend in England. He stated that Scriabin died of the disease of the lip from which he was suffering when in England last year, and that he had just finished the "wonderful poetical text" of the prologue to his "Mystery." When Scriabin was suffering terrible pain just before his death he clenched his hands and his last words were: "I must be self-possessed, like Englishmen."

M. Brianchaninov is collecting a fund for Scriabin's children, and he suggests that possibly "some English friends and admirers" may care to contribute.

Chronology of the War

Showing Progress of Campaigns on All Fronts and Collateral Events
From March 31, 1915, Up to and Including April 30, 1915

[Continued from the May number.]

CAMPAIGN IN EASTERN EUROPE

April 1—Russians take up lively offensive in Central Poland, seeking to prevent reinforcements being sent to the Carpathians; they halt a raid from Bukowina; Austrians drive back Russians near Inow-lodz, on the Pilica River; Germans check night attempt of Russians to cross the Rawka River; German bombardment of Ossowetz has been abandoned; cold weather is favoring German operations in East Prussia; German Headquarters Staff reports that in March the German Eastern army took 55,800 Russian prisoners, 9 cannon, and 61 machine guns.

April 2—Russians take the offensive along their whole front from the Baltic Sea to Rumanian border; they are reported to be concentrating an enormous force on the coast of Finland to prevent any attempt at a German landing; Germans in Poland are being pushed back to the East Prussian border; Russians capture another strongly fortified ridge in the Carpathians, scaling ice-covered hills to do it; vast bodies of Russian cavalry are held in readiness for a sweep across the plains of Hungary; main Austrian Army in Bukowina is falling back; Russians now stand upon last heights of the main chain of Beskid Mountains; Austrians repulse Russian attacks east of Beskid Pass; Russians drive back Germans to the east of Pilwiska; Austrians repulse Russian attacks between the Pruth and Dniester Rivers.

April 3—Fighting in the Carpathians continues night and day along a forty-mile front; Russians are making gains and pressing Austrians hard; Germans are pouring reinforcements into Hungary to support Austrians; Austrians gain in Bukowina; Austrians are trying to cut off Montenegro from all communication with the outside world and starve her into submission.

April 4—Austrians retreat from the Beskid region after Russian success; Austrians make progress in the Laborcza Valley; fighting has been going on for twenty-four continuous hours on both sides of the Dukla Pass; Germans repulse Russian attacks near Augustowo.

April 5—Russians continue to make steady progress in the Carpathians; they are now on the Hungarian side of both the Dukla and Lupkow Passes and are making advances on the heights which dominate Uzsok Pass; Russians gain in Bukowina and in North Poland.

April 6—Russians continue their great offensive in the Carpathians; Austrians are retreating at some points and burning their bridges behind them; Russians make progress in direction of Rostok Pass; German reinforcements are being rushed from Flanders to Austria via Munich; Austrian and German troops take strong Russian positions east of Laborcza Valley; Russians have been repulsed in an attempt to cross to the left bank of the Dniester River southwest of Uscie-Diekupie; Austrian artillery is bombarding Serbian towns on the Danube and the Save.

April 7—Russians continue offensive between the River Toplia and the Uzsok Pass region; Austrians take guns and war material on the heights east of the Laborcza Valley; Austrians bombard Belgrade; Austrians win ground along the River Pruth; Austrians are reported to have passed the Dniester and to be advancing on Kamenitz Podolsky, in Russian territory.

April 8—Russian advance in the Carpathians cuts one Austrian army in two; Russians capture Smolnik, east of Lupkow Pass; fierce fighting is going on in the mountain passes.

April 9—The whole southern slope of the Carpathians has been strongly fortified by the Austrians; twenty-four Austrian and six German army corps are stated to be now facing the Russians.

April 10—Russians begin attack on German forces which hold the hills from Uzsok Pass eastward to Beskid Pass; Russians make gains in the direction of Rostok; the general Russian offensive continues on the Niznia - Destuszica - Volestate-Bukowecz line; in places in the Carpathians the Russians are progressing through seven feet of snow; Austro-German forces repulse a strong Russian attack in the Opor Valley.

April 11—All the main ridges of the Carpathians are now in the hands of the Russians, who hold the eighty-mile front Uzsoz-Mezo-Laborca-Bartfeld, with the head sections of five main railways; at some points the Russians are descending the southern slopes and are approaching the Uzsoz Valley.

April 12—Germans repulse Russian attack near Kaziouwka, Russians losing heavily; artillery duels are in progress near Ossowetz and in the region of Edwabno; German attack on village of Szafranki is repulsed; Austro-Germans still hold the Uzsoz Pass; they repulse Russian attacks east of there.

April 13—Large German reinforcements are being sent to the Austrians; 250,000 Germans, comprising seven army corps, are co-operating with the Austrians in a formidable attack on the left wing of the Russian army which is invading Hungary; Austrian Embassy at Washington gives out an official bulletin from Vienna saying the Russian advance in the Carpathians is halted; heavy fighting is in progress in the Bartfeld-Stryi region; Russians advance on both banks of the Ondawa, and gain success in direction of Uzsoz, capturing certain heights; Austro-German forces strongly attack the heights south of Kaziouwka, but are repulsed; Russians repel German attacks on the front west of the Niemen; Ossowetz is again bombarded by the Germans; fierce fighting is on in Bukowina.

April 14—After a twelve-hour battle the Austrians retreat precipitately from a strong position at Mezo Laborcz, on Hungarian side of the East Beskid Mountains; the whole main front in this district is in Russian hands; Austro-German forces are contesting stubbornly every foot of the German advance along the front from Bartfeld to Stryi; Austrians are trying to penetrate into Russian territory from Bukowina; Germans are active in Poland; Germans attack the town of Chafranka, on the Skwa River, near Ostrolenka; it is stated at Petrograd that 4,000,000 combatants, including both sides, are now engaged along the Carpathians.

April 15—Russians crush fierce counter-attack against their left wing in the Carpathians made by picked Bavarian infantry; Russians repulse an attack by Austrians on the extreme east; Austrians defeat Russians near Oiezkowice, on the Biala.

April 16—War correspondents at Austrian headquarters, in summing up the result of the fighting in the Carpathians, say that the Russian loss has been 500,000, and that the backbone of the invading army is broken; Germans prepare to attack along an 800-mile Russian front.

April 17—The melting of the snow in the Carpathians, resulting in overflowing streams and rivers and in seas of mud,

is stopping various intended movements on both sides; artillery engagements are in progress in Southeast Galicia and Bukowina; Russians repulse attacks in the direction of Stryi; Russian Emperor leaves for the front.

April 18—In a review of the Carpathian campaign issued by Russian General Headquarters it is stated that since the beginning of March Russian troops have carried by storm 75 miles of the principal chain of the Carpathians, have taken 70,000 prisoners, 30 field guns, and 200 machine guns; fighting in the Carpathians on main line of Russian advance is now concentrated on the narrow section between the villages of Telepoch and Zuella; Russians gain on the heights of Telepotch; artillery duels continue in Southeast Galicia.

April 20—Russians repulse vigorous German attack east of Telepotch and Polen; severe fighting for the height near Oravozil is in progress, the Russians reoccupying it by a desperate assault after losing it earlier in the day; 600,000 Austro-German troops are now engaged over an irregular line between the Lupkow and Uzsoz Passes.

April 21—Austrians repel, after several days' fighting, a strong Russian attack on the extreme wings of the Austrian forces in the wooded mountains near Laborca and the Ung Valley; Austrians still hold Uzsoz Pass; Russians repulse Austrian attack in Western Galicia near Gorlitz; Russians check an Austrian counter-attack against the heights of Polen; the counter-attack of General Litzinger's Bavarian army against Russian left wing in the Carpathian position has now been definitely halted; nevertheless the Russian advance in the Carpathians has now apparently come to a full stop; Russians reoccupy the hill village of Oravtchik.

April 22—Russians defeat Austrians in bayonet fighting on the Bukowina front; artillery duels are in progress in Russian Poland and Western Galicia; Austrians repulse Russian attacks on both sides of the Uzsoz Pass, taking 1,200 prisoners; Russians check attempted Austrian outflanking movements on the central Carpathian front; in Galicia an Austro-German army, defeated by Russians, is falling back.

April 23—Austrians have success in artillery duel in the sector of Nagypolany; Russians gain in the direction of Lutovisk; a strong force of Russian cavalry invades East Prussia near Memel, the seaport at the northern extremity of the province, and is threatening the German left flank; Russians make gains in the region of Telepotch and at Sianka; Austrians repulse several day attacks at points near Uzsoz Pass; heavy artillery engagements are being fought in the region of this pass.

April 25—Austro-German troops take by storm Ostry Mountain, in the Orava Valley, in the Carpathians, to the south of Koziouwa; the mountain is 3,500 feet high, with precipitous sides, and the Russians believed their fortifications had made it impregnable; this victory gives the Austrians command of the Orava Valley and allows them to advance their lines east of Uzsok Pass eleven miles into Galician territory; Russian artillery repulses a German attack between Kalwaya and Ludwinow in Prussian Poland; heavy fighting continues in the Carpathians in the Uzsok Pass region, the Austrians having brought up fresh units of heavy artillery.

April 26—Russian counter-attacks on the height of Ostry are beaten off; Austrians capture twenty-six Russian trenches; Austrians gain ground south of Koziouwa; artillery duel is being fought on the Dniester in Bukowina.

April 27—Russians have begun another strong offensive around the heights of Uzsok Pass; Austro-German casualties there in two days are estimated by Russians at 20,000; Russians repel Austrian attacks on the heights to the northeast of Oroszepatak; Russians are concentrating at Bojan, Northern Bukowina.

April 28—Heavy fighting continues in the Uzsok Pass region; a battle has been raging for five days in the vicinity of Stryi; Russians repulse Germans at Jednorozet; Germans take twelve miles of Russian trenches east of Suwalki; Austrians occupy Novoselitsky, on border of Bessarabia, and are advancing into Russian territory.

April 29—Germans begin an offensive along nearly the whole of the East Prussian front, extending from north of the Niemen River to the sector north of the Vistula; Russians are beaten back in an attack in the Carpathians northeast of Loubnia; Russians repulse an attack on the heights of the Opor Valley.

April 30—German cavalry is invading the Russian Baltic Provinces; German attempt to advance on the left bank of the Vistula is checked; in the region of Golovetzko the Russians take the offensive, capturing trenches and prisoners; Russians check an attempted offensive north of Nadvorna; Austrians repulse Russian night attacks in the Orawa and Opor Valleys.

CAMPAIGN IN WESTERN EUROPE.

April 1—Artillery duels are in progress in the Woivre district; French occupy the village of Fey-en-Haye to the west of the Forest of Le Prêtre; outpost engagements take place near Lunéville.

April 2—Heavy artillery fighting is on between the Meuse and the Moselle; night infantry fighting takes place in the Forest of Le Prêtre.

April 3—Germans repulse French in Forest of Le Prêtre; Germans repulse French attack on heights west of Mülhausen; French make progress with mining operations southwest of Peronne; French check a German attempt to debouch near Lassigny; French repulse attacks in Upper Alsace.

April 4—Germans take from the Belgians the village of Drei Grachten on the west side of the Yser, this being the first time the Germans have gained a foothold on the west bank for weeks; French make progress in the Woivre district; French take village of Regniéville, west of Fey-en-Haye; Germans repulse French charges in Forest of Le Prêtre.

April 5—French capture three successive lines of trenches at the Forest of Ailly, near St. Mihiel; Germans repulse Belgians near Drei Grachten; Germans repulse French attempt to advance in the Argonne Forest and Germans gain ground in the Forest of Le Prêtre; French are advancing in Champagne; French gain ground in the Hurlus district and beyond the Camp de Chalons, capturing some of the Germans' prepared positions; bombardment of Rheims is being continued night and day, and it is reported that one-third of the houses have been destroyed and another one-third damaged.

April 6—French are conducting a sustained offensive between the Meuse and Moselle in an effort to dislodge Germans from St. Mihiel; French gain trenches in the Wood of Ailly; French make progress near Maizeray and in the Forest of Le Prêtre; strong French attacks at points east of Verdun are repulsed, but French occupy village of Gussainville.

April 7—French, continuing extensive operations, make gains in the Woivre district and southward between St. Mihiel and Pont-à-Mousson; east of Verdun the French take two lines of trenches, and repulse German counter-attacks; Germans report that French offensive, as a whole, is thus far a failure.

April 8—French official report states that since April 4 the French offensive between the Meuse and the Moselle has resulted in important gains on the heights of the Orne, on the heights of the Meuse at Les Eparges, in the Ailly Wood, and in the Southern Woivre between the Forest of Mortmare and the Forest of Le Prêtre, the Germans losing heavily; the German report is at variance with French claims and states that the French have failed; Belgians report that the western side of the Yser Canal, in the direction of Drei Grachten, is completely free of Germans.

April 9—Desperate fighting continues on the heights of the Meuse and along the St. Mihiel-Pont-à-Mousson front; French announce complete occupation of Les Eparges, one of their chief objectives;

French say Germans were repulsed fifteen times in the Forest of Mortmare; Berlin report is at sharp variance with the French, stating that all French attacks in the Meuse region have been repulsed with heavy loss; Germans make gains in Champagne; Germans retake Drei Grachten from Belgians.

April 10—French extend their gains in the Woevre; French push forward on St. Mihiel-Pont-à-Mousson front in attempt to cut German communications; French hold Les Eparges firmly, where, according to the official French report, the Germans have lost 30,000 men in two months; Germans repulse French between the Orne and the heights of the Meuse, and in the Forest of Le Prêtre; French attacks on the village of Bezange la Grande fail.

April 11—French state that they maintain their gains of previous days in the St. Mihiel region, though Germans recapture some of their own lost trenches in Mortmare Wood; French repulse attacks in the Forest of Le Prêtre, though the Germans capture some machine guns; a strong French attack on German positions north of Combres results in failure; German main army headquarters denies that the recent French attacks in the St. Mihiel region have been successful; Germans take three villages from the Belgians; Germans are vigorously attacking positions recently taken from them by the French on Hartmanns-Weilerkopf; furious German attacks are made near Albert, being a continuation of an attack begun yesterday; Germans blow up some French trenches by mines; heavy German losses, due to the pounding of six miles of French artillery, occur in an infantry advance.

April 12—Lively fighting in the Woevre district; Germans attack Les Eparges, but are repulsed; French make gains at Courie; Germans have successes in close-quarter fighting in the Forests of Ailly and Le Prêtre; German sappers throw letters into British trenches saying they are tired of fighting and expressing hopes for peace.

April 13—French make slight gains east of Berry-au-Bac; Germans repulse French attacks at several points; Germans gain ground in the Forest of Le Prêtre; Germans are moving up reinforcements in the region of Thionville and Metz.

April 14—French penetrate the German line at Marcheville, but are driven out by counter-attacks; French extend their front in the Forest of Ailly, and make progress in the Forest of Mortmare; French artillery checks a German attack at Les Eparges; activity is renewed at Berry-au-Bac; Germans are strengthening the forts at Istein, on the Rhine.

April 15—The whole spur northeast of Notre Dame de Lorette has been carried by the

French with the bayonet; French gain at Bagatelle in the Argonne; French repulse German counter-attacks at Les Eparges; Germans repulse French attacks at Marcheville, at the Forest of Le Prêtre, and elsewhere.

April 16—French repulse German attacks north of Arras and in the St. Mihiel region.

April 17—French make progress in the Vosges on both sides of the Fecht River; in Champagne, northeast of Perthes, the Germans explode mines under French trenches; Germans repulse French near Flirey; French repulse Germans at Notre Dame de Lorette; in the Valley of the Aisne French heavy artillery bombards the caves of Pasy, used as German shelters.

April 18—Germans repulse British attack in the hills southeast of Ypres; Germans capture an advanced French position in the Vosges southwest of Stossweiler; French have successes in the Valley of the Aisne, at the Bois de St. Mord, and in Champagne, to the northwest of Perthes; French make progress in region of Schnepfen-Riethkopf in Alsace.

April 19—British line south of Ypres has been pushed forward three miles after much hard fighting; British take Hill 60, an important strategic point, lying two miles south of Zillebeke; German counter-attacks are repulsed; British attacks are repulsed between Ypres and Comines; French make gains along the Fecht River, and capture a division of mountain artillery; French gain the summit of Burgkorpfeld, and are advancing on the north bank of the Fecht; French repulse counter-attacks at Les Eparges; Germans repulse French attacks at Combres.

April 20—Heavy artillery fighting in Champagne and the Argonne; French infantry attack fails north of Four-de-Paris; French make slight progress in the Forest of Mortmare; Germans storm and re-occupy the village of Embermenil, west of Avrecourt.

April 21—Violent German counter-attacks are being made on Hill 60, but all have been repulsed, "with great loss to the enemy," according to the British; Germans capture a French battery near Rheims; French repulse German attacks at several points between the Meuse and the Moselle; French repulse attack in Alsace east of Hartmanns-Weilerkopf; Germans repulse French attack north of Four-de-Paris; Germans repulse French attack extending over a considerable front at Flirey; German gain in the Forest of Le Prêtre.

April 22—A great new battle is being fought at Ypres, Germans taking a strong offensive from the northeast; they drive the Allies back to the Ypres Canal, taking 6,000 prisoners and 35 guns; at Steen-

straete and Het Sase the Germans force their way across the canal and establish themselves on the west bank; Germans capture villages of Langemarck, Steenstraete, Het Sase, and Pilken; Ypres is being heavily bombarded; British and French official reports declare that at one point where the French fell back they did so because of asphyxiating gas used by the Germans; the Germans, on the contrary, have claimed several times recently that the French have been using asphyxiating bombs at various points; Germans continue tremendous attacks on Hill 60, with what is declared to be one of the fiercest artillery bombardments in history, but the British still hold it; German troops are pouring through Belgium to the Ypres front; Germans gain ground south of La Bassée; Germans repulse French attack in the western part of the Forest of Le Prêtre; French repulse attack at Bagatelle, in the Argonne; French gain ground near St. Mihiel; French continue to advance on both banks of the Fecht River; official French report states that all the Ailly woods are now in the hands of the French after several days' fighting in the early part of April; infantry attacks were preceded by a concentrated artillery fire, at one point the French firing 20,000 shells in 90 minutes.

April 23—French make progress at Forstat and near St. Mihiel; artillery duels at Combres, St. Mihiel, Apremont, and northeast of Flirey; French take advanced German trenches between Ailly and Apremont.

April 24—One of the most furious battles of the war is now raging north of Ypres, where the Allies have regained some of the ground recently lost; Germans are pouring more troops into Flanders to push the attack; the Canadians make a brilliant counter-attack, regaining part of the ground this division lost, and retake four Canadian 4.7-inch guns which they had lost; the Canadians are highly praised in the British War Office report; Germans make further gains at another point on the line and they seize Lizerne on the west bank of the Ypres Canal; the French report says the French and Belgians recaptured Lizerne later in the day; the British have consolidated their position on Hill 60; fierce fighting is in progress in the Ailly wood; French repulse another attack on Les Eparges and an attack south of the Forest of Parroy; Germans repel a number of French attacks between the Meuse and the Moselle; Germans make progress in the Forest of Le Prêtre.

April 25—Germans gain more ground at Ypres and begin a terrific drive near La Bassée; Germans capture villages of St. Julien and Kersselaere and advance to-

ward Grafenstafel, taking British prisoners and machine guns; Allies repulse Germans at several other points; Germans repulse French attack in the Argonne and win in the Meuse hills, southwest of Combres, taking seventeen cannon and 1,000 prisoners; London reports that clouds of chlorine were released from bottles by the Germans during the recent fighting at Ypres, the gas being borne by the wind to the French trenches, killing many men.

April 26—Allies rally and check the German drive near Ypres, fresh German assaults north and northeast of the city being beaten off; Berlin says that the Germans retain the west bank of the Yser, while London reports that the Allies have retaken it; Germans still hold Lizerne, on the west bank of the canal; Germans take from the French the summit of Hartmanns-Weilerkopf, capturing 750 men and four machine guns; French repulse German attack at Notre Dame de Lorette; fighting is in progress on the heights of the Meuse; German attack on Les Eparges fails.

April 27—Allies repulse German attack northeast of Ypres; British make progress near St. Julien; French retake Het Sase; Belgians repel three attacks south of Dixmude, and charge Germans with again using asphyxiating gases; Allies retake Lizerne; Germans still hold the bridgehead on the left bank of the canal just east of Lizerne; French state they have retaken the summit of Hartmanns-Weilerkopf, but the Germans declare all French attacks failed; German attacks near Les Eparges fail.

April 28—Allies are delivering counter-attacks in an attempt to regain the ground lost north and northeast of Ypres; Germans are bringing up reinforcements and hold firmly their present lines; scarcely a house is left standing in Ypres; Germans take French trenches near Beauséjour in Champagne; French repulse Germans in the Argonne, near Marie Thérèse; both the Germans and French claim to be in possession of Hartmanns-Weilerkopf; French gain ground on heights of the Meuse; Germans repulse strong French night attack in the Forest of Le Prêtre.

April 29—Germans repulse Allies north of Ypres; German official report states Germans have taken sixty-three guns in Ypres fighting; Germans repulse French night attacks at Le Mesnil in Champagne; Germans gain ground on heights of the Meuse; French repulse Germans at Les Eparges.

April 30—French gain ground north of Ypres, taking two lines of trenches; Belgians have repulsed a German attack from Steenstraete; Germans have fortified and hold bridgeheads on the west bank of Ypres Canal near Steenstraete and Het

Sase and on the east bank of the canal north of Ypres; Germans repel a charge of Turcos and Zouaves; a huge German gun shells Dunkirk from behind the German lines near Belgian coast, about twenty-two miles away; twenty persons are killed and forty-five wounded; British airmen locate the gun and bombard it, while allied warships attack from the sea; French state that they hold the summit of Hartmanns-Weilerkopf; 500 shells fall in Rheims; French fail in an attempt in the Champagne district to win back their former positions north of Le Mesnil; Germans repulse French charge north of Flirey.

TURKISH AND EGYPTIAN CAMPAIGNS.

April 1—It is learned that the Turks lost 12,000 men and many guns in a fight against the Russians at Atkutor, Persia, on March 25; preceding the reoccupation by the Russians of Solmac Plains, northwest of Urumiah, 720 Christians were massacred by the Turks.

April 2—Turks are building new forts at San Stefano, near Constantinople, and thousands of Turkish troops are employed as workmen in the ammunition factories, which are being worked to their capacity.

April 3—Turks have repulsed an attempt to land troops from a British cruiser at Mowilah, at the head of the Red Sea.

April 7—Russians enter Artvin, Russian Armenia; the entire province of Batum has been cleared of Turks.

April 8—French War Office announces that the expeditionary corps to the Orient, under command of General d'Amade, has been ready for three weeks to aid the allied fleets and the British expeditionary force in operations against Turkey; the French troops are now in camp at Ramleh, Egypt, resting and perfecting their organization.

April 14—An official report is issued by the India Office of the British Government which states that 23,000 Turks and Kurds attacked the British positions at Kurna, Ahwaz, and Shaiba in Mesopotamia on March 12; they were driven off; Turks are daily massing troops on the Gallipoli Peninsula, especially at Kiled Bahr; heavy guns formerly around Constantinople, Principo, and Marmora seaports are being removed to the Dardanelles; a large number of German aeroplanes are with the Turkish troops.

April 15—The greater part of the garisons at Adrianople, Demotika, and Kirk Kilisseh have been withdrawn for the defense of Constantinople.

April 16—India Office of the British Government makes public an official report stating that the British India troops have inflicted another defeat on the Turks in the vicinity of Shaiba, Mesopotamia;

British casualties were 700; the Turkish forces numbered 15,000, their losses being so heavy that they fled to Nakhailah.

April 19—Reports sent to London state that the Turks have massed 350,000 men on the Gallipoli Peninsula, and have 200,000 more around Constantinople; 35,000 French and British troops are at Lemnos Island, off the entrance to the Dardanelles; Field Marshal Baron von der Goltz has been appointed Commander in Chief of the First Turkish Army.

April 21—Twenty thousand British and French troops have been landed near Enos, European Turkey, on the Gulf of Saros; General Sir Ian Hamilton, veteran of the Boer and other wars, is the Commander in Chief of the Allies' expeditionary force for the Dardanelles.

April 23—Troops of Allies are being landed at three points—at Enos, at Suol, a promontory on the west of the Gallipoli Peninsula, and at the Bulair Isthmus.

April 24—Observations made by aviators of the Allies show 25,000 Turkish troops are concentrated for the defense of Smyrna; they occupy trenches extending from Vourlah to Smyrna, and are posted on heights commanding the city.

April 26—British War Office announces that in spite of serious opposition troops have been landed at various points on the Gallipoli Peninsula, and their advance continues; a general attack is now in progress on the Dardanelles by both the allied army and fleet.

April 27—On the Gallipoli Peninsula the allied troops under General Sir Ian Hamilton are trying to batter their way through large Turkish forces led by German officers in an effort to force the Dardanelles and reach Constantinople; the French state that they have occupied Kum Kale, the Turkish fortress on the Asiatic side of the entrance to the Dardanelles, but the official Turkish report says the French were repulsed here; Turks repulse Allies at Teke Burum.

April 28—Allied troops have established a line across the southern tip of the Gallipoli Peninsula, from Eske-Hissarlik to the mouth of a stream on the opposite side; Allies beat off attacks at Sari-Bair and are advancing; Turks are strongly intrenching, and have constructed many wire entanglements; report from Berlin states that the left wing of the allied army has been beaten back by the Turks and 12,000 men captured.

April 29—The landing of allied troops on the Gallipoli Peninsula is still going on; forces disembarked at Enos have advanced twenty miles; 11,000 Turks have been captured, and many German officers; British aerial fleet is co-operating with the troops; Turks drive back Allies who landed near Gaba Tepeh, and sink twelve

sloops bearing allied troops; the landing of one detachment of allied troops on the Gallipoli Peninsula was accomplished by a ruse, 1,000 decrepit donkeys with dummy baggage being landed at one point while the troops landed elsewhere; Russians have dislodged Turks from Kotur, 110 miles northwest of Tabriz.

April 30—After hard fighting the British have firmly established themselves on the Gallipoli Peninsula and have advanced toward the Narrows of the Dardanelles; the French have cleared Cape Kum Kalo of Turks; activity is renewed on the Caucasus front; Russians are advancing in direction of Olti, on border of Turkey, and have cleared the Kurds out of the Alasehkert Valley.

CAMPAIGN IN AFRICA.

April 1—British troops occupy Aus, an important trading station in German West Africa.

April 2—Madrid reports that Moorish rebels have occupied Fez and Mekines, and that the French hold only Casablanca and Rabat.

April 6—It is announced officially at Cape Town that troops of the Union of South Africa have captured Warmbad, twenty miles north of the Orange River.

April 7—It is announced officially at Cape Town that troops of the Union of South Africa have occupied without opposition the railway stations at Kalkfontein and Kanus, German Southwest Africa.

April 21—German troops in Kamerun have been forced by allied forces to retreat from the plateau in the centre of the colony; seat of Government has been transferred to Jaunde; allied troops have forced a passage across the Kele River; British troops have taken possession of the Ngwas Bridge; French native troops from Central Africa have attained in the east the Lomis-Dume line; official news reaches Berlin of the defeat of a British force in German East Africa on Jan. 18-19 near Jassini, the total British loss being 700; Mafia Island, off the coast of German East Africa, was occupied by the British on Jan. 10.

NAVAL RECORD.

April 1—German submarines sink British steamer Seven Seas and French steamer Emma, thirty men going down with the vessels; British squadron shells Zeebrugge, where Germans have established a submarine base, by moonlight; Hamburg-American liner Macedonia, which had been interned at Las Palmas, Canary Islands, but recently escaped, has now eluded British cruisers and sailed for South American waters.

April 2—It is learned that Chile has made representations to the British Government regarding the sinking of the German

cruiser Dresden; Chile says she was blown up by her own crew in Chilean waters after bombardment by British squadron, and when the Chilean Government was on the point of interning her; three British trawlers are sunk by the German submarine U-10, whose Captain, the fishermen state, told them he has "orders to sink everything"; Norwegian sailing ship Nor is burned by a German submarine, the submarine Captain giving the Nor's Captain a document saying she was destroyed for carrying contraband; Dutch steamer Schieland is blown up off the English coast, presumably by a mine; British steamer Lockwood is sunk by a German submarine off Devonshire coast, the crew escaping.

April 3—Forts at entrance to the Gulf of Smyrna are bombarded by allied fleet; French fishing vessel is sunk by a German submarine, her crew escaping; Berlin estimates state that from Aug. 1 to March 1 a tonnage of 437,879 in British merchant ships and auxiliary cruisers has been destroyed.

April 4—German submarine sinks British steamer City of Bremen in the English Channel, four of the crew being drowned; German submarine sinks a Russian bark in the English Channel; three German steamers are sunk by mines in the Baltic, 25 men being drowned; Turkish armored cruiser Medjidieh is sunk by a Russian mine; it is learned that an Austrian steamer with 600 tons of ammunition aboard was blown up by a mine in the Danube on March 30, 35 of the crew being drowned; it is learned that the American steamer Greenbriar, lost in the North Sea a few days ago, was sunk by a mine.

April 5—A Turkish squadron sinks two Russian ships; Turkish batteries off Kum Kale sink an allied mine sweeper; an Athens report says that the British battleship Lord Nelson, recently stranded in the Dardanelles, has been destroyed by the fire of the Turkish shore guns; British trawler Agantha is sunk by a German submarine off Longstone, the crew being subjected to rifle fire from the submarine while taking to the boats; German submarine U-31 sinks British steamer Olivine and Russian bark Hermes, the crews being saved; German Baltic fleet, returning from bombardment of Libau, is cut off from its base by German mines, which have gone adrift in large numbers because of a storm.

April 6—A German submarine is entangled in at net off Dover specially designed for the catching of submarines; Stockholm reports that the Swedish steamer England has been seized by the Germans in the Baltic and taken to a German port.

April 7—United States Government, at request of Commander Thierichens, takes over for internment the German converted

- cruiser Prinz Eitel Friedrich, to hold her until the end of the war; German Admiralty admits loss of submarine U-9, already reported by the British as being sunk.
- April 8—French sailing ship Chateaubriand is sunk by a German submarine off the Isle of Wight, the crew being saved.
- April 9—British and French cruisers have taken from Italian mail steamers 2,300 bags of outgoing German mail, and it is planned to seize bags from abroad intended for Germany.
- April 10—British steamer Harpalyce, which made one voyage as a relief ship with supplies for the Belgians donated by residents of New York State, is sunk in the North Sea by a submarine; some of her crew are missing.
- April 11—German auxiliary cruiser Kronprinz Wilhelm anchors at Newport News, needing coal and provisions; Captain Thierfelder reports that his ship has sunk fourteen ships of the Allies and one Norwegian ship; allied fleet is bombarding Dardanelles forts from the Gulf of Saros; French steamer Frederic Franck, after being torpedoed by a German submarine in the English Channel, is towed to Plymouth.
- April 12—United States State Department is notified by Ambassador Page that the British Government will settle the case of the American steamship *Wilhelmina* in accordance with the contentions of the owners of the cargo; the British state that they will requisition and pay for the cargo, and the owners of both ship and cargo will be reimbursed for the delay caused in sending the case before a prize court; Captains of the American steamers *Navajo*, *Joseph W. Fordney*, and *Llama* appeal to American Embassy at London to procure their release from British marine authorities at Kirkwall; British collier *Newlyn* is damaged by an unexplained explosion off the Scilly Islands, but makes port; a French battleship, assisted by French aeroplanes, bombards the Turkish encampment near Gaza.
- April 13—British torpedo boat destroyer *Renard* dashes up the Dardanelles over ten miles at high speed on a scouting expedition.
- April 14—Allied patrol ships bombard Dardanelles forts; a cruiser and a destroyer are struck by shells from the forts; Dutch steamer *Katwyk*, from Baltimore to Rotterdam with a cargo of corn consigned to the Netherlands Government, is blown up and sunk while at anchor seven miles west of the North Hinder Lightship in the North Sea; crew is saved; indignation expressed in Holland; Swedish steamer *Folke* is sunk by a mine or torpedo off Peterhead; thirty-one new cases of beriberi have developed among the crew of the *Kronprinz Wilhelm* since her arrival at Newport News.
- April 15—"White Paper" made public in London shows that Great Britain has made "a full and ample apology" to the Government of Chile for the sinking in Chilean territorial waters last month of the German cruiser *Dresden*, the internment of which had already been ordered by the Maritime Governor of Cumberland Bay when the British squadron attacked her; two allied battleships enter the bay at Enos and with shells destroy the Turkish camp there; Russian squadron bombards *Kara-Burum*, inside the *Tchatalja* lines; British steamer *Ptarmigan* is sunk by a German submarine in the North Sea, eight of the crew being lost; tabulation made in London of statistics of maritime losses shows that England and her allies have sunk, captured, or detained 543 ships belonging to Germany and her allies, while Germany and her allies have sunk, captured, or detained 265 ships belonging to England, France, Belgium, and Russia.
- April 16—French cruiser bombards fortifications of El-Arish, near the boundary of Egypt and Palestine, as well as detachments of Turkish troops concentrated near that place; one cruiser bombards the Dardanelles forts; Russian squadron bombards *Eregli* and *Sunguldaik*, in Asia Minor, on the Black Sea.
- April 17—Two British ships drive ashore and destroy a Turkish torpedo boat which attacked a British transport in the Aegean Sea; it is reported that 100 men on the transport were drowned; Greek steamer *Ellispontis*, en route for Montevideo from Holland, is torpedoed in the North Sea, the crew being saved.
- April 18—British submarine E-15 runs ashore in the Dardanelles, the crew being captured by Turks; two British picket boats, under a heavy fire, then torpedo and destroy the stranded vessel to prevent her being used by the Turks.
- April 19—Russian Black Sea torpedo boat squadron bombards the coast of Turkey in Asia, between Archav and Artaschin; provision stores and barracks are destroyed; many Turkish coastwise vessels laden with ammunition and supplies are sunk; six allied torpedo boats fail in an attempt to penetrate the Dardanelles.
- April 20—Two Turkish torpedo boat destroyers are blown up while passing through a mine belt laid by the Russians across the entrance to the Bosphorus.
- April 21—British freighter *Ruth* is sunk by a German submarine in the North Sea, crew being rescued.
- April 22—M. Augagneur, French Minister of Marine, and Winston Spencer Churchill, First Lord of the British Admiralty, hold a conference in the north of France as to the best means of forcing the Darda-

nelles; an Anglo-French fleet is sighted off the lower coast of Norway; German Admiralty gives out a statement that British submarines have been repeatedly sighted lately in Heligoland Bay and that one of these submarines was sunk on April 17; all steamship communication between the British Isles and Holland is suspended; allied fleet bombards Dardanelles forts and points on the west coast of Gallipoli; British trawler *St. Lawrence* is sunk in the North Sea by a German submarine, two of the crew being lost; a German submarine has taken the British steam trawler *Glancarse* into a German port from a point off Aberdeen; British trawler *Fuschia* brings into Aberdeen the crew of the trawler *Envoy*, which was shelled by a German submarine.

April 23—German Admiralty announces that the German high seas fleet has recently cruised repeated in the North Sea, advancing into English waters without meeting British ships; the British Official Gazette announces a blockade, beginning at midnight, of Kamerun, German West Africa; Norwegian steamer *Capri* is sunk by a mine off the Irish coast.

April 24—Finnish steamer *Frack* is sunk in the Baltic by a German submarine; Norwegian barks *Oscar* and *Eva* are sunk by a German submarine, the crews being saved.

April 25—Russian Black Sea fleet bombards the Bosphorus forts.

April 26—French armored cruiser *Leon Gambetta* is torpedoed by the Austrian submarine U-5 in the Strait of Otranto; 552 of her men, including Admiral Senes and all her commissioned officers, perish; Italian vessels rescue 162 men; the cruiser was attacked while on patrol duty in the waterway leading to the Adriatic Sea, and sank in ten minutes after the torpedo hit; England stops all English Channel and North Sea shipping, experts believing that the Admiralty order is connected with the desperate fighting now going on at Ypres; German converted cruiser *Kronprinz Wilhelm*, lying at Newport News, interns until the end of the war.

April 27—Sixteen battleships and armored cruisers of the Allies attack advance batteries at the Dardanelles, but do little damage; British battleships *Majestic* and *Triumph*, damaged, have to withdraw from the fighting line; the fleet is operating in conjunction with the land forces.

April 28—Bombardment of the Dardanelles is continued by the Allies; French armored cruiser *Jeanne d'Arc* is damaged by fort fire; Captain of a Swedish steamer reports the presence in the North Sea of a German fleet of sixty-eight vessels of all classes.

April 29—British steamer *Mobile* is sunk by a German submarine off the north coast of Scotland, the crew being saved.

April 30—Allied fleet is co-operating with the troops in their advance on the Gallipoli Peninsula; British battleship *Queen Elizabeth* directs the fire of her fifteen-inch guns upon the Peninsula under guidance of aviators; a Turkish troopship is sunk; Zeebrugge is bombarded from the sea; British trawler *Lily Dale* is sunk by a German submarine in the North Sea; British Admiralty announces that the German steamship *Macedonia*, which escaped from Las Palmas, Canary Islands, a few weeks ago, has been captured by a British cruiser.

AERIAL RECORD.

April 1—British airmen bombard German submarines which are being built at Hoboken, near Antwerp.

April 2—French aeroplane squadron drops thirty-three bombs on barracks and aeroplane hangars at Vigneulles, in the Woëvre region; French and Belgian aviators drop thirty bombs on aviation camp at Handezaema; allied aviators drop bombs on Mühlheim and Neuenberg, doing slight damage; Adolphe Pegoud, French aviator, attacks and brings down a German Taube near Saint Menehould by shooting at it; he captures the pilot and observer, unhurt.

April 3—French bring down a German aeroplane at Rheims, the aviators, unhurt, being captured.

April 4—German Taube drops bombs on Newkerk church, near Ypres; twelve women and Abbé Reynaert are killed; many persons injured; bombs are dropped from a British aeroplane on the forts at the entrance to the Gulf of Smyrna; the tenth Zeppelin to be constructed at Friedrichshafen has its trial trip; the latest type is longer and faster than preceding models.

April 5—French War Office announces that in the British raid on Belgium, at the end of March, 40 German workmen were killed and 62 wounded; at Hoboken two German submarines were destroyed, a third damaged, and the Antwerp Naval Construction Yards were gutted; French aviators bombard Mühlheim, killing three women.

April 6—German seaplane is brought down by the Russians off Libau, after dropping bombs on city, the aviators being captured.

April 7—Austrian aviators drop bombs in the market place of Porgoritzza, Montenegro, killing twelve women and children, and injuring forty-eight other persons; many buildings are destroyed.

April 8—One Austrian aeroplane beats three Russian machines in mid-air, all the Russian aeroplanes falling to earth.

April 9—It is reported from Furnes, Belgium, that Garros, French aviator, recently won a duel in mid-air against a German aeroplane, shooting down Germans.

April 11—Captain of British steamer *Serula* drives off two German aeroplanes with

a rifle; the aviators drop twenty-five bombs, all missing; German aeroplane bombards an allied transport near the Dardanelles.

April 12—German dirigible drops seven bombs on Nancy, doing slight damage.

April 13—French aviators bombard military hangars at Vigneulles, and disperse, near there, a German battalion on the march; according to a report printed in a Swiss newspaper, Count Zeppelin's secretary told this journal's correspondent that Germany is preparing for a great air raid on London in August, with two squadrons of five dirigibles each.

April 14—A Zeppelin makes a night raid over the Tyne district of England; inhabitants of the whole region from Newcastle to the coast, warned by authorities, plunge the territory into darkness, which has the effect of baffling the airship pilot; bombs, chiefly of the incendiary kind, are dropped from time to time haphazard; a Zeppelin, while flying over the Ypres district, is shot at and badly damaged, coming down some hours afterward a complete wreck near Maria Aeltre; a Zeppelin drops bombs on Baillieu, the objective being the aviation ground, but this is not hit; three civilians are killed; two German aeroplanes are forced to come to the ground within the French lines, one near Braine and the other near Lunéville.

April 15—Fifteen French aeroplanes drop bombs on German military buildings at Ostend; German aviator drops bombs on Mourmelow; French aviator drops five bombs on the buildings occupied by the German General Staff at Mazières; French aviators bombard Freiburg-in-Breisgau, killing six children, two men, and one woman, and injuring fourteen other persons, including several children; three allied aeroplanes make a flight of 170 miles over the Sinai Peninsula, aiming bombs at the tents of Turkish troops.

April 16—Two Zeppelins attack the east coast of England in the early morning, dropping bombs at Lowestoft, at Malden, thirty miles from London, while one of the raiders is seen near Dagenham, eleven and one-half miles from London Mansion House; one woman is injured and considerable property damage is done; a German biplane flies over Kent, dropping bombs, which do little damage; at Sheerness the anti-aircraft guns open fire, but the machine escapes; a single bomb, dropped by a German Taube on Amiens, kills or wounds thirty persons, mostly civilians, while twenty-two houses are destroyed outright and many others seriously damaged; French aviators drop bombs at Leopoldshöhe, Rothwell, and Mazières-les-Metz; two civilians are killed at Rothwell; a combined attack is made by one British and five French aeroplanes

on a number of Rhine towns; two allied hydroplanes fall into the Dardanelles as a result of Turkish fire; Garros kills two German aviators in their aeroplane by shooting them from his aeroplane.

April 17—French airship bombards Strassburg, wounding civilians; two German aeroplanes drop bombs on Amiens, killing seven persons and wounding eight.

April 18—Garros brings down, between Ypres and Dixmude, another German aeroplane, his third within a short period.

April 19—Two French aerial squadrons attack railway positions along the Rhine, and bombard the Mühlheim and Habsheim stations; at Mannheim huge forage stores are set on fire; Garros is captured by the Germans at Ingelmunster, Belgium, after being forced to alight there; German aeroplanes drop bombs in BelFORT; Germans repulse French aeroplanes at Combres.

April 20—German aeroplane squadron drops 100 bombs at Bialystok, Russian Poland, killing and wounding civilians; a Zeppelin bombards the town of Oiechanow, doing slight damage; the Rhine from Basle to Mülhausen is the scene of a considerable engagement lasting two hours, in which two French and two British aeroplanes attack a larger German squadron and are driven off; returning with reinforcements, and now outnumbering the German squadron, they drive off the Germans; no report as to losses; reports from Swiss towns around Lake Constance, on which the Zeppelin works are situated, state that Emperor William has ordered much larger Zeppelins constructed; each of the new Zeppelins, it is stated, will cost over \$600,000, and will throw bombs double the size of those now used.

April 21—French aeroplanes bombard headquarters of General von Etrantz in the Woivre; French aeroplanes bombard German convoys in the Grand Duchy of Baden and an electric power plant at Loerrach, at the latter place injuring civilians; British aviators drop bombs on the German aviation harbor and shed at Ghent; Russian aeroplanes bombard the railroad station at Soldau.

April 23—Russian aeroplanes drop bombs on Mlaw and Plock, and bombard the German aviation field near Sanniky; Germans bring down a Russian aeroplane at Czernowitz, the pilot being killed.

April 24—French aviator drops two bombs on Fort Kastro, at Smyrna, killing several soldiers; official German statement says a British battleship was badly damaged in the recent Zeppelin attack on the Tyne region.

April 25—Aviators of the Allies are making daily attacks on the Germans between the Yser and Bruges; a Zeppelin throws bombs on the town of Bialystok.

- April 26—A Zeppelin drops on Calais large bombs of a new type, with greatly increased power; thirty civilians are injured; a Russian aeroplane drops three bombs on Czernowitz, injuring children.
- April 27—British airmen bombard eight towns in Belgium occupied by Germans; Russians damage and capture two Austro-German aeroplanes; Russian aviators drop bombs on German aeroplanes at the aviation field near Sanniky; French aviators drop bombs at Bollweiler, Chambley, and Arnville; French airman throws six bombs on the Mauser rifle factory at Oberdorf.
- April 28—A German aeroplane throws three bombs at the American tanker Cushing, owned by the Standard Oil Company, the attack taking place in daylight in the North Sea; the ship was flying the American flag; splinters from one bomb strike the vessel and tear the American ensign, according to the report of the Cushing's Captain; Russian giant aeroplane drops 1,200 pounds of explosives on the East Prussian town of Neidenburg; allied airmen drop bombs on Haltingen, Southern Baden; German aeroplane drops bombs on Nancy, three persons being killed and several injured; allied airmen bombard Oberdorf, killing six civilians and wounding seven; six allied aeroplanes bombard the hangars of dirigibles at Friedrichshafen; French aviators drop bombs on the station and a factory at Leopoldshöhe; French capture or destroy four German aeroplanes.
- April 29—Three German aeroplanes drop bombs on Belfort, four workmen being wounded; German aeroplanes bombard Epernay.
- April 30—A Zeppelin drops bombs on Ipswich and other places in Suffolk; no lives are reported lost, but a number of dwellings are set on fire; four Zeppelins are sighted off Wells, Norfolk; they change their course and head out to sea; French airship bombards the railway in the region of Valenciennes; a destroyed French aeroplane falls within the German lines; British bring down a German aeroplane east of Ypres.
- April 4—Budapest continues gay despite the war, and night life goes on much as usual.
- April 11—The Foreign Office publishes a second "Red Book," charging atrocities and breaches of international law against Serbia, Russia, France, and England; it is declared that there is not an article of international law which has not been violated repeatedly by the troops of the Allies.
- April 12—A law court at Vienna, in the case of Dubois, a Belgian, holds that despite the German occupation Dubois has not lost his Belgian citizenship.
- April 14—Wealthy Hungarians are preparing to flee before the Russian invasion.
- April 15—Some of the Hungarian newspapers are discussing peace.
- April 17—War Office announces that men between 18 and 50 of the untrained Landstrum will hereafter be liable for military service.
- April 18—Bread riots occur in Vienna and at points in Bohemia; Vienna is now protected by long lines of trenches on the left bank of the Danube; \$14,000,000 is said to have been spent in fortifications at Budapest and Vienna.
- April 19—The food situation in Trieste is critical.
- April 21—All Austrian subjects in Switzerland are recalled by their Government.
- April 22—Riots in Trieste are assuming a revolutionary character; "Long Live Italy!" is being shouted by the mobs; it is reported from Paris that the Hungarian Chamber at its opening session refused to vote the new military credits demanded by the General Staff.
- April 25—Anti-war riots continue at Trieste; there are also serious riots at Vienna, Goerz, Prague, and elsewhere; the Austrians have fortified the entire Italian frontier, at places having built intrenchments of concrete and cement.
- April 28—Railway service on the Austrian side of the Austro-Italian frontier has been virtually suspended for ordinary purposes; all lines are being used to carry troops to the frontier.

BELGIUM.

- ### AUSTRIA-HUNGARY.
- April 1—Report from Prague states that something akin to a reign of terror prevails in certain parts of Austria, people being punished severely for trivial offenses.
- April 2—Czech regiment refuses to entrain for the front; most of the Czech territorialists have been sent to Istria; Government issues appeal to cooks and housewives to exercise economy in foodstuffs.
- April 3—It is officially denied at Vienna that Austria has opened negotiations with Russia for a separate peace, as has been persistently reported of late.
- April 1—The German Governor General has revived an old law which holds each community responsible for damage done during public disturbances; a Berlin newspaper charges that American passports have been used to smuggle Belgian soldiers from the Yser to Holland and thence to the Belgian Army; the Pope expresses his sympathy for Belgium's woes to the new Belgian Minister to the Vatican.
- April 3—Officials of the Belgian Public Works Department resign when ordered by the German administration to direct construction of roads designed for strategic purposes.

April 5—Gifford Pinchot, who has been superintending relief work for Northern France, has been expelled from Belgium by order of the German Governor General; the reason is that Mr. Pinchot's sister is the wife of Sir Alan Johnstone, British Minister at The Hague, with whom Mr. Pinchot stayed on his way to Belgium; Prince Leopold, elder son of King Albert, 13½ years old, joins the line regiment famous for its defense of Dixmude.

April 6—Cardinal Gasparri, Papal Secretary of State, sends a letter to Cardinal Mercier inclosing \$5,000 as a personal gift from Pope Benedict to the Belgian sufferers from the war; the letter expresses the Pope's love and pity.

April 8—President Wilson cables greetings to King Albert on his birthday.

April 13—The German Governor General orders establishment of a credit bank which will advance money on the requisition bills given in payment for goods seized by the authorities.

April 15—It is reported from Rome that the German Embassy there has asked the Belgian Government, through the Belgian Legation to the Quirinal, whether, in event of the German armies evacuating Belgian territory, Belgium would remain neutral during the remainder of the war.

April 17—The German Governor General has ordered the dissolution of the Belgian Red Cross Society, because, it is stated, the managing committee refused to participate in carrying out a systematic plan for overcoming the present distress in Belgium.

April 24—A memorial addressed to President Wilson, signed by 40,000 Belgian refugees now in Holland, expressing gratitude for the aid which the United States has extended to the Belgian war sufferers, is mailed to Washington.

BULGARIA.

April 7—Travelers from Serbia and Saloniki are barred from Bulgaria because typhus is epidemic in Serbia.

CANADA.

April 1—Canadians approve the anti-liquor stand taken by King George, and prominent men declare themselves in favor of restricting the use of alcohol in the Dominion.

April 10—Premier Borden tells Parliament that Lord Kitchener has called on Canada for a second expeditionary force; the first contingent of the first expeditionary force numbered 35,420, and the second contingent of that force 22,272.

April 15—Parliament is prorogued, the Duke of Connaught, Governor General, praising Canada's troops for "conspicuous bravery and efficiency on the field of battle."

April 25—King George cables to the Duke of Connaught an expression of his admiration of the gallant work done by the Canadian division near Ypres; General Hughes, Canadian Minister of Militia, cables the appreciation of the Dominion to General Alderson, commanding the Canadian division.

April 28—About 200 Canadian officers were put out of action in the fighting near Ypres, out of a total of 600.

April 29—Four prominent German residents of Vancouver are arrested on a charge of celebrating German successes over the Canadians near Ypres, indignation being aroused among Vancouver citizens.

EGYPT.

April 8—An attempt is made at Cairo to assassinate the Sultan of Egypt, Hussien Kamel, a native firing at him, but missing.

FRANCE.

April 1—A delegation of foreign newspaper men who have visited the prison camps say they found the German prisoners well treated and contented.

April 3—General Joffre is quoted as predicting a speedy end of the war in favor of the Allies.

April 4—The second report of the French commission appointed to investigate the treatment of French citizens by the Germans charges many acts of cruelty; 300 former captives of the Germans tell, under oath, stories contained in the report of brutality, starvation, and death in the German concentration camps.

April 5—There are insistent reports that the French have a new shell which kills by concussion; it is officially stated in an army bulletin that a new explosive recently put into use doubles the explosive force of shells of three-inch guns.

April 9—The General commanding the Vosges army has forbidden, with General Joffre's approval, the use of alcoholic drinks in the district under his command; the general movement to restrict the sale of intoxicants is growing; the municipal authorities of Paris are preparing a decree prohibiting the tango.

April 10—A court-martial acquits Captain Herial of the Eleventh Hussars, who shot and killed his wife in November because she persisted in following the army to be near him, in direct violation of orders issued by the military authorities; the President of the Touring Club of France states that the French people want American tourists as usual this Summer; the Almanach de Gotha is being boycotted by the allied royalty and nobility and a new volume, to be called the Almanach de Bruxelles, is being prepared for speedy publication in Paris.

- April 11—Computation made by the Paris *Matin* shows that the total length of the battle front of the Allies is 1,656 miles, the French occupying 540 miles of trenches, the British 31, and the Belgians 17, while in the east the Russians are facing a front of 851 miles, and the Serbians and Montenegrins are fighting on a front of 217 miles.
- April 12—General Pau, who has been on a mission in Russia, Italy, and the Balkan States, gets a notable reception on arriving in Paris.
- April 13—President Poincaré leaves Dunkirk for Paris after three days with the French and Belgian troops; M. Poincaré had a long conference with King Albert; the War Office is organizing an expedition of cinematograph operators throughout the whole French line; it is planned to multiply and circulate the films.
- April 15—An official denial of reports from Berlin that public buildings in Paris are being used as military observation posts is cabled to the French Embassy at Washington by Foreign Minister Delcassé; vital statistics for the first half of 1914, just published, show that the net diminution in the population of France was 17,000, while the population of Germany increased, in the same period, nearly 500,000; the Temps says that the problem of depopulation must receive serious consideration after the war.
- April 19—A regiment of women is being formed in Paris; it is planned that they wear khaki uniforms, learn how to handle rifles, and undertake various military duties in areas back of the firing line.
- April 22—General Joffre retires twenty-nine more Generals to make way for younger and more active men; the Cabinet decides that children made orphans by the death in the war of their fathers should be cared for by the State; it is decided to appoint a commission to study the question and decide what steps should be taken; "Tout Paris," the social register of the capital, contains the names of 1,500 Parisians killed in action up to Feb. 25, including 20 Generals and 193 men of title.
- April 24—The famous Chambord estate is sequestrated on the ground that it is the property of Austrian subjects; the Bank of France releases \$1,000,000 gold to the Bank of England for transmission to New York to assist in steadying exchange; French official circles and French newspapers are pleased with the American note to Germany in reply to the von Bernstorff memorandum on the sale of arms to the Allies, and with the expressions of German annoyance resulting from the note.
- April 30—President Poincaré receives a delegation of Irish Members of the British Parliament, headed by T. P. O'Connor and Joseph Devlin, bringing addresses to the President and Cardinal Amette, and assurance of devotion to the Allies' cause.

GERMANY.

- April 1—Circular of the Minister of Agriculture says that through economical use of available grain the bread supply is assured until the next harvest; it is decided to hold horse races this season, including the German Derby; 812,808 prisoners of war are now held in Germany, 10,175 being officers.
- April 3—It is reported from Königsberg, East Prussia, that along a line of 150 miles, and for a distance varying from five to fifty miles from the Russian border, there is nothing but ruins as the result of the Russian invasion; thousands of women and children are stated to have been carried off to Russia; it is learned that spotted fever has been introduced into concentration camps by Russian prisoners, but spread to the German civil population has thus far been prevented; skilled artisans, urgently needed in various lines of industrial work, are being granted furloughs from the front.
- April 6—Postal officials suspend parcel post service to Argentina and several other South American countries and to Spain, Portugal, Greece, Italian colonies, and Dutch West Indies; Press Bureau of the French War Office gives out figures, compiled from official German sources, showing that the Germans have lost 31,726 officers in killed, wounded, and missing since the beginning of the war, out of a total of 52,805 who started in the war; General von Kluck is recovering from his wound and has been decorated by Emperor William.
- April 8—Germans are mourning Captain Otto Weddigen of submarines U-9 and U-29, it being now accepted as a fact that the U-29, his last command, has been lost.
- April 9—Official list shows that on March 1 there were in Germany 5,510 pieces of captured artillery.
- April 12—The Government is making reprisals for the treatment of captured German submarine crews in England, having imprisoned thirty-nine British officers in the military detention barracks.
- April 13—Germany is detaining freight cars belonging to Italian lines; semi-official statement says the passengers and crew of the steamer *Falaba* were given twenty-three minutes to leave the ship and were shown as much consideration as was compatible with safety to the submarine; according to a dispatch from Switzerland, there is an alarming increase of madness in the German Army.
- April 14—It is reported from Switzerland that Emperor William last month paid a visit to Emperor Francis Joseph.
- April 15—Several thousand parcel post packages mailed from Germany for the United States have been returned to the senders

by Swiss postal authorities, because the French and British Governments have given notice that parcels addressed to German citizens in the United States will be seized whenever found on shipboard; the Reichsbank's statement up to April 15 shows an increase in gold of \$2,000,000.

April 17—Ten British officers have been placed in solitary confinement in Magdeburg as a measure of reprisal for the treatment accorded captured German submarine crews by Great Britain; a letter from Dr. Bernhard Dernburg, former Colonial Secretary of Germany, who has for some time been in the United States, is read at a pro-German mass meeting in Portland, Me.; it suggests the neutralization of the high seas in time of war and makes various other proposals, which are regarded in some quarters as a possible indication that Germany is willing to discuss terms of peace; because of a shortage of rubber, the Government is arranging a special campaign to collect rubber in all shapes throughout the empire.

April 19—The second officer and some of the crew of the German converted cruiser Prinz Eitel Friedrich, now interned at Newport News, reach Copenhagen on their way to Germany; it is stated in the Copenhagen report that they are provided with false passports describing them as Swedish subjects.

April 20—A conference of German and Austrian Socialists in Vienna has agreed that after the war international treaties for limitation of armaments must be agreed upon, with a view to disarmament.

April 21—All German subjects in Switzerland are recalled by their Government; reports from The Hague declare that German Socialists are trying to get a basis on which the war can be stopped; the soldiers at the front are asking for flower seeds to plant on the graves of the slain.

April 22—During the last few days Emperor William has been visiting the German front in Alsace; he promoted Colonel Reuter of Zabern fame to the rank of Major General; the Government has sent 2,203 more maimed French officers and men to Constance, where they will be exchanged for German wounded; university courses are being conducted by Belgian professors in the prison camp at Soldau.

April 23—The Federal Council has extended until July 31 the operation of the order which provides that claims held by foreign persons or corporations which accrue before July 31, 1914, cannot be sued upon in the German courts; many newspapers comment bitterly upon the American note replying to the Bernstorff memorandum on the sale of arms to the Allies by the United States; there is rejoicing in Berlin over German gains near Ypres.

April 24—Dr. Dernburg, in address at Brooklyn, says that evacuation of Belgium depends on England's agreeing to the neutralization of the sea, free cable communications, revision of international law, and consent to German colonial expansion; interview printed in Paris quotes M. Zographos, Foreign Minister of Greece, as declaring that Greece is ready to unite with the Allies in the operations at the Dardanelles if invited to do so.

April 27—Copenhagen reports that systematic efforts are being made, under instructions from Imperial Chancellor von Bethmann-Hollweg, to buy sufficient foodstuffs in neutral countries to last Germany for four years.

April 28—The Supreme Military Court has confirmed the sentence of death imposed on Dec. 29 on William Lonsdale of Leeds, England, a private in the British Army, for striking a German non-commissioned officer at a military prison camp at Doeberitz.

April 30—The subscriptions for three-quarters of the latest war loan have already been paid; the payments reach the total of \$1,687,750,000, more than twice the amount required at this time under the stipulated conditions of the issue; German Embassy at Washington states that the Emperor of Russia has ordered prisoners of war of Czech or other Slav origin treated kindly, but prisoners of German or Magyar race treated severely.

GREAT BRITAIN.

April 1—Lord Kitchener follows the lead of King George in announcing his intention to abstain from liquor during the war; the nation is stirred by the drink question, and prominent observers believe that anti-alcohol legislation will not be necessary; 25,000 women volunteer to aid in making munitions of war.

April 2—Text is made public of a protest by Germany, transmitted through the American Ambassador in London, against treatment of captured German submarine crews; Germany threatens reprisals in the form of harsh treatment of captured British officers; Sir Edward Grey in reply says the submarine crews have violated the laws of humanity and they are segregated in naval barracks.

April 3—Government takes control of all motor manufacturing plants to accelerate the supplying of war material.

April 4—The Archbishop of Canterbury in his Easter sermon dwells upon the national necessity for prohibition during the war; a band of the Irish Guards, arriving in Dublin on a recruiting tour, is enthusiastically cheered; John E. Redmond reviews at Dublin 25,000 of the Irish National Volunteers; Limerick welcomes recruiting officers; every man in the British Navy has received a pencil case, the gift

of Queen Mary, formed of a cartridge which had been used "somewhere in France," with silver mountings.

April 6—Official announcement states that "by the King's command no wines or spirits will be consumed in any of his Majesty's houses after today"; George M. Booth heads committee appointed by Kitchener to provide such additional labor as is needed for making sufficient war supplies.

April 8—Official report of the bombardment of Hartlepool, Scarborough, and Whitby by a German naval squadron on Dec. 16 states that 86 civilians were killed and 424 wounded, of whom 26 have died; 7 soldiers were killed and 14 wounded; nearly all industries are working at top speed; unemployment has largely disappeared; King Albert's birthday is celebrated in London by Belgian refugees, many thousands of English joining in the observance.

April 9—A "White Paper" is published giving correspondence which passed between the British and German Foreign Offices through the United States Ambassador regarding treatment of British prisoners of war in Germany; testimony which is included is to the effect that Germans treat British prisoners brutally; John B. Jackson of the American Embassy at Berlin, who, on behalf of the German Government, recently inspected German prison camps in England, reports that prisoners are well cared for; Captain and crew of the steamer *Vosges*, sunk in March by a German submarine, are rewarded for persistent attempt to escape the submarine; in party circles it is accepted as a fact that there will be no general election this year, and that the terms of the present Members of Parliament will be extended.

April 11—A great campaign to obtain recruits for Kitchener's new army is begun in London, it being planned to hold 1,500 meetings.

April 12—Government is now transferring men from the working forces of municipalities to factories making munitions of war.

April 13—Official announcement states that 33,000 women had registered themselves up to the end of March for war service, as being ready to undertake various forms of labor in England usually done by men; the Foreign Office cables the United States State Department, asking that an investigation be started at once of Berlin reports that thirty-nine British officers have been put in a military prison as a measure of reprisal for England's declining to accord full privileges to German submarine prisoners; a serious explosion occurs at Lerwick, Shetland, in which many persons are killed; Lerwick is one of the chief stations in Scotland for the Royal Naval Reserve.

April 14—Report from Field Marshal French on the Neuve Chapelle fight is made public; the British losses were 12,811 in killed, wounded, and missing; German losses are declared to have been several thousand more; French says his orders were badly executed in some instances, resulting in disorganization of infantry after victory was won; it is intimated that British artillery fired on British troops; Government decides against placing cotton on the contraband list; Government is making huge purchases of wheat.

April 15—The total British casualties from the beginning of the war up to April 11 were 139,347, according to an announcement in the House of Commons by the Under Secretary for War; part of Kitchener's new army, after six months of training, is going into camp at Salisbury Plain, where it is stated that 100,000 men will soon be encamped.

April 16—The Foreign Office is advised by Ambassador Page that press reports are correct which state that the Germans have put thirty-nine British officers in military detention barracks as a measure of reprisal for British action in refusing honors of war to crews of German submarines; the London Times states that \$9,500,000 in life insurance claims has been paid to heirs of British officers thus far killed in action.

April 17—Wages are rising and unemployment is decreasing.

April 18—Ten thousand Protestant churches observe "King's Pledge Sunday," thousands of persons signing a pledge to abstain from intoxicants for the rest of the war.

April 19—English Football Association announces that with closing of present season on May 5 no more professional football games will be played during the war.

April 20—Premier Asquith, in an appeal made at Newcastle to the workmen of the northeast coast to hasten the output of munitions of war, refrains from all mention of the drink question and declares that there has been no slackness on the part of either employes or employers, this statement being at variance with recent statements made by other Cabinet members, who have blamed tippling on the part of workmen for slow output; the Government has made an arrangement by which skilled workmen now at the front can be recalled to England to work in munition factories as needed; David Lloyd George, Chancellor of the Exchequer, says in the House of Commons that the Government does not believe that the war would be more successfully prosecuted by conscription, adding that Kitchener is gratified with the response to his appeal for volunteers; since the war began, 1,961 officers have been killed, 3,528 wounded, and 738 are missing.

April 21—Chancellor Lloyd George states in the House of Commons that the expeditionary force in France now consists of more than thirty-six divisions, or about 750,000 men; the Chancellor also states that as much ammunition was expended at Neuve Chapelle as was used during the entire Boer war, which lasted for two years and nine months.

April 22—F. T. Jane, a well-known British naval expert, in an address at Liverpool declares that the Germans tried to land an expeditionary force in England, but the vigilance of the British Navy caused the expedition to turn back.

April 24—An official list received in London of the thirty-nine British officers placed in detention barracks by the Germans in retaliation for English treatment of German submarine crews shows the names of seven Captains and thirty-two Lieutenants, included being the names of Lieutenant Goschen, son of a former Ambassador to Berlin; Robin Grey, a nephew of Sir Edward Grey, and many sons of peers.

April 25—Jamaica begins raising money to send a contingent to join Kitchener's army.

April 26—The "war babies" question is to be investigated by a committee headed by the Archbishop of York, and a report is to be made.

April 27—Lord Kitchener, speaking in the House of Commons, scores the Germans for what he declares to be their barbarous methods of conducting war; the importation of raw cotton from the United Kingdom is specifically prohibited; Lord Derby, in an address at Manchester, intimates that conscription is to come soon; British War Office states that medical examination shows that Canadian soldiers died in the Ypres fight from poisoning by gases employed by the Germans.

April 28—Clergy oppose prohibition, the lower house of the Convocation at York going on record as believing it would be unwise and would lead in the end to an excess of intemperance; opposition newspapers and politicians are criticising the conduct of affairs by Winston Churchill, First Lord of the Admiralty.

April 30—Large numbers of protests from all parts of the country are being made against the proposal of Chancellor Lloyd George to increase the duty on alcoholic drinks.

GREECE.

April 4—After being repulsed in their raid on Serbia, a detachment of Bulgarian irregulars makes a raid on Dorian, Greece; the Greeks repulse them with machine guns.

HOLLAND.

April 1—More reservists are called; traffic between Holland and Germany has practically ceased.

April 10—Government has handed to Germany a note of protest on the sinking in March of the Dutch steamship Medea by a German submarine.

April 16—Intense indignation and resentment are expressed by the newspapers over the sinking of the Dutch steamer Katwyk by a German submarine; some of them talk of war.

April 21—It is reported from Amsterdam that Emperor William has sent a long personal message to Queen Wilhelmina about the sinking of the Katwyk, declaring that full compensation would be made if it is proved that the Katwyk was sunk by a German ship; arrangements have been made between the Dutch and British Governments whereby not only conditional contraband, but also goods on the contraband list of the British Government, may be given safe passage to Holland through the blockade lines.

April 27—The forty-two delegates from the United States to the International Women's Peace Congress arrive at The Hague; the congress is formally opened for a four days' session with delegates present from many neutral nations and from most of the warring nations, including England and Germany.

April 28—Miss Jane Addams presides over the Women's Peace Congress, the first business session being held.

INDIA.

April 12—Lieutenant Seybold of the Philippine Constabulary, on arriving in New York, says that the Fifth Native Light Infantry, composed of Hindus, revolted in Singapore on Feb. 15, while en route to Hongkong, and nearly 1,000 of them were killed before the mutiny was quelled; the rebellion is stated to have been fomented by agents of the German Government in Singapore; seven Germans are stated to have been executed for connection with the uprising.

April 27—Reports from the Straits Settlements state that serious disorders are taking place in various parts of India, the effect beginning to be felt of the Turko-German alliance and of the German propaganda; riots have occurred at Cawnpore and in the Central Provinces; a mutiny by native troops has taken place at Rangoon; it is reported from India that the Ameer of Afghanistan has been assassinated.

ITALY.

April 1—There is economic distress in Italy due to eight months of war; budget of the Government, which for years has shown a surplus, shows a deficit of \$13,800,000 since Aug. 1.

April 5—Many Italian troops are being assembled on the Austrian frontier; great excitement prevails in Genoa in consequence of a report that a German submarine has sunk the Italian steamer Luigi

- Parodi, and strong measures are taken by the authorities to protect the German colony.
- April 6—Owner of the Luigi Perodi declares the steamer has not been lost.
- April 7—The fleet concentrates at Augusta, Sicily, and at Taranto, within a few hours of the Adriatic.
- April 11—Demonstrations at Rome in favor of Italian intervention in the war cause riots and collisions with the police.
- April 12—An order is printed in the Military Journal directing all army officers to dull the metal on their uniforms and sword scabbards; it is reported that the Pope is ready to espouse the Italian cause if the nation enters the war.
- April 14—Indignation is expressed at the Papal Court over an alleged interview with Pope Benedict recently printed in the United States, Germany, and other countries, some of the statements attributed to the Pope being characterized as false; particular exception is taken to a statement, credited to the Pope, urging President Wilson to stop exportation of munitions of war to the Allies; many telegraphic protests on the interview have reached the Vatican from Roman Catholic clergy and laity in the United States, Britain, and France.
- April 16—Italy now has 1,200,000 first-line soldiers under arms.
- April 20—Reports from Rome state that Austria is rapidly gathering troops on the Italian border; Austrians have fortified the whole line of the Isonzo River with intrenchments; it is stated that the German and Austrian Ambassadors are secretly preparing for departure; Papal Guards are enlisting in the regular army.
- April 21—Sailings of liners from Italy to the United States have been canceled; Council of Ministers is held, a report on the international situation being made by the Foreign Minister.
- April 24—It is stated in high official circles that it is becoming increasingly improbable that Italy will participate in the war, at least for some time to come; the Austrian Ambassador and the Italian Foreign Minister have a long conference; it is reported from Rome that Austria has made further concessions in an attempt to preserve Italian neutrality; nevertheless further military preparations are being made by Italy; the exodus of German families from Italy continues; French military experts estimate the full military strength of Italy at 2,000,000 men, of whom 800,000 form the active field army.
- April 25—It is reported from Rome that Austria has offered to give autonomy to Trieste; Italian opinion, as expressed in the newspapers, is that Austria must yield all the territory occupied by Italians, and must yield not only the Province of Trent, but Pola, Fiume, and the greater part of Dalmatia.
- April 27—The Italian Ambassadors at Paris, London, Vienna, and Berlin have been summoned to Rome to confer with the Foreign Minister.
- April 29—It is reported from Rome that Italy and the Allies have reached a definite agreement concerning terms on which Italy will enter the war, if she ultimately decides to do so, and that she will become a member of a quadruple entente after the war; Prince von Bülow, German Ambassador to Italy, is stated to have failed in attempts to get Italy and Austria to come to an understanding.
- April 30—Belgian and French Cardinals, Archbishops, and Bishops have united in an appeal to Pope Benedict for the Vatican to abandon the attitude of neutrality it has maintained since the beginning of the war.

LUXEMBURG.

- April 23—Grand Duchess Marie has sent an official protest to Berlin against the methods of distributing food supplies, which is said to have brought nearly half her subjects to the verge of starvation; she says that gifts of food, money, and clothes have been sent to Luxemburg from all parts of the world, but that only a small part of these reach the civilian population.

PERSIA.

- April 24—Confirmation has been received at Dilman, Persia, of the flight of from 20,000 to 30,000 Armenian and Nestorian Christians from Azerbaijan Province; of the massacre of over 1,500 who were unable to escape; of the death of 2,000 in the compounds of the American Mission at Urumiah.

POLAND.

- April 22—It is stated in London that 7,000,000 Poles are in dire need of food.

RUMANIA.

- April 9—Artillery and supplies of ammunition are reaching Turkey through Rumania.
- April 14—The army, reported as splendidly equipped, is ready for instant action.

RUSSIA.

- April 1—Persistent rumors are current in Petrograd that Austria has opened negotiations for a separate peace; General Ruzsky, who won praise for his conduct of the Galician campaign, taking Lemberg, and also for his success at Przasnysz, retires because of ill-health.
- April 3—General Alexiev is appointed Commander in Chief of the army on the northern front in place of General Ruzsky; it is officially announced that Colonel Miassoyedoff, attached as interpreter to the staff of the Tenth Army, which was badly de-

feated in the Mazurian Lake region, has been shot as a German spy.

April 4—Petrograd reports that the Russians have taken 260,000 prisoners on the Carpathian front since Jan. 21.

April 7—All towns in Russian Poland are given local municipal self-government; Petrograd reports that during the celebration of Easter, the greatest of Russian festivals, there has been an entire absence of drunkenness.

April 14—Imperial order calls up for training throughout the empire all men from twenty to thirty-five not summoned before; it is stated that the call will ultimately almost double the Russian strength; the men summoned are all untrained.

April 17—The General Anzeiger of Duisburg, Rhenish Prussia, says it learns "from an absolutely unimpeachable source" that the reported sickness of Grand Duke Nicholas, Commander in Chief of the Russian forces, was due to a shot in the abdomen fired by the late General Baron Sievers of the defeated Tenth Army, who is stated to have then committed suicide.

April 20—Orders have been issued that Austrian officers who are prisoners of war shall no longer be allowed to retain their swords, as a penalty for the cutting out of the tongue of a captured Russian scout who refused to betray the Russian position.

April 21—As a substitute for vodka shops there have been erected in open places in communities throughout Russia "people's palaces," where the public may gather for entertainment and instruction; in the Government of Poltava alone 300 of these recreative centres have been opened or are projected.

April 22—Details of an \$83,000,000 order for shrapnel and howitzer shell, placed early in April by the Russian Government with the Canadian Car and Foundry Company, show that contracts for \$21,724,400 of that amount have been sublet by the Canadian company to American manufacturers; it is also learned that the Russian Government recently placed a \$15,000,000 contract with American mills for miscellaneous artillery; a letter from an American Red Cross nurse states that she and other American Red Cross nurses were recently received by the Czar at Kiev, where he shook hands and chatted with each.

April 23—The Czar arrives at Lemberg and holds a council of war with the Grand Duke Nicholas.

April 24—Copenhagen reports that the Czar has decided to re-establish the Finnish army with the same constitution as previous to 1898; Grand Duke Nicholas has been much impressed with the brilliant strategic work done by Finnish officers serving with the Russian Army.

April 25—Army orders contain the promotion of a young woman, Alexandra Lagerev, to a Lieutenantancy; she has been fighting alongside male relatives since the beginning of the war.

SERBIA.

April 2—American sanitary experts, who will work under the direction of Dr. Richard P. Strong of Harvard, now in Europe, sail from New York on their way to Serbia, where they will fight typhus and other diseases devastating the nation.

April 3—Several thousand Bulgarian irregulars cross the Serbian frontier near Valandovo, surprising and killing the Serbian guards; Serbian reinforcements, after an all-day fight, repulse and scatter the invaders; Bulgarians lose heavily.

April 4—Serbia protests to Bulgaria because of the raid, which is said to be the fifth of the kind since the beginning of the war; the Bulgarian Minister to Rome says that the raid is the work of Macedonian revolutionists in Serbia.

April 6—Bulgarian Government disclaims responsibility for the raid on Serbia; it is stated that the invasion was initiated by Turks among the inhabitants of that part of Macedonia included in Serbia; Serbians are not satisfied and say that more attacks are being planned on Bulgarian soil, with the object of cutting off supplies from the Serbian Army.

April 10—Disease conditions are growing worse and the percentage of deaths from typhus is very high; 107 Serbian doctors out of 452 have died of typhus; the municipality of Uskub decides to name its finest street after Lady Ralph Paget, who has been working in Serbia with the Red Cross and is now convalescing from a resultant illness.

April 16—Rockefeller Foundation War Relief Commission's first installment of a report on Serbia states that disease is spreading all over the country; there are more than 25,000 cases of typhus, while other fevers are also epidemic; cholera is expected with the warm weather; the nation is declared unable to aid itself.

April 17—The Government submits to Parliament a new army credit of \$40,000,000.

April 21—Two invasions into Serbian territory are made by Bulgarian irregulars.

April 28—Serbia holds 60,000 Austrian prisoners.

SWEDEN.

April 7—Sweden makes a strong protest to Germany against seizure of the Swedish steamer England.

SWITZERLAND.

April 13—German shells fall upon Swiss territory for the third time since the war began, according to a Delemont newspaper; the shots were intended for the French, but the aim was bad and they dropped near the town of Beurnevessain.

TURKEY.

April 1—Troops are being concentrated at Adrianople as a precaution in case war starts with Bulgaria.

April 2—Both the Turkish and Russian Ambassadors to Italy deny a report that Turkey is seeking a separate peace.

April 7—Field Marshal von der Goltz, in an interview in Vienna, says that Turkey is well prepared for war; she has 1,250,000 well-trained men and several hundred thousand reserves; the Sultan gives an interview at Constantinople to American newspaper men; he deplores "unjust" attack of Allies on the Dardanelles, adding that he does not believe the strait can be forced.

April 15—Pillage and murder are reported to be rife in villages and smaller towns of the littoral near Smyrna; lives of Christians are in danger.

April 18—Enver Pasha, War Minister and Generalissimo of the Turkish Army, in a newspaper interview lays the blame for Turkey's participation in the war on Russia and England; he says Turkey has a well-prepared army of 2,000,000.

April 24—Refugees who have reached the Russian line near Tiflis, Transcaucasia, report that widespread massacres of Armenians are being carried out by Mohammedans; they state that all the inhabitants of ten villages near Van, in Armenia, Asiatic Turkey, have been killed.

April 27—An appeal for relief of Armenian Christians in Turkey is made to the Turkish Government by the United States; a plot is discovered to blow up the council chamber in the Ministry of War at Constantinople during a session of the War Council.

April 29—The War Minister has called all available men to arms; Kurds are massacring Christians in Armenia.

UNITED STATES.

April 1—Secretary Bryan orders an inquiry into the circumstances of the arrest by the authorities in Paris of Raymond Rolfe Swoboda, stated to be an American citizen, held in connection with the recent fire on the French liner *La Touraine* in mid-ocean; the State Department is investigating the death of Leon Chester Thrasher of Hardwick, Mass., who was lost when the British steamer *Falaba* was sunk by a German submarine; information is being sought as to whether Thrasher was an American citizen at the time of his death.

April 2—The Government is informed by the British Government, through Ambassador Page, that no trade messages can be sent over British cables if they refer to transactions in which the enemies of Britain are interested.

April 5—Text is made public of the United States note to Germany, recently pre-

sented by Ambassador Gerard, demanding payment by the German Government of \$228,059.54, with interest from Jan. 28, for the destruction of the American sailing ship *William P. Frye* by the German converted cruiser *Prinz Eitel Friedrich*; Secretary Bryan makes public the text of the identic notes recently sent by the United States to the British and French Governments protesting against invasion of neutral rights involved in the recent British Order in Council, establishing a long-range blockade of European waters; the note insists on the right of innocent shipments "to be freely transported to and from the United States through neutral countries to belligerent territory, without being subjected to the penalties of contraband traffic or breach of blockade, much less to detention, requisition, or confiscation"; it is reported from Washington that the reason for the order, issued a few days ago, for the recall of the five American Army officers who have been acting as military observers in Germany, is due to the growing feeling of hostility to Americans in Germany, and the belief that it is wise to withdraw the officers before they become involved in any incident that might cause embarrassment in American-German relations; Dudley Field Malone, Collector of the Port of New York, announces that he has evidence of a widespread conspiracy to violate President Wilson's neutrality proclamation through the establishment here of an agency to supply the British warships lying outside the three-mile zone with food and fuel; he asks the Government for additional warships to protect the harbor's neutrality.

April 6—An official message from Berlin is issued by the German Embassy at Washington giving an intimation that Germany would not regard with favor the idea of paying damages for the death of Leon Chester Thrasher; the statement says that neutrals were warned not to cross the war zone; the German Embassy gives out a statement on the stopping of the German merchant ship *Odenwald*, halted by a shot across her bows when she was attempting to leave San Juan, Porto Rico, without clearance papers, on March 22; statement refers to the episode as an "attack," and says "a sharp fire" was opened, but the American official report shows that only warning shots were fired.

April 7—British Government denies Collector Malone's charge that British warships have been receiving supplies from ports of the United States in violation of neutrality; acting upon a request of the German Ambassador, the Government is making a new investigation of the *Odenwald* case.

April 8—Secretary Bryan makes public the reply of the German Government to the American claim for compensation for the

- loss of the William P. Frye; Germany is willing to pay both for ship and cargo, basing this readiness wholly on treaties of 1799 and 1828 between the United States and Prussia, but under international law justifying the destruction of both ship and cargo; Collector Malone says investigation shows that charges that supplies have been sent to British warships from New York in violation of neutrality were part of a plot to involve this country in trouble with England.
- April 11—Count von Bernstorff, the German Ambassador, makes public a memorandum, addressed to the United States Government and delivered several days ago, charging in effect that the United States is violating the true spirit of neutrality by permitting vast quantities of arms to be shipped to England, France, and Russia, and characterizing as a failure the diplomatic efforts of the United States to effect shipment of food supplies to Germany; the memorandum intimates that the United States maintained a true spirit of neutrality to Mexico in placing an embargo on arms exports to Huerta and Carranza, and quotes a statement attributed to President Wilson on the Mexican situation.
- April 13—The Government War Risk Insurance Bureau settles its first claim for losses by paying \$401,000 to the owners of the American steamer Evelyn, sunk off the coast of Holland, supposedly by a mine, on Feb. 21; London reports that negotiations are under way for a short-term loan of \$100,000,000 to England by American interests.
- April 14—Secretary Bryan announces that arrangements have been completed with the British Government by which two shiploads of dyestuffs may be shipped from Germany to the United States without interference from British warships.
- April 15—The text is made public of a letter written by Theodore Roosevelt to Mrs. George Rublee of Washington, in opposition to the principles advanced by the Woman's Party for Constructive Peace, in which he says the platform is "both silly and base"; at a meeting in New York of the Central Federated Union a resolution is passed in favor of a general strike in those industries employed in producing munitions of war.
- April 16—The American Locomotive Company has practically completed arrangements with the Russian Government for the manufacture of \$65,000,000 worth of shrapnel shells.
- April 17—The Hamburg-American steamship Georgia is transferred to American registry and renamed the Housatonic.
- April 20—French military authorities decide to abandon the charge of setting fire to La Touraine preferred against Raymond Swoboda, because of lack of evidence.
- April 21—The Government replies to the recent memorandum from Ambassador von Bernstorff on American neutrality; the American answer regrets use of language that seems to impugn our good faith, and it restates our position; it declares that we have at no time yielded any of our rights as a neutral, and that we cannot prohibit exportation of arms to belligerents, because to do so would be an unjustifiable breach of our neutrality; the State Department has cabled the American Consul at Warsaw to report fully on the present situation of Jews in Poland.
- April 23—The Telefunken wireless plant at Sayville, L. I., through which the German Government and its embassy at Washington chiefly communicate, has been trebled in power for the purpose of overcoming climatic conditions likely in Summer to be unfavorable for the handling of messages; Secretary Bryan is refusing to issue passports to Americans who wish to visit belligerent countries in Europe for sightseeing purposes.
- April 28—Secretary Bryan replies to the German note on the sinking of the American ship William P. Frye; the answer declares that the destruction of the vessel was "unquestionably" a violation of existing treaties between the United States and Prussia; the answer states that the American Government does not believe the matter should go before a prize court, as suggested by the German note.
- April 29—Samuel Pearson, who was a Boer General in the Boer war and is an American citizen, begins an action in Wisconsin aimed at preventing shipment of munitions of war from the United States to the enemies of Germany; a complaint is filed on Pearson's behalf under the so-called "Discovery" statute of Wisconsin, to obtain information whether the Allis-Chalmers Company and others have entered into a conspiracy with the Bethlehem Steel Company and others to manufacture and ship shrapnel shells to European belligerents contrary to Wisconsin law.
- April 30—Directions are given by President Wilson for an investigation to be made of the Pearson bill of complaint; German Embassy at Washington publishes an advertisement in the newspapers declaring that "travelers sailing in the war zone on ships of Great Britain or her allies do so at their own risk."

RELIEF.

- April 1—American Red Cross sends 200,000 pounds of disinfectants to Serbia for use in the fight against typhus.
- April 2—Mme. Lalla Vandervelde, wife of the Belgian Minister of State, sails from New York after collecting nearly \$300,000 for relief in Belgium.

April 3—Henryk Sienkiewicz, the Polish writer, appeals to the United States for help for Poland; it is stated that an area seven times as great as Belgium has been laid waste, 5,000 villages have been destroyed, 1,000,000 horses and 2,000,000 cattle are dead or seized by the enemy, and damage to the extent of \$600,000,000 has been done; Serbian Agricultural Relief Commission of America announces that Walter Camp will take charge of Serbian relief in the colleges and universities of the United States.

April 6—Australians have contributed \$700,000 in four days for Belgian relief, and measures are being taken to insure \$500,000 a month from the Australian States.

April 8—German Red Cross sends through Ambassador Gerard its thanks for gifts from the United States.

April 9—Commission for Relief in Belgium announces the organization of a New York State Belgian Committee which will work in co-operation with the commission, Dr. John H. Finley being Chairman.

April 10—Major Gen. Gorgas, U. S. A., has been invited to go to Serbia for the Rockefeller Commission to take charge of an attempt to stamp out typhus.

April 12—The State of Oklahoma makes Belgian relief an official matter, and the Governor has issued a proclamation calling upon the people to do all in their power to aid.

April 15—Three hospital trains, each consisting of an automobile with two trailers, have been presented to the Military Commander at Frankfort-on-Main as a gift "from friends of Germany in the United States"; Mme. Marcella Sem-

brich, President of the American Polish Relief Committee, issues an appeal to "all America" for aid for Poland; Paderewski arrives in New York to seek American help for Poland.

April 17—Donations to the American Red Cross total to date \$1,415,000; during the last week eight steamers have sailed from the United States for Rotterdam carrying relief for Belgium; the cargoes totaled 55,000 tons, valued at \$3,000,000.

April 21—Rockefeller Foundation gives out a report of its Relief Commission concerning Belgian refugees in Holland; up to Feb. 22 cases containing 1,386,572 articles of clothing, contributed by the neutral world, principally the United States, have been delivered in Rotterdam for the Belgians.

April 24—Report of the American Red Cross, covering the period from Sept. 12 to April 17, shows that supplies valued at over \$1,000,000 have been sent to France, which got the largest individual share of the shipments, and to Great Britain, Germany, Austria-Hungary, Russia, Serbia, Turkey, and the Belgians; the supplies have included 600,000 pounds of absorbent cotton; surgical gauze that if stretched in a single line would reach from the Battery, New York, to Niagara Falls; 32,600 pounds of chloroform and ether; 65,000 yards of bandages, and 1,123 cases of surgical instruments.

April 26—A new British committee, with many well-known Englishmen on it, has been organized for Belgian relief, King George heading the subscription list.

April 27—American Red Cross ships a large consignment of supplies to the Russian Red Cross at Petrograd.

The Drink Question

[From Truth, April 7, 1915.]

Sir Topas Port, in angry sort,
A scowl upon his forehead,
Relieved his chest, of wrath possessed,
In words distinctly torrid;
His brows were raised, his eyes they blazed,
His nose inclined to florid.

"Disgraceful state! That we must wait
For guns and ammunition,
Because—Great Scott!—men play the sot
And ruin their condition.
Low, drunken swine! If power were mine,
I'd teach 'em their position!

"I'd close the pubs and workmen's clubs—
What says that Welshman feller?
All drink tabooed? Alike preclude
Mile-Ender and Pall-Maller?
Good-bye! Can't stay. I must away
Post haste to stock my cellar."
